But during the interval between 1867 and 1871, the men on whom had devolved the direction of national affairs saw no relief from crippling impecuniosity except an issue of paper money. This was not a novelty in Japan. Paper money had been known to the people since the middle of the 17th century, and in the era of which we are now writing no less than 1694 varieties of notes were in circulation. There were gold notes, silver notes, cash-notes, rice-notes, umbrella-notes, ribbon-notes, lathe-article-notes, and so on through an interminable list, the circulation of each kind being limited to the issuing fief. Many of these notes had almost ceased to have any purchasing power, and nearly all were regarded by the people as evidences of official greed. The first duty of a centralized progressive administration should have been to reform the currency. The political leaders of the time appreciated that duty, but saw themselves compelled by stress of circumstances to adopt the very device which in the hands of the feudal chiefs had produced such deplorable results. The ordinary revenue amounted to only 3,000,000 *yen*, while the extraordinary aggregated 29,000,000, and was derived wholly from issues of paper money or other equally unsound sources.

Even on the abolition of feudalism in 1871 the situation was not immediately relieved. The land tax, which constituted nine-tenths of the feudal revenues, had been assessed by varying methods and at various rates by the different feudatories, and re-assessment of all the land became a preliminary essential to establishing a uniform system. Such a task, on the basis of accurate surveys, would have involved years of work, whereas the financial needs of the state had to be met immediately. Under the pressure of this imperative necessity a re-assessment was roughly made in two years, and being continued thereafter with greater accuracy, was completed in 1881. This survey, eminently liberal to the agriculturists, assigned a value of 1,200,000,000 *yen* to the whole of the arable land, and the treasury fixed the tax at 3 % of the assessed value of the land, which was about one-half of the real market value. Moreover, the government contemplated a gradual reduction of this already low impost until it should ultimately fall to 1 %. Circumstances prevented the consummation of that purpose. The rate underwent only one reduction of $\frac{1}{2}$ %, and thereafter had to be raised on account of war expenditures. On the whole, however, no class benefited more conspicuously from the change of administration than the peasants, since not only was their burden of taxation light, but also they were converted from mere tenants into actual proprietors. In brief, they acquired the fee-simple of their farms in consideration of paying an annual rent equal to about one sixty-sixth of the market value of the land.

In 1873, when these changes were effected, the ordinary

¹ The *yen* is a silver coin worth about 25. : 10 *yen* = £1.

² In addition to the above grant, the feudatories were allowed to retain the reserves in their treasuries; thus many of the feudal nobles found themselves possessed of substantial fortunes, a considerable part of which they generally devoted to the support of their former vassals.

revenue of the state rose from 24,500,000 *yen* to 70,500,000 *yen*. But seven millions sterling is a small income for a country confronted by such problems as Japan had to solve.

She had to build railways; to create an army and a navy; to organize posts, telegraphs, prisons, police and education; to construct roads, improve harbours, light and buoy the coasts; to create a mercantile marine; to start under official auspices numerous industrial enterprises which should serve as object lessons to the people, as well as to lend to private persons large sums in aid of similar projects. Thus, living of necessity beyond its income, the government had recourse to further issues of fiduciary notes, and in proportion as the volume of the latter exceeded actual currency requirements their specie value depreciated.

This question of paper currency inaugurates the story of banking; a story on almost every page of which are to be found inscribed the names of Prince Itō, Marquis Inouye, Marquis Matsukata, Count Okuma and Baron Shibusawa, the fathers of their country's economic and financial progress in modern times. The only substitutes for banks in feudal days were a few private firms—"households" would, perhaps, be a more correct expression—which received local taxes in kind, converted them into money, paid the proceeds to the central government or to the feudatories, gave accommodation to officials, did some exchange business, and occasionally extended accommodation to private individuals. They were not banks in the Occidental sense, for they neither collected funds by receiving deposits nor distributed capital by making loans. The various fiefs were so isolated that neither social nor financial intercourse was possible, and moreover the mercantile and manufacturing classes were regarded with some disdain by the gentry. The people had never been familiarized with combinations of capital for productive purposes, and such a thing as a joint-stock company was unknown. In these circumstances, when the administration of state affairs fell into the hands of the men who had made the restoration, they not only lacked the first essential of rule, money, but were also without means of obtaining any, for they could not collect taxes in the fiefs, these being still under the control of the feudal barons; and in the absence of widely organized commerce or finance, no access to funds presented itself. Doubtless the minds of these men were sharpened by the necessities confronting them, yet it speaks eloquently for their discernment that, samurai as they were, without any business training whatever, one of their first essays was to establish organizations which should take charge of the national revenue, encourage industry and promote trade and production by lending money at comparatively low rates of interest. The tentative character of these attempts is evidenced by frequent changes. There was first a business bureau, then a trade bureau, then commercial companies, and then exchange companies, these last being established in the principal cities and at the open ports, their personnel consisting of the three great families—Mitsui, Shimada and Ono—houses of ancient repute, as well as other wealthy merchants in Kiōto, Osaka and elsewhere. These exchange companies were partnerships, though not strictly of the joint-stock kind. They formed the nucleus of banks in Japan, and their functions included, for the first time, the receiving of deposits and the lending of money to merchants and manufacturers. They had power to issue notes, and, at the same time, the government issued notes on its own account. Indeed, in this latter fact is to be found one of the motives for organizing the exchange companies, the idea being that if the state's notes were lent to the companies, the people would become familiarized with the use of such currency, and the companies would find them convenient capital. But this system was essentially unsound: the notes, alike of the treasury and of the companies, though nominally convertible, were not secured by any fixed stock of specie. Four years sufficed to prove the impracticability of such an arrangement, and in 1872 the exchange companies were swept away, to be succeeded in July 1873 by the establishment of national banks on a system which combined some of the features of English banking with the general

State
Revenue.

Banks.

bases of American. Each bank had to pay into the treasury 60 % of its capital in government notes. It was credited in return with interest-bearing bonds, which bonds were to be left in the treasury as security for the issue of bank-notes to an equal amount, the banks being required to keep in gold the remaining 40 % of their capital as a fund for converting the notes, which conversion must always be effected on application. The elaborators of this programme were Itô, Inouye, Okuma and Shibusawa. They added a provision designed to prevent the establishment of too small banks, namely, that the capital of each bank must bear a fixed ratio to the population of its place of business. Evidently the main object of the treasury was gradually to replace its own fiat paper with convertible bank-notes. But experience quickly proved that the scheme was unworkable. The treasury notes had been issued in such large volume that sharp depreciation had ensued; gold could not be procured except at a heavy cost, and the balance of foreign trade being against Japan, some 300,000,000 yen in specie flowed out of the country between 1872 and 1874.

It should be noted that at this time foreign trade was still invested with a perilous character in Japanese eyes. In early days, while the Dutch had free access to her ports, they sold her so much and bought so little in return that an immense quantity of the precious metals flowed out of her coffers. Again, when over-sea trade was renewed in modern times, Japan's exceptional financial condition presented to foreigners an opportunity of which they did not fail to take full advantage. For, during her long centuries of seclusion, gold had come to hold to silver in her coinage a ratio of 1 to 8, so that gold cost, in terms of silver, only one-half of what it cost in the West. On the other hand, the treaty gave foreign traders the right to exchange their own silver coins against Japanese, weight for weight, and thus it fell out that the foreigner, going to Japan with a supply of Mexican dollars, could buy with them twice as much gold as they had cost in Mexico. Japan lost very heavily by this system, and its effects accentuated the dread with which her medieval experience had invested foreign commerce. Thus, when the balance of trade swayed heavily in the wrong direction between 1872 and 1874, the fact created undue consternation, and moreover there can be no doubt that the drafters of the bank regulations had over-estimated the quantity of available gold in the country.

All these things made it impossible to keep the bank-notes long in circulation. They were speedily returned for conversion; no deposits came to the aid of the banks, nor did the public make any use of them. Disaster became inevitable. The two great firms of Ono and Shimada, which had stood high in the nation's estimation alike in feudal and in Imperial days, closed their doors in 1874; a panic ensued, and the circulation of money ceased almost entirely.

Evidently the banking system must be changed. The government bowed to necessity. They issued a revised code of banking regulations which substituted treasury notes in the place of

Change of the Banking System. Each bank was thenceforth required to invest 80 % of its capital in 6 % state bonds, and these being lodged with the treasury, the bank became competent to issue an equal quantity of its own notes, forming with the remainder of its capital a reserve of treasury notes for purposes of redemption. This was a complete subversion of the government's original scheme. But no alternative offered. Besides, the situation presented a new feature. The hereditary pensions of the feudatories had been commuted with bonds aggregating 174,000,000 yen. Were this large volume of bonds issued at once, their heavy depreciation would be likely to follow, and moreover their holders, unaccustomed to dealing with financial problems, might dispose of the bonds and invest the proceeds in hazardous enterprises. To devise some opportunity for the safe and profitable employment of these bonds seemed, therefore, a pressing necessity, and the newly organized national banks offered such an opportunity. For bond-holders, combining to form a bank, continued to draw from the treasury 6 % on their bonds, while they acquired power to issue a corresponding amount of notes which could be lent at profitable rates. The programme worked well. Whereas, up to 1876, only five banks were established under the original regulations, the number under the new rule was 151 in 1879, their aggregate capital having grown in the same interval from 2,000,000 yen to 40,000,000 yen, and their note issues from less than 1,000,000 to over 34,000,000. Here, then, was a rapidly growing system resting wholly on state credit. Something like a mania for bank-organizing declared itself, and in 1878 the government deemed it necessary to legislate against the establishment of any more national banks, and to limit to 34,000,000 yen the aggregate note issues of those already in existence.

It is possible that the conditions which prevailed immediately after the establishment of the national banks might have developed some permanency had not the Satsuma rebellion broken out in 1877. Increased taxation to meet military outlay being impossible in such circumstances, nothing offered except recourse to further note

issues. The result was that by 1881, fourteen years after the Restoration, notes whose face value aggregated 164,000,000 yen had been put into circulation; the treasury possessed specie amounting to only 8,000,000 yen, and 18 paper yen could be purchased with 10 silver ones.

Up to 1881 fitful efforts had been made to strengthen the specie value of fiat paper by throwing quantities of gold and silver upon the market from time to time, and 23,000,000 yen had been devoted to the promotion of industries whose products, it was hoped, would go to swell the list of exports, and thus draw specie to the country. But these devices were now finally abandoned, and the government applied itself steadfastly to reducing the volume of the fiduciary currency on the one hand, and accumulating a specie reserve on the other. The steps of the programme were simple. By cutting down administrative expenditure; by transferring certain charges from the treasury to the local communes; by suspending all grants in aid of provincial public works and private enterprises, and by a moderate increase of the tax on alcohol, an annual surplus of revenue, totaling 7,500,000 yen, was secured. This was applied to reducing the volume of the notes in circulation. At the same time, it was resolved that all officially conducted industrial and agricultural works should be sold—since their purpose of instruction and example seemed now to have been sufficiently achieved—and the proceeds, together with various securities (aggregating 26,000,000 yen in face value) held by the treasury, were applied to the purchase of specie. Had the government entered the market openly as a seller of its own fiduciary notes, its credit must have suffered. There were also ample reasons to doubt whether any available stores of precious metal remained in the country. In obedience to elementary economical laws, the cheap money had steadily driven out the dear, and although the government mint at Osaka, founded in 1871, had struck gold and silver coins worth 80,000,000 yen between that date and 1881, the customs returns showed that a great part of this metallic currency had flowed out of the country. In these circumstances Japanese financiers decided that only one course remained: the treasury must play the part of national banker. Produce and manufactures destined for export must be purchased by the state with fiduciary notes, and the metallic proceeds of their sales abroad must be collected and stored in the treasury. This programme required the establishment of consulates in the chief marts of the Occident, and the organization of a great central bank—the present Bank of Japan—as well as of a secondary bank—the present Specie Bank of Yokohama—the former to conduct transactions with native producers and manufacturers, the latter to finance the business of exportation. The outcome of these various arrangements was that, by the middle of 1885, the volume of fiduciary notes had been reduced to 19,000,000 yen, their depreciation had fallen to 3 %, and the metallic reserve of the treasury had increased to 45,000,000 yen. The resumption of specie payments was then announced, and became, in the autumn of that year, an accomplished fact. From the time when this programme began to be effective, Japan entered a period of favourable balance of trade. According to accepted economic theories, the influence of an appreciating currency should be to encourage imports; but the converse was seen in Japan's case, for from 1882 her exports annually exceeded her imports, the maximum excess being reached in 1886, the very year after the resumption of specie payments.

The above facts deserve to figure largely in a retrospect of Japanese finance, not merely because they set forth a fine economic feat, indicating clear insight, good organizing capacity, and courageous energy, but also because volumes of adverse foreign criticism were written in the margin of the story during the course of the incidents it embodies. Now Japan was charged with robbing her own people because she bought their goods with paper money and sold them for specie; again, she was accused of an official conspiracy to ruin the foreign local banks because she purchased exporters' bills on Europe and America at rates that defied ordinary competition; and while some declared that she was plainly without any understanding of her own doings, others predicted that her heroic method of dealing with the problem would paralyse industry, interrupt trade and produce widespread suffering. Undoubtedly, to carry the currency of a nation from a discount of 70 or 80 % to par in the course of four years, reducing its volume at the same time from 160 to 179 million yen, was a financial enterprise violent and daring almost to rashness. The gentler expedient of a foreign loan would have commended itself to the majority of economists. But it may be here stated, once for all, that until her final adoption of a gold standard in 1897, the foreign money market was practically closed to Japan. Had she borrowed abroad it must have been on a sterling basis. Receiving a fixed sum in silver, she would have had to discharge her debt in rapidly appreciating gold. Twice, indeed, she had recourse to London for small sums, but when she came to cast up her accounts the cost of the accommodation stood out in deterrent proportions. A 9 % loan, placed in England in 1868 and paid off in 1889, produced 3,750,000 yen, and cost altogether 11,750,000 yen in round figures; and a 7 % loan, made in 1872 and paid off in 1897, produced 10,750,000 yen, and cost 36,000,000 yen. These considerations were supplemented by a strong aversion from incurring pecuniary obligations to Western states before the latter had consented

to restore Japan's judicial and tariff autonomy. The example of Egypt showed what kind of fate might overtake a semi-independent state falling into the clutches of foreign bond-holders. Japan did not wish to fetter herself with foreign debts while struggling to emerge from the rank of Oriental powers.

After the revision of the national bank regulations, semi-official banking enterprise won such favour in public eyes that the government found it necessary to impose limits. This conservative policy proved an incentive to private banks and banking companies, so that, by the year 1883, no less than 1093 banking institutions were in existence throughout Japan with an aggregate capital of 900,000,000 *yen*. But these were entirely lacking in arrangements for combination or for equalizing rates of interest, and to correct such defects, no less than ultimately to constitute the sole note-issuing institution, a central bank (the Bank of Japan) was organized on the model of the Bank of Belgium, with due regard to corresponding institutions in other Western countries and to the conditions existing in Japan. Established in 1882 with a capital of 4,000,000 *yen*, this bank has now a capital of 30 millions, a security reserve of 206 millions, a note-issue of 266 millions, a specie reserve of 160 millions, and loans of 525 millions.

The banking machinery of the country being now complete, in a general sense, steps were taken in 1883 for converting the national banks into ordinary joint-stock concerns and for the redemption of all their note-issues. Each national bank was required to deposit with the treasury the government paper kept in its strong room as security for its own notes, and further to take from its annual profits and hand to the treasury a sum equal to 2½ % of its notes in circulation. With these funds the central bank was to purchase state bonds, devoting the interest to redeeming the notes of the national banks. Formed with the object of disturbing the money-market as little as possible, this programme encountered two obstacles. The first was that, in view of the Bank of Japan's purchases, the market price of state bonds rose rapidly, so that, whereas official financiers had not expected them to reach par before 1897, they were quoted at a considerable premium in 1886. The second was that the treasury having in 1886 initiated the policy of converting its 6 % bonds into 5 % consols, the former no longer produced interest at the rate estimated for the purposes of the banking scheme. The national banks thus found themselves in an embarrassing situation and began to clamour for a revision of the programme. But the government, seeing compensations for them in other directions, adhered firmly to its scheme. Few problems have caused greater controversy in modern Japan than this question of the ultimate fate of the national banks. Not until 1896 could the Diet be induced to pass a bill providing for their dissolution at the close of their charter terms, or their conversion into ordinary joint-stock concerns without any note-issuing power, and not until 1899 did their notes cease to be legal tender. Out of a total of 153 of these banks, 132 continued business as private institutions, and the rest were absorbed or dissolved. Already (1890 and 1893) minute regulations had been enacted bringing all the banks and banking institutions—except the special banks to be presently described—within one system of semi-annual balance-sheets and official auditing, while in the case of savings banks the directors' responsibility was declared unlimited and these banks were required to lodge security with the treasury for the protection of their depositors.

Just as the ordinary banks were all centred on the Bank of Japan¹ and more or less connected with it, so in 1895, a group of special institutions, called agricultural and commercial banks, were organized and centred on a hypothec bank, the object of this system being to supply cheap capital to farmers and manufacturers on the security of real estate. The hypothec bank had its head office in Tokyo and was authorized to obtain funds by issuing premium-bearing bonds, while an agricultural and industrial bank was established in each prefecture and received assistance from the hypothec bank. Two years later (1900), an industrial bank—sometimes spoken of as the *crédit mobilier* of Japan—was brought into existence under official auspices, its purpose being to lend money against bonds, debentures and shares, as well as to public corporations. These various institutions, together with clearing houses, bankers' associations, the Hokkaidō colonial bank, the bank of Formosa, savings banks (including a post-office savings bank), and a mint complete the financial machinery of modern Japan.

Reviewing this chapter of Japan's material development, we find that whereas, at the beginning of the Meiji era (1867), the nation did not possess so much as one banking institution worthy of the name, forty years later it had 2211 banks, with a paid-up capital of £40,000,000, reserves of £12,000,000, and deposits of £147,000,000; and whereas

there was not one savings bank in 1867, there were 487 in 1906 with deposits of over £50,000,000. The average yearly dividends of these banks in the ten years ending 1906 varied between 9½ and 9·9 %.

Necessarily the movement of industrial expansion was accompanied by a development of insurance business. The beginnings of this kind of enterprise did not become visible, however, until 1881, and even at that comparatively recent date no Japanese laws had yet been enacted for the control of such operations. The commercial code, published in March 1890, was the earliest legislation which met the need, and from that time the number of insurance companies and the volume of their transactions grew rapidly. In 1897 there were 35 companies with a total paid-up capital of 7,000,000 *yen* and policies aggregating 971,000,000 *yen*, and in 1906 the corresponding figures were 65 companies, 22,000,000 *yen* paid up and policies of 4,149,000,000 *yen*. The premium reserves grew in the same period from 7,000,000 to 108,000,000. The net profits of these companies in 1906 were (in round numbers) 10,000,000 *yen*.

The origin of clearing houses preceded that of insurance companies in Japan by only two years (1879). Osaka set the example, which was quickly followed by Tokyo, Kobe, Yokohama, Kiōto and Nagoya. In 1898 the bills handled at these institutions amounted to 1,186,000,000 *yen*, and in 1907 to 7,484,000,000 *yen*. Japanese clearing houses are modelled after those of London and New York.

Exchanges existed in Japan as far back as the close of the 17th century. At that time the income of the feudal chiefs consisted almost entirely of rice, and as this was sold to brokers, the latter found it convenient to meet at fixed times and places for conducting their business. Originally their transactions were all for cash, but afterwards they devised time bargains which ultimately developed into a definite form of exchange. The reform of abuses incidental to this system attracted the early attention of the Meiji government, and in 1893 a law was promulgated for the control of exchanges, which then numbered 146. Under this law the minimum share capital of a bourse constituted as a joint-stock company was fixed at 100,000 *yen*, and the whole of its property became liable for failure on the part of its brokers to implement their contracts. There were 51 bourses in 1908.

Not less remarkable than this economic development was the large part acted in it by officialdom. There were two reasons for this. One was that a majority of the men gifted with originality and foresight were drawn into the ranks of the administration by the great current of the revolution; the other, that the feudal system had tended to check rather than to encourage material development, since the limits of each fief were also the limits of economical and industrial enterprise. Ideas for combination and co-operation had been confined to a few families, and there was nothing to suggest the organization of companies nor any law to protect them if organized. Thus the opening of the Meiji era found the Japanese nation wholly unqualified for the commercial and manufacturing competition in which it was thenceforth required to engage, and therefore upon those who had brought the country out of its isolation there devolved the responsibility of speedily preparing their fellow-countrymen for the new situation. To these leaders banking facilities seemed to be the first need, and steps were accordingly taken in the manner already described. But how to educate men of affairs at a moment's notice? How to replace by a spirit of intelligent progress the ignorance and conservatism of the hitherto despised traders and artisans? When the first bank was organized, its two founders—men who had been urged, nay almost compelled, by officialdom to make the essay—were obliged to raise four-fifths of the capital themselves, the general public not being willing to subscribe more than one-fifth—a petty sum of 500,000 *yen*—and when its staff commenced their duties, they had not the most shadowy conception of what to do. That was a faithful reflection of the condition of the business world at large. If the initiative of the people themselves had been awaited, Japan's career must have been slow indeed.

Only one course offered, namely, that the government itself should organize a number of productive enterprises on modern lines, so that they might serve as schools and also as models. Such, as already noted under *Industries*, was the programme adopted. It provoked much hostile criticism from foreign onlookers, who had learned to decry all official incursions into trade and industry, but had not properly appreciated the special conditions existing in Japan. The end justified the means. At the outset of its administration we find the Meiji government not only forming plans for the circulation of money, building railways and organizing posts and telegraphs, but also establishing dockyards, spinning mills, printing-houses, silk-reeling filatures, paper-making factories and so forth, thus by example encouraging these kinds of enterprise and by legislation providing for their safe prosecution. Yet progress was slow. One by one and at long intervals joint-stock companies came into existence, nor was it until the resumption of specie payments in 1886 that a really effective spirit of enterprise manifested itself among the people. Railways, harbours, mines, spinning, weaving,

¹ The Bank of Japan was established as a joint-stock company in 1882. The capital in 1909 was 30,000,000 *yen*. In it alone is vested note-issuing power. There is no limit to its issues against gold or silver coins and bullion, but on other securities (state bonds, treasury bills and other negotiable bonds or commercial paper) its issues are limited to 120 millions, any excess over that figure being subject to a tax of 5 % per annum.

paper-making, oil-refining, brick-making, leather-tanning, glass-making and other industries attracted eager attention, and whereas the capital subscribed for such works aggregated only 50,000,000 yen in 1886, it exceeded 1,000,000,000 yen in 1906.

When specie payments were resumed in 1885, the notes issued by the Bank of Japan were convertible into silver on demand, the silver standard being thus definitely adopted, a complete reversal of the system inaugurated at the establishment of the national banks on Prince Itos' return from the United States. Japanese financiers believed from the outset in gold monometallism. But, in the first place, the country's stock of gold was soon driven out by her depreciated fiat currency; and, in the second, not only were all other Oriental nations silver-using, but also the Mexican silver dollar had long been the unit of account in Far-Eastern trade. Thus Japan ultimately drifted into silver monometallism, the silver yen becoming her unit of currency. So soon, however, as the indemnity that she received from China after the war of 1894-95 had placed her in possession of a stock of gold, she determined to revert to the gold standard. Mechanically speaking, the operation was very easy. Gold having appreciated so that its value in terms of silver had exactly doubled during the first 30 years of the Meiji era, nothing was necessary except to double the denominations of the gold coins in terms of yen, leaving the silver subsidiary coins unchanged. Thus the old 5-yen gold piece, weighing 2.22221 *monme* of 900 fineness, became a 10-yen piece in the new currency, and a new 5-yen piece of half the weight was coined. No change whatever was required in the reckonings of the people. The yen continued to be their coin of account, with a fixed sterling value of a small fraction over two shillings, and the denominations of the gold coins were doubled. Gold, however, is little seen in Japan; the whole duty of currency is done by notes.

It is not to be supposed that all this economic and financial development was unchequered by periods of depression and severe panic. There were in fact six such seasons: in 1874, 1881, 1889, 1897, 1900 and 1907. But no year throughout the whole period failed to witness an increase in the number of Japan's industrial and commercial companies, and in the amount of capital thus invested.

To obtain a comprehensive idea of Japan's state finance, the simplest method is to set down the annual revenue at quinquennial periods, commencing with the year 1878-1879, because it was not until 1876 that the system of duly compiled and published budgets came into existence.

State
Revenue.

REVENUE (omitting fractions)

Year. ¹	Ordinary Revenue (millions of yen).	Extraordinary Revenue (millions of yen).	Total Revenue (millions of yen).
1878-9	53	9	62
1883-4	76	7	83
1888-9	74	18	92
1893-4	86	28	114
1898-9	133	87	220
1903-4	224	36	260
1908-9	476	144	620

The most striking feature of the above table is the rapid growth of revenue during the last three periods. So signal was the growth that the revenue may be said to have sextupled in the 15 years ended 1909. This was the result of the two great wars in which Japan was involved, that with China in 1894-95 and that with Russia in 1904-5. The details will be presently shown.

Turning now to the expenditure and pursuing the same plan, we have the following figures:—

EXPENDITURE (omitting fractions)

Year.	Ordinary Expenditures (millions of yen).	Extraordinary Expenditures (millions of yen).	Total Expenditures (millions of yen).
1878-9	56	5	61
1883-4	68	15	83
1888-9	66	15	81
1893-4	64	20	84
1898-9	119	101	220
1903-4	170	80	250
1908-9	427	193	620

It may be here stated that, with three exceptions, the working of the budget showed a surplus in every one of the 41 years between 1867 and 1908.

¹ The Japanese fiscal year is from April 1 to March 31.

The sources from which revenue is obtained are as follow:—

ORDINARY REVENUE

	1894-5.	1898-9.	1903-4.	1908-9.
	Millions of yen.	Millions of yen.	Millions of yen.	Millions of yen.
Taxes	70.50	96.20	146.10	299.61
Receipts from stamps and Public Undertakings	14.75	33.00	96.87	164.66
Various Receipts	4.58	3.67	8.15	11.48

It appears from the above that during 15 years the weight of taxation increased fourfold. But a correction has to be applied, first, on account of the tax on alcoholic liquors and, secondly, on account of customs dues, neither of which can properly be called general imposts. The former grew from 16 millions in 1894-1895 to 72 millions in 1908-1909, and the latter from 5½ millions to 41½ millions. If these increases be deducted, it is found that taxes, properly so called, grew from 70.5 millions in 1894-1895 to 207.86 millions in 1908-1909, an increase of somewhat less than threefold. Otherwise stated, the burden per unit of population in 1894-1895 was 3s. 6d., whereas in 1908-1909 it was 8s. 4d. To understand the principle of Japanese taxation and the manner in which the above development took place, it is necessary to glance briefly at the chief taxes separately.

The land tax is the principal source of revenue. It was originally fixed at 3 % of the assessed value of the land, but in 1877 this ratio was reduced to 2½ %, on which basis the tax yielded from 37 to 38 million yen annually. After the war with China (1894-1895) the government proposed to increase this impost in order to obtain funds for an extensive programme of useful public works and expanded armaments (known subsequently as the "first post bellum programme"). By that time the market value of agricultural land had largely appreciated owing to improved communications, and urban land commanded greatly enhanced prices. But the lower house of the diet, considering itself guardian of the farmers' interests, refused to endorse any increase of the tax. Not until 1889 could this resistance be overcome, and then only on condition that the change should not be operative for more than 5 years. The amended rates were 3.3 % on rural lands and 5 % on urban building sites. Thus altered, the tax produced 46,000,000 yen, but at the end of the five-year period it would have reverted to its old figure, had not war with Russia broken out. An increase was then made so that the impost varied from 3 % to 17½ % according to the class of land, and under this new system the tax yielded 85 millions. Thus the exigencies of two wars had augmented it from 38 millions in 1889 to 85 millions in 1907.

The income tax was introduced in 1887. It was on a graduated scale, varying from 1 % on incomes of not less than 300 yen, to 3 % on incomes of 30,000 yen and upwards. At these rates the tax yielded an insignificant revenue of about 2,000,000 yen. In 1899, a revision was effected for the purposes of the first post bellum programme. This revision increased the number of classes from five to ten, incomes of 300 yen standing at the bottom and incomes of 100,000 yen or upwards at the top, the minimum and maximum rates being 1 % and 5½ %. The tax now produced approximately 8,000,000 yen. Finally in 1904, when war broke out with Russia, these rates were again revised, the minimum now becoming 2 %, and the maximum 8.2 %. Thus revised, the tax yields a revenue of 27,000,000 yen.

The business tax was instituted in 1896, after the war with China, and the rates have remained unchanged. For the purposes of the tax all kinds of business are divided into nine classes, and the tax is levied on the amounts of sales (wholesale and retail), on rental value of buildings, on number of employees and on amount of capital. The yield from the tax grows steadily. It was only 4,500,000 yen in 1897, but it figured at 22,000,000 yen in the budget for 1908-1909.

The above three imposts constitute the only direct taxes in Japan. Among indirect taxes the most important is that upon alcoholic liquors. It was inaugurated in 1871; doubled, roughly speaking, in 1878; still further increased thenceforth at intervals of about 3 years, until it is now approximately twenty times as heavy as it was originally. The liquor taxed is mainly sake; the rate is about 50 sen (one shilling) per gallon, and the annual yield is 72,000,000 yen.

In 1859, when Japan re-opened her ports to foreign commerce, the customs dues were fixed on a basis of 10 % *ad valorem*, but this was almost immediately changed to a nominal 5 % and a real 3 %. The customs then yielded a very petty return—not more than three or four million yen—and the Japanese government had no discretionary power to alter the rates. Strenuous efforts to change this system were at length successful, and, in 1899, the tariff was divided into two sections, conventional and statutory; the rates in the former being governed by a treaty valid for 12 years; those in the latter being fixed at Japan's will. Things remained thus until the war with Russia

Business
Tax.

Tax on
Alcoholic
Liquors.

Customs
Duties.

compelled a revision of the statutory tariff. Under this system the ratio of the duties to the value of the dutiable goods was about 15.65 %. The customs yield a revenue of about 42,000,000 yen.

In addition to the above there are eleven taxes, some in existence before the war of 1904-5, and some created for the purpose of carrying on the war or to meet the expenses of a *post bellum* programme.

Taxes in existence before 1904-1905 :—

Name.	Yield (millions of yen).
Tax on soy	4
Tax on sugar	16½
Mining tax	2
Tax on bourses	2
Tax on issue of bank-notes	1
Tonnage dues	1

Taxes created on account of the war (1904-5) or in its immediate sequel:

Name.	Yield (millions of yen).
Consumption tax on textile fabrics	19½
Tax on dealers in patent medicines	1
Tax on communications	2½
Consumption tax on kerosene	1½
Succession tax	1½

Also, as shown above, the land tax was increased by 39 millions; the income tax by 19 millions; the business tax by 15 millions; and the tax on alcoholic liquors by 15 millions. On the whole, if taxes of general incidence and those of special incidence be lumped together, it appears that the burden swelled from 160,000,000 yen before the war to 320,000,000 after it.

The government of Japan carries on many manufacturing undertakings for purposes of military and naval equipment, for ship-building, for the construction of railway rolling stock, for the manufacture of telegraph and light-house materials, for iron-founding and steel-making, for printing, for paper-making, and so forth. There are 48 of these institutions, giving employment to 108,000 male operatives and 23,000 female, together with 63,000 labourers. But the financial results do not appear independently in the general budget. Three other government undertakings, however, constitute important budgetary items: they are, the profits derived from the postal and telegraph services, 39,000,000 yen; secondly, from forests, 13,000,000 yen; and thirdly, from railways, 37,000,000 yen. The government further exercises a monopoly of three important staples, tobacco, salt and camphor. In each case the crude article is produced by private individuals from whom it is taken over at a fair price by the government, and, having been manufactured (if necessary), it is resold by government agents at fixed prices. The tobacco monopoly yields a profit of some 33,000,000 yen; the salt monopoly a profit of 12,000,000 yen, and the camphor monopoly a profit of 1,000,000 yen. Thus the ordinary revenue of the state consisted in 1908-1909 of :—

	Yen.
Proceeds of taxes	320,000,000
Proceeds of state enterprises (posts and telegraphs, forests and railways)	89,000,000
Proceeds of monopolies	56,000,000
Sundries	11,000,000
Total	476,000,000

The ordinary expenditures of the nine departments of state aggregated—in 1908-1909—427,000,000 yen, so that there was a surplus revenue of 49,000,000 yen.

Japanese budgets have long included an extraordinary section, so called because it embodies outlays of a special and terminable character as distinguished from ordinary and perpetually recurring expenditures. The items in this extraordinary section possessed deep interest in the years 1896 and 1907, because they disclosed the special programmes mapped out by Japanese financiers and statesmen after the wars with China and Russia. Both programmes had the same bases—expansion of armaments and development of the country's material resources. After her war with China, Japan received a plain intimation that she must either fight again after a few years or resign herself to a career of insignificance on the confines of the Far East. No other interpretation could be assigned to the action of Russia, Germany and France in requiring her to retrocede the territory which she had acquired by right of conquest. Japan therefore made provision for the doubling of her army and her navy, for the growth of a mercantile marine qualified to supply a sufficiency of troop-ships, and for the development of resources which should lighten the burden of these outlays.

The war with Russia ensued nine years after these preparations had begun, and Japan emerged victorious. It then seemed to the onlooking nations that she would rest from her warlike efforts. On the contrary, just as she had behaved after her war with China, so she now behaved after her war with Russia—made arrange-

ments to double her army and navy and to develop her material resources. The government drafted for the year 1907-1908 a budget with three salient features. First, instead of proceeding to deal in a leisurely manner with the greatly increased national debt, Japan's financiers made dispositions to pay it off completely in the space of 30 years. Secondly, a total outlay of 422,000,000 yen was set down for improving and expanding the army and the navy. Thirdly, expenditures aggregating 304,000,000 yen were estimated for productive purposes. All these outlays, included in the extraordinary section of the budget, were spread over a series of years commencing in 1907 and ending in 1913, so that the disbursements would reach their maximum in the fiscal year 1908-1909 and would thenceforth decline with growing rapidity. To finance this programme three constant sources of annual revenue were provided, namely, increased taxation, yielding some 30 millions yearly; domestic loans, varying from 30 to 40 millions each year; and surpluses of ordinary revenue amounting to from 45 to 75 millions. There were also some exceptional and temporary assets: such as 100,000,000 yen remaining over from the war fund; 50 millions paid by Russia for the maintenance of her officers and soldiers during their imprisonment in Japan; occasional sales of state properties and so forth. But the backbone of the scheme was the continuing revenue detailed above.

The house of representatives unanimously approved this programme. By the bulk of the nation, however, it was regarded with something like consternation, and a very short time sufficed to demonstrate its impracticability. From the beginning of 1907 a cloud of commercial and industrial depression settled down upon Japan, partly because of so colossal a programme of taxes and expenditures, and partly owing to excessive speculation during the year 1906 and to unfavourable financial conditions abroad. To float domestic loans became a hopeless task, and thus one of the three sources of extraordinary revenue ceased to be available. There remained no alternative but to modify the programme, and this was accomplished by extending the original period of years so as correspondingly to reduce the annual outlays. The nation, however, as represented by its leading men of affairs, clamoured for still more drastic measures, and it became evident that the government must study retrenchment, not expansion, eschewing above all things any increase of the country's indebtedness. A change of ministry took place, and the new cabinet drafted a programme on five bases: first, that all expenditures should be brought within the margin of actual visible revenue, loans being wholly abstained from; secondly, that the estimates should not include any anticipated surpluses of yearly revenue; thirdly, that appropriations of at least 50,000,000 yen should be annually set aside to form a sinking fund, the whole of the foreign debt being thus extinguished in 27 years; fourthly, that the state railways should be placed in a separate account, all their profits being devoted to extensions and repairs; and fifthly, that the period for completing the *post bellum* programme should be extended from 6 years to 11. This scheme had the effect of restoring confidence in the soundness of the national finances.

National Debt.—When the fiefs were surrendered to the sovereign at the beginning of the Meiji era, it was decided to provide for the feudal nobles and the samurai by the payment of lump sums in commutation, or by handing to them public bonds, the interest on which should constitute a source of income. The result of this transaction was that bonds having a total face value of 191,500,000 yen were issued, and ready-money payments were made aggregating 21,250,000 yen.¹ This was the foundation of Japan's national debt. Indeed, these public bonds may be said to have represented the bulk of the state's liabilities during the first 25 years of the Meiji period. The government had also to take over the debts of the fiefs, amounting to 41,000,000 yen, of which 21,500,000 yen were paid with interest-bearing bonds, the remainder with ready money. If to the above figures be added two foreign loans aggregating 16,500,000 yen (completely repaid by the year 1897); a loan of 15,000,000 yen incurred on account of the Satsuma revolt of 1877; loans of 33,000,000 yen for public works, 13,000,000 yen for naval construction, and 14,500,000 yen² in connexion with the fiat currency, we have a total of 305,000,000 yen, being the whole national debt of Japan during the first 28 years of her new era under Imperial administration.

The second epoch dates from the war with China in 1894-95. The direct expenditures on account of the war aggregated 200,000,000

¹ The amounts include the payments made in connexion with what may be called the disestablishment of the Church. There were 29,805 endowed temples and shrines throughout the empire, and their estates aggregated 354,481 acres, together with 1½ million bushels of rice (representing 2,500,000 yen). The government resumed possession of all these lands and revenues at a total cost to the state of a little less than 2,500,000 yen, paid out in pensions spread over a period of fourteen years. The measure sounds like wholesale confiscation. But some extenuation is found in the fact that the temples and shrines held their lands and revenues under titles which, being derived from the feudal chiefs, depended for their validity on the maintenance of feudalism.

² This sum represents interest-bearing bonds issued in exchange for fiat notes, with the idea of reducing the volume of the latter. It was a tentative measure, and proved of no value.

yen, of which 135,000,000 yen were added to the national debt, the remainder being defrayed with accumulations of surplus revenue, with a part of the indemnity received from China, and with voluntary contributions from patriotic subjects. As the immediate sequel of the war, the government elaborated a large programme of armaments and public works. The expenditure for these unproductive purposes, as well as for coast fortifications, dockyards, and so on, came to 314,000,000 yen, and the total of the productive expenditures included in the programme was 190,000,000 yen—namely, 120 millions for railways, telegraphs and telephones; 20 millions for riparian improvements; 20 millions in aid of industrial and agricultural banks and so forth—the whole programme thus involving an outlay of 504,000,000 yen. To meet this large figure, the Chinese indemnity, surpluses of annual revenue and other assets, furnished 300 millions; and it was decided that the remaining 204 millions should be obtained by domestic loans, the programme to be carried completely into operation—with trifling exceptions—by the year 1905. In practice, however, it was found impossible to obtain money at home without paying a high rate of interest. The government, therefore, had recourse to the London market in 1899, raising a loan of £10,000,000 at 4%, and selling the £100 bonds at 90. In 1902, it was not expected that Japan would need any further immediate recourse to foreign borrowing. According to her financiers' forecast at that time, her national indebtedness would reach its maximum, namely, 575,000,000 yen, in the year 1903, and would thenceforward diminish steadily. All Japan's domestic loans were by that time placed on a uniform basis. They carried 5% interest, ran for a period of 5 years without redemption, and were then to be redeemed within 50 years at latest. The treasury had power to expedite the operation of redemption according to financial convenience, but the sum expended on amortization each year must receive the previous consent of the Diet. Within the limit of that sum redemption was effected either by purchasing the stock of the loans in the open market or by drawing lots to determine the bonds to be paid off. During the first two periods (1867 to 1897) of the Meiji era, owing to the processes of conversion, consolidation, &c., and to the various requirements of the state's progress, twenty-two different kinds of national bonds were issued; they aggregated 673,215,500 yen; 269,042,198 yen of that total had been paid off at the close of 1897, and the remainder was to be redeemed by 1946, according to these programmes.

But at this point the empire became involved in war with Russia, and the enormous resulting outlays caused a signal change in the financial situation. Before peace was restored in the autumn of 1905, Japan had been obliged to borrow 405,000,000 yen at home and 1,054,000,000 abroad, so that she found herself in 1908 with a total debt of 2,276,000,000 yen, of which aggregate her domestic indebtedness stood for 1,110,000,000 and her foreign borrowings amounted to 1,166,000,000. This meant that her debt had grown from 561,000,000 yen in 1904 to 2,276,000,000 yen¹ in 1908; or from 11·3 yen to 43·8 yen per head of the population. Further, out of the grand total, the sum actually spent on account of war and armaments represented 1,357,000,000 yen. The debt carried interest varying from 4 to 5%.

It will be observed that the country's indebtedness grew by 1,700,000,000 yen, in round numbers, owing to the war with Russia. This added obligation the government resolved to discharge within the space of 30 years, for which purpose the Diet was asked to approve the establishment of a national debt consolidation fund, which should be kept distinct from the general accounts of revenue and expenditure, and specially applied to payment of interest and redemption of principal. The amount of this fund was never to fall below 110,000,000 yen annually. Immediately after the war, the Diet approved a cabinet proposal for the nationalization of 17 private railways, at a cost of 500,000,000 yen, and this brought the state's debts to 2,776,000,000 yen in all. The people becoming impatient of this large burden, a scheme was finally adopted in 1908 for appropriating a sum of at least 50,000,000 yen annually to the purpose of redemption.

Local Finance.—Between 1878 and 1888 a system of local autonomy in matters of finance was fully established. Under this system the total expenditures of the various corporations in the last year of each quinquennial period commencing from the fiscal year 1887-1890 were as follow:—

Year.	Total Expenditure (millions of yen).
1880-1890	22
1893-1894	52
1898-1899	97
1903-1904 ²	158
1907-1908	167

¹ In this is included a sum of 110,000,000 yen distributed in the form of loan-bonds among the officers and men of the army and navy by way of reward for their services during the war of 1904-5.

² When war broke out in 1904 the local administrative districts took steps to reduce their outlays, so that whereas the expenditures totalled 158,000,000 yen in 1903-1904, they fell to 122,000,000 and 126,000,000 in 1904-1905 and 1905-1906 respectively. Thereafter, however, they expanded once more.

In the same years the total indebtedness of the corporations was:—

Year.	Debts (millions of yen).
1890	1
1894	10
1899	32
1904	65
1907	89 ³

The chief purposes to which the proceeds of these loans were applied are as follow:—

	Millions of yen.
Education	5
Sanitation	12
Industries	13
Public works	52

Local corporations are not competent to incur unrestricted indebtedness. The endorsement of the local assembly must be secured; redemption must commence within 3 years after the date of issue and be completed within 30 years; and, except in the case of very small loans, the sanction of the minister of home affairs must be obtained.

Wealth of Japan.—With reference to the wealth of Japan, there is no official census. So far as can be estimated from statistics for the year 1904-1905, the wealth of Japan proper, excluding Formosa, Sakhalin and some rights in Manchuria, amounts to about 19,896,000,000 yen, the items of which are as follow:—

	Yen (10 yen = £1).
Lands	12,301,000,000
Buildings	2,331,000,000
Furniture and fittings	1,080,000,000
Livestock	109,000,000
Railways, telegraphs and telephones	707,000,000
Shipping	376,000,000
Merchandise	873,000,000
Specie and bullion	310,000,000
Miscellaneous	1,809,000,000
Grand total	19,896,000,000

Education.—There is no room to doubt that the literature and learning of China and Korea were transported to Japan in very ancient times, but tradition is the sole authority *Early* for current statements that in the 3rd century a *Edictipia*. Korean immigrant was appointed historiographer to the Imperial court of Japan and another learned man from the same country introduced the Japanese to the treasures of Chinese literature. About the end of the 6th century the Japanese court began to send civilians and religionists direct to China, there to study Confucianism and Buddhism, and among these travellers there were some who passed as much as 25 or 30 years beyond the sea. The knowledge acquired by these students was crystallized into a body of laws and ordinances based on the administrative and legal systems of the Sui dynasty in China, and in the middle of the 7th century the first Japanese school seems to have been established by the emperor Tenchi, followed some 50 years later by the first university. Nara was the site of the latter, and the subjects of study were ethics, law, history and mathematics.

Not until 794, the date of the transfer of the capital to Kiōto, however, is there any evidence of educational organization on a considerable scale. A university was then opened in the capital, with affiliated colleges; and local schools were built and endowed by noble families, to whose scions admittance was restricted, but for general education one institution only appears to have been provided. In this Kiōto university the curriculum included the Chinese classics, calligraphy, history, law, etiquette, arithmetic and composition; while in the affiliated colleges special subjects were taught, as medicine, herbalism, acupuncture, shampooing, dietation, the almanac and languages. Admission was limited to youths of high social grade; the students aggregated some 400, from 13 to 16 years of age; the faculty included professors and teachers, who were known by the same titles (*hakase* and *shi*) as those applied to their successors to-day; and the government supplied food and clothing as well as books. The family schools numbered five, and their patrons were the Wage, the Fujiwara, the Tachibana (one school each) and the Minamoto (two). At the one institution—opened in 828—where youths in general might receive instruction, the course

³ This includes 22½ millions of loans raised abroad.

embraced only calligraphy and the precepts of Buddhism and Confucianism.

The above retrospect suggests that Japan, in those early days, borrowed her educational system and its subjects of study entirely from China. But closer scrutiny shows that the national factor was carefully preserved. The ethics of administration required a combination of two elements, *wakon*, or the soul of Japan, and *kwansai*, or the ability of China; so that, while adopting from Confucianism the doctrine of filial piety, the Japanese grafted on it a spirit of unswerving loyalty and patriotism; and while accepting Buddha's teaching as to three states of existence, they supplemented it by a belief that in the life beyond the grave the duty of guarding his country would devolve on every man. Great academic importance attached to proficiency in literary composition, which demanded close study of the ideographic script, endlessly perplexing in form and infinitely delicate in sense. To be able to compose and indite graceful couplets constituted a passport to high office as well as to the favour of great ladies, for women vied with men in this accomplishment. The early years of the 11th century saw, grouped about the empress Aki, a galaxy of female authors whose writings are still accounted their country's classics—Murasaki no Shikibu, Akazome Emon, Izumi Shikibu, Ise Taiyu and several lesser lights. To the first two Japan owes the *Genji monogatari* and the *Eiga monogatari*, respectively, and from the Imperial court of those remote ages she inherited admirable models of painting, calligraphy, poetry, music, song and dance. But it is to be observed that all this refinement was limited virtually to the noble families residing in Kiōto, and that the first object of education in that era was to fit men for office and for society.

Meanwhile, beyond the precincts of the capital there were rapidly growing to maturity numerous powerful military magnates who despised every form of learning that did not contribute to martial excellence. An illiterate era ensued which reached its climax with the establishment of feudalism at the close of the 12th century. It is recorded that, about that time, only one man out of a force of five thousand could decipher an Imperial mandate addressed to them. Kamakura, then the seat of feudal government, was at first distinguished for absence of all intellectual training, but subsequently the course of political events brought thither from Kiōto a number of court nobles whose erudition and refinement acted as a potent leaven. Buddhism, too, had been from the outset a strong educating influence. Under its auspices the first great public library was established (1270) at the temple Shōmyō-ji in Kanazawa. It is said to have contained practically all the Chinese and Japanese books then existing, and they were open for perusal by every class of reader. To Buddhist priests, also, Japan owed during many years all the machinery she possessed for popular education. They organized schools at the temples scattered about in almost every part of the empire, and at these *tera-koya*, as they were called, lessons in ethics, calligraphy, reading and etiquette were given to the sons of samurai and even to youths of the mercantile and manufacturing classes.

When, at the beginning of the 17th century, administrative supremacy fell into the hands of the Tokugawa, the illustrious founder of that dynasty of shōguns, Iyeyasu, showed himself an earnest promoter of erudition. He employed a number of priests to make copies of Chinese and Japanese books; he patronized men of learning and he endowed schools. It does not appear to have occurred to him, however, that the spread of knowledge was hampered by a restriction which, emanating originally from the Imperial court in Kiōto, forbade any one outside the ranks of the Buddhist priesthood to become a public teacher. To his fifth successor Tsunayoshi (1680-1709) was reserved the honour of abolishing this veto. Tsunayoshi, whatever his faults, was profoundly attached to literature. By his command a pocket edition of the Chinese classics was prepared, and the example he himself set

in reading and expounding rare books to audiences of feudatories and their vassals produced something like a mania for erudition, so that feudal chiefs competed in engaging teachers and founding schools. The eighth shōgun, Yoshimunē (1716-1749), was an even more enlightened ruler. He caused a geography to be compiled and an astronomical observatory to be constructed; he revoked the veto on the study of foreign books; he conceived and carried out the idea of imparting moral education through the medium of calligraphy by preparing ethical primers whose precepts were embodied in the head-lines of copy-books, and he encouraged private schools. Iyenari (1787-1838), the eleventh shōgun, and his immediate successor, Iyeyoshi (1838-1853), patronized learning no less ardently, and it was under the auspices of the latter that Japan acquired her five classics, the primers of *True Words*, of *Great Learning*, of *Lesser Learning*, of *Female Ethics* and of *Women's Filial Piety*.

Thus it may be said that the system of education progressed steadily throughout the Tokugawa era. From the days of Tsunayoshi the number of fief schools steadily increased, and as students were admitted free of all charges, a duty of grateful fealty as well as the impulse of interfief competition drew thither the sons of all samurai. Ultimately the number of such schools rose to over 240, and being supported entirely at the expense of the feudal chiefs, they did no little honour to the spirit of the era. From 7 to 15 years of age lads attended as day scholars, being thereafter admitted as boarders, and twice a year examinations were held in the presence of high officials of the fief. There were also several private schools where the curriculum consisted chiefly of moral philosophy, and there were many temple schools, where ethics, calligraphy, arithmetic, etiquette and, sometimes, commercial matters were taught. A prominent feature of the system was the bond of reverential affection uniting teacher and student. Before entering school a boy was conducted by his father or elder brother to the home of his future teacher, and there the visitors, kneeling before the teacher, pledged themselves to obey him in all things and to submit unquestioningly to any discipline he might impose. Thus the teacher came to be regarded as a parent, and the veneration paid to him was embodied in a precept: "Let not a pupil tread within three feet of his teacher's shadow." In the case of the temple schools the priestly instructor had full cognisance of each student's domestic circumstances and was guided by that knowledge in shaping the course of instruction. The universally underlying principle was, "serve the country and be diligent in your respective avocations." Sons of samurai were trained in military arts, and on attaining proficiency many of them travelled about the country, inuring their bodies to every kind of hardship and challenging all experts of local fame.

Unfortunately, however, the policy of national seclusion prevented for a long time all access to the stores of European knowledge. Not until the beginning of the 18th century did any authorized account of the great world of the West pass into the hands of the people. A celebrated scholar (Arai Hakuseki) then compiled two works—*Saiyō kibun* (*Record of Occidental Hearsay*), and *Sairan igen* (*Renderings of Foreign Languages*)—which embodied much information, obtained from Dutch sources, about Europe, its conditions and its customs. But of course the light thus furnished had very restricted influence. It was not extinguished, however. Thenceforth men's interest centred more and more on the astronomical, geographical and medical sciences of the West, though such subjects were not included in academical studies until the renewal of foreign intercourse in modern times. Then (1857), almost immediately, the nation turned to Western learning, as it had turned to Chinese thirteen centuries earlier. The Tokugawa government established in Yedo an institution called *Bansho-shirabe-dokoro* (place for studying foreign books), where Occidental languages were learned and Occidental works translated. Simultaneously a school for acquiring foreign medical art (*Seiyo igaku-sho*) was opened, and, a little later (1862), the *Kaisei-jo* (place of liberal culture), a college for studying European sciences, was added to the list of new institutions. Thus the eve of the Restoration saw the

Japanese people already appreciative of the stores of learning rendered accessible to them by contact with the Occident.

Commercial education was comparatively neglected in the schools. Sons of merchants occasionally attended the *tera-koya*, but the instruction they received there had seldom any bearing upon the conduct of trade. Mercantile knowledge had to be acquired by a system of apprenticeship. A boy of 9 or 10 was apprenticed for a period of 8 or 9 years to a merchant, who undertook to support him and teach him a trade. Generally this young apprentice could not even read or write. He passed through all the stages of shop menial, errand boy, petty clerk, salesman and senior clerk, and in the evenings he received instruction from a teacher, who used for textbooks the manual of letter-writing (*Shosoku orai*) and the manual of commerce (*Shobai orai*). The latter contained much useful information, and a youth thoroughly versed in its contents was competent to discharge responsible duties. When an apprentice, having attained the position of senior clerk, had given proof of practical ability, he was often assisted by his master to start business independently, but under the same firm-name, for which purpose a sum of capital was given to him or a section of his master's customers were assigned.

When the government of the Restoration came into power, the emperor solemnly announced that the administration should be conducted on the principle of employing men of capacity wherever they could be found. This amounted to a declaration that in choosing officials scholastic acquirements would thenceforth take precedence of the claims of birth, and thus unprecedented importance was seen to attach to education. But so long as the feudal system survived, even in part, no general scheme of education could be thoroughly enforced, and thus it was not until the conversion of the fiefs into prefectures in 1871 that the government saw itself in a position to take drastic steps. A commission of investigation was sent to Europe and America, and on its return a very elaborate and extensive plan was drawn up in accordance with French models, which the commissioners had found conspicuously complete and symmetrical. This plan subsequently underwent great modifications. It will be sufficient to say that in consideration of the free education hitherto provided by the feudatories in their various fiefs, the government of the restoration resolved not only that the state should henceforth shoulder the main part of this burden, but also that the benefits of the system should be extended equally to all classes of the population, and that the attendance at primary schools should be compulsory. At the outset the sum to be paid by the treasury was fixed at 2,000,000 yen, that having been approximately the expenditure incurred by the feudatories. But the financial arrangements suffered many changes from time to time, and finally, in 1877, the cost of maintaining the schools became a charge on the local taxes, the central treasury granting only sums in aid.

Every child, on attaining the age of six, must attend a common elementary school, where, during a six-years' course, instruction is given in morals, reading, arithmetic, the rudiments of technical work, gymnastics and poetry. Year by year the attendance at these schools has increased. Thus, whereas in the year 1900, only 81.67 % of the school-age children of both sexes received the prescribed elementary instruction, the figure in 1905 was 94.93 %. The desire for instruction used to be keener among boys than among girls, as was natural in view of the difference of inducement; but ultimately this discrepancy disappeared almost completely. Thus, whereas the percentage of girls attending school was 75.90 in 1900, it rose to 91.46 in 1905, and the corresponding figures for boys were 90.55 and 97.10 respectively. The tuition fee paid at a common elementary school in the rural districts must not exceed 5s. yearly, and in the urban districts, 10s.; but in practice it is much smaller, for these elementary schools form part of the communal system, and such portion of their expenses as is not covered by tuition fees, income from school property and miscellaneous sources, must be defrayed out of the proceeds of local taxation. In 1909 there were 18,160 common elementary schools, and also 9105 schools classed as elementary but having sections where, subsequently to the completion of the regular curriculum, a special supplementary course of study might be pursued in agriculture, commerce or industry (needle-work in the case of girls). The time devoted to these special courses is two, three or four years, according to the degree

of proficiency contemplated, and the maximum fees are 15d. per month in urban districts and one-half of that amount in rural districts.

There are also 294 kindergartens, with an attendance of 26,000 infants, whose parents pay 3d. per month on the average for each child. In general the kindergartens are connected with elementary schools or with normal schools.

If a child, after graduation at a common elementary school, desires to extend its education, it passes into a common middle school, where training is given for practical pursuits or for admission to higher educational institutions. The ordinary curriculum at a common middle school includes moral philosophy, English language, history, geography, mathematics, natural history, natural philosophy, chemistry, drawing and the Japanese language. Five years are required to graduate, and from the fourth year the student may take up a special technical course as well as the main course; or, in accordance with local requirements, technical subjects may be taught conjointly with the regular curriculum throughout the whole time. The law provides that there must be at least one common middle school in each prefecture. The actual number in 1909 was 216.

Great inducements attract attendance at a common middle school. Not only does the graduation certificate carry considerable weight as a general qualification, but it also entitles a young man to volunteer for one year's service with the colours, thus escaping one of the two years he would have to serve as an ordinary conscript.

The graduate of a common middle school can claim admittance, without examination, to a high school, where he spends three years preparing to pass to a university, or four years studying a special subject, as law, engineering or medicine. By following the course in a high school, a youth obtains exemption from conscription until the age of 28, when one year as a volunteer will free him from all service with the colours. A high-school certificate of graduation entitles its holder to enter a university without examination, and qualifies him for all public posts.

For girls also high schools are provided, the object being to give a general education of higher standard. Candidates for admission must be over 12 years of age, and must have completed the second-year course of a higher elementary school. The regular course of study requires 4 years, and supplementary courses as well as special art courses may be taken.

In addition to the schools already enumerated, which may be said to constitute the machinery of general education, there are special schools, generally private, and technical schools (including a few private), where instruction is given in medicine and surgery, agriculture, commerce, mechanics, applied chemistry, navigation, electrical engineering, art (pictorial and applied), veterinary science, sericulture and various other branches of industry. There are also apprentices' schools, classed under the heading of elementary, where a course of not less than six months, and not more than four years, may be taken in dyeing and weaving, embroidery, the making of artificial flowers, tobacco manufacture, sericulture, reeling silk, pottery, lacquer, woodwork, metal-work or brewing. There are also schools—nearly all supported by private enterprise—for the blind and the dumb.

Normal schools are maintained for the purpose of training teachers, a class of persons not plentiful in Japan, doubtless because of an exceptionally low scale of emoluments, the yearly pay not exceeding £60 and often falling as low as £15.

There are two Imperial universities, one in Tokyo and one in Kioto. In 1909 the former had about 220 professors and instructors and 2880 students. Its colleges number six: law, medicine, engineering, literature, science and agriculture. It has a university hall where post-graduate courses are studied, and it publishes a quarterly journal giving accounts of scientific researches, which indicate not only large erudition, but also original talent. The university of Kioto is a comparatively new institution and has not given any signs of great vitality. In 1909 its colleges numbered four: law, medicine, literature and science; its faculty consisted of about 60 professors with 70 assistants, and its students aggregated about 1100.

Except in the cases specially indicated, all the figures given above are independent of private educational institutions. The system pursued by the state does not tend to encourage private education, for unless a private school brings its curriculum into exact accord with that prescribed for public institutions of corresponding grade, its students are denied the valuable privilege of partial exemption from conscription, as well as other advantages attaching to state recognition. Thus the quality of the instruction being nominally the same, the rate of fees must also be similar, and no margin offers to tempt private enterprise.

Public education in Japan is strictly secular: no religious teaching of any kind is permitted in the schools. There are about 100 libraries. Progress is marked in this branch, the rate of growth having been from 43 to 100 in the five-year period ended 1905. The largest library is the Imperial, in Tokyo. It had about half a million volumes in 1909, and the daily average of visitors was about 430.

Apart from the universities, the public educational institutions in Japan involve an annual expenditure of 3½ millions sterling, out of which total a little more than half a million is met by students' fees; 2½ millions are paid by the communes, and the remainder is

drawn from various sources, the central government contributing only some £28,000. It is estimated that public school property—in land, buildings, books, furniture, &c., aggregates 11 millions sterling.

VII.—RELIGION

The primitive religion of Japan is known by the name of Shintō, which signifies "the divine way," but the Japanese maintain that this term is of comparatively modern application. The term Shintō being obviously of Chinese origin, cannot have been used in Japan before she became acquainted with the Chinese language. Now Buddhism did not reach Japan until the 6th century, and a knowledge of the Chinese language had preceded it by only a hundred years. It is therefore reasonable to conclude that the primitive religion of Japan had no name, and that it did not begin to be called Shintō until Buddhism had entered the field. The two creeds remained distinct, though not implacably antagonistic, until the beginning of the 9th century, when they were welded together into a system of doctrine to which the name *Ryōbu-Shintō* (dual Shintō) was given. In this new creed the Shintō deities were regarded as avatars of Buddhist divinities, and thus it may be said that Shintō was absorbed into Buddhism. Probably that would have been the fate of the indigenous creed in any circumstances, for a religion without a theory as to a future state and without any code of moral duties could scarcely hope to survive contact with a faith so well equipped as Buddhism in these respects. But Shintō, though absorbed, was not obliterated. Its beliefs survived; its shrines survived; its festivals survived, and something of its rites survived also.

Shintō, indeed, may be said to be entwined about the roots of Japan's national existence. Its scripture—as the *Kojiki* must be considered—resembles the Bible in that both begin with the cosmogony. But it represents the gods as peopling the newly created earth with their own offspring instead of with human beings expressly made for the purpose. The actual work of creation was done by a male deity, *Izanagi*, and a female deity, *Izanami*. From the right eye of the former was born *Amaterasu*, who became goddess of the sun; from his left eye, the god of the moon; and from his nose, a species of Lucifer. The grandson of the sun goddess was the first sovereign of Japan, and his descendants have ruled the land in unbroken succession ever since, the 121st being on the throne in 1909. Thus it is to *Amaterasu* (the heaven-illuminating goddess) that the Japanese pay reverence above all other deities, and it is to her shrine at Ise that pilgrims chiefly flock.

The story of creation, as related in the *Kojiki*, is obviously based on a belief that force is indestructible, and that every exercise of it is productive of some permanent result. Thus by the motions of the creative spirit there spring into existence all the elements that go to make up the universe, and these, being of divine origin, are worshipped and propitiated. Their number becomes immense when we add the deified ghosts of ancestors who were descended from the gods and whose names are associated with great deeds. These ancestors are often regarded as the tutelary deities of districts, where they receive special homage and where shrines are erected to them. The method of worship consists in making offerings and in the recital of rituals (*narito*). Twenty-seven of these rituals were reduced to writing and embodied in a work called *Engishiki* (927). Couched in antique language, these liturgies are designed for the dedication of shrines, for propitiating evil, for entreating blessings on the harvest, for purification, for obtaining household security, for bespeaking protection during a journey, and so forth. Nowhere is any reference found to a future state of reward or punishment, to deliverance from evil, to assistance in the path of virtue. One ceremonial only is designed to avert the consequences of sin or crime; namely, the rite of purification, which, by washing with water and by the sacrifice of valuables, removes the pollution resulting from all wrong-doing. Originally performed on behalf of individuals, this *harae* ultimately came to be a semi-annual ceremony for sweeping away the sins of all the people.

Shintō is thus a mixture of ancestor-worship and of nature-worship without any explicit code of morals. It regards human beings as virtuous by nature; assumes that each man's conscience is his best guide; and while believing in a continued existence beyond the grave, entertains no theory as to its pleasures or pains. Those that pass away become disembodied spirits, inhabiting the world of darkness (*yomi-no-yo*) and possessing power to bring sorrow or joy into the lives of their survivors, on which account they are worshipped and propitiated. Purity and simplicity being essential characteristics of the cult, its shrines are built of white wood, absolutely without decorative features of any kind, and fashioned as were the original huts of the first Japanese settlers. There are no graven images—a fact attributed by some critics to ignorance of the glyptic art on the part of the original worshippers—but there is an emblem of the deity, which generally takes the form of a sword, a mirror or a so-called jewel, these being the insignia handed by the sun goddess to her grandson, the first ruler of Japan. This emblem is not exposed to public view; it is enveloped in silk and brocade and enclosed in a box at the back of the shrine. The mirror sometimes prominent is a Buddhist innovation and has nothing to do with the true emblem of the creed.

From the 9th century, when Buddhism absorbed Shintō, the two grew together so intimately that their differentiation seemed hopeless. But in the middle of the 17th century a strong revival of the indigenous faith was effected by the efforts of a group of illustrious scholars and politicians, at whose head stood Mabuchi, Motoori and Hirata. These men applied themselves with great diligence and acumen to reproduce the pure Shintō of the *Kojiki* and to restore it to its old place in the nation's reverence, their political purpose being to educate a spirit of revolt against the feudal system which deprived the emperor of administrative power. The principles thus revived became the basis of the restoration of 1867; Shintō rites and Shintō rituals were re-adopted, and Buddhism fell for a season into comparative disfavour, Shintō being regarded as the national religion. But Buddhism had twined its roots too deeply around the heart of the people to be thus easily torn up. It gradually recovered its old place, though not its old magnificence, for its disestablishment at the hands of the Meiji government robbed it of a large part of its revenues.

Buddhism entered China at the beginning of the Christian era, but not until the 4th century did it obtain any strong footing. Thence, two centuries later (522), it reached Japan through Korea. The reception extended to it was not encouraging at first. Its images and its brilliant appurtenances might well deter a nation which had never seen an idol nor ever worshipped in a decorated temple. But the ethical teachings and the positive doctrines of the foreign faith presented an attractive contrast to the colourless Shintō. After a struggle, not without bloodshed, Buddhism won its way. It owed much to the active patronage of Shōtoku taishi, prince-regent during the reign of the empress Suiko (593–621). At his command many new temples were built; the country was divided into dioceses under Buddhist prelates; priests were encouraged to teach the arts of road-making and bridge-building, and students were sent to China to investigate the mysteries of the faith at its supposed fountain-head. Between the middle of the 7th century and that of the 8th, six sects were introduced from China, all imperfect and all based on the teachings of the Hinayana system. Up to this time the propagandists of the creed had been chiefly Chinese and Korean teachers. But from the 8th century onwards, when Kiōto became the permanent capital of the empire, Japanese priests of lofty intelligence and profound piety began to repair to China and bring thence modified forms of the doctrines current there. It was thus that Dengyō daishi (c. 800) became the founder of the Tendai (heavenly tranquillity) sect and Kōbō daishi (774–834) the apostle of the Shingon (true word). Other sects followed, until the country possessed six principal sects in all with thirty-seven sub-sects. It must be remembered that Buddhism offers an almost limitless field for eclecticism. There is not in the world any literary production

Japanese people already appreciative of the stores of learning rendered accessible to them by contact with the Occident.

Commercial education was comparatively neglected in the schools. Sons of merchants occasionally attended the *tera-koya*, but the instruction they received there had seldom any bearing upon the conduct of trade. Mercantile knowledge had to be acquired by a system of apprenticeship. A boy of 9 or 10 was apprenticed for a period of 8 or 9 years to a merchant, who undertook to support him and teach him a trade. Generally this young apprentice could not even read or write. He passed through all the stages of shop menial, errand boy, petty clerk, salesman and senior clerk, and in the evenings he received instruction from a teacher, who used for textbooks the manual of letter-writing (*Shosoku orai*) and the manual of commerce (*Shōbai orai*). The latter contained much useful information, and a youth thoroughly versed in its contents was competent to discharge responsible duties. When an apprentice, having attained the position of senior clerk, had given proof of practical ability, he was often assisted by his master to start business independently, but under the same firm-name, for which purpose a sum of capital was given to him or a section of his master's customers were assigned.

When the government of the Restoration came into power, the emperor solemnly announced that the administration should be conducted on the principle of employing men of capacity wherever they could be found. This amounted to a declaration that in choosing officials scholastic acquirements would thenceforth take precedence of the claims of birth, and thus unprecedented importance was seen to attach to education. But so long as the feudal system survived, even in part, no general scheme of education could be thoroughly enforced, and thus it was not until the conversion of the fiefs into prefectures in 1871 that the government saw itself in a position to take drastic steps. A commission of investigation was sent to Europe and America, and on its return a very elaborate and extensive plan was drawn up in accordance with French models, which the commissioners had found conspicuously complete and symmetrical. This plan subsequently underwent great modifications. It will be sufficient to say that in consideration of the free education hitherto provided by the feudatories in their various fiefs, the government of the restoration resolved not only that the state should henceforth shoulder the main part of this burden, but also that the benefits of the system should be extended equally to all classes of the population, and that the attendance at primary schools should be compulsory. At the outset the sum to be paid by the treasury was fixed at 2,000,000 yen, that having been approximately the expenditure incurred by the feudatories. But the financial arrangements suffered many changes from time to time, and finally, in 1877, the cost of maintaining the schools became a charge on the local taxes, the central treasury granting only sums in aid.

Every child, on attaining the age of six, must attend a common elementary school, where, during a six-years' course, instruction is given in morals, reading, arithmetic, the rudiments of technical work, gymnastics and poetry. Year by year the attendance at these schools has increased. Thus, whereas in the year 1900, only 81.67 % of the school-age children of both sexes received the prescribed elementary instruction, the figure in 1905 was 94.93 %. The desire for instruction used to be keener among boys than among girls, as was natural in view of the difference of inducement; but ultimately this discrepancy disappeared almost completely. Thus, whereas the percentage of girls attending school was 75.90 in 1900, it rose to 91.46 in 1905, and the corresponding figures for boys were 90.55 and 97.10 respectively. The tuition fee paid at a common elementary school in the rural districts must not exceed 5s. yearly, and in the urban districts, 10s.; but in practice it is much smaller, for these elementary schools form part of the communal system, and such portion of their expenses as is not covered by tuition fees, income from school property and miscellaneous sources, must be defrayed out of the proceeds of local taxation. In 1909 there were 18,160 common elementary schools, and also 9105 schools classed as elementary but having sections where, subsequently to the completion of the regular curriculum, a special supplementary course of study might be pursued in agriculture, commerce or industry (needle-work in the case of girls). The time devoted to these special courses is two, three or four years, according to the degree

of proficiency contemplated, and the maximum fees are 15d. per month in urban districts and one-half of that amount in rural districts.

There are also 294 kindergartens, with an attendance of 26,000 infants, whose parents pay 3d. per month on the average for each child. In general the kindergartens are connected with elementary schools or with normal schools.

If a child, after graduation at a common elementary school, desires to extend its education, it passes into a common middle school, where training is given for practical pursuits or for admission to higher educational institutions. The ordinary curriculum at a common middle school includes moral philosophy, English language, history, geography, mathematics, natural history, natural philosophy, chemistry, drawing and the Japanese language. Five years are required to graduate, and from the fourth year the student may take up a special technical course as well as the main course; or, in accordance with local requirements, technical subjects may be taught conjointly with the regular curriculum throughout the whole time. The law provides that there must be at least one common middle school in each prefecture. The actual number in 1909 was 216.

Great inducements attract attendance at a common middle school. Not only does the graduation certificate carry considerable weight as a general qualification, but it also entitles a young man to volunteer for one year's service with the colours, thus escaping one of the two years he would have to serve as an ordinary conscript.

The graduate of a common middle school can claim admittance, without examination, to a high school, where he spends three years preparing to pass to a university, or four years studying a special subject, as law, engineering or medicine. By following the course in a high school, a youth obtains exemption from conscription until the age of 28, when one year as a volunteer will free him from all service with the colours. Normal schools are maintained for the purpose of training teachers, a class of persons not plentiful in Japan, doubtless because of an exceptionally low scale of emoluments, the yearly pay not exceeding £60 and often falling as low as £15.

There are two Imperial universities, one in Tokyo and one in Kioto. In 1909 the former had about 220 professors and instructors and 2880 students. Its colleges number six: law, medicine, engineering, literature, science and agriculture. It has a university hall where post-graduate courses are studied, and it publishes a quarterly journal giving accounts of scientific researches, which indicate not only large erudition, but also original talent. The university of Kioto is a comparatively new institution and has not given any signs of great vitality. In 1909 its colleges numbered four: law, medicine, literature and science; its faculty consisted of about 60 professors with 70 assistants, and its students aggregated about 1100.

Except in the cases specially indicated, all the figures given above are independent of private educational institutions. The system pursued by the state does not tend to encourage private education, for unless a private school brings its curriculum into exact accord with that prescribed for public institutions of corresponding grade, its students are denied the valuable privilege of partial exemption from conscription, as well as other advantages attaching to state recognition. Thus the quality of the instruction being nominally the same, the rate of fees must also be similar, and no margin offers to tempt private enterprise.

Public education in Japan is strictly secular: no religious teaching of any kind is permitted in the schools. There are about 100 libraries. Progress is marked in this branch, the rate of growth having been from 43 to 100 in the five-year period ended 1905. The largest library is the Imperial, in Tokyo. It had about half a million volumes in 1909, and the daily average of visitors was about 430.

Apart from the universities, the public educational institutions in Japan involve an annual expenditure of 3½ millions sterling, out of which total a little more than half a million is met by students' fees; 2½ millions are paid by the communes, and the remainder is

becomes 137,000. In spite of the numerous sects represented in Japan there has been virtually no sectarian strife, and it may be said of the Japanese converts that they concern themselves scarcely at all about the subtleties of dogma which divide European Christianity. Their tendency is to consider only the practical aspects of the faith as a moral and ethical guide. They are disposed, also, to adapt the creed to their own requirements, just as they adapted Buddhism, and this is a disposition which promises to grow.

VIII.—FOREIGN INTERCOURSE

Foreign Intercourse in Early and Medieval Times.—There can be no doubt that commerce was carried on by Japan with China and Korea earlier than the 8th century of the Christian era. It would appear that from the very outset over-sea trade was regarded as a government monopoly. Foreigners were allowed to travel freely in the interior of the country provided that they submitted their baggage for official inspection and made no purchases of weapons of war, but all imported goods were bought in the first place by official appraisers who subsequently sold them to the people at arbitrarily fixed prices. Greater importance attached to the trade with China under the Ashikaga shōguns (14th, 15th and 16th centuries), who were in constant need of funds to defray the cost of interminable military operations caused by civil disturbances. In this distress they turned to the neighbouring empire as a source from which money might be obtained. This idea seems to have been suggested to the shōgun Takauji by a Buddhist priest, when he undertook the construction of the temple Tenryū-ji. Two ships laden with goods were fitted out, and it was decided that the enterprise should be repeated annually. Within a few years after this development of commercial relations between the two empires, an interruption occurred owing partly to the overthrow of the Yuen Mongols by the Chinese Ming, and partly to the activity of Japanese pirates and adventurers who raided the coasts of China. The shōgun Yoshimitsu (1368-1394), however, succeeded in restoring commercial intercourse, though in order to effect his object he consented that goods sent from Japan should bear the character of tribute and that he himself should receive investiture at the hands of the Chinese emperor's ambassador. The Nanking government granted a certain number of commercial passports, and these were given by the shōgun to Ouchi, feudal chief of Cho-shu, which had long been the principal port for trade with the neighbouring empire. Tribute goods formed only a small fraction of a vessel's cargo: the bulk consisted of articles which were delivered into the government's stores in China, payment being received in copper cash. It was from this transaction that the shōgun derived a considerable part of his profits, for the articles did not cost him anything originally, being either presents from the great temples and provincial governors or compulsory contributions from the house of Ouchi. As for the gifts by the Chinese government and the goods shipped in China, they were arbitrarily distributed among the noble families in Japan at prices fixed by the shōgun's assessor. Thus, so far as the shōgun was concerned, these enterprises could not fail to be lucrative. They also brought large profits to the Ouchi family, for, in the absence of competition, the products and manufactures of each country found ready sale in the markets of the other. The articles found most suitable in China were swords, fans, screens, lacquer wares, copper and agate, and the goods brought back to Japan were brocade and other silk fabrics, ceramic productions, jade and fragrant woods. The Chinese seem to have had a just appreciation of the wonderful swords of Japan. At first they were willing to pay the equivalent of 12 guineas for a pair of blades, but by degrees, as the Japanese began to increase the supply, the price fell, and at the beginning of the 16th century all the diplomacy of the Japanese envoys was needed to obtain good figures for the large and constantly growing quantity of goods that they took over by way of supplement to the tribute. Buddhist priests generally enjoyed the distinction of being selected as envoys, for experience showed that their subtle reasoning invariably overcame the economical scruples of the Chinese authorities and secured a fine profit for their master, the shōgun. In the middle of the

16th century these tribute-bearing missions came to an end with the ruin of the Ouchi family and the overthrow of the Ashikaga shōguns, and they were never renewed.

Japan's medieval commerce with Korea was less ceremonious than that with China. No passports had to be obtained from the Korean government. A trader was sufficiently equipped when he carried a permit from the So family, which held the island of Tsushima in fief. Fifty vessels were allowed to pass yearly from ports in Japan to the three Japanese settlements in Korea. Little is recorded about the nature of this trade, but it was rudely interrupted by the Japanese settlers, who, offended at some arbitrary procedure on the part of the local Korean authorities, took up arms (A.D. 1510) and at first signally routed the Koreans. An army from Seoul turned the tables, and the Japanese were compelled to abandon the three settlements. Subsequently the shōgun's government—which had not been concerned in the struggle—approached Korea with amicable proposals, and it was agreed that the ringleaders of the raiders should be decapitated and their heads sent to Seoul, Japan's compliance with this condition affording, perhaps, a measure of the value she attached to neighbourly friendship. Thenceforth the number of vessels was limited to 25 annually and the settlements were abolished. Some years later, the Japanese again resorted to violent acts of self-assertion, and on this occasion, although the offenders were arrested by order of the shōgun Yoshiharu, and handed over to Korea for punishment, the Seoul court persisted in declining to restore the system of settlements or to allow the trade to be resumed on its former basis. Fifty years afterwards the taikō's armies invaded Korea, overrunning it for seven years, and leaving, when they retired in 1598, a country so impoverished that it no longer offered any attraction to commercial enterprise from beyond the sea.

The Portuguese discovered Japan by accident in 1542 or 1543—the exact date is uncertain. On a voyage to Macao from Siam, a junk carrying three Portuguese was blown from her course and fetched Tanegashima, a small island lying south of the province of Satsuma. The Japanese, always hospitable and inquisitive, welcomed the newcomers and showed special curiosity about the arquebuses carried by the Portuguese, fire-arms being then a novelty in Japan and all weapons of war being in great request. Conversation was impossible, of course, but, by tracing ideographs upon the sand, a Chinese member of the crew succeeded in explaining the cause of the junk's arrival. She was then piloted to a more commodious harbour, and the Portuguese sold two arquebuses to the local feudatory, who immediately ordered his armourer to manufacture similar weapons. Very soon the news of the discovery reached all the Portuguese settlements in the East, and at least seven expeditions were fitted out during the next few years to exploit this new market. Their objective points were all in the island of Kiūshū—the principal stage where the drama—ultimately converted into a tragedy—of Christian propagandism and European commercial intercourse was acted in the interval between 1542 and 1637.

It does not appear that the Jesuits at Macao, Goa or other centres of Portuguese influence in the East took immediate advantage of the discovery of Japan. The pioneer propagandist was Francis Xavier, who landed at Kagoshima on the 15th of August 1549. During the interval of six (or seven) years that separated this event from the drifting of the junk to Tanegashima, the Portuguese had traded freely in the ports of Kiūshū, had visited Kiōto, and had reported the Japanese capital to be a city of 96,000 houses, therefore larger than Lisbon. Xavier would certainly have gone to Japan even though he had not been specially encouraged, for the reports of his countrymen depicted the Japanese as "very desirous of being instructed," and he longed to find a field more promising than that inhabited by "all these Indian nations, barbarous, vicious and without inclination to virtue." There were, however, two special determinants. One was a request addressed by a feudatory, supposed to have been the chief of the

Bungo fief, to the viceroy of the Indies at Goa; the other, an appeal made in person by a Japanese named Yajiro, whom the fathers spoke of as Anjiro, and who subsequently attained celebrity under his baptismal name, Paul of the holy faith. No credible reason is historically assigned for the action of the Japanese feudatory. Probably his curiosity had been excited by accounts which the Portuguese traders gave of the noble devotion of their country's missionaries, and being entirely without bigotry, as nearly all Japanese were at that epoch, he issued the invitation partly out of curiosity and partly from a sincere desire for progress. Anjiro's case was very different. Labouring under stress of repentant zeal, and fearful that his evil acts might entail murderous consequences, he sought an asylum abroad, and was taken away in 1548 by a Portuguese vessel whose master advised him to repair to Malacca for the purpose of confessing to Xavier. This might well have seemed to the Jesuits a providential dispensation, for Anjiro, already able to speak Portuguese, soon mastered it sufficiently to interpret for Xavier and his fellow-missionaries (without which aid they must have remained long helpless in the face of the immense difficulty of the Japanese language), and to this linguistic skill he added extraordinary gifts of intelligence and memory. Xavier, with two Portuguese companions and Anjiro, were excellently received by the feudal chiefs of Satsuma and obtained permission to preach their doctrine in any part of the fief. This permit is not to be construed as an evidence of official sympathy with the foreign creed. Commercial considerations alone were in question. A Japanese feudal chief in that era had sedulously to foster every source of wealth or strength, and as the newly opened trade with the outer world seemed full of golden promise, each feudatory was not less anxious to secure a monopoly of it in the 16th century than the Ashikaga shōguns had been in the 15th. The Satsuma daimyō was led to believe that the presence of the Jesuits in Kagoshima would certainly prelude the advent of trading vessels. But within a few months one of the expected merchantmen sailed to Hirado without touching at Kagoshima, and her example was followed by two others in the following year, so that the Satsuma chief saw himself flouted for the sake of a petty rival, Matsudaira of Hirado. This fact could not fail to provoke his resentment. But there was another influence at work. Buddhism has always been a tolerant religion, eclectic rather than exclusive. Xavier, however, had all the bigoted intolerance of his time. The Buddhist priests in Kagoshima received him with courtesy and listened respectfully to the doctrines he expounded through the mouth of Anjiro. Xavier rejoined with a display of aggressive intolerance which shocked and alienated the Buddhists. They represented to the Satsuma chief that peace and good order were inconsistent with such a display of militant propagandism, and he, already profoundly chagrined by his commercial disappointment, issued in 1550 an edict making it a capital offence for any of his vassals to embrace Christianity. Xavier, or, more correctly speaking, Anjiro, had won 150 converts, who remained without molestation, but Xavier himself took ship for Hirado. There he was received with salvoes of artillery by the Portuguese merchantmen lying in the harbour and with marks of profound respect by the Portuguese traders, a display which induced the local chief to issue orders that courteous attention should be paid to the teaching of the foreign missionaries. In ten days a hundred baptisms took place; another significant index of the mood of the Japanese in the early era of Occidental intercourse: the men in authority always showed a complaisant attitude towards Christianity where trade could be fostered by so doing, and wherever the men in authority showed such an attitude, considerable numbers of the lower orders embraced the foreign faith. Thus, in considering the commercial history of the era, the element of religion constantly thrusts itself into the foreground.

Xavier next resolved to visit Kiōto. The first town of importance he reached on the way was Yamaguchi, capital of the Chōshū fief, situated on the northern shore of the Shimonoseki Strait. There the feudal chief, Ouchi, though sufficiently courteous and inquisitive, showed

no special cordiality towards humble missionaries unconnected with commerce, and the work of proselytizing made no progress, so that Xavier and his companion, Fernandez, pushed on to Kiōto. The time was mid-winter; the two fathers suffered terrible privations during their journey of two months on foot, and on reaching Kiōto they found a city which had been almost wholly reduced to ruins by internecine war. Necessarily they failed to obtain audience of either emperor or shōgun, at that time the most inaccessible potentates in the world, the Chinese "son of heaven" excepted, and nothing remained but street preaching, a strange resource, seeing that Xavier, constitutionally a bad linguist, had only a most rudimentary acquaintance with the profoundly difficult tongue in which he attempted to expound the mysteries of a novel creed. A fortnight sufficed to convince him that Kiōto was unfruitful soil. He therefore returned to Yamaguchi. But he had now learned a lesson. He saw that propagandism without scrip or staff and without the countenance of those sitting in the seats of power would be futile in Japan. So he obtained from Hirado his canonicals, together with a clock and other novel products of European skill, which, as well as credentials from the viceroy of India, the governor of Malacca and the bishop of Goa, he presented to the Chōshū chief. His prayer for permission to preach Christianity was now readily granted, and Ouchi issued a proclamation announcing his approval of the introduction of the new religion and according perfect liberty to embrace it. Xavier and Fernandez now made many converts. They also gained the valuable knowledge that the road to success in Japan lay in associating themselves with over-sea commerce and its directors, and in thus winning the co-operation of the feudal chiefs.

Nearly ten years had now elapsed since the first Portuguese landed in Kagoshima, and during that time trade had gone on steadily and prosperously. No attempt was made *Christian Propagandists* to find markets in the main island: the Portuguese confined themselves to Kiūshiū for two reasons: one, that having no knowledge of the coasts, they hesitated to risk their ships and their lives in unsurveyed waters; the other, that whereas the main island, almost from end to end, was seething with internecine war, Kiūshiū remained beyond the pale of disturbance and enjoyed comparative tranquillity. At the time of Xavier's second sojourn in Yamaguchi, a Portuguese ship happened to be visiting Bungo, and at its master's suggestion the great missionary proceeded thither, with the intention of returning temporarily to the Indies. At Bungo there was then ruling Otomo, second in power to only the Satsuma chief among the feudatories of Kiūshiū. By him the Jesuit father was received with all honour. Xavier did not now neglect the lesson he had learned in Yamaguchi. He repaired to the Bungo chieftain's court, escorted by nearly the whole of the Portuguese crew, gorgeously bedizen, carrying their arms and with banners flying. Otomo, a young and ambitious ruler, was keenly anxious to attract foreign traders with their rich cargoes and puissant weapons of war. Witnessing the reverence paid to Xavier by the Portuguese traders, he appreciated the importance of gaining the goodwill of the Jesuits, and accordingly not only granted them full freedom to teach and preach, but also enjoined upon his younger brother, who, in the sequel of a sudden rebellion, had succeeded to the lordship of Yamaguchi, the advisability of extending protection to Torres and Fernandez, then sojourning there. After some four months' stay in Bungo, Xavier set sail for Goa in February 1552. Death overtook him in the last month of the same year.

Xavier's departure from Japan marked the conclusion of the first epoch of Christian propagandism. His sojourn in Japan extended to 27 months. In that time he and his coadjutors won about 760 converts. In Satsuma more than a year's labour produced 150 believers. There Xavier had the assistance of Anjiro to expound his doctrines. No language lends itself with greater difficulty than Japanese to the discussion of theological questions. The terms necessary for such a purpose are not current among laymen, and only by special

study, which, it need scarcely be said, must be preluded by an accurate acquaintance with the tongue itself, can a man hope to become duly equipped for the task of exposition and dissertation. It is open to grave doubt whether any foreigner has ever attained the requisite proficiency. Leaving Anjiro in Kagoshima to care for the converts made there, Xavier pushed on to Hirado, where he baptized a hundred Japanese in a few days. Now we have it on the authority of Xavier himself that in this Hirado campaign "none of us knew Japanese." How then did they proceed? "By reciting a semi-Japanese volume" (a translation made by Anjiro of a treatise from Xavier's pen) "and by delivering sermons, we brought several over to the Christian cult." Sermons preached in Portuguese or Latin to a Japanese audience on the island of Hirado in the year 1550 can scarcely have attracted intelligent interest. On his first visit to Yamaguchi, Xavier's means of access to the understanding of his hearers was confined to the rudimentary knowledge of Japanese which Fernandez had been able to acquire in 14 months, a period of study which, in modern times, with all the aids now procurable, would not suffice to carry a student beyond the margin of the colloquial. No converts were won. The people of Yamaguchi probably admired the splendid faith and devotion of these over-sea philosophers, but as for their doctrine, it was unintelligible. In Kioto the same experience was repeated, with an addition of much physical hardship. But when the Jesuits returned to Yamaguchi in the early autumn of 1551, they baptized 500 persons, including several members of the military class. Still Fernandez with his broken Japanese was the only medium for communicating the profound doctrines of Christianity. It must be concluded that the teachings of the missionaries produced much less effect than the attitude of the local chieftain.

Only two missionaries, Torres and Fernandez, remained in Japan after the departure of Xavier, but they were soon joined by three others. These newcomers landed at Kagoshima and found that, in spite of the official veto against the adoption of Christianity, the feudal chief had lost nothing of his desire to foster foreign trade. Two years later, all the Jesuits in Japan were assembled in Bungo. Their only church stood there; and they had also built two hospitals. Local disturbances had compelled them to withdraw from Yamaguchi, not, however, before their violent disputes with the Buddhist priests in that town had induced the feudatory to proscribe the foreign religion, as had previously been done in Kagoshima. From Funai, the chief town of Bungo, the Jesuits began in 1579 to send yearly reports to their Generals in Rome. These reports, known as the *Annual Letters*, comprise some of the most valuable information available about the conditions then existing in Japan. They describe a state of abject poverty among the lower orders; poverty so cruel that the destruction of children by their famishing parents was an everyday occurrence, and in some instances choice had to be made between cannibalism and starvation. Such suffering becomes easily intelligible when the fact is recalled that Japan had been racked by civil war during more than 200 years, each feudal chief fighting for his own hand, to save or to extend his territorial possessions. From these *Annual Letters* it is possible also to gather a tolerably clear idea of the course of events during the years immediately subsequent to Xavier's departure. There was no break in the continuity of the newly inaugurated foreign trade. Portuguese ships visited Hirado as well as Bungo, and in those days their masters and crews not only attended scrupulously to their religious duties, but also showed such profound respect for the missionaries that the Japanese received constant object lessons in the influence wielded over the traders by the Jesuits. Thirty years later, this orderly and reverential demeanour was exchanged for riotous excesses such as had already made the Portuguese sailor a by-word in China. But in the early days of intercourse with Japan the crews of the merchant vessels seem to have preached Christianity by their exemplary conduct. Just as Xavier had been induced to visit Bungo by the anxiety of a ship-captain for

Christian ministrations, so in 1557 two of the fathers repaired to Hirado in obedience to the solicitations of Portuguese sailors. There the fathers, under the guidance of Vilela, sent brothers to parade the streets ringing bells and chaunting litanies; they organized bands of boys for the same purpose; they caused the converts, and even children, to flagellate themselves at a model of Mount Calvary, and they worked miracles, healing the sick by contact with scourges or with a booklet in which Xavier had written litanies and prayers. It may well be imagined that such doings attracted surprised attention in Japan. They were supplemented by even more striking practices. For a sub-feudatory of the Hirado chief, having been converted, showed his zeal by destroying Buddhist temples and throwing down the idols, thus inaugurating a campaign of violence destined to mark the progress of Christianity throughout the greater part of its history in Japan. There followed the overthrowing of a cross in the Christian cemetery, the burning of a temple in the town of Hirado, and a street riot, the sequel being that the Jesuit fathers were compelled to return once more to Bungo. It is essential to follow all these events, for not otherwise can a clear understanding be reached as to the aspects under which Christianity presented itself originally to the Japanese. The Portuguese traders, reverent as was their demeanour towards Christianity, did not allow their commerce to be interrupted by vicissitudes of propagandism. They still repaired to Hirado, and rumours of the wealth-begetting effects of their presence having reached the neighbouring fief of Omura, its chief, Sumitada, made overtures to the Jesuits in Bungo, offering a port free from all dues for ten years, a large tract of land, a residence for the missionaries and other privileges. The Jesuits hastened to take advantage of this proposal, and no sooner did the news reach Hirado than the feudatory of that island repented of having expelled the fathers and invited them to return. But while they hesitated, a Portuguese vessel arrived at Hirado, and the feudal chief declared publicly that no need existed to conciliate the missionaries, since trade went on without them. When this became known in Bungo, Torres hastened to Hirado, was received with extraordinary honours by the crew of the vessel, and at his instance she left the port, her master declaring that "he could not remain in a country where they maltreated those who professed the same religion as himself." Hirado remained a closed port for some years, but ultimately the advent of three merchantmen, which intimated their determination not to put in unless the anti-Christian ban was removed, induced the feudal chief to receive the Jesuits once more. This incident was paralleled a few years later in the island of Amakusa, where a petty feudatory, in order to attract foreign trade, as the missionaries themselves frankly explain, embraced Christianity and ordered all his vassals to follow his example; but when no Portuguese ship appeared, he apostatized, required his subjects to revert to Buddhism and made the missionaries withdraw. In fact, the competition for the patronage of Portuguese traders was so keen that the Hirado feudatory attempted to burn several of their vessels because they frequented the territorial waters of his neighbour and rival, Sumitada. The latter became a most stalwart Christian when his wish was gratified. He set himself to eradicate idolatry throughout his fief with the strong arm, and his fierce intolerance provoked results which ended in the destruction of the Christian town at the newly opened free port. Sumitada, however, quickly reasserted his authority, and five years later (1567), he took a step which had far-reaching consequences, namely, the building of a church at Nagasaki, in order that Portuguese commerce might have a centre and the Christians an assured asylum. Nagasaki was then a little fishing village. In five years it grew to be a town of thirty thousand inhabitants, and Sumitada became one of the richest of the Kiushiu feudatories. When in 1573 successful conflicts with the neighbouring fiefs brought him an access of territory, he declared that he owed these victories to the influence of the Christian God, and shortly afterwards he publicly proclaimed banishment for all who would not accept the foreign faith. There were then no Jesuits by his side, but immediately two

hastened to join him, and "these, accompanied by a strong guard, but yet not without danger of their lives, went round causing the churches of the Gentiles, with their idols, to be thrown to the ground, while three Japanese Christians went preaching the law of God everywhere. Three of us who were in the neighbouring kingdoms all withdrew therefrom to work in this abundant harvest, and in the space of seven months twenty thousand persons were baptized, including the bonzes of about sixty monasteries, except a few who quitted the State." In Bungo, however, where the Jesuits were originally so well received, it is doubtful whether Christian propagandism would not have ended in failure but for an event which occurred in 1576, namely, the conversion of the chieftain's son, a youth of some 16 years. Two years later Otomo himself came over to the Christian faith. He rendered inestimable aid, not merely within his own fief, but also by the influence he exercised on others. His intervention, supported by recourse to arms, obtained for the Jesuits a footing on the island of Amakusa, where one of the feudatories gave his vassals the choice of conversion or exile, and announced to the Buddhist priests that unless they accepted Christianity their property would be confiscated and they themselves banished. Nearly the whole population of the fief did violence to their conscience for the sake of their homes. Christianity was then becoming established in Kiūshiū by methods similar to those of Islam and the inquisition. Another notable illustration is furnished by the story of the Arima fief, adjoining that of Sumitada (Omura), where such resolute means had been adopted to force Christianity upon the vassals. Moreover, the heads of the two fiefs were brothers. Accordingly, at the time of Sumitada's very dramatic conversion, the Jesuits were invited to Arima and encouraged to form settlements at the ports of Kuchinotsu and Shimabara, which thenceforth began to be frequented by Portuguese merchantmen. The fief naturally became involved in the turmoil resulting from Sumitada's iconoclastic methods of propagandism; but, in 1576, the then ruling feudatory, influenced largely by the object lesson of Sumitada's prosperity and puissance, which that chieftain openly ascribed to the tutelary aid of the Christian deity, accepted baptism and became the "Prince Andrew" of missionary records. It is written in those records that "the first thing Prince Andrew did after his baptism was to convert the chief temple of his capital into a church, its revenues being assigned for the maintenance of the building and the support of the missionaries. He then took measures to have the same thing done in the other towns of his fief, and he seconded the preachers of the gospel so well in everything else that he could flatter himself that he soon would not have one single idolater in his states." Thus in the two years that separated his baptism from his death, twenty thousand converts were won in Arima. But his successor was an enemy of the alien creed. He ordered the Jesuits to quit his dominions, required the converts to return to their ancestral faith, and caused "the holy places to be destroyed and the crosses to be thrown down." Nearly one-half of the converts apostatized under this pressure, but others had recourse to a device of proved potency. They threatened to leave Kuchinotsu *en masse*, and as that would have involved the loss of foreign trade, the hostile edict was materially modified. To this same weapon the Christians owed a still more signal victory. For just at that time the great ship from Macao, now an annual visitor, arrived in Japanese waters carrying the visitor-general, Valegnani. She put into Kuchinotsu, and her presence, with its suggested eventualities, gave such satisfaction that the feudatory offered to accept baptism and to sanction its acceptance by his vassals. This did not satisfy Valegnani, a man of profound political sagacity. He saw that the fief was menaced by serious dangers at the hands of its neighbours, and seizing the psychological moment of its extreme peril, he used the secular arm so adroitly that the fief's chance of survival seemed to be limited to the unreserved adoption of Christianity. Thus, in 1580, the chieftain and his wife were baptized; "all the city was made Christian; they burned their idols and destroyed 40 temples, reserving some materials to build churches."

Christian propagandism had now made substantial progress. The *Annual Letter* of 1582 recorded that at the close of 1581, thirty-two years after the landing of Xavier in Japan, there were about 150,000 converts, of whom some 125,000 were in Kiūshiū and the remainder in Yamaguchi, Kiōto and the neighbourhood of the latter city. The Jesuits in the empire then numbered 75, but down to the year 1563 there had never been more than 9, and down to 1577, not more than 18. The harvest was certainly great in proportion to the number of sowers. But it was a harvest mainly of artificial growth; forced by the despotic insistence of feudal chiefs who possessed the power of life and death over their vassals, and were influenced by a desire to attract foreign trade. To the Buddhist priests this movement of Christian propagandism had brought an experience hitherto unknown to them, persecution on account of creed. They had suffered for interfering in politics, but the fierce cruelty of the Christian fanatic now became known for the first time to men themselves conspicuous for tolerance of heresy and receptivity of instruction. They had had no previous experience of humanity in the garb of an Otomo of Bungo, who, in the words of Crasset, "went to the chase of the bonzes as to that of wild beasts, and made it his singular pleasure to exterminate them from his states."

In 1582 the first Japanese envoys sailed from Nagasaki for Europe. The embassy consisted of four youths, the oldest not more than 16, representing the fiefs of Arima, Omura and Bungo. They visited Lisbon, Madrid and Rome, and in all these cities they were received with displays of magnificence such as 16th century Europe delighted to make. That, indeed, had been the motive of Valegnani in organizing the mission: he desired to let the Japanese see with their own eyes how great were the riches and might of Western states.

In the above statistics of converts at the close of 1581 mention is made of Christians in Kiōto, though we have already seen that the visit by Xavier and Fernandez to that city was wholly barren of results. A second visit, however, made by Vilela in 1559, proved more successful. He carried letters of recommendation from the Bungo chieftain, and the proximate cause of his journey was an invitation from a Buddhist priest in the celebrated monastery of Hiei-zan, who sought information about Christianity. This was before the razing of temples and the overthrow of idols had commenced in Kiūshiū. On arrival at Hiei-zan, Vilela found that the Buddhist prior who had invited him was dead and that only a portion of the old man's authority had descended to his successor. Nevertheless the Jesuit obtained an opportunity to expound his doctrines to a party of bonzes at the monastery. Subsequently, through the good offices of a priest, described as "one of the most respected men in the city," and with the assistance of the Bungo feudatory's letter, Vilela enjoyed the rare honour of being received by the shōgun in Kiōto, who treated him with all consideration and assigned a house for his residence. It may be imagined that, owing such a debt of gratitude to Buddhist priests, Vilela would have behaved towards them and their creed with courtesy. But the Jesuit fathers were proof against all influences calculated to impair their stern sense of duty. Speaking through the mouth of a Japanese convert, Vilela attacked the bonzes in unmeasured terms and denounced their faith. Soon the bonzes, on their side, were seeking the destruction of these uncompromising assailants with insistence inferior only to that which the Jesuits themselves would have shown in similar circumstances. Against these perils Vilela was protected by the goodwill of the shōgun, who had already issued a decree threatening with death any one who injured the missionaries or obstructed their work. In spite of all difficulties and dangers these wonderful missionaries, whose courage, zeal and devotion are beyond all eulogy, toiled on resolutely and even recklessly, and such success attended their efforts that by 1564 many converts had been won and churches had been established in five walled towns within a distance of 50 miles from Kiōto. Among the converts were two Buddhist priests, notoriously

to Kiōto.

hostile at the outset, who had been nominated as official commissioners to investigate and report upon the doctrine of Christianity. The first conversion *en masse* was due to pressure from above. A petty feudatory, Takayama, whose fief lay at Takatsuki in the neighbourhood of the capital, challenged Vilela to a public controversy, the result of which was that the Japanese acknowledged himself vanquished, embraced Christianity and invited his vassals as well as his family to follow his example. This man's son—Takayama Yūshō—proved one of the staunchest supporters of Christianity in all Japan, and has been immortalized by the Jesuits under the name of Don Justo Ucondono. Incidentally this event furnishes an index to the character of the Japanese samurai: he accepted the consequences of defeat as frankly as he dared it. In the same year (1564) the feudatory of Sawa, a brother of Takayama, became a Christian and imposed the faith on all his vassals, just as Sumitada and other feudal chiefs had done in Kiūshiū. But the Kiōto record differs from that of Kiūshiū in one important respect—the former is free from any intrusion of commercial motives.

Kiōto was at that time the scene of sanguinary tumults, which culminated in the murder of the shōgun (1565), and led to the issue of a decree by the emperor proscribing Christianity. In Japanese medieval history this is one of the only two instances of Imperial interference with Christian propagandism. There is evidence that the edict was obtained at the instance of one of the shōgun's assassins and certain Buddhist priests. The Jesuits—their number had been increased to three—were obliged to take refuge in Sakai, now little more than a suburb of Osaka, but at that time a great and wealthy mart, and the only town in Japan which did not acknowledge the sway of any feudal chief. Three years later they were summoned thence to be presented to Oda Nobunaga, one of the greatest captains Japan has ever produced. In the very year of Xavier's landing at Kagoshima, Nobunaga had succeeded to his father's fief, a comparatively petty estate in the province of Owari. In 1568 he was seated in Kiōto, a maker of shōguns and acknowledged ruler of 30 among the 66 provinces of Japan. Had Nobunaga, wielding such immense power, adopted a hostile attitude towards Christianity, the fires lit by the Jesuits in Japan must soon have been extinguished. Nobunaga, however, to great breadth and liberality of view added strong animosity towards Buddhist priests. Many of the great monasteries had become armed camps, their inmates skilled equally in field-attacks and in the defence of ramparts. One sect (the Nichiren), which was specially affected by the samurai, had lent powerful aid to the murderers of the shōgun three years before Nobunaga's victories carried him to Kiōto, and the armed monasteries constituted *imperia in imperio* which assorted ill with his ambition of complete supremacy. He therefore welcomed Christianity for the sake of its opposition to Buddhism, and when Takayama conducted Froez from Sakai to Nobunaga's presence, the reception accorded to the Jesuit was of the most cordial character. Throughout the fourteen years of life that remained to him, Nobunaga continued to be the constant friend of the missionaries in particular and of foreigners visiting Japan in general. He stood between the Jesuits and the Throne when, in reply to an appeal from the Buddhist priests, the emperor, for the second time, issued an anti-Christian decree (1568); he granted a site for a church and residence at Azuchi on Lake Biwa, where his new fortress stood; he addressed to various powerful feudatories letters signifying a desire for the spread of Christianity; he frequently made handsome presents to the fathers, and whenever they visited him he showed a degree of accessibility and graciousness very foreign to his usually haughty and imperious demeanour. The Jesuits themselves said of him: "This man seems to have been chosen by God to open and prepare the way for our faith." Nevertheless they do not appear to have entertained much hope at any time of converting Nobunaga. They must have understood that their doctrines had not made any profound impression on a man who could treat them as this potentate did in 1579, when he plainly showed that political exigencies might at any

moment induce him to sacrifice them.¹ His last act, too, proved that sacrilege was of no account in his eyes, for he took steps to have himself apotheosized at Azuchi with the utmost pomp and circumstance. Still nothing can obscure the benefits he heaped upon the propagandists of Christianity.

The terrible tumult of domestic war through which Japan passed in the 15th and 16th centuries brought to her service three of the greatest men ever produced in *Hideyoshi* Occident or Orient. They were Oda Nobunaga, *and the Christians.* Toyotomi Hideyoshi and Tokugawa Iyeyasu. Hideyoshi, as Nobunaga's lieutenant, contributed largely to the building of the latter's fortunes, and, succeeding him in 1582, brought the whole 66 provinces of the empire under his own administrative sway. For the Jesuits now the absorbing question was, what attitude Hideyoshi would assume towards their propagandism. His power was virtually limitless. With a word he could have overthrown the whole edifice created by them at the cost of so much splendid effort and noble devotion. They were very quickly reassured. In this matter Hideyoshi walked in Nobunaga's footsteps. He not only accorded a friendly audience to Father Organtino, who waited on him as representative of the Jesuits, but also he went in person to assign to the company a site for a church and a residence in Osaka, where there was presently to rise the most massive fortress ever built in the East. At that time many Christian converts were serving in high positions, and in 1584 the Jesuits placed it on record that "Hideyoshi was not only not opposed to the things of God, but he even showed that he made much account of them and preferred them to all the sects of the bonzes. . . . He is entrusting to Christians his treasures, his secrets and his fortresses of most importance, and shows himself well pleased that the sons of the great lords about him should adopt our customs and our law." Two years later in Osaka he received with every mark of cordiality and favour a Jesuit mission which had come from Nagasaki seeking audience, and on that occasion his visitor recorded that he spoke of an intention of christianizing one half of Japan. Nor did Hideyoshi confine himself to words. He actually signed a patent licensing the missionaries to preach throughout all Japan, and exempting not only their houses and churches from the billeting of soldiers but also the priests themselves from local burdens. This was in 1586, on the eve of Hideyoshi's greatest military enterprise, the invasion of Kiūshiū and its complete reduction. He carried that difficult campaign to completion by the middle of 1587, and throughout its course he maintained a uniformly friendly demeanour towards the Jesuits. But suddenly, when on the return journey he reached Hakata in the north of the island, his policy underwent a radical metamorphosis. Five questions were by his order propounded to the vice-provincial of the Jesuits: "Why and by what authority he and his fellow-propagandists had constrained Japanese subjects to become Christians? Why they had induced their disciples and their sectaries to overthrow temples? Why they persecuted the bonzes? Why they and other Portuguese ate animals useful to men, such as oxen and cows? Why the vice-provincial allowed merchants of his nation to buy Japanese to make slaves of them in the Indies?" To these queries Coelho, the vice-provincial, made answer that the missionaries had never themselves resorted, or incited, to violence in their propagandism or persecuted bonzes; that if their eating of beef were considered inadvisable, they would give up the practice; and that they were powerless to prevent or restrain the outrages perpetrated by their countrymen. Hideyoshi read the vice-provincial's reply and, without comment, sent him word to retire to Hirado, assemble all his followers there, and quit the country within six months. On the next day (July 25, 1587) the following edict was published:—

¹ The problem was to induce the co-operation of a feudatory whose castle served for frontier guard to the fief of a powerful chief, his suzerain. The feudatory was a Christian. Nobunaga seized the Jesuits in Kiōto, and threatened to suppress their religion altogether unless they persuaded the feudatory to abandon the cause of his suzerain.

"Having learned from our faithful councillors that foreign priests have come into our estates, where they preach a law contrary to that of Japan, and that they even had the audacity to destroy temples dedicated to our Kami and Hotoke; although the outrage merits the most extreme punishment, wishing nevertheless to show them mercy, we order them under pain of death to quit Japan within twenty days. During that space no harm or hurt will be done to them. But at the expiration of that term, we order that if any of them be found in our states, they should be seized and punished as the greatest criminals. As for the Portuguese merchants, we permit them to enter our ports, there to continue their accustomed trade, and to remain in our states provided our affairs need this. But we forbid them to bring any foreign priests into the country, under the penalty of the confiscation of their ships and goods."

How are we to account for this apparently rapid change of mood on the part of Hideyoshi? Some historians insist that from the very outset he conceived the resolve of suppressing Christianity and expelling its propagandists, but that he concealed his design pending the subjugation of Kiūshiū, lest, by premature action, he might weaken his hand for that enterprise. This hypothesis rests mainly on conjecture. Its formulators found it easier to believe in a hidden purpose than to attribute to a statesman so shrewd and far-seeing a sudden change of mind. A more reasonable theory is that, shortly before leaving Osaka for Kiūshiū, Hideyoshi began to entertain doubts as to the expediency of tolerating Christian propagandism, and that his doubts were signally strengthened by direct observation of the state of affairs in Kiūshiū. While still in Osaka, he one day remarked publicly that "he feared much that all the virtue of the European priests served only to conceal pernicious designs against the empire." There had been no demolishing of temples or overthrowing of images at Christian instance in the metropolitan provinces. In Kiūshiū, however, very different conditions prevailed. There Christianity may be said to have been preached at the point of the sword. Temples and images had been destroyed wholesale; vassals in thousands had been compelled to embrace the foreign faith; and the missionaries themselves had come to be treated as demi-gods whose nod was worth conciliating at any cost of self-abasement. Brought into direct contact with these evidences of the growth of a new power, temporal as well as spiritual, Hideyoshi may well have reached the conclusion that a choice had to be finally made between his own supremacy and that of the alien creed, if not between the independence of Japan and the yoke of the great Christian states of Europe.

Hideyoshi gauged the character of the medieval Christians with sufficient accuracy to know that for the sake of their faith they would at any time defy the laws of the island. His estimate received immediate verification, for when the Jesuits, numbering 120, assembled at Hirado and received his order to embark at once they decided that only those should sail whose services were needed in China. The others remained and went about their duties as usual, under the protection of the converted feudatories. Hideyoshi, however, saw reason to wink at this disregard of his authority. At first he showed uncompromising resolution. All the churches in Kiōto, Osaka and Sakai were demolished, while troops were sent to raze the Christian places of worship in Kiūshiū and seize the port of Nagasaki. These troops were munificently dissuaded from their purpose by the Christian feudatories. But Hideyoshi did not protest, and in 1588 he allowed himself to be convinced by a Portuguese envoy that in the absence of missionaries foreign trade must cease, since without the intervention of the fathers peace and good order could not be maintained among the merchants. Rather than suffer the trade to be interrupted Hideyoshi agreed to the coming of priests, and thenceforth, during some years, Christianity not only continued to flourish and grow in Kiūshiū but also found a favourable field of operations in Kiōto itself. Care was taken that Hideyoshi's attention should not be attracted by any salient evidences of what he had called a "diabolical religion," and thus for a time all went well. There is evidence that, like the feudal chiefs in Kiūshiū, Hideyoshi

set great store by foreign trade and would even have sacrificed to its maintenance and expansion something of the aversion he had conceived for Christianity. He did indeed make one very large concession. For on being assured that Portuguese traders could not frequent Japan unless they found Christian priests there to minister to them, he consented to sanction the presence of a limited number of Jesuits. The statistics of 1595 show how Christianity fared under even this partial tolerance, for there were then 137 Jesuits in Japan with 300,000 converts, among whom were 17 feudal chiefs, to say nothing of many men of lesser though still considerable note, and even not a few bonzes.

For ten years after his unlooked-for order of expulsion, Hideyoshi preserved a tolerant mien. But in 1597 his forbearance gave place to a mood of uncompromising severity. The reasons of this second change are very clear, *Hideyoshi's Final Attitude towards Christianity.* Up to 1593 the Portuguese had possessed a monopoly of religious propagandism and over-sea commerce in Japan. The privilege was secured to them by agreement between Spain and Portugal and by a papal bull. But the Spaniards in Manila had long looked with somewhat jealous eyes on this Jesuit reservation, and when news of the disaster of 1587 reached the Philippines, the Dominicans and Franciscans residing there were fired with zeal to enter an arena where the crown of martyrdom seemed to be the least reward within reach. The papal bull, however, demanded obedience, and to overcome that difficulty a ruse was necessary: the governor of Manila agreed to send a party of Franciscans as ambassadors to Hideyoshi. In that guise the friars, being neither traders nor propagandists, considered that they did not violate either the treaty or the bull. It was a technical subterfuge very unworthy of the object contemplated, and the friars supplemented it by swearing to Hideyoshi that the Philippines would submit to his sway. Thus they obtained permission to visit Kiōto, Osaka and Fushimi, but with the explicit proviso that they must not preach. Very soon they had built a church in Kiōto, consecrated it with the utmost pomp, and were preaching sermons and chanting litanies there in flagrant defiance of Hideyoshi's veto. Presently their number received an access of three friars who came bearing gifts from the governor at Manila, and now they not only established a convent in Osaka, but also seized a Jesuit church in Nagasaki and converted the circumspect worship hitherto conducted there by the fathers into services of the most public character. Officially checked in Nagasaki, they charged the Jesuits in Kiōto with having intrigued to impede them, and they further vaunted the courageous openness of their own ministrations as compared with the clandestine timidity of the methods which wise prudence had induced the Jesuits to adopt. Retribution would have followed quickly had not Hideyoshi's attention been engrossed by an attempt to invade China through Korea. At this stage, however, a memorable incident occurred. Driven out of her course by a storm, a great and richly laden Spanish galleon, bound for Acapulco from Manila, drifted to the coast of Tosa province, and running—or being purposely run—on a sand-bank as she was being towed into port by Japanese boats, broke her back. She carried goods to the value of some 600,000 crowns, and certain officials urged Hideyoshi to confiscate her as derelict, conveying to him at the same time a detailed account of the doings of the Franciscans and their open flouting of his orders. Hideyoshi, much incensed, commanded the arrest of the Franciscans and despatched officers to Tosa to confiscate the "San Felipe." The pilot of the galleon sought to intimidate these officers by showing them on a map of the world the vast extent of Spain's dominions, and being asked how one country had acquired such extended sway, replied: "Our kings begin by sending into the countries they wish to conquer missionaries who induce the people to embrace our religion, and when they have made considerable progress, troops are sent who combine with the new Christians, and then our kings have not much trouble in accomplishing the rest."

On learning of this speech Hideyoshi was overcome with fury. He condemned the Franciscans to have their noses and ears *The First Execution of and Sakai, and to be crucified at Nagasaki.* "I *Christians.* have ordered these foreigners to be treated thus, because they have come from the Philippines to Japan, calling themselves ambassadors, although they were not so; because they have remained here far too long without my permission; because, in defiance of my prohibition, they have built churches, preached their religion and caused disorders." Twenty-six suffered under this sentence—six Franciscans, three Japanese Jesuits and seventeen native Christians, chiefly domestic servants of the Franciscans.¹ They met their fate with noble fortitude. Hideyoshi further issued a special injunction against the adoption of Christianity by a feudal chief, and took steps to give practical effect to his expulsion edict of 1587. The governor of Nagasaki received instructions to send away all the Jesuits, permitting only two or three to remain for the service of the Portuguese merchants. But the Jesuits were not the kind of men who, to escape personal peril, turn their back upon an unaccomplished work of grace. There were 125 of them in Japan at that time. In October 1597 a junk sailed out of Nagasaki harbour, her decks crowded with seeming Jesuits. In reality she carried 11 of the company, the apparent Jesuits being disguised sailors. It is not to be supposed that such a manoeuvre could be hidden from the local authorities. They winked at it, until rumour became insistent that Hideyoshi was about to visit Kiūshū in person, and all Japanese in administrative posts knew how Hideyoshi visited disobedience and how hopeless was any attempt to deceive him. Therefore, early in 1598, really drastic steps were taken. Churches to the number of 137 were demolished in Kiūshū, seminaries and residences fell, and the governor of Nagasaki assembled there all the fathers of the company for deportation to Macao by the great ship in the following year. But while they waited, Hideyoshi died. It is not on record that the Jesuits openly declared his removal from the earth to have been a special dispensation in their favour. But they pronounced him an execrable tyrant and consigned his "soul to hell for all eternity." Yet no impartial reader of history can pretend to think that a 16th-century Jesuit general in Hideyoshi's place would have shown towards an alien creed and its propagandists even a small measure of the tolerance exercised by the Japanese statesman towards Christianity and the Jesuits.

Hideyoshi's death occurred in 1598. Two years later, his authority as administrative ruler of all Japan had passed into the hands of Iyeyasu, the Tokugawa chief, and thirty-nine years later the Tokugawa potentates had not only exterminated Christianity in Japan but had also condemned their country to a period of international isolation which continued unbroken until 1853, an interval of 214 years. It has been shown that even when they were most incensed against Christianity, Japanese administrators sought to foster and preserve foreign trade. Why then did they close the country's doors to the outside world and suspend a commerce once so much esteemed? To answer that question some retrospect is needed. Certain historians allege that from the outset Iyeyasu shared Hideyoshi's misgivings about the real designs of Christian potentates and Christian propagandists. But that verdict is not supported by facts. The first occasion of the Tokugawa chief's recorded contact with a Christian propagandist was less than three months after Hideyoshi's death. There was then led into his presence a Franciscan, by name Jerome de Jesus, originally a member of the fictitious embassy from Manila. This man's conduct constitutes an example of the invincible zeal and courage inspiring a Christian priest in those days. Barely escaping the doom of crucifixion which overtook his companions, he had been deported from Japan to

Manila at a time when death seemed to be the certain penalty of remaining. But no sooner had he been landed at Manila than he took passage in a Chinese junk, and, returning to Nagasaki, made his way secretly from the far south of Japan to the province of Kii. There arrested, he was brought into the presence of Iyeyasu, and his own record of what ensued is given in a letter subsequently sent to Manila:—

"When the Prince saw me he asked how I had managed to escape the previous persecution. I answered him that at that date God had delivered me in order that I might go to Manila and bring back new colleagues from there—preachers of the divine law—and that I had returned from Manila to encourage the Christians, cherishing the desire to die on the cross in order to go to enjoy eternal glory like my former colleagues. On hearing these words the Emperor began to smile, whether in his quality of a pagan of the sect of Shaka, which teaches that there is no future life, or whether from the thought that I was frightened at having to be put to death. Then, looking at me kindly, he said, 'Be no longer afraid and no longer conceal yourself, and no longer change your habit, for I wish you well; and as for the Christians who every year pass within sight of the Kwantō where my domains are, when they go to Mexico with their ships, I have a keen desire for them to visit the harbours of this island, to refresh themselves there, and to take what they wish, to trade with my vassals and to teach them how to develop silver mines; and that my intentions may be accomplished before my death, I wish you to indicate to me the means to take to realize them.' I answered that it was necessary that Spanish pilots should take the soundings of his harbours, so that ships might not be lost in future as the 'San Felipe' had been, and that he should solicit this service from the governor of the Philippines. The Prince approved of my advice, and accordingly he has sent a Japanese gentleman, a native of Sakai, the bearer of this message. . . . It is essential to oppose no obstacle to the complete liberty offered by the Emperor to the Spaniards and to our holy order, for the preaching of the holy gospel. . . . The same Prince (who is about to visit the Kwantō) invites me to accompany him to make choice of a house, and to visit the harbour which he promises to open to us; his desires in this respect are keener than I can express."

The above version of the Tokugawa chief's mood is confirmed by events, for not only did he allow the contumelious Franciscan to build a church—the first—in Yedo and to celebrate Mass there, but also he sent three embassies to the Philippines, proposing reciprocal freedom of commerce, offering to open ports in the Kwantō and asking for competent naval architects. He never obtained the architects, and though the trade came, its volume was small in comparison with the abundance of friars that accompanied it. There is just a possibility that Iyeyasu saw in these Spanish monks an instrument of counteracting the influence of the Jesuits, for he must have known that the Franciscans opened their mission in Yedo by "declaiming with violence against the fathers of the company of Jesus." In short, the Spanish monks assumed towards the Jesuits in Japan the same intolerant and abusive tone that the Jesuits themselves had previously assumed towards Buddhism.

At that time there appeared upon the scene another factor destined greatly to complicate events. It was a Dutch merchant ship, the "Liefde." Until the Netherlands revolted from Spain, the Dutch had been the principal distributors of all goods arriving at Lisbon from the Far East; but in 1594 Philip II. closed the port of Lisbon to these rebels, and the Dutch met the situation by turning their prows to the Orient to invade the sources of Portuguese commerce. One of the first expeditions despatched for that purpose set out in 1598, and of the five vessels composing it one only was ever heard of again. This was the "Liefde." She reached Japan during the spring of 1600, with only four—and twenty alive out of her original crew of 110. Towed into the harbour at Funai, the "Liefde" was visited by Jesuits, who, on discovering her nationality, denounced her to the local authorities as a pirate and endeavoured to incense the Japanese against them. The "Liefde" had on board in the capacity of "pilot major" an Englishman, Will Adams of Gillingham in Kent, whom Iyeyasu summoned to Osaka, where there commenced between the rough British sailor and the Tokugawa chief a curiously friendly intercourse which was not interrupted until the death of Adams twenty years later. The Englishman became master ship-builder to the Yedo government; was employed as diplomatic agent when other traders from his own country

¹ The mutilation was confined to the lobe of one ear. Crucifixion, according to the Japanese method, consisted in tying to a cross and piercing the heart with two sharp spears driven from either side. Death was always instantaneous.

"Having learned from our faithful councillors that foreign priests have come into our estates, where they preach a law contrary to that of Japan, and that they even had the audacity to destroy temples dedicated to our Kami and Hotoke; although the outrage merits the most extreme punishment, wishing nevertheless to show them mercy, we order them under pain of death to quit Japan within twenty days. During that space no harm or hurt will be done to them. But at the expiration of that term, we order that if any of them be found in our states, they should be seized and punished as the greatest criminals. As for the Portuguese merchants, we permit them to enter our ports, there to continue their accustomed trade, and to remain in our states provided our affairs need this. But we forbid them to bring any foreign priests into the country, under the penalty of the confiscation of their ships and goods."

How are we to account for this apparently rapid change of mood on the part of Hideyoshi? Some historians insist that from the very outset he conceived the resolve of suppressing Christianity and expelling its propagandists, but that he concealed his design pending the subjugation of Kiūshiū, lest, by premature action, he might weaken his hand for that enterprise. This hypothesis rests mainly on conjecture. Its formulators found it easier to believe in a hidden purpose than to attribute to a statesman so shrewd and far-seeing a sudden change of mind. A more reasonable theory is that, shortly before leaving Osaka for Kiūshiū, Hideyoshi began to entertain doubts as to the expediency of tolerating Christian propagandism, and that his doubts were signally strengthened by direct observation of the state of affairs in Kiūshiū. While still in Osaka, he one day remarked publicly that "he feared much that all the virtue of the European priests served only to conceal pernicious designs against the empire." There had been no demolishing of temples or overthrowing of images at Christian instance in the metropolitan provinces. In Kiūshiū, however, very different conditions prevailed. There Christianity may be said to have been preached at the point of the sword. Temples and images had been destroyed wholesale; vassals in thousands had been compelled to embrace the foreign faith; and the missionaries themselves had come to be treated as demi-gods whose nod was worth conciliating at any cost of self-abasement. Brought into direct contact with these evidences of the growth of a new power, temporal as well as spiritual, Hideyoshi may well have reached the conclusion that a choice had to be finally made between his own supremacy and that of the alien creed, if not between the independence of Japan and the yoke of the great Christian states of Europe.

Hideyoshi gauged the character of the medieval Christians with sufficient accuracy to know that for the sake of their faith they would at any time defy the laws of the island. His estimate received immediate verification, for when the Jesuits, numbering 120, assembled at Hirado and received his order to embark at once they decided that only those should sail whose services were needed in China. The others remained and went about their duties as usual, under the protection of the converted feudatories. Hideyoshi, however, saw reason to wink at this disregard of his authority. At first he showed uncompromising resolution. All the churches in Kiōto, Osaka and Sakai were demolished, while troops were sent to raze the Christian places of worship in Kiūshiū and seize the port of Nagasaki. These troops were munificently dissuaded from their purpose by the Christian feudatories. But Hideyoshi did not protest, and in 1588 he allowed himself to be convinced by a Portuguese envoy that in the absence of missionaries foreign trade must cease, since without the intervention of the fathers peace and good order could not be maintained among the merchants. Rather than suffer the trade to be interrupted Hideyoshi agreed to the coming of priests, and thenceforth, during some years, Christianity not only continued to flourish and grow in Kiūshiū but also found a favourable field of operations in Kiōto itself. Care was taken that Hideyoshi's attention should not be attracted by any salient evidences of what he had called a "diabolical religion," and thus for a time all went well. There is evidence that, like the feudal chiefs in Kiūshiū, Hideyoshi

set great store by foreign trade and would even have sacrificed to its maintenance and expansion something of the aversion he had conceived for Christianity. He did indeed make one very large concession. For on being assured that Portuguese traders could not frequent Japan unless they found Christian priests there to minister to them, he consented to sanction the presence of a limited number of Jesuits. The statistics of 1595 show how Christianity fared under even this partial tolerance, for there were then 137 Jesuits in Japan with 300,000 converts, among whom were 17 feudal chiefs, to say nothing of many men of lesser though still considerable note, and even not a few bonzes.

For ten years after his unlooked-for order of expulsion, Hideyoshi preserved a tolerant mien. But in 1597 his forbearance gave place to a mood of uncompromising severity. The reasons of this second change are very clear, *Hideyoshi's Final Attitude towards Christianity.* Up to 1593 the Portuguese had possessed a monopoly of religious propagandism and over-sea commerce in Japan. The privilege was secured to them by agreement between Spain and Portugal and by a papal bull. But the Spaniards in Manila had long looked with somewhat jealous eyes on this Jesuit reservation, and when news of the disaster of 1587 reached the Philippines, the Dominicans and Franciscans residing there were fired with zeal to enter an arena where the crown of martyrdom seemed to be the least reward within reach. Very soon they had built a church in Kiōto, consecrated it with the utmost pomp, and were preaching sermons and chanting litanies there in flagrant defiance of Hideyoshi's veto. Presently their number received an access of three friars who came bearing gifts from the governor at Manila, and now they not only established a convent in Osaka, but also seized a Jesuit church in Nagasaki and converted the circumspect worship hitherto conducted there by the fathers into services of the most public character. Officially checked in Nagasaki, they charged the Jesuits in Kiōto with having intrigued to impede them, and they further vaunted the courageous openness of their own ministrations as compared with the clandestine timidity of the methods which wise prudence had induced the Jesuits to adopt. Retribution would have followed quickly had not Hideyoshi's attention been engrossed by an attempt to invade China through Korea. At this stage, however, a memorable incident occurred. Driven out of her course by a storm, a great and richly laden Spanish galleon, bound for Acapulco from Manila, drifted to the coast of Tosa province, and running—or being purposely run—on a sand-bank as she was being towed into port by Japanese boats, broke her back. She carried goods to the value of some 600,000 crowns, and certain officials urged Hideyoshi to confiscate her as derelict, conveying to him at the same time a detailed account of the doings of the Franciscans and their open flouting of his orders. Hideyoshi, much incensed, commanded the arrest of the Franciscans and despatched officers to Tosa to confiscate the "San Felipe." The pilot of the galleon sought to intimidate these officers by showing them on a map of the world the vast extent of Spain's dominions, and being asked how one country had acquired such extended sway, replied: "Our kings begin by sending into the countries they wish to conquer missionaries who induce the people to embrace our religion, and when they have made considerable progress, troops are sent who combine with the new Christians, and then our kings have not much trouble in accomplishing the rest."

edict, some by concealing themselves at the time of its issue, the rest by leaving their ships when the latter had passed out of sight of the shore of Japan, and returning by boats to the scene of their former labours. Moreover, in a few months, those that had actually crossed the sea re-crossed it in various disguises, and soon the Japanese government had to consider whether it would suffer its authority to be thus flouted or resort to extreme measures.

During two years immediately following the issue of the anti-Christian decree, the attention of the Tokugawa chief and indeed of all Japan was concentrated on the closing episode of the great struggle which assured to Iyeyasu final supremacy as administrative ruler of the empire. That episode was a terrible battle under the walls of Osaka castle between the adherents of the Tokugawa and the supporters of Hideyori. In this struggle fresh fuel was added to the fire of anti-Christian resentment, for many Christian converts threw in their lot with Hideyori, and in one part of the field the Tokugawa troops found themselves fighting against a foe whose banners were emblazoned with the cross and with images of the Saviour and St James, the patron saint of Spain. But the Christians had protectors. Many of the feudatories showed themselves strongly averse from inflicting the extreme penalty on men and women whose adoption of an alien religion had been partly forced by the feudatories themselves. As for the people at large, their liberal spirit is attested by the fact that five fathers who were in Osaka castle at the time of its capture made their way to distant refuges without encountering any risk of betrayal. During these events the death of Iyeyasu took place (June 1, 1616), and pending the dedication of his mausoleum the anti-Christian crusade was virtually suspended.

In September 1616 a new anti-Christian edict was promulgated by Hidetada, son and successor of Iyeyasu. It pronounced sentence of exile against all Christian priests, including even those whose presence had been sanctioned for ministering to the Portuguese merchants: it forbade the Japanese, under the penalty of being burned alive and of having all their property confiscated, to have any connexion with the ministers of religion or to give them hospitality. It was forbidden to any prince or lord to keep Christians in his service or even on his estates, and the edict was promulgated with more than usual solemnity, though its enforcement was deferred until the next year on account of the obsequies of Iyeyasu. This edict of 1616 differed from that issued by Iyeyasu in 1614, since the latter did not prescribe the death penalty for converts refusing to apostatize. But both agreed in indicating expulsion as the sole manner of dealing with the foreign priests. As for the shōgun and his advisers, it is reasonable to assume that they did not anticipate much necessity for recourse to violence. They must have known that a great majority of the converts had joined the Christian church at the instance or by the command of their local rulers, and nothing can have seemed less likely than that a creed thus lightly embraced would be adhered to in defiance of torture and death. It is moreover morally certain that had the foreign propagandists obeyed the government's edict and left the country, not one would have been put to death. They suffered because they defied the laws of the land. Some fifty missionaries happened to be in Nagasaki when Hidetada's edict was issued. A number of these were apprehended and deported, but several of them returned almost immediately. This happened under the jurisdiction of Omura, who had been specially charged with the duty of sending away the *bateren* (*padres*). He appears to have concluded that a striking example must be furnished, and he therefore ordered the seizure and decapitation of two fathers, De l'Assumpcion and Machado. The result completely falsified his calculations, and presaged the cruel struggle now destined to begin.

The bodies, placed in different coffins, were interred in the same grave. Guards were placed over it, but the concourse was immense. The sick were carried to the sepulchre to be restored to health. The Christians found new strength in this martyrdom; the pagans themselves were full of admiration for it. Numerous conversions and numerous returns of apostates took place everywhere.

In the midst of all this, Navarette, the vice-provincial of the Dominicans, and Ayala, the vice-provincial of the Augustins, came out of their retreat, and in full priestly garb started upon an open propaganda. The two fanatics—for so even Charlevoix considers them to have been—were secretly conveyed to the island Takashima and there decapitated, while their coffins were weighted with big stones and sunk in the sea. Even more directly defiant was the attitude of the next martyred priest, an old Franciscan monk, Juan de Santa Martha. He had for three years suffered all the horrors of a medieval Japanese prison, when it was proposed to release him and deport him to New Spain. His answer was that, if released, he would stay in Japan and preach there. He laid his head on the block in August 1618. But from that time until 1622 no other foreign missionary suffered capital punishment in Japan, though many of them arrived in the country and continued their propaganda there. During that interval, also, there occurred another incident eminently calculated to fix upon the Christians still deeper suspicion of political designs. In a Portuguese ship captured by the Dutch a letter was found instigating the Japanese converts to revolt, and promising that, when the number of these disaffected Christians was sufficient, men-of-war would be sent to aid them. Not the least potent of the influences operating against the Christians was that pamphlets were written by apostates attributing the zeal of the foreign propagandists solely to political motives. Yet another indictment of Spanish and Portuguese propagandists was contained in a despatch addressed to Hidetada in 1620 by the admiral in command of the British and Dutch fleet then cruising in Far-Eastern waters. In that document the friars were flatly accused of treacherous practices, and the Japanese ruler was warned against the aggressive designs of Philip of Spain. In the face of all this evidence the Japanese ceased to hesitate, and a time of terror ensued for the fathers and their converts. The measures adopted towards the missionaries gradually increased in severity. In 1617 the first two fathers put to death (De l'Assumpcion and Machado) were beheaded, "not by the common executioner, but by one of the first officers of the prince." Subsequently Navarette and Ayala were decapitated by the executioner. Then, in 1618, Juan de Santa Martha was executed like a common criminal, his body being dismembered and his head exposed. Finally, in 1622, Zuñiga and Flores were burnt alive. The same year was marked by the "great martyrdom" at Nagasaki when 6 foreign priests went to the stake with 10 Japanese converts. The shōgun seems to have been now labouring under vivid fear of a foreign invasion. An emissary sent by him to Europe had returned on the eve of the "great martyrdom" after seven years abroad, and had made a report more than ever unfavourable to Christianity. Therefore Hidetada deemed it necessary to refuse audience to a Philippine embassy in 1624 and to deport all Spaniards from Japan. Further, it was decreed that no Japanese Christian should thenceforth be suffered to go abroad for commerce, and that though non-Christians or men who had apostatized might travel freely, they must not visit the Philippines. Thus ended all intercourse between Japan and Spain. It had continued for 32 years and had engendered a widespread conviction that Christianity was an instrument of Spanish aggression.

Iyemitsu, son of Hidetada, now ruled in Yedo, though Hidetada himself remained the power behind the throne. The year (1623) of the former's accession to power had been marked by the re-issue of anti-Christian decrees, and by the martyrdom of some 500 Christians within the Tokugawa domains, whither the tide of persecution now flowed for the first time. Thenceforth the campaign was continuous. The men most active and most relentless in carrying on the persecution were Mizuno and Takenaka, governors of Nagasaki, and Matsukura, feudatory of Shimabara. By the latter were invented the punishment of throwing converts into the solfataras at Unzen and the torture of the *fosse*, which consisted in suspension by the feet, head downwards, in a pit until blood oozed from the mouth, nose and ears. Many endured this latter torture for days, until death

came to their relief, but a few—notably the Jesuit provincial Ferreyra—apostatized. Matsukura and Takenaka were so strongly obsessed by the Spanish menace that they contemplated the conquest of the Philippines in order to deprive the Spaniards of a Far-Eastern base. But timid counsels then prevailed in Yedo, where the spirit of a Nobunaga, a Hideyoshi or an Iyeyasu no longer presided. Of course the measures of repression grew in severity as the fortitude of the Christians became more obdurate. It is not possible to state the exact number of victims. Some historians say that, down to 1635, no fewer than 280,000 were punished, but that figure is probably exaggerated, for the most trustworthy records indicate that the converts never aggregated more than 300,000, and many of these, if not a great majority, having accepted the foreign faith very lightly, doubtless discarded it readily under menace of destruction. Every opportunity was given for apostatizing and for escaping death. Immunity could be secured by pointing out a fellow-convert, and when it is observed that among the seven or eight feudatories who embraced Christianity only two or three died in that faith, we must conclude that not a few cases of recanting occurred among the commoners. Remarkable fortitude, however, is said to have been displayed. If the converts were intrepid their teachers showed no less courage. Again and again the latter defied the Japanese authorities by coming to the country or returning thither after having been deported. Ignoring the orders of the governors of Macao and Manila and even of the king of Spain himself, they arrived, year after year, to be certainly apprehended and sent to the stake after brief periods of propagandism. In 1626 they actually baptized over 3000 converts. Large rewards were paid to any one denouncing a propagandist, and as for the people, they had to trample upon a picture of Christ in order to prove that they were not Christians.

Meanwhile the feuds between the Dutch, the Spaniards and the Portuguese never ceased. In 1636, the Dutch found on a captured Portuguese vessel a report of the governor of Macao describing a two days' festival which had been held there in honour of Vieyra, the vice-provincial whose martyrdom had just taken place in Japan. This report the Dutch handed to the Japanese authorities "in order that his majesty may see more clearly what great honour the Portuguese pay to those he has forbidden his realm as traitors to the state and to his crown." Probably the accusation added little to the resentment and distrust already harboured by the Japanese against the Portuguese. At all events the Yedo government took no step distinctly hostile to Portuguese laymen until 1637, when an edict was issued forbidding any foreigners to travel in the empire, lest Portuguese with passports bearing Dutch names might enter it. This was the beginning of the end. In the last month of 1637 a rebellion broke out, commonly called the "Christian revolt of Shimabara," which sealed the fate of Japan's foreign intercourse for over 200 years.

The promontory of Shimabara and the island of Amakusa enclose the gulf of Nagasaki on the west. Among all the fiefs in Japan, Shimabara and Amakusa had been the two most thoroughly christianized in the early years of Jesuit propagandism. Hence in later days they were naturally the scene of the severest persecutions. Still the people would probably have suffered in silence had they not been taxed beyond all endurance to supply funds for an extravagant chief who employed savage methods of extortion. Japanese annals, however, relegate the taxation grievance to an altogether secondary place, and attribute the revolt solely to the instigation of five samurai who led a roving life to avoid persecution for their adherence to Christianity. Whichever version be correct, it is certain that the outbreak ultimately attracted all the Christians from the surrounding regions, and was regarded by the authorities as in effect a Christian rising. The Amakusa insurgents passed over to Shimabara, and on the 27th of January 1638 the whole body—numbering, according to some authorities, 20,000 fighting men with 17,000 women and children; according to others, little more than one-half of these figures—took possession

of the dilapidated castle of Hara, which stood on a plateau with three sides descending perpendicularly to the sea, a hundred feet beneath, and with a swamp on its fourth front. There the insurgents, who fought under flags with red crosses and whose battle cries were "Jesus," "Maria" and "St Iago," successfully maintained themselves against the repeated assaults of strong forces until the 12th of April, when, their ammunition and their provisions alike exhausted, they were overwhelmed and put to the sword, with the exception of 105 prisoners. During the siege the Dutch were enabled to furnish a vivid proof of enmity to the Christianity of the Spaniards and the Portuguese. For the guns in possession of the besiegers being too light to accomplish anything, Koeckebacker, the factor at Hirado, was invited to send ships carrying heavier metal. He replied with the "de Ryp" of 20 guns, which threw 426 shot into the castle in 15 days. Probably the great bulk of the remaining Japanese Christians perished at the massacre of Hara. Thenceforth there were few martyrs.¹

It has been clearly shown that Nobunaga, Hideyoshi and Iyeyasu were all in favour of foreign intercourse and trade, and that the Tokugawa chief, even more than his predecessor Hideyoshi, made strenuous efforts to differentiate between Christianity and commerce, so that the latter might not be involved in the former's fate.

*Foreign
Trade in
the 17th
Century.*

In fact the three objects which Iyeyasu desired most earnestly to compass were the development of foreign commerce, the acquisition of a mercantile marine and the exploitation of Japan's mines. He offered the Spaniards, Portuguese, English and Dutch a site for a settlement in Yedo, and had they accepted the offer the country might never have been closed. In his time Japan was virtually a free-trade country. Importers had not to pay any duties. It was expected, however, that they should make presents to the feudatory into whose port they carried their goods, and these presents were often very valuable. Naturally the Tokugawa chief desired to attract such a source of wealth to his own domains. He sent more than one envoy to Manila to urge the opening of commerce direct with the regions about Yedo, and to ask the Spaniards for competent naval architects. Perhaps the truest exposition of his attitude is given in a law enacted in 1602:—

"If any foreign vessel by stress of weather is obliged to touch at any principality or to put into any harbour of Japan, we order that, whoever these foreigners may be, absolutely nothing whatever that belongs to them or that they may have brought in their ship, shall be taken from them. Likewise we rigorously prohibit the use of any violence in the purchase or the sale of any of the commodities brought by their ship, and if it is not convenient for the merchants of the ship to remain in the port they have entered, they may pass to any other port that may suit them, and therein buy and sell in full freedom. Likewise we order in a general manner that foreigners may freely reside in any part of Japan they choose, but we rigorously forbid them to promulgate their faith."

It was in that mood that he granted (1605) a licence to the Dutch to trade in Japan, his expectation doubtless being that the ships which they promised to send every year would make their dépôt at Uruga or in some other place near Yedo. But things were ordered differently. The first Hollanders that set foot in Japan were the survivors of the wrecked "Liefde." Thrown into prison for a time, they were approached by emissaries from the feudatory of Hirado, who engaged some of them to teach the art of casting guns and the science of gunnery to his vassals, and when two of them were allowed to leave Japan, he furnished them with the means of doing so, at the same time making promises which invested Hirado with attractions as a port of trade, though it was then and always remained an insignificant fishing village. The Dutch possessed precisely the qualifications suited to the situation then existing in Japan: they had commercial potentialities without any religious associations. Fully appreciating that fact, the shrewd feudatory of Hirado laid himself out to entice the Dutchmen to his fief, and he succeeded. Shortly afterwards, an incident occurred which clearly betrayed the strength of the Tokugawa chief's desire to

¹ See *A History of Christianity in Japan* (1910), by Otis Cary.

exploit Japan's mines. The governor-general of the Philippines (Don Rodrigo Vivero y Velasco), his ship being cast away on the Japanese coast on a voyage to Acapulco, was received by Iyeyasu, and in response to the latter's request for fifty miners, the Spaniard formulated terms to which Iyeyasu actually agreed: that half the produce of the mines should go to the miners; that the other half should be divided between Iyeyasu and the king of Spain; that the latter might send commissioners to Japan to look after his mining interests, and that these commissioners might be accompanied by priests who would be entitled to have public churches for holding services. This was in 1609, when the Tokugawa chief had again and again imposed the strictest veto on Christian propagandism. There can be little doubt that he understood the concession made to Don Rodrigo in the sense of Hideyoshi's mandate to the Jesuits in Nagasaki, namely, that a sufficient number might remain to minister to the Portuguese traders frequenting the port. Iyeyasu had confidence in himself and in his countrymen. He knew that emergencies could be dealt with when they arose and he sacrificed nothing to timidity. But his courageous policy died with him and the miners did not come. Neither did the Spaniards ever devote any successful efforts to establishing trade with Japan. Their vessels paid fitful visits to Uraga, but the Portuguese continued to monopolize the commerce.

In 1611 a Dutch merchantman (the "Brach") reached Hirado with a cargo of pepper, cloth, ivory, silk and lead. She carried two envoys, Spex and Segerszoon, and in the very face of a Spanish embassy which had just arrived from Manila expressly for the purpose of "settling the matter regarding the Hollanders," the Dutchmen obtained a liberal patent from Iyeyasu. Twelve years previously, the merchants of London, stimulated generally by the success of the Dutch in trade with the East, and specially by the fact that "these Hollanders had raised the price of pepper against us from 3 shillings per pound to 6 shillings and 8 shillings," organized the East India Company which immediately began to send ships eastward. Of course the news that the Dutch were about to establish a trading station in Japan reached London speedily, and the East India Company lost no time in ordering one of their vessels, the "Clove," under Captain Saris, to proceed to the Far-Eastern islands. She carried a quantity of pepper, and on the voyage she endeavoured to procure some spices of the Moluccas. But the Dutch would not suffer any poaching on their valuable monopoly. The "Clove" entered Hirado on the 11th of June 1613. Saris seems to have been a man self-opinionated, of shallow judgment, and suspicious. Though strongly urged by Will Adams to make Uraga the seat of the new trade, though convinced of the excellence of the harbour there, and though instructed as to the great advantage of proximity to the shōgun's capital, he appears to have conceived some distrust of Adams, for he chose Hirado. From Iyeyasu Captain Saris received a most liberal charter, which plainly displayed the mood of the Tokugawa shōgun towards foreign trade:—

1. The ship that has now come for the first time from England over the sea to Japan may carry on trade of all kinds without hindrance. With regard to future visits (of English ships) permission will be given in regard to all matters.
2. With regard to the cargoes of ships, requisition will be made by list according to the requirements of the shōgunate.
3. English ships are free to visit any port in Japan. If disabled by storms they may put into any harbour.
4. Ground in Yedo in the place which they may desire shall be given to the English, and they may erect houses and reside and trade there. They shall be at liberty to return to their country whenever they wish to do so, and to dispose as they like of the houses they have erected.
5. If an Englishman dies in Japan of disease, or any other cause, his effects shall be handed over without fail.
6. Forced sales of cargo, and violence, shall not take place.
7. If one of the English should commit an offence, he should be sentenced by the English General according to the gravity of his offence.

(Translated by Professor Riess.)

The terms of the 4th article show that the shōgun expected the English to make Yedo their headquarters. Had Saris done

so, he would have been free from all competition, would have had an immense market at his very doors, would have economized the expense of numerous overland journeys to the Tokugawa court, and would have saved the payment of many "considerations." The result of his mistaken choice and subsequent bad management was that, ten years later (1623), the English factory at Hirado had to be closed, having incurred a total loss of about £2000. In condonation of this failure it must be noted that a few months after the death of Iyeyasu, the charter he had granted to Saris underwent serious modification. The original document threw open to the English every port in Japan; the revised document limited them to Hirado. But this restriction may be indirectly traced to the blunder of not accepting a settlement in Yedo and a port at Uraga. For the Tokugawa's foreign policy was largely swayed by an apprehension lest the Kiūshū feudatories, over whom the authority of Yedo had never been fully established, might, by the presence of foreign traders, come into possession of such a fleet and such an armament as would ultimately enable them to wrest the administration of the empire from Tokugawa hands. Hence the precaution of confining the English and the Dutch to Hirado, the fief of a *daimyō* too petty to become formidable, and to Nagasaki which was an imperial city.¹ But evidently an English factory in Yedo and English ships at Uraga would have strengthened the Tokugawa ruler's hand instead of supplying engines of war to his political foes. It must also be noted that the question of locality had another injurious outcome. It exposed the English—and the Dutch also—to crippling competition at the hands of a company of rich Osaka monopolists, who, as representing an Imperial city and therefore being pledged to the Tokugawa interests, enjoyed Yedo's favour and took full advantage of it. These shrewd traders not only drew a ring round Hirado, but also sent vessels on their own account to Cochin China, Siam, Tonkin, Cambodia and other places, where they obtained many of the staples in which the English and the Dutch dealt. Still the closure of the English factory at Hirado was purely voluntary. From first to last there had been no serious friction between the English and the Japanese. The company's houses and godowns were not sold. These as well as the charter were left in the hands of the *daimyō* of Hirado, who promised to restore them should the English re-open business in Japan. The company did think of doing so on more than one occasion, but no practical step was taken until the year 1673, when a merchantman, aptly named the "Return," was sent to seek permission. The Japanese, after mature reflection, made answer that as the king of England was married to a Portuguese princess, British subjects could not be permitted to visit Japan. That this reply was suggested by the Dutch is very probable; that it truly reflected the feeling of the Japanese government towards Roman Catholics is certain.

The Spaniards were expelled from Japan in 1624, the Portuguese in 1638. Two years before the latter event, the Yedo government took a signally retrogressive step. They ordained that no Japanese vessel should go abroad; that no Japanese subject should leave the country, and that, if detected attempting to do so, he should be put to death, the vessel that carried him and her crew being seized "to await our pleasure"; that any Japanese resident abroad should be executed if he returned; that the children and descendants of Spaniards together with those who had adopted such children should not be allowed to remain on pain of death; and that no ship of ocean-going dimensions should be built in Japan. Thus not only were the very children of the Christian propagandists driven completely from the land, but the Japanese people also were sentenced to imprisonment within the limits of their islands, and the country was deprived of all hope of acquiring a mercantile marine. The descendants of the Spaniards, banished by the edict, were taken to Macao in two Portuguese galleons. They numbered 287 and the property

¹ The Imperial cities were Yedo, Kiōto, Osaka and Nagasaki. To this last the English were subsequently admitted. They were also invited to Kagoshima by the Shimazu chieftain, and, had not their experience at Hirado proved so deterrent, they might have established a factory at Kagoshima.

The Last Days of the Portuguese in Japan.

they carried with them aggregated 6,697,500 florins. But if the Portuguese derived any gratification from this sweeping out of their much-abused rivals, the feeling was destined to be short-lived. Already they were subjected to humiliating restrictions.

"From 1623 the galleons and their cargoes were liable to be burnt and their crews executed if any foreign priest was found on board of them. An official of the Japanese government was stationed in Macao for the purpose of inspecting all intending passengers, and of preventing any one that looked at all suspicious from proceeding to Japan. A complete list and personal description of every one on board was drawn up by this officer, a copy of it was handed to the captain and by him it had to be delivered to the authorities who met him at Nagasaki before he was allowed to anchor. If in the subsequent inspection any discrepancy between the list and the persons actually carried by the vessel appeared, it would prove very awkward for the captain. Then in the inspection of the vessel letters were opened, trunks and boxes ransacked, and all crosses, rosaries or objects of religion of any kind had to be thrown overboard. In 1635 Portuguese were forbidden to employ Japanese to carry their umbrellas or their shoes, and only their chief men were allowed to bear arms, while they had to hire fresh servants every year. It was in the following year (1636) that the artificial islet of Deshima was constructed for their special reception, or rather imprisonment. It lay in front of the former Portuguese factory, with which it was connected by a bridge, and henceforth the Portuguese were to be allowed to cross this bridge only twice a year—at their arrival and at their departure. Furthermore, all their cargoes had to be sold at a fixed price during their fifty days' stay to a ring of licensed merchants from the imperial towns."

The imposition of such irksome conditions did not deter the Portuguese, who continued to send merchandise-laden galleons to Nagasaki. But in 1638 the bolt fell. The Shimabara rebellion was directly responsible. Probably the fact of a revolt of Christian converts, in such numbers and fighting with such resolution, would alone have sufficed to induce the weak government in Yedo to get rid of the Portuguese altogether. But the Portuguese were suspected of having instigated the Shimabara insurrection, and the Japanese authorities believed that they had proof of the fact. Hence, in 1638, an edict was issued proclaiming that as, in defiance of the government's order, the Portuguese had continued to bring missionaries to Japan; as they had supplied these missionaries with provisions and other necessities, and as they had fomented the Shimabara rebellion, thenceforth any Portuguese ship coming to Japan should be burned, together with her cargo, and every one on board of her should be executed. Ample time was allowed before enforcing this edict. Not only were the Portuguese ships then at Nagasaki permitted to close up their commercial transactions and leave the port, but also in the following year when two galleons arrived from Macao, they were merely sent away with a copy of the edict and a stern warning. But the Portuguese could not easily become reconciled to abandon a commerce from which they had derived splendid profits prior to the intrusion of the Spaniards, the Dutch and the English, and from which they might now hope further gains, since, although the Dutch continued to be formidable rivals, the Spaniards had been excluded, the English had withdrawn, and the Japanese, by the suicidal policy of their own rulers, were no longer able to send ships to China. Therefore they took a step which resulted in one of the saddest episodes of the whole story. Four aged men, the most respected citizens of Macao, were despatched (1640) to Nagasaki as ambassadors in a ship carrying no cargo but only rich presents. They bore a petition declaring that for a long time no missionaries had entered Japan from Macao, that the Portuguese had not been in any way connected with the Shimabara revolt, and that interruption of trade would injure Japan as much as Portugal. These envoys arrived at Nagasaki on the 1st of July 1640, and 24 days sufficed to bring from Yedo, whither their petition had been sent, peremptory orders for their execution as well as executioners to carry out the orders. There was no possibility of resistance. The Japanese had removed the ship's rudder, sails, guns and ammunition, and had placed the envoys, their suite and the crews under guard in Deshima. On the end of August they were all summoned to the governor's hall of audience, where, after their protest had been heard that ambassadors

should be under the protection of international law, the sentence written in Yedo 13 days previously was read to them. The following morning the Portuguese were offered their lives if they would apostatize. Every one rejected the offer, and being then led out to the martyrs' mount, the heads of the envoys and of 57 of their companions fell. Thirteen were saved to carry the news to Macao. These thirteen, after witnessing the burning of the galleon, were conducted to the governor's residence who gave them this message:—

"Do not fail to inform the inhabitants of Macao that the Japanese wish to receive from them neither gold nor silver, nor any kind of presents or merchandise; in a word, absolutely nothing which comes from them. You are witnesses that I have caused even the clothes of those who were executed yesterday to be burned. Let them do the same with respect to us if they find occasion to do so; we consent to it without difficulty. Let them think no more of us, just as if we were no longer in the world."

Finally the thirteen were taken to the martyrs' mount where, set up above the heads of the victims, a tablet recounted the story of the embassy and the reasons for the execution, and concluded with the words:—

"So long as the sun warms the earth, let no Christian be so bold as to come to Japan, and let all know that if King Philip himself, or even the very God of the Christians, or the great Shaka contravenes this prohibition, they shall pay for it with their heads."

Had the ministers of the shōgun in Yedo desired to make clear to future ages that to Christianity alone was due the expulsion of Spaniards and Portuguese from Japan and her adoption of the policy of seclusion they could not have placed on record more conclusive testimony. Macao received the news with rejoicing in that its "earthly ambassadors had been made ambassadors of heaven," but it did not abandon all hope of overcoming Japan's obduracy. When Portugal recovered her independence in 1640, the people of Macao requested Lisbon to send an ambassador to Japan, and on the 16th of July 1647 Don Gonzalo de Siqueira arrived in Nagasaki with two vessels. He carried a letter from King John IV., setting forth the severance of all connexion between Portugal and Spain, which countries were now actually at war, and urging that commercial relations should be re-established. The Portuguese, having refused to give up their rudders and arms, soon found themselves menaced by a force of fifty thousand samurai, and were glad to put out of port quietly on the 4th of September. This was the last episode in the medieval history of Portugal's intercourse with Japan.

When (1609) the Dutch contemplated forming a settlement in Japan, Iyeyasu gave them a written promise that "no man should do them any wrong and that he would maintain and defend them as his own subjects." *The Dutch at Deshima.* Moreover, the charter granted to them contained a clause providing that, into whatever ports their ships put, they were not to be molested or hindered in any way, but, "on the contrary, must be shown all manner of help, favour and assistance." They might then have chosen any port in Japan for their headquarters, but they had the misfortune to choose Hirado. For many years they had no cause to regret the choice. Their exclusive possession of the Spice Islands and their own enterprise and command of capital gave them the leading place in Japan's over-sea trade. Even when things had changed greatly for the worse and when the English closed their books with a large loss, it is on record that the Dutch were reaping a profit of 76 % annually. Their doings at Hirado were not of a purely commercial character. The Anglo-Dutch "fleet of defence" made that port its basis of operations against the Spaniards and the Portuguese. It brought its prizes into Hirado, the profits to be equally divided between the fleet and the factories, Dutch and English, which arrangement involved a sum of a hundred thousand pounds in 1622. But after the death of Iyeyasu there grew up at the Tokugawa court a party which advocated the expulsion of all foreigners on the ground that, though some professed a different form of Christianity from that of the Castilians and Portuguese, it was nevertheless one and the same creed. This policy was not definitely adopted,

they are confined to a little island 200 yards in length by 80 in width; the least symptom of predilection for any alien creed exposes a Japanese subject to be punished with awful rigour; any attempt to leave the limits of the realm involves decapitation; not a ship large enough to pass beyond the shadow of the coast may be built. However unwelcome the admission, it is apparent that for all these changes Christian propagandism was responsible. The policy of seclusion adopted by Japan in the early part of the 17th century and resolutely pursued until the middle of the 19th, was anti-Christian, not anti-foreign. The fact cannot be too clearly recognized. It is the chief lesson taught by the events outlined above. Throughout the whole of that period of isolation, Occidentals were not known to the Japanese by any of the terms now in common use, as *gwaikoku-jin*, *seiyō-jin*, or *i-jin*, which embody the simple meanings 'foreigner', 'Westerner' or 'alien': they were popularly called *bateren* (*padres*). Thus completely had foreign intercourse and Christian propagandism become identified in the eyes of the people. And when it is remembered that foreign intercourse, associated with Christianity, had come to be synonymous in Japanese ears with foreign aggression, with the subversion of the mikado's ancient dynasty, and with the loss of the independence of the 'country of the gods,' there is no difficulty in understanding the attitude of the nation's mind towards this question."

Foreign Intercourse in Modern Times.—From the middle of the 17th century to the beginning of the 19th, Japan succeeded in rigorously enforcing her policy of seclusion. But in the concluding days of this epoch two influences began to disturb her self-sufficiency. One was the gradual infiltration of light from the outer world through the narrow window of the Dutch prison at Deshima; the other, frequent apparitions of Russian vessels on her northern coasts. The former was a slow process. It materialized first in the study of anatomy by a little group of youths who had acquired accidental knowledge of the radical difference between Dutch and Japanese conceptions as to the structure of the human body. The work of these students reads like a page of romance. Without any appreciable knowledge of the Dutch language, they set themselves to decipher a Dutch medical book, obtained at enormous cost, and from this small beginning they passed to a vague but firm conviction that their country had fallen far behind the material and intellectual progress of the Occident. They laboured in secret, for the study of foreign books was then a criminal offence; yet the patriotism of one of their number outweighed his prudence, and he boldly published a brochure advocating the construction of a navy and predicting a descent by the Russians on the northern borders of the empire. Before this prescient man had lain five months in prison, his foresight was verified by events. The Russians simulated at the outset a desire to establish commercial relations by peaceful means. Had the Japanese been better acquainted with the history of nations, they would have known how to interpret the idea of a Russian quest for commercial connexions in the Far East a hundred years ago. But they dealt with the question on its superficial merits, and, after imposing on the tsar's envoys a wearisome delay of several months at Nagasaki, addressed to them a peremptory refusal together with an order to leave that port forthwith. Incensed by such treatment, and by the subsequent imprisonment of a number of their fellow-countrymen who had landed on the island of Etorofu in the Kuriles, the Russians resorted to armed reprisals. The Japanese settlements in Sakhalin and Etorofu were raided and burned, other places were menaced and several Japanese vessels were destroyed. The lesson sank deep into the minds of the Yedo officials. They withdrew their veto against the study of foreign books, and they arrived in part at the reluctant conclusion that to offer armed opposition to the coming of foreign ships was a task somewhat beyond Japan's capacity. Japan ceased, however, to attract European attention amid the absorbing interest of the Napoleonic era, and the shōgun's government, misinterpreting this respite, reverted to their old policy of stalwart resistance to foreign intercourse.

Meanwhile another power was beginning to establish close contact with Japan. The whaling industry in Russian waters off the coast of Alaska and in the seas of China and Japan had attracted large investments of American capital and was pursued yearly by thousands of American citizens. In one season 86 of these whaling vessels passed within

easy sight of Japan's northern island, Yezo, so that the aspect of foreign ships became quite familiar. From time to time American schooners were cast away on Japan's shores. Generally the survivors were treated with tolerable consideration and ultimately sent to Deshima for shipment to Batavia. Japanese sailors, too, driven out of their route by hurricanes and caught in the stream of the "Black Current," were occasionally carried to the Aleutian Islands, to Oregon or California, and in several instances these shipwrecked mariners were taken back to Japan with all kindness by American vessels. On such an errand of mercy the "Morrison" entered Yedo Bay in 1837, proceeding thence to Kagoshima, only to be driven away by cannon shot; and on such an errand the "Manhattan" in 1845 lay for four days at Uruga while her master (Mercator Cooper) collected books and charts. It would seem that his experience induced the Washington government to attempt the opening of Japan. A ninety-gun ship and a sloop were sent on the errand. They anchored off Uruga (July 1846) and Commodore Biddle made due application for trade. But he received a positive refusal, and having been instructed by his government to abstain from any act calculated to excite hostility or distrust, he quietly weighed anchor and sailed away.

In this same year (1846) a French ship touched at the Riukiu (Luchu) archipelago and sought to persuade the islanders that their only security against British aggression was to place themselves under the protection of France. In fact Great Britain was now beginning to interest herself in south China, and more than one warning reached Yedo from Deshima that English war-ships might at any moment visit Japanese waters. The Dutch have been much blamed for thus attempting to prejudice Japan against the Occident, but if the dictates of commercial rivalry, as it was then practised, do not constitute an ample explanation, it should be remembered that England and Holland had recently been enemies, and that the last British vessel,¹ seen at Nagasaki had gone there hoping to capture the annual Dutch trading-ship from Batavia. Deshima's warnings, however, remained unfulfilled; though they doubtless contributed to Japan's feeling of uneasiness. Then, in 1847, the king of Holland himself intervened. He sent to Yedo various books, together with a map of the world and a despatch advising Japan to abandon her policy of isolation. Within a few months (1849) of the receipt of his Dutch majesty's recommendation, an American brig, the "Preble," under Commander J. Glynn, anchored in Nagasaki harbour and threatened to bombard the town unless immediate delivery were made of 18 seamen who, having been wrecked in northern waters, were held by the Japanese preparatory to shipment for Batavia. In 1849 another despatch reached Yedo from the king of Holland announcing that an American fleet might be expected in Japanese waters a year later, and that, unless Japan agreed to enter into friendly commercial relations, war must ensue. Appended to this despatch was an approximate draft of the treaty which would be presented for signature, together with a copy of a memorandum addressed by the Washington government to European nations, justifying the contemplated expedition on the ground that it would inure to the advantage of Japan as well as to that of the Occident.

In 1853, Commodore Perry, with a squadron of four ships-of-war and 560 men, entered Uruga Bay. So formidable a foreign force had not been seen in Japanese waters since the coming of the Mongol Armada. A panic ensued among the people—the same people who, in the days of Hideyoshi or Iyeyasu, would have gone out to encounter these ships with assured confidence of victory. The contrast did not stop there. The shōgun, whose ancestors had administered the country's affairs with absolutely autocratic authority, now summoned a council of the feudatories to consider the situation; and the Imperial court in Kiōto, which never appealed for heaven's aid except in a national emergency such as had never been witnessed since the creation of the shōgunate, now directed that at the seven principal shrines and at all the great temples special

¹ H.M.S. "Phaeton," which entered that port in 1808.

Great Britain reappears upon the scene.

Commodore Perry.

prayers should be offered for the safety of the land and for the destruction of the aliens. Thus the appearance of the American squadron awoke in the case of the country as a whole a spirit of patriotism hitherto confined to feudal interests. The shōgun does not seem to have had any thought of invoking that spirit: his part in raising it was involuntary and his ministers behaved with perplexed vacillation. The infirmity of the Yedo Administration's purpose presented such a strong contrast to the single-minded resolution of the Imperial court that the prestige of the one was largely impaired and that of the other correspondingly enhanced. Perry, however, was without authority to support his proposals by any recourse to violence. The United States government had relied solely on the moral effect of his display of force, and his countrymen had supplied him with a large collection of the products of peaceful progress, from sewing machines to miniature railways. He did not unduly press for a treaty, but after lying at anchor off Uraga during a period of ten days and after transmitting the president's letter to the sovereign of Japan, he steamed away on the 17th of July, announcing his return in the ensuing spring. The conduct of the Japanese subsequently to his departure showed how fully and rapidly they had acquired the conviction that the appliances of their old civilization were powerless to resist the resources of the new. Orders were issued rescinding the long-enforced veto against the construction of sea-going ships; the feudal chiefs were invited to build and arm large vessels; the Dutch were commissioned to furnish a ship of war and to procure from Europe all the best works on modern military science; every one who had acquired any expert knowledge through the medium of Deshima was taken into official favour; forts were built; cannon were cast and troops were drilled. But from all this effort there resulted only fresh evidence of the country's inability to defy foreign insistence, and on the 2nd of December 1853, instructions were issued that if the Americans returned, they were to be dealt with peacefully. The sight of Perry's steam-propelled ships, their powerful guns and all the specimens they carried of western wonders, had practically broken down the barriers of Japan's isolation without any need of treaties or conventions. Perry returned in the following February, and after an interchange of courtesies and formalities extending over six weeks, obtained a treaty pledging Japan to accord kind treatment to shipwrecked sailors; to permit foreign vessels to obtain stores and provisions within her territory, and to allow American ships to anchor in the ports at Shimoda and Hakodate. On this second occasion Perry had 10 ships with crews numbering two thousand, and when he landed to sign the treaty, he was escorted by a guard of honour mustering 500 strong in 27 boats. Much has been written about his judicious display of force and his sagacious tact in dealing with the Japanese, but it may be doubted whether the consequences of his exploit have not invested its methods with extravagant lustre. Standing on the threshold of modern Japan's wonderful career, his figure shines by the reflected light of its surroundings.

Russia, Holland and England speedily secured for themselves treaties similar to that concluded by Commodore Perry in 1854.

First Treaty of Commerce. But Japan's doors still remained closed to foreign commerce, and it was reserved for another citizen of the great republic to open them. This was Townsend Harris (1803-1878), the first U.S. consul-general in Japan. Arriving in August 1856, he concluded, in June of the following year, a treaty securing to American citizens the privilege of permanent residence at Shimoda and Hakodate, the opening of Nagasaki, the right of consular jurisdiction and certain minor concessions. Still, however, permission for commercial intercourse was withheld, and Harris, convinced that this great goal could not be reached unless he made his way to Yedo and conferred direct with the shōgun's ministers, pressed persistently for leave to do so. Ten months elapsed before he succeeded, and such a display of reluctance on the Japanese side was very unfavourably criticized in the years immediately subsequent. Ignorance of the country's domestic politics inspired the critics. The Yedo administration, already weakened by the growth of a strong public sentiment in favour of abolishing the dual system

of government—that of the mikado in Kiōto and that of the shōgun in Yedo—had been still further discredited by its own timid policy as compared with the stalwart mien of the throne towards the question of foreign intercourse. Openly to sanction commercial relations at such a time would have been little short of reckless. The Perry convention and the first Harris convention could be construed, and were purposely construed, as mere acts of benevolence towards strangers; but a commercial treaty would not have lent itself to any such construction, and naturally the shōgun's ministers hesitated to agree to an apparently suicidal step. Harris carried his point, however. He was received by the shōgun in Yedo in November 1857, and on the 29th of July 1858 a treaty was signed in Yedo, engaging that Yokohama should be opened on the 4th of July 1859 and that commerce between the United States and Japan should thereafter be freely carried on there. This treaty was actually concluded by the shōgun's Ministers in defiance of their failure to obtain the sanction of the sovereign in Kiōto. Foreign historians have found much to say about Japanese duplicity in concealing the subordinate position occupied by the Yedo administration towards the Kiōto court. Such condemnation is not consistent with fuller knowledge. The Yedo authorities had power to solve all problems of foreign intercourse without reference to Kiōto. Iyeyasu had not seen any occasion to seek imperial assent when he granted unrestricted liberty of trade to the representatives of the East India Company, nor had Iyemitsu asked for Kiōto's sanction when he issued his decree for the expulsion of all foreigners. It, in the 19th century, Yedo shrank from a responsibility which it had unhesitatingly assumed in the 17th, the cause was to be found, not in the shōgun's simulation of autonomy, but in his desire to associate the throne with a policy which, while recognizing it to be unavoidable, he distrusted his own ability to make the nation accept. But his ministers had promised Harris that the treaty should be signed, and they kept their word, at a risk of which the United States' consul-general had no conception. Throughout these negotiations Harris spared no pains to create in the minds of the Japanese an intelligent conviction that the world could no longer be kept at arm's length, and though it is extremely problematical whether he would have succeeded had not the Japanese themselves already arrived at that very conviction, his patient and lucid expositions coupled with a winning personality undoubtedly produced much impression. He was largely assisted, too, by recent events in China, where the Peihō forts had been captured and the Chinese forced to sign a treaty at Tientsin. Harris warned the Japanese that the British fleet might be expected at any moment in Yedo Bay, and that the best way to avert irksome demands at the hands of the English was to establish a comparatively moderate precedent by yielding to America's proposals.

This treaty could not be represented, as previous conventions had been, in the light of a purely benevolent concession. It definitely provided for the trade and residence of foreign merchants, and thus finally terminated Japan's traditional isolation. Moreover, it had been concluded in defiance of the Throne's refusal to sanction anything of the kind. Much excitement resulted. The nation ranged itself into three parties. One comprised the advocates of free intercourse and progressive liberality; another, while insisting that only the most limited privileges should be accorded to aliens, was of two minds as to the advisability of offering armed resistance at once or temporizing so as to gain time for preparation; the third advocated uncompromising seclusion. Once again the shōgun convoked a meeting of the feudal barons, hoping to secure their co-operation. But with hardly an exception they pronounced against yielding. Thus the shōgunate saw itself compelled to adopt a resolutely liberal policy: it issued a decree in that sense, and thenceforth the administrative court at Yedo and the Imperial court in Kiōto stood in unequivocal opposition to each other, the Conservatives ranging themselves on the side of the latter, the Liberals on that of the former. It was a situation full of perplexity to outsiders, and the foreign

Effects of the Treaty.

representatives misinterpreted it. They imagined that the shōgun's ministers sought only to evade their treaty obligations and to render the situation intolerable for foreign residents, whereas in truth the situation threatened to become intolerable for the shōgunate itself. Nevertheless the Yedo officials cannot be entirely acquitted of duplicity. Under pressure of the necessity of self-preservation they effected with Kiōto a compromise which assigned to foreign intercourse a temporary character. The threatened political crisis was thus averted, but the enemies of the dual system of government gained strength daily. One of their devices was to assassinate foreigners in the hope of embroiling the shōgunate with Western powers and thus either forcing its hand or precipitating its downfall. It is not wonderful, perhaps, that foreigners were deceived, especially as they approached the solution of Japanese problems with all the Occidental's habitual suspicion of everything Oriental. Thus when the Yedo government, cognisant that serious dangers menaced the Yokohama settlement, took precautions to guard it, the foreign ministers convinced themselves that a deliberate piece of chicanery was being practised at their expense; that statecraft rather than truth had dictated the representations made to them by the Japanese authorities; and that the alarm of the latter was simulated for the purpose of finding a pretext to curtail the liberty enjoyed by foreigners. Therefore a suggestion that the inmates of the legations should show themselves as little as possible in the streets of the capital, where at any moment a desperado might cut them down, was treated almost as an insult. Then the Japanese authorities saw no recourse except to attach an armed escort to the person of every foreigner when he moved about the city. But even this precaution, which certainly was not adopted out of mere caprice or with any sinister design, excited fresh suspicions. The British representative, in reporting the event to his government, said that the Japanese had taken the opportunity to graft upon the establishment of spies, watchmen and police-officers at the several legations, a mounted escort to accompany the members whenever they moved about.

Just at this time (1861) the Yedo statesmen, in order to reconcile the divergent views of the two courts, negotiated a marriage between the emperor's sister and the shōgun. But in order to bring the union about, they had to placate the Kiōto Conservatives by a promise to expel foreigners from the country within ten years. When this became known, it strengthened the hands of the reactionaries, and furnished a new weapon to Yedo's enemies, who interpreted the marriage as the beginning of a plot to dethrone the mikado. Murderous attacks upon foreigners became more frequent. Two of these assaults had momentous consequences. Three British subjects attempted to force their way through the *cortège* of the Satsuma feudal chief on the highway between Yokohama and Yedo. One of them was killed and the other two wounded. This outrage was not inspired by the "barbarian-expelling" sentiment: to any Japanese subject violating the rules of etiquette as these Englishmen had violated them, the same fate would have been meted out. Nevertheless, as the Satsuma daimyō refused to surrender his implicated vassals, and as the shōgun's arm was not long enough to reach the most powerful feudatory in Japan, the British government sent a squadron to bombard his capital, Kagoshima. It was not a brilliant exploit in any sense, but its results were invaluable; for the operations of the British ships finally convinced the Satsuma men of their impotence in the face of Western armaments, and converted them into advocates of liberal progress. Three months previously to this bombardment of Kagoshima another puissant feudatory had thrown down the gauntlet. The Chōshū chief, whose batteries commanded the entrance to the inland sea at Shimonoseki, opened fire upon ships flying the flags of the United States, of France and of Holland. In thus acting he obeyed an edict obtained by the extremists from the mikado without the knowledge of the shōgun, which edict fixed the 11th of May 1863 as the date for practically inaugurating the foreigners-expulsion policy.

Again the shōgun's administrative competence proved inadequate to exact reparation, and a squadron, composed chiefly of British men-of-war, proceeding to Shimonoseki, demolished Chōshū's forts, destroyed his ships and scattered his samurai. In the face of the Kagoshima bombardment and the Shimonoseki expedition, no Japanese subject could retain any faith in his country's ability to oppose Occidentals by force. Thus the year 1863 was memorable in Japan's history. It saw the "barbarian-expelling" agitation deprived of the emperor's sanction; it saw the two principal clans, Satsuma and Chōshū, convinced of their country's impotence to defy the Occident; it saw the nation almost fully roused to the disintegrating and weakening effects of the feudal system; and it saw the traditional antipathy to foreigners beginning to be exchanged for a desire to study their civilization and to adopt its best features.

The treaty concluded between the shōgun's government and the United States in 1858 was of course followed by similar compacts with the principal European powers. *Ratification* From the outset these states agreed to co-operate *of the* for the assertion of their conventional privileges, *Treaties*, and they naturally took Great Britain for leader, though such a relation was never openly announced. The treaties, however, continued during several years to lack imperial ratification, and, as time went by, that defect obtruded itself more and more upon the attention of their foreign signatories. The year 1865 saw British interests entrusted to the charge of Sir Harry Parkes, a man of keen insight, indomitable courage and somewhat peremptory methods, learned during a long period of service in China. It happened that the post of Japanese secretary at the British legation in Yedo was then held by a remarkably gifted young Englishman, who, in a comparatively brief interval, had acquired a good working knowledge of the Japanese language, and it happened also that the British legation in Yedo was already—as it has always been ever since—the best equipped institution of its class in Japan. Aided by these facilities and by the researches of Mr Satow (afterwards Sir Ernest Satow) Parkes arrived at the conclusions that the Yedo government was tottering to its fall; that the resumption of administrative authority by the Kiōto court would make for the interests not only of the West but also of Japan; and that the ratification of the treaties by the mikado would elucidate the situation for foreigners while being, at the same time, essential to the validity of the documents. Two other objects also presented themselves, namely, that the import duties fixed by the conventions should be reduced from 15 to 5 % *ad valorem*, and that the ports of Hiōgō and Osaka should be opened at once, instead of at the expiration of two years as originally fixed. It was not proposed that these concessions should be entirely gratuitous. When the four-power flotilla destroyed the Shimonoseki batteries and sank the vessels lying there, a fine of three million dollars (some £750,000) had been imposed upon the daimyō of Chōshū by way of ransom for his capital, which lay at the mercy of the invaders. The daimyō of Chōshū, however, was in open rebellion against the shōgun, and as the latter could not collect the debt from the recalcitrant clansmen, while the four powers insisted on being paid by some one, the Yedo treasury was finally compelled to shoulder the obligation. Two out of the three millions were still due, and Parkes conceived the idea of remitting this debt in exchange for the ratification of the treaties, the reduction of the customs tariff from 15 to 5 % *ad valorem* and the immediate opening of Hiōgō and Osaka. He took with him to the place of negotiation (Hiōgō) a fleet of British, French and Dutch war-ships, for, while announcing peaceful intentions, he had accustomed himself to think that a display of force should occupy the foreground in all negotiations with Oriental states. This *coup* may be said to have sealed the fate of the shōgunate. For here again was produced in a highly aggravated form the drama which had so greatly startled the nation eight years previously. Perry had come with his war-ships to the portals of Yedo, and now a foreign fleet, twice as strong as Perry's, had anchored at the vestibule of the Imperial city itself. No rational Japanese

quences.

could suppose that this parade of force was for purely peaceful purposes, or that rejection of the amicable bargain proposed by Great Britain's representative would be followed by the quiet withdrawal of the menacing fleet, whose terrible potentialities had been demonstrated at Kagoshima and Shimonoseki. The seclusionists, whose voices had been nearly silenced, raised them in renewed denunciation of the shōgun's incompetence to guarantee the sacred city of Kiōto against such trespasses, and the emperor, brought once more under the influence of the anti-foreign party, inflicted a heavy disgrace on the shōgun by dismissing and punishing the officials to whom the latter had entrusted the conduct of negotiations at Hiōgō. Such procedure on the part of the throne amounted to withdrawing the administrative commission held by the Tokugawa family since the days of Iyeyasu. The shōgun resigned. But his adversaries not being yet ready to replace him, he was induced to resume office, with, however, fatally damaged prestige. As for the three-power squadron, it steamed away successful. Parkes had come prepared to write off the indemnity in exchange for three concessions. He obtained two of the concessions without remitting a dollar of the debt.

The shōgun did not long survive the humiliation thus inflicted on him. He died in the following year (1866), and was succeeded by Keiki, destined to be the last of the Tokugawa rulers. Nine years previously this same Keiki had been put forward by the seclusionists as candidate for the shōgunate. Yet no sooner did he attain that distinction in 1866 than he remodelled the army on French lines, engaged English officers to organize a navy, sent his brother to the Paris Exhibition, and altered many of the forms and ceremonies of his court so as to bring them into accord with Occidental fashions. The contrast between the politics he represented when a candidate for office in 1857 and the practice he adopted on succeeding to power in 1866 furnished an apt illustration of the change that had come over the spirit of the time. The most bigoted of the exclusionists were now beginning to abandon all idea of expelling foreigners and to think mainly of acquiring the best elements of their civilization. The Japanese are slow to reach a decision but very quick to act upon it when reached. From 1866 onwards the new spirit rapidly permeated the whole nation; progress became the aim of all classes, and the country entered upon a career of intelligent assimilation which, in forty years, won for Japan a universally accorded place in the ranks of the great Occidental powers.

After the abolition of the shōgunate and the resumption of administrative functions by the Throne, one of the first acts of the newly organized government was to invite the foreign representatives to Kiōto, where they had audience of the mikado. Subsequently a decree was issued, announcing the emperor's resolve to establish amicable relations with foreign countries, and "declaring that any Japanese subject thereafter guilty of violent behaviour towards a foreigner would not only act in opposition to the Imperial command, but would also be guilty of impairing the dignity and good faith of the nation in the eyes of the powers with which his majesty had pledged himself to maintain friendship." From that time the relations between Japan and foreign states grew yearly more amicable; the nation adopted the products of Western civilization with notable thoroughness, and the provisions of the treaties were carefully observed. Those treaties, however, presented one feature which very soon became exceedingly irksome to Japan. They exempted foreigners residing within her borders from the operation of her criminal laws, and secured to them the privilege of being arraigned solely before tribunals of their own nationality. That system had always been considered necessary where the subjects of Christian states visited or sojourned in non-Christian countries, and, for the purpose of giving effect to it, consular courts were established. This necessitated the confinement of foreign residents to settlements in the neighbourhood of the consular courts, since it would have been imprudent

to allow foreigners to have free access to districts remote from the only tribunals competent to control them. The Japanese raised no objection to the embodiment of this system in the treaties. They recognized its necessity and even its expediency, for if, on the one hand, it infringed their country's sovereign rights, on the other, it prevented complications which must have ensued had they been entrusted with jurisdiction which they were not prepared to discharge satisfactorily. But the consular courts were not free from defects. A few of the powers organized competent tribunals presided over by judicial experts, but a majority of the treaty states, not having sufficiently large interests at stake, were content to delegate consular duties to merchants, not only deficient in legal training, but also themselves engaged in the very commercial transactions upon which they might at any moment be required to adjudicate in a magisterial capacity. In any circumstances the dual functions of consul and judge could not be discharged without anomaly by the same official, for he was obliged to act as advocate in the preliminary stages of complications about which, in his position as judge, he might ultimately have to deliver an impartial verdict. In practice, however, the system worked with tolerable smoothness, and might have remained long in force had not the patriotism of the Japanese rebelled bitterly against the implication that their country was unfit to exercise one of the fundamental attributes of every sovereign state, judicial autonomy. From the very outset they spared no effort to qualify for the recovery of this attribute. Revision of the country's laws and re-organization of its law courts would necessarily have been an essential feature of the general reforms suggested by contact with the Occident, but the question of consular jurisdiction certainly constituted a special incentive. Expert assistance was obtained from France and Germany; the best features of European jurisprudence were adapted to the conditions and usages of Japan; the law courts were remodelled, and steps were taken to educate a competent judiciary. In criminal law the example of France was chiefly followed; in commercial law that of Germany; and in civil law that of the Occident generally, with due regard to the customs of the country. The jury system was not adopted, collegiate courts being regarded as more conducive to justice, and the order of procedure went from tribunals of first instance to appeal courts and finally to the court of cassation. Schools of law were quickly opened, and a well-equipped bar soon came into existence. Twelve years after the inception of these great works, Japan made formal application for revision of the treaties on the basis of abolishing consular jurisdiction. She had asked for revision in 1871, sending to Europe and America an important embassy to raise the question. But at that time the conditions originally calling for consular jurisdiction had not undergone any change such as would have justified its abolition, and the Japanese government, though very anxious to recover tariff autonomy as well as judicial, shrank from separating the two questions, lest by prematurely solving one the solution of the other might be unduly deferred. Thus the embassy failed, and though the problem attracted great academical interest from the first, it did not re-enter the field of practical politics until 1883. The negotiations were long protracted. Never previously had an Oriental state received at the hands of the Occident recognition such as that now demanded by Japan, and the West naturally felt deep reluctance to try a wholly novel experiment. The United States had set a generous example by concluding a new treaty (1878) on the lines desired by Japan. But its operation was conditional on a similar act of compliance by the other treaty powers. Ill-informed European publicists ridiculed the Washington statesmen's attitude on this occasion, claiming that what had been given with one hand was taken back with the other. The truth is that the conditional provision was inserted at the request of Japan herself, who appreciated her own unpreparedness for the concession. From 1883, however, she was ready to accept full responsibility, and she therefore asked that all foreigners within her borders should thenceforth be subject to her laws and judiciable by her law-courts, supplementing her

*Japan's
Claim for
Judicial
Autonomy.*

application by promising that its favourable reception should be followed by the complete opening of the country and the removal of all restrictions hitherto imposed on foreign trade, travel and residence in her realm. "From the first it had been the habit of Occidental peoples to upbraid Japan on account of the barriers opposed by her to full and free foreign intercourse, and she was now able to claim that these barriers were no longer maintained by her desire, but that they existed because of a system which theoretically proclaimed her unfitness for free association with Western nations, and practically made it impossible for her to throw open her territories completely for the ingress of foreigners." She had a strong case, but on the side of the European powers extreme reluctance was manifested to try the unprecedented experiment of placing their people under the jurisdiction of an Oriental country. Still greater was the reluctance of those upon whom the experiment would be tried. Foreigners residing in Japan naturally clung to consular jurisdiction as a privilege of inestimable value. They saw, indeed, that such a system could not be permanently imposed on a country where the conditions justifying it had nominally disappeared. But they saw, also, that the legal and judicial reforms effected by Japan had been crowded into an extraordinarily brief period, and that, as tyros experimenting with alien systems, the Japanese might be betrayed into many errors.

The negotiations lasted for eleven years. They were begun in 1883 and a solution was not reached until 1894. Finally European governments conceded the justice of Japan's case, and it was agreed that from July 1899 Japanese tribunals should assume jurisdiction over every person, of whatever nationality, within the confines of Japan, and the whole country should be thrown open to foreigners, all limitations upon trade, travel and residence being removed. Great Britain took the lead in thus releasing Japan from the fetters of the old system. The initiative came from her with special grace, for the system and all its irksome consequences had been originally imposed on Japan by a combination of powers with Great Britain in the van. As a matter of historical sequence the United States dictated the terms of the first treaty providing for consular jurisdiction. But from a very early period the Washington government showed its willingness to remove all limitations of Japan's sovereignty, whereas Europe, headed by Great Britain, whose preponderating interests entitled her to lead, resolutely refused to make any substantial concession. In Japanese eyes, therefore, British conservatism seemed to be the one serious obstacle, and since the British residents in the settlements far outnumbered all other nationalities, and since they alone had newspaper organs to ventilate their grievances—it was certainly fortunate for the popularity of her people in the Far East that Great Britain saw her way finally to set a liberal example. Nearly five years were required to bring the other Occidental powers into line with Great Britain and America. It should be stated, however, that neither reluctance to make the necessary concessions nor want of sympathy with Japan caused the delay. The explanation is, first, that each set of negotiators sought to improve either the terms or the terminology of the treaties already concluded, and, secondly, that the tariff arrangements for the different countries required elaborate discussion.

Until the last of the revised treaties was ratified, voices of protest against revision continued to be vehemently raised by a large section of the foreign community in the settlements. Some were honestly apprehensive as to the issue of the experiment. Others were swayed by racial prejudice. A few had fallen into an insuperable habit of grumbling, or found their account in advocating conservatism under pretence of championing foreign interests; and all were naturally reluctant to forfeit the immunity from taxation hitherto enjoyed. It seemed as though the inauguration of the new system would find the foreign community in a mood which must greatly diminish the chances of a happy result, for where a captious and aggrieved disposition

exists, opportunities to discover causes of complaint cannot be wanting. But at the eleventh hour this unfavourable demeanour underwent a marked change. So soon as it became evident that the old system was hopelessly doomed, the sound common sense of the European and American business man asserted itself. The foreign residents let it be seen that they intended to bow cheerfully to the inevitable, and that no obstacles would be willingly placed by them in the path of Japanese jurisdiction. The Japanese, on their side, took some promising steps. An Imperial rescript declared in unequivocal terms that it was the sovereign's policy and desire to abolish all distinctions between natives and foreigners, and that by fully carrying out the friendly purpose of the treaties his people would best consult his wishes, maintain the character of the nation, and promote its prestige. The premier and other ministers of state issued instructions to the effect that the responsibility now devolved on the government, and the duty on the people, of enabling foreigners to reside confidently and contentedly in every part of the country. Even the chief Buddhist prelates addressed to the priests and parishioners in their dioceses injunctions pointing out that, freedom of conscience being now guaranteed by the constitution, men professing alien creeds must be treated as courteously as the followers of Buddhism, and must enjoy the same rights and privileges.

Thus the great change was effected in circumstances of happy augury. Its results were successful on the whole. Foreigners residing in Japan now enjoy immunity of domicile, personal and religious liberty, freedom from official interference, and security of life and property as fully as though they were living in their own countries, and they have gradually learned to look with greatly increased respect upon Japanese law and its administrators.

Next to the revision of the treaties and to the result of the great wars waged by Japan since the resumption of foreign intercourse, the most memorable incident in her modern career was the conclusion, first, of an *entente*, and, secondly, of an offensive and defensive alliance with Great Britain in January 1902 and September 1905, respectively. The *entente* set out by disavowing on the part of each of the contracting parties any aggressive tendency in either China or Korea, the independence of which two countries was explicitly recognized; and went on to declare that Great Britain in China and Japan in China and Korea might take indispensable means to safeguard their interests; while, if such measures involved one of the signatories in war with a third power, the other signatory would not only remain neutral but would also endeavour to prevent other powers from joining in hostilities against its ally, and would come to the assistance of the latter in the event of its being faced by two or more powers. The *entente* further recognized that Japan possessed, in a peculiar degree, political, commercial and industrial interests in Korea. This agreement, equally novel for each of the contracting parties, evidently tended to the benefit of Japan more than to that of Great Britain, inasmuch as the interests in question were vital from the former power's point of view but merely local from the latter's. The inequality was corrected by an offensive and defensive alliance in 1905. For the scope of the agreement was then extended to India and eastern Asia generally, and while the signatories pledged themselves, on the one hand, to preserve the common interests of all powers in China by insuring her integrity and independence as well as the principle of equal opportunities for the commerce and industry of all nations within her borders, they agreed, on the other, to maintain their own territorial rights in eastern Asia and India, and to come to each other's armed assistance in the event of those rights being assailed by any other power or powers. These agreements have, of course, a close relation to the events which accompanied or immediately preceded them, but they also present a vivid and radical contrast between a country which, less than half a century previously, had struggled vehemently to remain secluded from the world, and a country which now allied itself with one of the most liberal and progressive nations for the purposes of a policy

extending over the whole of eastern Asia and India. This contrast was accentuated two years later (1907) when France and Russia concluded *ententes* with Japan, recognizing the independence and integrity of the Chinese Empire, as well as the principle of equal opportunity for all nations in that country, and engaging to support each other for assuring peace and security there. Japan thus became a world power in the most unequivocal sense.

Japan's Foreign Wars and Complications.—The earliest foreign war conducted by Japan is said to have taken place at the beginning of the 3rd century, when the empress Jingō led an army to the conquest of Korea. But as the event is supposed to have happened more than 500 years before the first Japanese record was written, its traditional details cannot be seriously discussed. There is, however, no room to doubt that from time to time in early ages Japanese troops were seen in Korea, though they made no permanent impression on the country. It was reserved for Hideyoshi, the taikō, to make the Korean peninsula the scene of a great over-sea campaign. Hideyoshi, the Napoleon of Japan, having brought the whole empire under his sway as the sequel of many years of incomparable generalship and statecraft, conceived the project of subjugating China. By some historians his motive has been described as a desire to find employment for the immense mob of armed men whom four centuries of almost continuous fighting had called into existence in Japan: he felt that domestic peace could not be permanently restored unless these restless spirits were occupied abroad. But although that object may have reinforced his purpose, his ambition aimed at nothing less than the conquest of China, and he regarded Korea merely as a stepping-stone to that aim. Had Korea consented to be put to such a use, she need not have fought or suffered. The Koreans, however, counted China invincible. They considered that Japan would be shattered by the first contact with the great empire, and therefore although, in the 13th century, they had given the use of their harbours to the Mongol invaders of Japan, they flatly refused in the 16th to allow their territory to be used for a Japanese invasion of China. On the 24th of May 1592 the wave of invasion rolled against Korea's southern coast. Hideyoshi had chosen Nagoya in the province of Hizen as the home-base of his operations. There the sea separating Japan from the Korean peninsula narrows to a strait divided into two channels of almost equal width by the island of Tsushima. To reach this island from the Japanese side was an easy and safe task, but in the 56-mile channel that separated Tsushima from the peninsula an invading flotilla had to run the risk of attack by Korean war-ships. At Nagoya Hideyoshi assembled an army of over 300,000 men, of whom some 70,000 constituted the first fighting line, 87,000 the second, and the remainder formed a reserve to be subsequently drawn on as occasion demanded. The question of transport presented some difficulty, but it was solved by the simple expedient of ordering every feudatory to furnish two ships for each 100,000 *koku* of his fief's revenue. These were not fighting vessels but mere transports. As for the plan of campaign, it was precisely in accord with modern principles of strategy, and bore witness to the daring genius of Hideyoshi. The van, consisting of three army corps and mustering in all 51,000 men, was to cross rapidly to Fusan, on the south coast of the peninsula, and immediately commence a movement northward towards the capital, Seoul, one corps moving by the eastern coast-road, one by the central route, and one by the western coast-line. Thereafter the other four corps, which formed the first fighting line, together with the corps under the direct orders of the commander-in-chief, Ukida Hideiye, were to cross, for the purpose of effectually subduing the regions through which the van had passed; and, finally, the two remaining corps of the second line were to be transported by sea up the west coast of the peninsula, to form a junction with the van which, by that time, should be preparing to pass into China over the northern boundary of Korea, namely, the Yalu River. For the landing place of these reinforcements the town of Phyang-yang was adopted, being easily accessible by the Taidong River from the

coast. In later ages Japanese armies were destined to move twice over these same regions, once to the invasion of China, once to the attack of Russia, and they adopted almost the same strategical plan as that mapped out by Hideyoshi in the year 1592. The forecast was that the Koreans would offer their chief resistance, first, at the capital, Seoul; next at Phyang-yang, and finally at the Yalu, as the approaches to all these places offered positions capable of being utilized to great advantage for defensive purposes.

On the 24th of May 1592 the first army corps, under the command of Konishi Yukinaga, crossed unmolested to the peninsula; next day the castle of Fusan was carried by storm, which same fate befell, on the 27th, another and stronger fortress lying 3 miles inland and garrisoned by 20,000 picked soldiers. The invaders were irresistible. From the landing-place at Fusan to the gates of Seoul the distance is 267 miles. Konishi's corps covered that interval in 19 days, storming two forts, carrying two positions and fighting one pitched battle *en route*. On the 12th of June the Korean capital was in Japanese hands, and by the 16th four army corps had assembled there, while four others had effected a landing at Fusan. After a rest of 15 days the northward advance was resumed, and July 15th saw Phyang-yang in Japanese possession. The distance of 130 miles from Seoul to the Taidong had been traversed in 18 days, 10 having been occupied in forcing the passage of a river which, if held with moderate resolution and skill, should have stopped the Japanese altogether. At this point, however, the invasion suffered a check owing to a cause which in modern times has received much attention, though in Hideyoshi's days it had been little considered; the Japanese lost the command of the sea.

The Japanese idea of sea-fighting in those times was to use open boats propelled chiefly by oars. They closed as quickly as possible with the enemy, and then fell on with the trenchant swords which they used so skilfully. Now during the 15th century and part of the 16th the Chinese had been so harassed by Japanese piratical raids that their inventive genius, quickened by suffering, suggested a device for coping with these formidable adversaries. Once allow the Japanese swordsman to come to close quarters and he carried all before him. To keep him at a distance, then, was the great desideratum, and the Chinese compasssed this in maritime warfare by completely covering their boats with roofs of solid timber, so that those within were protected against missiles, while loop-holes and ports enabled them to pour bullets and arrows on a foe. The Koreans learned this device from the Chinese and were the first to employ it in actual warfare. Their own history alleges that they improved upon the Chinese model by nailing sheet iron over the roofs and sides of the "turtle-shell" craft and studding the whole surface with *chevaux de frise*, but Japanese annals indicate that in the great majority of cases solid timber alone was used. It seems strange that the Japanese should have been without any clear perception of the immense fighting superiority possessed by such protected war-vessels over small open boats. But certainly they were either ignorant or indifferent. The fleet which they provided to hold the command of Korean waters did not include one vessel of any magnitude: it consisted simply of some hundreds of row-boats manned by 7000 men. Hideyoshi himself was perhaps not without misgivings. Six years previously he had endeavoured to obtain two war-galleons from the Portuguese, and had he succeeded, the history of the Far East might have been radically different. Evidently, however, he committed a blunder which his countrymen in modern times have conspicuously avoided; he drew the sword without having fully investigated his adversary's resources. Just about the time when the van of the Japanese army was entering Seoul, the Korean admiral, Yi Sun-sin, at the head of a fleet of 80 vessels, attacked the Japanese squadron which lay at anchor near the entrance to Fusan harbour, set 26 of the vessels on fire and dispersed the rest. Four other engagements ensued in rapid succession. The last and most important took place shortly after the Japanese troops had seized Phyang-yang. It

Fighting at Sea.

resulted in the sinking of over 70 Japanese vessels, transports and fighting ships combined, which formed the main part of a flotilla carrying reinforcements by sea to the van of the invading army. This despatch of troops and supplies by water had been a leading feature of Hideyoshi's plan of campaign, and the destruction of the flotilla to which the duty was entrusted may be said to have sealed the fate of the war by isolating the army in Korea from its home base. It is true that Konishi Yukinaga, who commanded the first division, would have continued his northward march from Phyong-yang without delay. He argued that China was wholly unprepared, and that the best hope of ultimate victory lay in not giving her time to collect her forces. But the commander-in-chief, Ukida Hideyoshi, refused to endorse this plan. He took the view that since the Korean provinces were still offering desperate resistance, supplies could not be drawn from them, neither could the troops engaged in subjugating them be freed for service at the front. Therefore it was essential to await the consummation of the second phase of Hideyoshi's plan, namely, the despatch of reinforcements and munitions by water to Phyong-yang. The reader has seen how that second phase fared. The Japanese commander at Phyong-yang never received any accession of strength. His force suffered constant diminution from casualties, and the question of commissariat became daily more difficult. It is further plain to any reader of history—and Japanese historians themselves admit the fact—that no wise effort was made to conciliate the Korean people. They were treated so harshly that even the humble peasant took up arms, and thus the peninsula, instead of serving as a basis of supplies, had to be garrisoned perpetually by a strong army.

The Koreans, having suffered for their loyalty to China, naturally looked to her for succour. Again and again appeals were made to Peking, and at length a force of 5000 men, which had been mobilized in the Liaotung peninsula, crossed the Yalu and moved south to Phyong-yang, where the Japanese van had been lying idle for over two months. This was early in October 1592. Memorable as the first encounter between Japanese and Chinese, the incident also illustrated China's supreme confidence in her own ineffable superiority. The whole of the Korean forces had been driven northward throughout the entire length of the peninsula by the Japanese armies, yet Peking considered that 5000 Chinese "braves" would suffice to roll back this tide of invasion. Three thousand of the Chinese were killed and the remainder fled pell-mell across the Yalu. China now began to be seriously alarmed. She collected an army variously estimated at from 51,000 to 200,000 men, and marching it across Manchuria in the dead of winter, hurried it against Phyong-yang during the first week of February 1593. The Japanese garrison did not exceed 20,000, nearly one-half of its original number having been detached to hold a line of forts which guarded the communications with Seoul. Moreover, the Chinese, though their swords were much inferior to the Japanese weapon, possessed great superiority in artillery and cavalry, as well as in the fact that their troopers wore iron mail which defied the keenest blade. Thus, after a severe fight, the Japanese had to evacuate Phyong-yang and fall back upon Seoul. But this one victory alone stands to China's credit. In all subsequent encounters of any magnitude her army suffered heavy defeats, losing on one occasion some 10,000 men, on another 4000, and on a third 39,000. But the presence of her forces and the determined resistance offered by the Koreans effectually saved China from invasion. Indeed, after the evacuation of Seoul, on the 9th of May 1593, Hideyoshi abandoned all idea of carrying the war into Chinese territory, and devoted his attention to obtaining honourable terms of peace, the Japanese troops meanwhile holding a line of forts along the southern coast of Korea. He died before that end had been accomplished. Had he lived a few days longer, he would have learned of a crushing defeat inflicted on the Chinese forces (at Sŏ-chhŏn, October 30, 1598), when the Satsuma men under Shimazu Yoshihiro took 38,700 Chinese heads and sent the noses and ears to Japan, where they now lie buried under a tumulus (*mimimuta*,

ear-mound) near the temple of Daibutsu in Kiōto. Thereafter the statesmen to whom the regent on his death-bed had entrusted the duty of terminating the struggle and recalling the troops, intimated to the enemy that the evacuation of the peninsula might be obtained if a Korean prince repaired to Japan as envoy, and if some tiger-skins and ginseng were sent to Kiōto in token of amity. So ended one of the greatest over-sea campaigns recorded in history. It had lasted 6½ years, had seen 200,000 Japanese troops at one time on Korean soil, and had cost something like a quarter of a million lives.

From the recall of the Korea expedition in 1598 to the resumption of intercourse with the Occident in modern times, Japan enjoyed uninterrupted peace with foreign nations. Thereafter she had to engage in four wars. It is a striking contrast. During the first eleven centuries of her historical existence she was involved in only one contest abroad; during the next half century she fought four times beyond the sea and was confronted by many complications. Whatever material or moral advantages her association with the West conferred on her, it did not bring peace.

The first menacing foreign complication with which the Japanese government of the Meiji era had to deal was connected with the traffic in Chinese labour, an abuse not yet wholly eradicated. In 1872, a Peruvian ship, the *Luz*—"Maria Luz," put into port at Yokohama, carrying 200 contract labourers. One of the unfortunate men succeeded in reaching the shore and made a piteous appeal to the Japanese authorities, who at once seized the vessel and released her freight of slaves, for they were little better. The Japanese had not always been so particular. In the days of early foreign intercourse, before England's attitude towards slavery had established a new code of ethics, Portuguese ships had been permitted to carry away from Hirado, as they did from Macao, cargoes of men and women, doomed to a life of enforced toil if they survived the horrors of the voyage. But modern Japan followed the tenets of modern morality in such matters. Of course the Peruvian government protested, and for a time relations were strained almost to the point of rupture; but it was finally agreed that the question should be submitted to the arbitration of the tsar, who decided in Japan's favour. Japan's attitude in this affair elicited applause, not merely from the point of view of humanity, but also because of the confidence she showed in Occidental justice.

Another complication which occupied the attention of the Tōkyō government from the beginning of the Meiji era was in truth a legacy from the days of feudalism. In those days the island of Yezo, as well as Sakhalin on its north-west and the Kurile group on its north, could scarcely be said to be in effective Japanese occupation. It is true that the feudal chief of Matsumae (now Fuku-yama), the remains of whose castle may still be seen on the coast at the southern extremity of the island of Yezo, exercised nominal jurisdiction; but his functions did not greatly exceed the levying of taxes on the aboriginal inhabitants of Yezo, the Kuriles and southern Sakhalin. Thus from the beginning of the 18th century Russian fishermen began to settle in the Kuriles and Russian ships menaced Sakhalin. There can be no doubt that the first explorers of Sakhalin were Japanese. As early as 1620, some vassals of the feudal chief of Matsumae visited the place and passed a winter there. It was then supposed to be a peninsula forming part of the Asiatic mainland, but in 1806 a daring Japanese traveller, by name Mamiya Rinzo, made his way to Manchuria, voyaged up and down the Amur, and, crossing to Sakhalin, discovered that a narrow strait separated it from the mainland. There still prevails in the minds of many Occidentals a belief that the discovery of Sakhalin's insular character was reserved for Captain Nevelskoy, a Russian, who visited the place in 1849, but in Japan the fact had then been known for 43 years. Muraviev, the great Russian empire-builder in East Asia, under whose orders Nevelskoy acted, quickly appreciated the necessity of acquiring Sakhalin, which commands the estuary of the Amur.

extending over the whole of eastern Asia and India. This contrast was accentuated two years later (1907) when France and Russia concluded *ententes* with Japan, recognizing the independence and integrity of the Chinese Empire, as well as the principle of equal opportunity for all nations in that country, and engaging to support each other for assuring peace and security there. Japan thus became a world power in the most unequivocal sense.

Japan's Foreign Wars and Complications.—The earliest foreign war conducted by Japan is said to have taken place at the beginning of the 3rd century, when the empress Jingō led an army to the conquest of Korea. But as the event is supposed to have happened more than 500 years before the first Japanese record was written, its traditional details cannot be seriously discussed. There is, however, no room to doubt that from time to time in early ages Japanese troops were seen in Korea, though they made no permanent impression on the country. It was reserved for Hideyoshi, the taikō, to make the Korean peninsula the scene of a great over-sea campaign. Hideyoshi, the Napoleon of Japan, having brought the whole empire under his sway as the sequel of many years of incomparable generalship and statecraft, conceived the project of subjugating China. By some historians his motive has been described as a desire to find employment for the immense mob of armed men whom four centuries of almost continuous fighting had called into existence in Japan: he felt that domestic peace could not be permanently restored unless these restless spirits were occupied abroad. But although that object may have reinforced his purpose, his ambition aimed at nothing less than the conquest of China, and he regarded Korea merely as a stepping-stone to that aim. Had Korea consented to be put to such a use, she need not have fought or suffered. The Koreans, however, counted China invincible. They considered that Japan would be shattered by the first contact with the great empire, and therefore although, in the 13th century, they had given the use of their harbours to the Mongol invaders of Japan, they flatly refused in the 16th to allow their territory to be used for a Japanese invasion of China. On the 24th of May 1592 the wave of invasion rolled against Korea's southern coast. Hideyoshi had chosen Nagoya in the province of Hizen as the home-base of his operations. There the sea separating Japan from the Korean peninsula narrows to a strait divided into two channels of almost equal width by the island of Tsushima. To reach this island from the Japanese side was an easy and safe task, but in the 56-mile channel that separated Tsushima from the peninsula an invading flotilla had to run the risk of attack by Korean war-ships. At Nagoya Hideyoshi assembled an army of over 300,000 men, of whom some 70,000 constituted the first fighting line, 87,000 the second, and the remainder formed a reserve to be subsequently drawn on as occasion demanded. The question of transport presented some difficulty, but it was solved by the simple expedient of ordering every feudatory to furnish two ships for each 100,000 *koku* of his fief's revenue. These were not fighting vessels but mere transports. As for the plan of campaign, it was precisely in accord with modern principles of strategy, and bore witness to the daring genius of Hideyoshi. Fighting at Sea.

possession of the peninsula by a foreign power would have threatened the maritime route to the Chinese capital and given easy access to Manchuria, the cradle of the dynasty which ruled China. Therefore Peking statesmen endeavoured to preserve the old-time relations with the little kingdom. But they could never persuade themselves to modify the indirect methods sanctioned by tradition. Instead of boldly declaring Korea a dependency of China, they sought to keep up the romance of ultimate dependency and intermediate sovereignty. Thus in 1876 Korea was suffered to conclude with Japan a treaty of which the first article declared her "an independent state enjoying the same rights as Japan," and subsequently to make with the United States (1882), Great Britain (1883) and other powers, treaties in which her independence was constructively admitted. China, however, did not intend that Korea should exercise the independence thus conventionally recognized. A Chinese resident was placed in Seoul, and a system of steady though covert interference in Korea's affairs was inaugurated. The chief sufferer from these anomalous conditions was Japan. In all her dealings with Korea, in all complications that arose out of her comparatively large trade with the peninsula, in all questions connected with her numerous settlers there, she found herself negotiating with a dependency of China, and with officials who took their orders from the Chinese representative. China had long entertained a rooted apprehension of Japanese aggression in Korea—an apprehension not unwarranted by history—and that distrust tinged all the influence exerted by her agents there. On many occasions Japan was made sensible of the discrimination thus exercised against her. Little by little the consciousness roused her indignation, and although no single instance constituted a ground for strong international protest, the Japanese people gradually acquired a sense of being perpetually baffled, thwarted and humiliated by China's interference in Korean affairs. For thirty years China had treated Japan as a contemptible deserter from the Oriental standard, and had regarded her progressive efforts with openly disdainful aversion; while Japan, on her side, had chafed more and more to furnish some striking evidence of the wisdom of her preference for Western civilization. Even more serious were the consequences of Chinese interference from the point of view of Korean administration. The rulers of the country lost all sense of national responsibility, and gave unrestrained sway to selfish ambition. The functions of the judiciary and of the executive alike came to be discharged by bribery only. Family interests predominated over those of the state. Taxes were imposed in proportion to the greed of local officials. No thought whatever was taken for the welfare of the people or for the development of the country's resources. Personal responsibility was unknown among officials. To be a member of the Min family, to which the queen belonged, was to possess a passport to office and an indemnity against the consequences of abuse of power. From time to time the advocates of progress or the victims of oppression rose in arms. They effected nothing except to recall to the world's recollection the miserable condition into which Korea had fallen. Chinese military aid was always furnished readily for the suppression of these risings, and thus the Min family learned to base its tenure of power on ability to conciliate China and on readiness to obey Chinese dictation, while the people at large fell into the apathetic condition of men who possess neither security of property nor national ambition.

As a matter of state policy the Korean problem caused much anxiety to Japan. Her own security being deeply concerned in preserving Korea from the grasp of a Western power, she could not suffer the little kingdom to drift into a condition of such administrative incompetence and national debility that a strong aggressor might find at any moment a pretext for interference. On two occasions (1882 and 1884) when China's armed intervention was employed in the interests of the Min to suppress movements of reform, the partisans of the victors, regarding Japan as the fountain of progressive tendencies, destroyed her legation in Seoul and compelled its inmates to fly from the city. Japan behaved with forbearance at these crises, but in the consequent

negotiations she acquired conventional titles that touched the core of China's alleged suzerainty. In 1882 her right to maintain troops in Seoul for the protection of her legation was admitted; in 1885 she concluded with China a convention by which each power pledged itself not to send troops to Korea without notifying the other.

In the spring of 1894 a serious insurrection broke out in Korea, and the Min family appealed for China's aid. On the 6th of July 2500 Chinese troops embarked at Tientsin and were transported to the peninsula, where they went into camp at Ya-shan (Asan), on the south-west coast, notice of the measure being given by the Chinese government to the Japanese representative at Peking, according to treaty. During the interval immediately preceding these events, Japan had been rendered acutely sensible of China's arbitrary and unfriendly interference in Korea. Twice the efforts of the Japanese government to obtain redress for unlawful and ruinous commercial prohibitions had been thwarted by the Chinese representative in Seoul; and an ultimatum addressed from Tōkyō to the Korean government had elicited from the viceroy Li in Tientsin a thinly veiled threat of Chinese armed opposition. Still more provocative of national indignation was China's procedure with regard to the murder of Kim Ok-kyun, the leader of progress in Korea, who had been for some years a refugee in Japan. Inveigled from Japan to China by a fellow-countryman sent from Seoul to assassinate him, Kim was shot in a Japanese hotel in Shanghai; and China, instead of punishing the murderer, conveyed him in a war-ship of her own to Korea to be publicly honoured. When, therefore, the Korean insurrection of 1894 induced the Min family again to solicit China's armed intervention, the Tōkyō government concluded that, in the interests of Japan's security and of civilization in the Orient, steps must be taken to put an end to the misrule which offered incessant invitations to foreign aggression, and checked Korea's capacity to maintain its own independence. Japan did not claim for herself any rights or interests in the peninsula superior to those possessed there by China. But there was not the remotest probability that China, whose face had been contemptuously set against all the progressive measures adopted by Japan during the preceding twenty-five years, would join in forcing upon a neighbouring kingdom the very reforms she herself despised, were her co-operation invited through ordinary diplomatic channels only. It was necessary to contrive a situation which would not only furnish clear proof of Japan's resolution, but also enable her to pursue her programme independently of Chinese endorsement, should the latter be finally unobtainable. She therefore met China's notice of a despatch of troops with a corresponding notice of her own, and the month of July 1894 found a Chinese force assembled at Asan and a Japanese force occupying positions in the neighbourhood of Seoul. China's motive for sending troops was nominally to quell the Tonghak insurrection, but really to re-affirm her own domination in the peninsula. Japan's motive was to secure such a position as would enable her to insist upon the radically curative treatment of Korea's malady. Up to this point the two empires were strictly within their conventional rights. Each was entitled by treaty to send troops to Korea, provided that notice was given to the other. But China, in giving notice, described Korea as her "tributary state," thus thrusting into the forefront of the discussion a contention which Japan, from conciliatory motives, would have kept out of sight. Once formally advanced, however, the claim had to be challenged. In the treaty of amity and commerce concluded in 1876 between Japan and Korea, the two high contracting parties were explicitly declared to possess the same national status. Japan could not agree that a power which for nearly two decades she had acknowledged and treated as her equal should be openly classed as a tributary of China. She protested, but the Chinese statesmen took no notice of her protest. They continued to apply the disputed appellation to Korea, and they further asserted their assumption of sovereignty in the peninsula by seeking to set limits to the number of troops sent by Japan, as well as to the sphere of their employment. Japan then proposed that

the two empires should unite their efforts for the suppression of disturbances in Korea, and for the subsequent improvement of that kingdom's administration, the latter purpose to be pursued by the despatch of a joint commission of investigation. But China refused everything. Ready at all times to interfere by force of arms between the Korean people and the dominant political faction, she declined to interfere in any way for the promotion of reform. She even expressed supercilious surprise that Japan, while asserting Korea's independence, should suggest the idea of peremptorily reforming its administration. In short, for Chinese purposes the Peking statesmen openly declared Korea a tributary state; but for Japanese purposes they insisted that it must be held independent. They believed that their island neighbour aimed at the absorption of Korea into the Japanese empire. Viewed in the light of that suspicion, China's attitude became comprehensible, but her procedure was inconsistent, illogical and impractical. The Tōkyō cabinet now declared its resolve not to withdraw the Japanese troops without "some understanding that would guarantee the future peace, order, and good government of Korea," and since China still declined to come to such an understanding, Japan undertook the work of reform single-handed.

The Chinese representative in Seoul threw his whole weight into the scale against the success of these reforms. But the determining cause of rupture was in itself a belligerent operation. China's troops had been sent originally for the purpose of quelling the Tonghak rebellion. But the rebellion having died of inanition before the landing of the troops, their services were not required. Nevertheless China kept them in Korea, her declared reason for doing so being the presence of a Japanese military force. Throughout the subsequent negotiations the Chinese forces lay in an entrenched camp at Asan, while the Japanese occupied Seoul. An attempt on China's part to send reinforcements could be construed only as an unequivocal declaration of resolve to oppose Japan's proceedings by force of arms. Nevertheless China not only despatched troops by sea to strengthen the camp at Asan, but also sent an army overland across Korea's northern frontier. At this stage an act of war occurred. Three Chinese men-of-war, conveying a transport with 1200 men encountered and fired on three Japanese cruisers. One of the Chinese ships was taken; another was so shattered that she had to be beached and abandoned; the third escaped in a dilapidated condition; and the transport, refusing to surrender, was sunk. This happened on the 25th of July 1894, and an open declaration of war was made by each empire six days later.

From the moment when Japan applied herself to break away from Oriental traditions, and to remove from her limbs the fetters of Eastern conservatism, it was inevitable that a widening gulf should gradually grow between herself and China. The war of 1894 was really a contest between Japanese progress and Chinese stagnation. To secure Korean immunity from foreign—especially Russian—aggression was of capital importance to both empires. Japan believed that such security could be attained by introducing into Korea the civilization which had contributed so signally to the development of her own strength and resources. China thought that she could guarantee it without any departure from old-fashioned methods, and by the same process of capricious protection which had failed so signally in the cases of Annam, Tongking, Burma and Siam. The issue really at stake was whether Japan should be suffered to act as the Eastern propagandist of Western progress, or whether her efforts in that cause should be held in check by Chinese conservatism.

The war itself was a succession of triumphs for Japan. Four days after the first naval encounter she sent from Seoul a column of troops who routed the Chinese entrenched at Asan. Many of the fugitives effected their escape to Phyong-yang, a town on the Taidong River, offering excellent facilities for defence, and historically interesting as the place where a Japanese army of invasion had its first encounter

with Chinese troops in 1592. There the Chinese assembled a force of 17,000 men, and made leisurely preparations for a decisive contest. Forty days elapsed before the Japanese columns converged upon Phyong-yang, and that interval was utilized by the Chinese to throw up parapets, mount Krupp guns and otherwise strengthen their position. Moreover, they were armed with repeating rifles, whereas the Japanese had only single-loaders, and the ground offered little cover for an attacking force. In such circumstances, the advantages possessed by the defence ought to have been wellnigh insuperable; yet a day's fighting sufficed to carry all the positions, the assailants' casualties amounting to less than 700 and the defenders losing 6000 in killed and wounded. This brilliant victory was the prelude to an equally conspicuous success at sea. For on the 17th of September, the very day after the battle at Phyong-yang, a great naval fight took place near the mouth of the Yalu River, which forms the northern boundary of Korea. Fourteen Chinese war-ships and six torpedo-boats were returning to home ports after conveying a fleet of transports to the Yalu, when they encountered eleven Japanese men-of-war cruising in the Yellow Sea. Hitherto the Chinese had sedulously avoided a contest at sea. Their fleet included two armoured battleships of over 7000 tons displacement, whereas the biggest vessels on the Japanese side were belted cruisers of only 4000 tons. In the hands of an admiral appreciating the value of sea power, China's naval force would certainly have been led against Japan's maritime communications, for a successful blow struck there must have put an end to the Korean campaign. The Chinese, however, failed to read history. They employed their war-vessels as convoys only, and, when not using them for that purpose, hid them in port. Everything goes to show that they would have avoided the battle off the Yalu had choice been possible, though when forced to fight they fought bravely. Four of their ships were sunk, and the remainder escaped to Wei-hai-wei, the vigour of the Japanese pursuit being greatly impaired by the presence of torpedo-boats in the retreating squadron.

The Yalu victory opened the over-sea route to China. Japan could now strike at Talien, Port Arthur, and Wei-hai-wei, naval stations on the Liaotung and Shantung peninsulas, where powerful permanent fortifications, built after plans prepared by European experts and armed with the best modern weapons, were regarded as almost impregnable. They fell before the assaults of the Japanese troops as easily as the comparatively rude fortifications at Phyong-yang had fallen. The only resistance of a stubborn character was made by the Chinese fleet at Wei-hai-wei; but after the whole squadron of torpedo-craft had been destroyed or captured as they attempted to escape, and after three of the largest vessels had been sunk at their moorings by Japanese torpedoes, and one by gun-fire, the remaining ships surrendered, and their brave commander, Admiral Ting, committed suicide. This ended the war. It had lasted seven and a half months, during which time Japan put into the field five columns, aggregating about 120,000 of all arms. One of these columns marched northward from Seoul, won the battle of Phyong-yang, advanced to the Yalu, forced its way into Manchuria, and moved towards Mukden by Feng-hwang, fighting several minor engagements, and conducting the greater part of its operations amid deep snow in midwinter. The second column diverged westwards from the Yalu, and, marching through southern Manchuria, reached Hai-cheng, whence it advanced to the capture of Niuchwang and Ying-tse-kow. The third landed on the Liaotung peninsula, and, turning southwards, carried Talien and Port Arthur by assault. The fourth moved up the Liaotung peninsula, and, having seized Kaiping, advanced against Ying-tse-kow, where it joined hands with the second column. The fifth crossed from Port Arthur to Wei-hai-wei, and captured the latter. In all these operations the total Japanese casualties were 1005 killed and 4922 wounded—figures which sufficiently indicate the inefficiency of the Chinese fighting. The deaths from disease totalled 16,866, and the total monetary expenditure was £20,000,000 sterling.

Events of the War.

The Chinese government sent Li Hung-chang, viceroy of Pechili and senior grand secretary of state, and Li Ching-fong, to discuss terms of peace with Japan, the latter being represented by Marquis (afterwards Prince) Itô and Count Matsu, prime minister and minister for foreign affairs, respectively. A treaty was signed at Shimonoseki on the 17th of April 1895, and subsequently ratified by the sovereigns of the two empires. It declared the absolute independence of Korea; ceded to Japan the part of Manchuria lying south of a line drawn from the mouth of the river Anping to the mouth of the Liao, through Feng-hwang, Hai-cheng and Ying-tse-kow, as well as the islands of Formosa and the Pescadores; pledged China to pay an indemnity of 300,000,000 taels; provided for the occupation of Wei-hai-wei by Japan pending payment of the indemnity; secured some additional commercial privileges, such as the opening of four new places to foreign trade and the right of foreigners to engage in manufacturing enterprises in China, and provided for the conclusion of a treaty of commerce and amity between the two empires, based on the lines of China's treaties with Occidental powers.

No sooner was this agreement ratified than Russia, Germany and France presented a joint note to the Tokyo government, recommending that the territories ceded to Japan on the mainland of China should not be permanently occupied, as such a proceeding would be detrimental to peace. The recommendation was couched in the usual terms of diplomatic courtesy, but everything indicated that its signatories were prepared to enforce their advice by an appeal to arms. Japan found herself compelled to comply. Exhausted by the Chinese campaign, which had drained her treasury, consumed her supplies of warlike material, and kept her squadrons constantly at sea for eight months, she had no residue of strength to oppose such a coalition. Her resolve was quickly taken. The day that saw the publication of the ratified treaty saw also the issue of an Imperial rescript in which the mikado, avowing his unalterable devotion to the cause of peace, and recognizing that the counsel offered by the European states was prompted by the same sentiment, "yielded to the dictates of magnanimity, and accepted the advice of the three Powers." The Japanese people were shocked by this incident. They could understand the motives influencing Russia and France, for it was evidently natural that the former should desire to exclude warlike and progressive people like the Japanese from territories contiguous to her borders, and it was also natural that France should remain true to her alliance with Russia. But Germany, wholly uninterested in the ownership of Manchuria, and by profession a warm friend of Japan, seemed to have joined in robbing the latter of the fruits of her victory simply for the sake of establishing some shadowy title to Russia's goodwill. It was not known until a later period that the German emperor entertained profound apprehensions about the "yellow peril," an irruption of Oriental hordes into the Occident, and held it a sacred duty to prevent Japan from gaining a position which might enable her to construct an immense military machine out of the countless millions of China.

Japan's third expedition over-sea in the Meiji era had its origin in causes which belong to the history of China (*q.v.*). In the second half of 1900 an anti-foreign and anti-dynastic rebellion, breaking out in Shantung, spread to the metropolitan province of Pechili, and resulted in a situation of extreme peril for the foreign communities of Tientsin and Peking. It was impossible for any European power, or for the United States, to organize sufficiently prompt measures of relief. Thus the eyes of the world turned to Japan, whose proximity to the scene of disturbance rendered intervention comparatively easy for her. But Japan hesitated. Knowing now with what suspicion and distrust the development of her resources and the growth of her military strength were regarded by some European peoples, and aware that she had been admitted to the comity of Western nations on sufferance, she shrank, on the one hand, from seeming to grasp at an opportunity for armed display, and, on the other, from the solecism of obtru-

siveness in the society of strangers. Not until Europe and America made it quite plain that they needed and desired her aid did she send a division (21,000) men to Pechili. Her troops played a fine part in the subsequent expedition for the relief of Peking, which had to be approached in midsummer under very trying conditions. Fighting side by side with European and American soldiers, and under the eyes of competent military critics, the Japanese acquitted themselves in such a manner as to establish a high military reputation. Further, after the relief of Peking they withdrew a moiety of their forces, and that step, as well as their unequivocal co-operation with Western powers in the subsequent negotiations, helped to show the injustice of the suspicions with which they had been regarded.

From the time (1895) when Russia, with the co-operation of Germany and France, dictated to Japan a cardinal alteration of the Shimonoseki treaty, Japanese statesmen seem to have concluded that their country must one day cross swords with the great northern power. Not a few European and American publicists shared that view. But the vast majority, arguing that the little Eastern empire would never invite annihilation by such an encounter, believed that sufficient forbearance to avert serious trouble would always be forthcoming on Japan's side. Yet when the geographical and historical situation was carefully considered, little hope of an ultimately peaceful settlement presented itself.

Japan along its western shore, Korea along its southern and eastern, and Russia along the eastern coast of its maritime province, are washed by the Sea of Japan. The communications between the sea and the Pacific Ocean are practically two only. One is on the north-east, namely, Tsugaru Strait; the other is on the south, namely, the channel between the extremity of the Korean peninsula and the Japanese island of the nine provinces. Tsugaru Strait is entirely under Japan's control. It is between her main island and her island of Yezo, and in case of need she can close it with mines. The channel between the southern extremity of Korea and Japan has a width of 102 m. and would therefore be a fine open sea-way were it free from islands. But almost mid-way in this channel lie the twin islands of Tsushima, and the space of 56 m. that separates them from Japan is narrowed by another island, Iki. Tsushima and Iki belong to the Japanese empire. The former has some exceptionally good harbours, constituting a naval base from which the channel on either side could easily be sealed. Thus the avenues from the Pacific Ocean to the Sea of Japan are controlled by the Japanese empire. In other words, access to the Pacific from Korea's eastern and southern coasts and access to the Pacific from Russia's maritime province depend upon Japan's goodwill. So far as Korea was concerned this question mattered little, it being her fate to depend upon the goodwill of Japan in affairs of much greater importance. But with Russia the case was different. Vladivostok, which until recent times was her principal port in the Far East, lies at the southern extremity of the maritime province; that is to say, on the north-western shore of the Japan Sea. It was therefore necessary for Russia that freedom of passage by the Tsushima channel should be secured, and to secure it one of two things was essential, namely, either that she herself should possess a fortified port on the Korean side, or that Japan should be bound neither to acquire such a port nor to impose any restriction upon the navigation of the strait. To put the matter briefly, Russia must either acquire a strong foothold for herself in southern Korea, or contrive that Japan should not acquire one. There was here a strong inducement for Russian aggression in Korea.

Russia's eastward movement through Asia has been strikingly illustrative of her strong craving for free access to southern seas and of the impediments she had experienced in gratifying that wish. An irresistible impulse had driven her oceanward. Checked again and again in her attempts to reach the Mediterranean, she set out on a five-thousand-miles march of conquest right across the vast Asiatic continent towards the Pacific. Eastward of Lake Baikal she found her line of least resistance along the Amur, and when, owing to the restless perseverance

War with Russia.

Chinese Crisis of 1900.

of Muraviev, she reached the mouth of that great river, the acquisition of Nikolayevsk for a naval basis was her immediate reward. But Nikolayevsk could not possibly satisfy her. Situated in an inhospitable region far away from all the main routes of the world's commerce, it offered itself only as a stepping-stone to further acquisitions. To push southward from this new port became an immediate object to Russia. There lay an obstacle in the way, however; the long strip of sea-coast from the mouth of the Amur to the Korean frontier—an area then called the Usuri region because the Usuri forms its western boundary—belonged to China, and she, having conceded much to Russia in the matter of the Amur, showed no disposition to make further concessions in the matter of the Usuri. In the presence of menaces, however, she agreed that the region should be regarded as common property pending a convenient opportunity for clear delimitation. That opportunity came very soon. Seizing the moment (1860) when China had been beaten to her knees by England and France, Russia secured final cession of the Usuri region, which now became the maritime province of Siberia. Then Russia shifted her naval base on the Pacific from Nikolayevsk to Vladivostok. She gained ten degrees in a southerly direction.

From the mouth of the Amur, where Nikolayevsk is situated, to the southern shore of Korea there rests on the coast of eastern Asia an arch of islands having at its northern point Sakhalin and at its southern Tsushima, the keystone of the arch being the main island of Japan. This arch embraces the Sea of Japan and is washed on its convex side by the Pacific Ocean. Immediately after the transfer of Russia's naval base from Nikolayevsk to Vladivostok, an attempt was made to obtain possession of the southern point of the arch, namely, Tsushima. A Russian man-of-war proceeded thither and quietly began to establish a settlement, which would soon have constituted a title of ownership had not Great Britain interfered. The Russians saw that Vladivostok, acquired at the cost of so much toil, would be comparatively useless unless from the sea on whose shore it was situated an avenue to the Pacific could be opened, and they therefore tried to obtain command of the Tsushima channel. Immediately after reaching the mouth of the Amur the same instinct had led them to begin the colonization of Sakhalin. The axis of this long narrow island is inclined at a very acute angle to the Usuri region, which its northern extremity almost touches, while its southern is separated from Yezo by the Strait of La Pérouse. But in Sakhalin the Russians found Japanese subjects. In fact the island was a part of the Japanese empire. Resorting, however, to the Usuri fiction of joint occupation, they succeeded by 1875 in transferring the whole of Sakhalin to Russia's dominion. Further encroachments upon Japanese territory could not be lightly essayed, and the Russians held their hands. They had been trebly checked: checked in trying to push southward along the coast of the mainland; checked in trying to secure an avenue from Vladivostok to the Pacific; and checked in their search for an ice-free port, which definition Vladivostok did not fulfil. Enterprise in the direction of Korea seemed to be the only hope of saving the maritime results of the great Trans-Asian march.

Was Korea within safe range of such enterprises? Everything seemed to answer in the affirmative. Korea had all the qualifications desired by an aggressor. Her people were unprogressive, her resources undeveloped, her self-defensive capacities insignificant, her government corrupt. But she was a tributary of China, and China had begun to show some tenacity in protecting the integrity of her buffer states. Besides, Japan was understood to have pretensions with regard to Korea. On the whole, therefore, the problem of carrying to full fruition the work of Muraviev and his lieutenants demanded strength greater than Russia could exercise without some line of communications supplementing the Amur waterway and the long ocean route. Therefore she set about the construction of a railway across Asia.

The Amur being the boundary of Russia's east Asian territory, this railway had to be carried along its northern bank where

many engineering and economic obstacles presented themselves. Besides, the river, from an early stage in its course, makes a huge semicircular sweep northward, and a railway following its bank to Vladivostok must make the same détour. If, on the contrary, the road could be carried over the diameter of the semicircle, it would be a straight and therefore shorter line, technically easier and economically better. The diameter, however, passed through Chinese territory, and an excuse for extorting China's permission was not in sight. Russia therefore proceeded to build each end of the road, deferring the construction of the Amur section for the moment. She had not waited long when, in 1894, war broke out between China and Japan, and the latter, completely victorious, demanded as the price of peace the southern littoral of Manchuria from the Korean boundary to the Liaotung peninsula at the entrance to the Gulf of Pechili. This was a crisis in Russia's career. She saw that her maritime extension could never get nearer to the Pacific than Vladivostok were this claim of Japan's established. For the proposed arrangement would place the littoral of Manchuria in Japan's direct occupation and the littoral of Korea in her constructive control, since not only had she fought to rescue Korea from Chinese suzerainty, but also her object in demanding a slice of the Manchurian coast-line was to protect Korea against aggression from the north; that is to say, against aggression from Russia. Muraviev's enterprise had carried his country first to the mouth of the Amur and thence southward along the coast to Vladivostok and to Possiet Bay at the north-eastern extremity of Korea. But it had not given to Russia free access to the Pacific, and now she was menaced with a perpetual barrier to that access, since the whole remaining coast of east Asia as far as the Gulf of Pechili was about to pass into Japan's possession or under her domination.

Then Russia took an extraordinary step. She persuaded Germany and France to force Japan out of Manchuria. It is not to be supposed that she frankly exposed her own aggressive designs and asked for assistance to prosecute them. Neither is it to be supposed that France and Germany were so curiously deficient in perspicacity as to overlook those designs. At all events these three great powers served on Japan a notice to quit, and Japan, exhausted by her struggle with China, had no choice but to obey.

The notice was accompanied by an *exposé* of reasons. Its signatories said that Japan's tenure of the Manchurian littoral would menace the security of the Chinese capital, would render the independence of Korea illusory, and would constitute an obstacle to the peace of the Orient.

By way of saving the situation in some slight degree Japan sought from China a guarantee that no portion of Manchuria should thereafter be leased or ceded to a foreign state. But France warned Japan that to press such a demand would offend Russia, and Russia declared that, for her part, she had no intention of trespassing in Manchuria. Japan, had she been in a position to insist on the guarantee, would also have been in a position to disobey the mandate of the three powers. Unable to do either the one or the other, she quietly stepped out of Manchuria, and proceeded to double her army and treble her navy.

As a reward for the assistance nominally rendered to China in this matter, Russia obtained permission in Peking to divert her Trans-Asian railway from the huge bend of the Amur to the straight line through Manchuria. Neither Germany nor France received any immediate recompense. Three years later, by way of indemnity for the murder of two missionaries by a mob, Germany seized a portion of the province of Shantung. Immediately, on the principle that two wrongs make a right, Russia obtained a lease of the Liaotung peninsula, from which she had driven Japan in 1895. This act she followed by extorting from China permission to construct a branch of the Trans-Asian railway through Manchuria from north to south.

Russia's maritime aspirations had now assumed a radically altered phase. Instead of pushing southward from Vladivostok and Possiet Bay along the coast of Korea, she had suddenly

The Chinese government sent Li Hung-chang, viceroy of Pechili and senior grand secretary of state, and Li Ching-fong, to discuss terms of peace with Japan, the latter being represented by Marquis (afterwards Prince) Itô and Count Matsu, prime minister and minister for foreign affairs, respectively. A treaty was signed at Shimonoseki on the 17th of April 1895, and subsequently ratified by the sovereigns of the two empires. command submission. The only alternatives for Japan were war or total and permanent effacement in Asia. She chose war, and in fighting it she fought the battle of free and equal opportunities for all without undue encroachment upon the sovereign rights or territorial integrity of China or Korea, against a military dictatorship, a programme of ruthless territorial aggrandizement and a policy of selfish restrictions.

The details of the great struggle that ensued are given elsewhere (see RUSSO-JAPANESE WAR). After the battle of Mukden

The Results of the War.

the belligerents found themselves in a position which must either prelude another stupendous effort on both sides or be utilized for the purpose of peace negotiations. At this point the president of the United States of America intervened in the interests of humanity, and on the 9th of June 1905 instructed the United States' representative in Tōkyō to urge that the Japanese government should open direct negotiations with Russia, an exactly corresponding note being simultaneously sent to the Russian government through the United States' representative in St Petersburg. Japan's reply was made on the 10th of June. It intimated frank acquiescence, and Russia lost no time in taking a similar step. Nevertheless two months elapsed before the plenipotentiaries of the belligerents met, on the 10th of August, at Portsmouth, New Hampshire, U.S.A. Russia sent M. (afterwards Count) de Witte and Baron Rosen; Japan, Baron (afterwards Count) Komura, who had held the portfolio of foreign affairs throughout the war, and Mr (afterwards Baron) Takahira. In entering this conference, Japanese statesmen, as was subsequently known, saw clearly that a great part of the credit accruing to them for their successful conduct of the war would be forfeited in the sequel of the negotiations. For the people of Japan had accustomed themselves to expect that Russia would assuredly recoup the expenses incurred by their country in the contest, whereas the cabinet in Tōkyō understood well that to look for payment of indemnity by a great state whose territory had not been invaded effectively nor its existence menaced must be futile. Nevertheless, diplomacy required that this conviction should be concealed, and thus Russia carried to the conference a belief that the financial phase of the discussion would be crucial, while, at the same time, the Japanese nation reckoned fully on an indemnity of 150 millions sterling. Baron Komura's mandate was, however, that the only radically essential terms were those formulated by Japan prior to the war. She must insist on securing the ends for which she had fought, since she believed them to be indispensable to the peace of the Far East, but she would not demand anything more. The Japanese plenipotentiary, therefore, judged it wise to marshal his terms in the order of their importance, leaving his Russian colleague to imagine, as he probably would, that the converse method had been adopted, and that everything preliminary to the questions of finance and territory was of minor consequence. The negotiations, commencing on the 10th of August, were not concluded until the 5th of September, when a treaty of peace was signed. There had been a moment when the onlooking world believed that unless Russia agreed to ransom the island of Sakhalin by paying to Japan a sum of 120 millions sterling, the conference would be broken off; nor did such an exchange seem unreasonable, for were Russia expelled from the northern part of Sakhalin, which commands the estuary of the Amur River, her position in Siberia would have been compromised. But the statesmen who directed Japan's affairs were not disposed to make any display of earth-hunger. The southern half of Sakhalin had originally belonged to Japan and had passed into Russia's possession by an arrangement which the Japanese nation strongly resented. To recover that portion of the island seemed, therefore, a legitimate ambition. Japan did not contemplate any larger demand, nor did she seriously insist on an indemnity. Therefore the negotiations were never in real danger of failure. The treaty of Portsmouth recognized Japan's "paramount political, military and economic interests" in Korea; provided for the simultaneous evacuation

of Manchuria by the contracting parties; transferred to Japan the lease of the Liaotung peninsula held by Russia from China together with the Russian railways south of Kwang-Cheng-tsze and all collateral mining or other privileges; ceded to Japan the southern half of Sakhalin, the 50th parallel of latitude to be the boundary between the two parts; secured fishing rights for Japanese subjects along the coasts of the seas of Japan, Okhotsk and Bering; laid down that the expenses incurred by the Japanese for the maintenance of the Russian prisoners during the war should be reimbursed by Russia, less the outlays made by the latter on account of Japanese prisoners—by which arrangement Japan obtained a payment of some 4 millions sterling—and provided that the contracting parties, while withdrawing their military forces from Manchuria, might maintain guards to protect their respective railways, the number of such guards not to exceed 15 per kilometre of line. There were other important restrictions: first, the contracting parties were to abstain from taking, on the Russo-Korean frontier, any military measures which might menace the security of Russian or Korean territory; secondly, the two powers pledged themselves not to exploit the Manchurian railways for strategic purposes; and thirdly, they promised not to build on Sakhalin or its adjacent islands any fortifications or other similar military works, or to take any military measures which might impede the free navigation of the straits of La Pérouse and the Gulf of Tartary. The above provisions concerned the two contracting parties only. But China's interests also were considered. Thus it was agreed to "restore entirely and completely to her exclusive administration" all portions of Manchuria then in the occupation, or under the control, of Japanese or Russian troops, except the leased territory; that her consent must be obtained for the transfer to Japan of the leases and concessions held by the Russians in Manchuria; that the Russian government would disavow the possession of "any territorial advantages or preferential or exclusive concessions in impairment of Chinese sovereignty or inconsistent with the principle of equal opportunity in Manchuria"; and that Japan and Russia "engaged reciprocally not to obstruct any general measures common to all countries which China might take for the development of the commerce and industry of Manchuria." This distinction between the special interests of the contracting parties and the interests of China herself as well as of foreign nations generally is essential to clear understanding of a situation which subsequently attracted much attention. From the time of the opium war (1857) to the Boxer rising (1900) each of the great Western powers struggled for its own hand in China, and each sought to gain for itself exclusive concessions and privileges with comparatively little regard for the interests of others, and with no regard whatever for China's sovereign rights. The fruits of this period were: permanently ceded territories (Hong-Kong and Macao); leases temporarily establishing foreign sovereignty in various districts (Kiaochow, Wei-hai-wei and Kwang-chow); railway and mining concessions; and the establishment of settlements at open ports where foreign jurisdiction was supreme. But when, in 1900, the Boxer rising forced all the powers into a common camp, they awoke to full appreciation of a principle which had been growing current for the past two or three years, namely, that concerted action on the lines of maintaining China's integrity and securing to all alike equality of opportunity and a similarly open door, was the only feasible method of preventing the partition of the Chinese Empire and averting a clash of rival interests which might have disastrous results. This, of course, did not mean that there was to be any abandonment of special privileges already acquired or any surrender of existing concessions. The arrangement was not to be retrospective in any sense. Vested interests were to be strictly guarded until the lapse of the periods for which they had been granted, or until the maturity of China's competence to be really autonomous. A curious situation was thus created. International professions of respect for China's sovereignty, for the integrity of her empire and for the enforcement of the open door and equal opportunity,

The Chinese government sent Li Hung-chang, viceroy of Pechili and senior grand secretary of state, and Li Ching-fong, to discuss terms of peace with Japan, the latter being represented by Marquis (afterwards Prince) Itô and Count Matsu, prime minister and minister for foreign affairs, respectively. A treaty was signed at Shimonoseki on the 17th of April 1895, and subsequently ratified by the sovereigns of the two empires. It declared the absolute independence of Korea; ceded to Japan the part of Manchuria lying south of a line drawn from the mouth of the river Anping to the mouth of the Liao, through Feng-hwang, Hai-cheng and Ying-tse-kow, as well as the islands of Formosa and the Pescadores; pledged China to pay an indemnity of 300,000,000 taels; provided for the occupation of Wei-hai-wei by Japan pending payment of the indemnity; secured some additional commercial privileges, such as the opening of four new places to foreign trade and the right of foreigners to engage in manufacturing enterprises in China, and provided for the conclusion of a treaty of commerce and amity between the two empires, based on the lines of China's treaties with Occidental powers.

No sooner was this agreement ratified than Russia, Germany and France presented a joint note to the Tokyo government, recommending that the territories ceded to Japan on the mainland of China should not be permanently occupied, as such a proceeding would be detrimental to peace. The recommendation was couched in the usual terms of diplomatic courtesy, but everything indicated that its signatories were prepared to enforce their advice by an appeal to arms. Japan found herself compelled to comply. Exhausted by the Chinese campaign, which had drained her treasury, consumed her supplies of warlike material, and kept her squadrons constantly at sea for eight months, she had no residue of strength to oppose such a coalition. Her resolve was quickly taken. The day that saw the publication of the ratified treaty saw also the issue of an Imperial rescript in which the mikado, avowing his unalterable devotion to the cause of peace, and recognizing that the counsel offered by the European states was prompted by the same sentiment, "yielded to the dictates of magnanimity, and accepted the advice of the three Powers." The Japanese people were shocked by this incident. They could understand the motives influencing Russia and France, for it was evidently natural that the former should desire to exclude warlike and progressive people like the Japanese from territories contiguous to her borders, and it was also natural that France should remain true to her alliance with Russia. But Germany, wholly uninterested in the ownership of Manchuria, and by profession a warm friend of Japan, seemed to have joined in robbing the latter of the fruits of her victory simply for the sake of establishing some shadowy title to Russia's goodwill. It was not known until a later period that the German emperor entertained profound apprehensions about the "yellow peril," an irruption of Oriental hordes into the Occident, and held it a sacred duty to prevent Japan from gaining a position which might enable her to construct an immense military machine out of the countless millions of China.

Japan's third expedition over-sea in the Meiji era had its origin in causes which belong to the history of China (*q.v.*). In the second half of 1900 an anti-foreign and anti-dynastic rebellion, breaking out in Shantung, spread to the metropolitan province of Pechili, and resulted in a situation of extreme peril for the foreign communities of Tientsin and Peking. It was impossible for any European power, or for the United States, to organize sufficiently prompt measures of relief. Thus the eyes of the world turned to Japan, whose proximity to the scene of disturbance rendered intervention comparatively easy for her. But Japan hesitated. Knowing now with what suspicion and distrust the development of her resources and the growth of her military strength were regarded by some European peoples, and aware that she had been admitted to the comity of Western nations on sufferance, she shrank, on the one hand, from seeming to grasp at an opportunity for armed display, and, on the other, from the solecism of obtru-

siveness in the society of strangers. Not until Europe and America made it quite plain that they needed and desired her aid did she send a division (21,000) men to Pechili. Her troops played a fine part in the subsequent expedition for the relief of Peking, which had to be approached in midsummer under very trying conditions. Fighting side by side with European and American soldiers, and under the eyes of competent military critics, the Japanese acquitted themselves in such a manner as to establish a high military reputation. Further, after the relief of Peking they withdrew a moiety of their forces, and that step, as well as their unequivocal co-operation with Western powers in the subsequent negotiations, helped to show the injustice of the suspicions with which they had been regarded.

From the time (1895) when Russia, with the co-operation of Germany and France, dictated to Japan a cardinal alteration of the Shimonoseki treaty, Japanese statesmen seem to have concluded that their country must one day cross swords with the great northern power. Not a few European and American publicists shared that view. But the vast majority, arguing that the little Eastern empire would never invite annihilation by such an encounter, believed that sufficient forbearance to avert serious trouble would always be forthcoming on Japan's side. Yet when the geographical and historical situation was carefully considered, little hope of an ultimately peaceful settlement presented itself.

Japan along its western shore, Korea along its southern and eastern, and Russia along the eastern coast of its maritime province, are washed by the Sea of Japan. The communications between the sea and the Pacific Ocean are practically two only. One is on the north-east, namely, Tsugaru Strait; the other is on the south, namely, the channel between the extremity of the Korean peninsula and the Japanese island of the nine provinces. Tsugaru Strait is entirely under Japan's control. It is between her main island and her island of Yezo, and in case of need she can close it with mines. The channel between the southern extremity of Korea and Japan has a width of 102 m. and would therefore be a fine open sea-way were it free from islands. But almost mid-way in this channel lie the twin islands of Tsushima, and the space of 56 m. that separates them from Japan is narrowed by another island, Iki. Tsushima and Iki belong to the Japanese empire. The former has some exceptionally good harbours, constituting a naval base from which the channel on either side could easily be sealed. Thus the avenues from the Pacific Ocean to the Sea of Japan are controlled by the Japanese empire. In other words, access to the Pacific from Korea's eastern and southern coasts and access to the Pacific from Russia's maritime province depend upon Japan's goodwill. So far as Korea was concerned this question mattered little, it being her fate to depend upon the goodwill of Japan in affairs of much greater importance. But with Russia the case was different. Vladivostok, which until recent times was her principal port in the Far East, lies at the southern extremity of the maritime province; that is to say, on the north-western shore of the Japan Sea. It was therefore necessary for Russia that freedom of passage by the Tsushima channel should be secured, and to secure it one of two things was essential, namely, either that she herself should possess a fortified port on the Korean side, or that Japan should be bound neither to acquire such a port nor to impose any restriction upon the navigation of the strait. To put the matter briefly, Russia must either acquire a strong foothold for herself in southern Korea, or contrive that Japan should not acquire one. There was here a strong inducement for Russian aggression in Korea.

Russia's eastward movement through Asia has been strikingly illustrative of her strong craving for free access to southern seas and of the impediments she had experienced in gratifying that wish. An irresistible impulse had driven her oceanward. Checked again and again in her attempts to reach the Mediterranean, she set out on a five-thousand-miles march of conquest right across the vast Asiatic continent towards the Pacific. Eastward of Lake Baikal she found her line of least resistance along the Amur, and when, owing to the restless perseverance

Foreign Interference.

War with Russia.

Chinese Crisis of 1900.

building and equipping of an industrial training school; the inauguration of sanitary works; the opening of hospitals and medical schools; the organization of an excellent educational system; the construction of waterworks in several towns; the complete remodelling of the central government; the differentiation of the court and the executive, as well as of the administration and the judiciary; the formation of an efficient body of police; the organization of law courts with a majority of Japanese jurists on the bench; the enactment of a new penal code; drastic reforms in the taxation system. In the summer of 1907 the resident-general advised the Throne to disband the standing army as an unserviceable and expensive force. The measure was doubtless desirable, but the docility of the troops had been overrated. Some of them resisted vehemently, and many became the nucleus of an insurrection which lasted in a desultory manner for nearly two years; cost the lives of 21,000 insurgents and 1300 Japanese; and entailed upon Japan an outlay of nearly a million sterling. Altogether, what with building 642 m. of railway, making loans to Korea, providing funds for useful purposes and quelling the insurrection, Japan was 15 millions sterling out of pocket on Korea's account by the end of 1909. She had also lost the veteran statesman Prince Ito, who was assassinated at Harbin by a Korean fanatic on the 26th of October 1909.

IX.—DOMESTIC HISTORY

Cosmography.—Japanese annals represent the first inhabitant of earth as a direct descendant of the gods. Two books describe the events of the "Divine age." One, compiled in 712, is called the *Kojiki* (*Records of Ancient Matters*); the other, compiled in 720, is called the *Nihongi* (*Chronicles of Japan*). Both describe the processes of creation, but the author of the *Chronicles* drew largely upon Chinese traditions, whereas the compilers of the *Records* appear to have limited themselves to materials which they believed to be native. The *Records*, therefore, have always been regarded as the more trustworthy guide to pure Japanese conceptions. They deal with the creation of Japan only, other countries having been apparently judged unworthy of attention. At the beginning of all things a primordial trinity is represented as existing on the "plain of high heaven." Thereafter, during an indefinite time and by an indefinite process, other deities come into existence, their titles indicating a vague connexion with constructive and fertilizing forces. They are not immortal: it is explicitly stated that they ultimately pass away, and the idea of the cosmographers seems to be that each deity marks a gradual approach to human methods of procreation. Meanwhile the earth is "young and, like floating oil, drifts about after the manner of a jelly-fish." At last there are born two deities, the creator and the creatress, and these receive the mandate of all the heavenly beings to "make, consolidate and give birth to the drifting land." For use in that work a jewelled spear is given to them, and, standing upon the bridge that connects heaven and earth, they thrust downwards with the weapon, stir the brine below and draw up the spear, when from its point fall drops which, accumulating, form the first dry land. Upon this land the two deities descend, and, by ordinary processes, beget the islands of Japan as well as numerous gods representing the forces of nature. But in giving birth to the god of fire the creatress (Izanami) perishes, and the creator (Izanagi) makes his way to the under-world in search of her—an obvious parallel to the tales of Ishtar and Orpheus. With difficulty he returns to earth, and, as he washes himself from the pollution of Hades, there are born from the turbid water a number of evil deities succeeded by a number of good, just as in the Babylonian cosmogony the primordial ocean, Tiamat, brings forth simultaneously gods and imps. Finally, as Izanagi washes his left eye the Goddess of the Sun comes into existence; as he washes his right, the God of the Moon; and as he washes his nose, the God of Force. To these three he assigns, respectively, the dominion of the sun, the dominion of the moon, and the dominion of the ocean. But the god of force (Sosanoō), like Lucifer, rebels against this decree, creates a commotion in

heaven, and after having been the cause of the temporary seclusion of the sun goddess and the consequent wrapping of the world in darkness, kills the goddess of food and is permanently banished from heaven by the host of deities. He descends to Izumo on the west of the main island of Japan, and there saves a maiden from an eight-headed serpent. Sosanoō himself passes to the under-world and becomes the deity of Hades, but he invests one of his descendants with the sovereignty of Japan, and the title is established after many curious adventures. To the sun goddess also, whose feud with her fierce brother survives the latter's banishment from heaven, the idea of making her grandson ruler of Japan presents itself. She despatches three embassies to impose her will upon the descendants of Sosanoō, and finally her grandson descends, not, however, in Izumo, where the demi-gods of Sosanoō's race hold sway, but in Hiūga in the southern island of Kiūshiū. This grandson of Amaterasu (the goddess of the sun) is called Ninigi, whose great-grandson figures in Japanese history as the first human sovereign of the country, known during life as Kamu-Yamato-Iware-Biko, and given the name of Jimmu tennō (Jimmu, son of heaven) fourteen centuries after his death. Japanese annalists attribute the accession of Jimmu to the year 660 B.C. Why that date was chosen must remain a matter of conjecture. The *Records of Ancient Matters* has no chronology, but the more pretentious writers of the *Chronicles of Japan*, doubtless in imitation of their Chinese models, considered it necessary to assign a year, a month, and even a day for each event of importance. There is abundant reason, however, to question the accuracy of all Japanese chronology prior to the 5th century. The first date corroborated by external evidence is 461, and Aston, who has made a special study of the subject, concludes that the year 500 may be taken as the time when the chronology of the *Chronicles* begins to be trustworthy. Many Japanese, however, are firm believers in the *Chronicles*, and when assigning the year of the empire they invariably take 660 B.C. for starting-point, so that 1909 of the Gregorian calendar becomes for them 2569.

Prehistoric Period.—Thus, if the most rigid estimate be accepted, the space of 1160 years, from 660 B.C. to A.D. 500, may be called the prehistoric period. During that long interval the annals include 24 sovereigns, the first 17 of whom lived for over a hundred years on the average. It seems reasonable to conclude that the so-called assignment of the sovereignty of Japan to Sosanoō's descendants and the establishment of their kingdom in Izumo represent an invasion of Mongolian immigrants coming from the direction of the Korean peninsula—indeed one of the *Nihongi's* versions of the event actually indicates Korea as the point of departure—and that the subsequent descent of Ninigi on Mount Takachiho in Hiūga indicates the advent of a body of Malayan settlers from the south sea. Jimmu, according to the *Chronicles*, set out from Hiūga in 667 B.C. and was not crowned at his new palace in Yamato until 660. This campaign of seven years is described in some detail, but no satisfactory information is given as to the nature of the craft in which the invader and his troops voyaged, or as to the number of men under his command. The weapons said to have been carried were bows, spears and swords. A supernatural element is imported into the narrative in the form of the three-legged crow of the sun, which Amaterasu sends down to act as guide and messenger for her descendants. Jimmu died at his palace of Kashiwa-hara in 585 B.C., his age being 127 according to the *Chronicles*, and 137 according to the *Records*. He was buried in a kind of tomb called *misasagi*, which seems to have been in use in Japan for some centuries before the Christian era—"a highly specialized form of tumulus, consisting of two mounds, one having a circular, the other a triangular base, which merged into each other, the whole being surrounded by a moat, or sometimes by two concentric moats with a narrow strip of land between. In some, perhaps in most, cases the *misasagi* contains a large vault of great unhewn stones without mortar. The walls of this vault converge gradually towards the top, which is roofed in by enormous slabs of stone weighing

many tons each. The entrance is by means of a gallery roofed with similar stones." Several of these ancient sepulchral mounds have been examined during recent years, and their contents have furnished information of much antiquarian interest, though there is a complete absence of inscriptions. The reigns of the eight sovereigns who succeeded Jimmu were absolutely uneventful. Nothing is set down except the genealogy of each ruler, the place of his residence and his burial, his age and the date of his death. It was then the custom—and it remained so until the 8th century of the Christian era—to change the capital on the accession of each emperor; a habit which effectually prevented the growth of any great metropolis. The reign of the 10th emperor, Sūjin, lasted from 98 to 30 B.C. During his era the land was troubled by pestilence and the people broke out in rebellion; calamities which were supposed to be caused by the spirit of the ancient ruler of Izumo to avenge a want of consideration shown to his descendants by their supplinters. Divination—by a Chinese process—and visions revealed the source of trouble; rites of worship were performed in honour of the ancient ruler, his descendant being entrusted with the duty, and the pestilence ceased. We now hear for the first time of vigorous measures to quell the aboriginal savages, doubtless the Ainu. Four generals are sent out against them in different directions. But the expedition is interrupted by an armed attempt on the part of the emperor's half-brother, who, utilizing the opportunity of the troops' absence from Yamato, marches from Yamashiro at the head of a powerful army to win the crown for himself. In connexion with these incidents, curious evidence is furnished of the place then assigned to woman by the writers of the *Chronicles*. It is a girl who warns one of the emperor's generals of the plot; it is the sovereign's aunt who interprets the warning; and it is Ata, the wife of the rebellious prince, who leads the left wing of his army. Four other noteworthy facts are recorded of this reign: the taking of a census; the imposition of a tax on animals' skins and game to be paid by men, and on textile fabrics by women; the building of boats for coastwise transport, and the digging of dikes and reservoirs for agricultural purposes. All these things rest solely on the testimony of annalists writing eight centuries later than the era they discuss and compiling their narrative mostly from tradition. Careful investigations have been made to ascertain whether the histories of China and Korea corroborate or contradict those of Japan. Without entering into detailed evidence, the inference may be at once stated that the dates given in Japanese early history are just 120 years too remote; an error very likely to occur when using the sexagenary cycle, which constituted the first method of reckoning time in Japan. But although this correction suffices to reconcile some contradictory features of Far-Eastern history, it does not constitute any explanation of the incredible longevity assigned by the *Chronicles* to several Japanese sovereigns, and the conclusion is that when a consecutive record of reigns came to be compiled in the 8th century, many lacunae were found which had to be filled up from the imagination of the compilers. With this parenthesis we may pass rapidly over the events of the next two centuries (29 B.C. to A.D. 200). They are remarkable for vigorous measures to subdue the aboriginal Ainu, who in the southern island of Kiūshiū are called Kuma-so (the names of two tribes) and sometimes earth-spiders (*i.e.* cave-dwellers), while in the north-eastern regions of the main island they are designated Yemishi. Expeditions are led against them in both regions by Prince Yamato-dake, a hero revered by all succeeding generations of Japanese as the type of valour and loyalty. Dying from the effects of hardship and exposure, but declaring with his last breath that loss of life was as nothing compared with the sorrow of seeing his father's face no more, his spirit ascends to heaven as a white bird, and when his son, Chūai, comes to the throne, he causes cranes to be placed in the moat surrounding his palace in memory of his illustrious sire.

The sovereign had partly ceased to follow the example of Jimmu, who led his armies in person. The emperors did not, however, pass a sedentary life. They frequently made pro-

gresses throughout their dominions, and on these occasions a not uncommon incident was the addition of some local beauty to the Imperial harem. This licence had a far-reaching effect, since to provide for the sovereign's numerous offspring—the emperor Keikō (71–130) had 80 children—no better way offered than to make grants of land, and thus were laid the foundations of a territorial nobility destined profoundly to influence the course of Japanese history. Woman continues to figure conspicuously in the story. The image of the sun goddess, enshrined in Ise (5 B.C.), is entrusted to the keeping of a princess, as are the mirror, sword and jewel inherited from the sun goddess; a woman (Tachibana) accompanies Prince Yamato-dake in his campaign against the Yemishi, and sacrifices her life to quell a tempest at sea; Saho, consort of Suinin, is the heroine of a most tragic tale in which the conflict between filial piety and conjugal loyalty leads to her self-destruction; and a woman is found ruling over a large district in Kiūshiū when the Emperor Keikō is engaged in his campaign against the aborigines. The reign of Suinin saw the beginning of an art destined to assume extraordinary importance in Japan—the art of wrestling—and the first champion, Nomi no Sukune, is honoured for having suggested that clay figures should take the place of the human sacrifices hitherto offered at the sepulture of Imperial personages. The irrigation works commenced in the time of Sūjin were zealously continued under his two immediate successors, Suinin and Keikō. More than 800 ponds and channels are described as having been constructed under the former's rule. We find evidence also that the sway of the throne had been by this time widely extended, for in 125 a governor-general of 15 provinces is nominated, and two years later, governors (*miyakko*) are appointed in every province and mayors (*inaki*) in every village. The number or names of these local divisions are not given, but it is explained that mountains and rivers were taken as boundaries of provinces, the limits of towns and villages being marked by roads running respectively east and west, north and south.

An incident is now reached which the Japanese count a landmark in their history, though foreign critics are disposed to regard it as apocryphal. It is the invasion of Korea by a Japanese army under the command of the empress *Invasion of Korea.* Jingō, in 200. The emperor Chūai, having proceeded to Kiūshiū for the purpose of conducting a campaign against the Kuma-so, is there joined by the empress, who, at the inspiration of a deity, seeks to divert the Imperial arms against Korea. But the emperor refuses to believe in the existence of any such country, and heaven punishes his incredulity with death at the hands of the Kuma-so, according to one account; from the effects of disease, according to another. The calamity is concealed; the Kuma-so are subdued, and the empress, having collected a fleet and raised an army, crosses to the state of Silla (in Korea), where, at the spectacle of her overwhelming strength, the Korean monarch submits without fighting, and swears that until the sun rises in the west, until rivers run towards their sources, and until pebbles ascend to the sky and become stars, he will do homage and send tribute to Japan. His example is followed by the kings of the two other states constituting the Korean peninsula, and the warlike empress returns triumphant. Many supernatural elements embellish the tale, but the features which chiefly discredit it are that it abounds in anachronisms, and that the event, despite its signal importance, is not mentioned in either Chinese or Korean history. It is certain that China then possessed in Korea territory administered by Chinese governors. She must therefore have had cognisance of such an invasion, had it occurred. Moreover, Korean history mentions twenty-five raids made by the Japanese against Silla during the first five centuries of the Christian era, but not one of them can be identified with Jingō's alleged expedition. There can be no doubt that the early Japanese were an aggressive, enterprising people, and that their nearest over-sea neighbour suffered much from their activity. Nor can there be any reasonable doubt that the Jingō tale contains a large germ of truth, and is at least an echo of the relations that existed between Japan and Korea in the 3rd and 4th centuries. The records of the 60 years comprising

Jingo's reign are in the main an account of intercourse, sometimes peaceful, sometimes stormy, between the neighbouring countries. Only one other episode occupies a prominent place: it is an attempt on the part of Jingo's step-brothers to oppose her return to Yamato and to prevent the accession of her son to the throne. It should be noted here that all such names as Jimmu, Sūjin, Chūai, &c., are posthumous, and were invented in the reign of Kwammu (782-806), the fashion being taken from China and the names themselves being purely Chinese translations of the qualities assigned to the respective monarchs. Thus Jimmu signifies "divine valour"; Sūjin, "deity-honouring"; and Chūai, "sad middle son." The names of these rulers during life were wholly different from their posthumous appellations.

Chinese history, which is incomparably older and more precise than Korean, is by no means silent about Japan. Long notices

Earliest Notices in Chinese History. occur in the later Han and Wei records (25 to 265). The Japanese are spoken of as dwarfs (*Wa*), and their islands, frequently called the queen country, are said to be mountainous, with soil suitable for growing grain, hemp, and the silk-worm mulberry. The climate is so mild that vegetables can be grown in winter and summer; there are neither oxen, horses, tigers, nor leopards; the people understand the art of weaving; the men tattoo their faces and bodies in patterns indicating differences of rank; male attire consists of a single piece of cloth; females wear a gown passed over the head, and tie their hair in a bow; soldiers are armed with spears and shields, and also with bows, from which they discharge arrows tipped with bone or iron; the sovereign resides in Yamato; there are stockaded forts and houses; food is taken with the fingers but is served on bamboo trays and wooden trenchers; foot-gear is not worn; when men of the lower classes meet a man of rank, they leave the road and retire to the grass, squatting or kneeling with both hands on the ground when they address him; intoxicating liquor is much used; the people are long-lived, many reaching the age of 100; women are more numerous than men; there is no theft, and litigation is infrequent; the women are faithful and not jealous; all men of high rank have four or five wives, others two or three; wives and children of law-breakers are confiscated, and for grave crimes the offender's family is extirpated; divination is practised by burning bones; mourning lasts for some ten days and the rites are performed by a "mourning-keeper"; after a funeral the whole family perform ablutions; fishing is much practised, and the fishermen are skilled divers; there are distinctions of rank and some are vassals to others; each province has a market where goods are exchanged; the country is divided into more than 100 provinces, and among its products are white pearls, green jade and cinnabar. These annals go on to say that between 147 and 190 civil war prevailed for several years, and order was finally restored by a female sovereign, who is described as having been old and unmarried; much addicted to magic arts; attended by a thousand females; dwelling in a palace with lofty pavilions surrounded by a stockade and guarded by soldiers; but leading such a secluded life that few saw her face except one man who served her meals and acted as a medium of communication. There can be little question that this queen was the empress Jingo who, according to Japanese annals, came to the throne in the year A.D. 200, and whose every public act had its inception or promotion in some alleged divine interposition. In one point, however, the Chinese historians are certainly incorrect. They represent tattooing as universal in ancient Japan, whereas it was confined to criminals, in whose case it played the part that branding does elsewhere. Centuries later, in feudal days, the habit came to be practised by men of the lower orders whose avocations involved baring the body, but it never acquired vogue among educated people. In other respects these ancient Chinese annals must be credited with remarkable accuracy in their description of Japan and the Japanese. Their account may be advantageously compared with Professor Chamberlain's analysis of the manners and customs of the early Japanese, in the preface to his translation of the *Kojiki*.

"The Japanese of the mythical period, as pictured in the legends preserved by the compiler of the *Records of Ancient Matters*, were a race who had long emerged from the savage stage and had attained to a high level of barbaric skill. The Stone Age was forgotten by them—or nearly so—and the evidence points to their never having passed through a genuine Bronze Age, though the knowledge of bronze was at a later period introduced from the neighbouring continent. They used iron for manufacturing spears, swords and knives of various shapes, and likewise for the more peaceful purpose of making hooks wherewith to angle or to fasten the doors of their huts. Their other warlike and hunting implements (besides traps and guns, which appear to have been used equally for catching beasts and birds and for destroying human enemies) were bows and arrows, spears and elbow-pads—the latter seemingly of skin, while special allusion is made to the fact that the arrows were feathered. Perhaps clubs should be added to the list. Of the bows and arrows, swords and knives, there is perpetual mention, but nowhere do we hear of the tools with which they were manufactured, and there is the same remarkable silence regarding such widely spread domestic implements as the saw and the axe. We hear, however, of the pestle and mortar, of the fire-drill, of the wedge, of the sickle, and of the shuttle used in weaving. Navigation seems to have been in a very elementary state. Indeed the art of sailing was but little practised in Japan even so late as the middle of the 10th century of our era, subsequent to the general diffusion of Chinese civilization, though rowing and punting are often mentioned by the early poets. To what we should call towns or villages very little reference is made anywhere in the *Records* or in that part of the *Chronicles* which contain the account of the so-called Divine Age. But from what we learn incidentally it would seem that the scanty population was chiefly distributed in small hamlets and isolated dwellings along the coast and up the course of the larger streams. Of house-building there is frequent mention. Fences were in use. Rugs of skins and rush-matting were occasionally brought in to sit on, and we even hear once or twice of silk rugs being used for the same purpose by the noble and wealthy. The habits of personal cleanliness which so pleasantly distinguish the modern Japanese from their neighbours in continental Asia, though less fully developed than at present, would seem to have existed in the germ in early times, as we read more than once of bathing in rivers, and are told of bathing women being specially attached to the person of a certain Imperial infant. Lustrations, too, formed part of the religious practices of the race. Latrines are mentioned several times. They would appear to have been situated away from the houses and to have been generally placed over a running stream, whence doubtless the name for latrine in the archaic dialect—*kawaya* (river-house). A peculiar sort of dwelling-place which the two old histories bring prominently under our notice is the so-called parturition house—a one roomed hut without windows, which a woman was expected to build and retire into for the purpose of being delivered unseen. Castles are not distinctly spoken of until a time which coincides, according to the received chronology, with the first century B.C. We then first meet with the curious term rice-castle, whose precise signification is a matter of dispute among the native commentators, but which, on comparison with Chinese descriptions of the early Japanese, should probably be understood to mean a kind of palisade serving the purpose of a redoubt, behind which the warriors could ensconce themselves. The food of the early Japanese consisted of fish and of the flesh of the wild creatures which fell by the hunter's arrow or were taken in the trapper's snare. Rice is the only cereal of which there is such mention made as to place it beyond a doubt that its cultivation dates back to time immemorial. Beans, millet and barley are indeed named once, together with silkworms, in the account of the Divine Age. But the passage has every aspect of an interpolation in the legend, perhaps not dating back long before the time of the eighth-century compiler. A few unimportant vegetables and fruits, of most of which there is but a single mention, are found. The intoxicating liquor called *sake* was known in Japan during the mythical period, and so were chopsticks for eating food with. Cooking pots and cups and dishes—the latter both of earthenware and of leaves of trees—are also mentioned; but of the use of fire for warming purposes we hear nothing. Tables are named several times, but never in connexion with food: they would seem to have been used exclusively for the purpose of presenting offerings on, and were probably quite small and low—in fact, rather trays than tables, according to European ideas. In the use of clothing and the specialization of garments the early Japanese had reached a high level. We read in the most ancient legends of upper garments, skirts, trousers, girdles, veils and hats, while both sexes adorned themselves with necklaces, bracelets and head ornaments of stones considered precious—in this respect offering a striking contrast to their descendants in modern times, of whose attire jewelry forms no part. The material of their clothes was hempen cloth and paper—mulberry bark, coloured by being rubbed with madder, and probably with wood and other tinctorial plants. All the garments, so far as we may judge, were woven, sewing being nowhere mentioned. From the great place which the chase occupied in daily life, we are led to suppose that skins also were used to make garments of. There is in the *Records* at least one passage which favours this supposition, and the *Chronicles* in one place mention the straw rain-coat and

broad-brimmed hat, which still form the Japanese peasant's effectual protection against the inclemencies of the weather. The tendrils of creeping plants served the purposes of strings, and bound the warrior's sword round his waist. Combs are mentioned, and it is evident that much attention was devoted to the dressing of the hair. The men seem to have bound up their hair in two bunches, one on each side of the head, while the young boys tied theirs in a top-knot, the unmarried girls let their locks hang down over their necks, and the married women dressed theirs after a fashion which apparently combined the two last-named methods. There is no mention in any of the old books of cutting the hair or beard except in token of disgrace; neither do we gather that the sexes, but for the matter of the head-dress, were distinguished by a diversity of apparel and ornamentation. With regard to the precious stones mentioned above as having been used as ornaments for the head, neck and arms, we know from the specimens which have rewarded the labours of archaeological research in Japan that agate, crystal, glass, jade, serpentine and steatite were the most used materials, and carved and pierced cylindrical shapes the commonest forms. The horse—which was ridden, but not driven—the barn-door fowl and the cormorant used for fishing, are the only domesticated creatures mentioned in the earlier traditions, with the doubtful exception of the silkworm. In the later portions of the *Records* and *Chronicles* dogs and cattle are alluded to, but sheep, swine and even cats were apparently not yet introduced."

As the prehistoric era draws to its end the above analyses of Japanese civilization have to be modified. Thus, towards the close of the 3rd century, ship-building made great progress, and instead of the small boats hitherto in use, a vessel 100 ft. long was constructed. Notable above all is the fact that Japan's turbulent relations with Korea were replaced by friendly intercourse, so that she began to receive from her neighbour instruction in the art of writing. The date assigned by the *Chronicles* for this important event is A.D. 285, but it has been proved almost conclusively that Japanese annals relating to this period are in error to the extent of 120 years. Hence the introduction of calligraphy must be placed in 405. Chinese history shows that between 57 and 247 Japan sent four embassies to the courts of the Han and the Wei, and this intercourse cannot have failed to disclose the ideograph. But the knowledge appears to have been confined to a few interpreters, and not until the year 405 were steps taken to extend it, with the aid of a learned Korean, Wang-in. Korea herself began to study Chinese learning only a few years before she undertook to impart it to Japan. We now find a numerous colony of Koreans passing to Japan and settling there; a large number are also carried over as prisoners of war, and the Japanese obtain seamstresses from both of their continental neighbours. One fact, related with much precision, shows that the refinements of life were in an advanced condition: an ice-house is described, and we read that from 374 (? 494) it became the fashion to store ice in this manner for use in the hot months by placing it in water or *sake*. The emperor, Nintoku, to whose time this innovation is attributed, is one of the romantic figures of Japanese history. He commenced his career by refusing to accept the sovereignty from his younger brother, who pressed him earnestly to do so on the ground that the proper order of succession had been disturbed by their father's partiality—though the rights attaching to primogeniture did not receive imperative recognition in early Japan. After three years of this mutual self-effacement, during which the throne remained vacant, the younger brother committed suicide, and Nintoku reluctantly became sovereign. He chose Naniwa (the modern Osaka) for his capital, but he would not take the farmers from their work to finish the building of a palace, and subsequently, inferring from the absence of smoke over the houses of the people that the country was impoverished, he remitted all taxes and suspended forced labour for a term of three years, during which his palace fell into a state of ruin and he himself fared in the coarsest manner. Digging canals, damming rivers, constructing roads and bridges, and establishing granaries occupied his attention when love did not distract it. But in affairs of the heart he was most unhappy. He figures as the sole wearer of the Japanese crown who was defied by his consort; for when he took a concubine in despite of the empress, her jealousy was so bitter that, refusing to be placated by any of his majesty's verses or other overtures, she left the palace altogether; and when he sought to introduce another beauty into the inner

chamber, his own half-brother, who carried his proposals, won the girl for himself. One other fact deserves to be remembered in connexion with Nintoku's reign: Ki-no-tsuno, representative of a great family which had filled the highest administrative and military posts under several sovereigns, is mentioned as "the first to commit to writing in detail the productions of the soil in each locality." This was in 353 (probably 473). We shall err little if we date the commencement of Japanese written annals from this time, though no compilation earlier than the *Kojiki* has survived.

Early Historical Period.—With the emperor Richū, who came to the throne A.D. 400, the historical period may be said to commence; for though the chronology of the records is still questionable, the facts are generally accepted as credible. Conspicuous loyalty towards the sovereign was not an attribute of the Japanese Imperial family in early times. Attempts to usurp the throne were not uncommon, though there are very few instances of such essays on the part of a subject. Love or lust played no insignificant part in the drama, and a common method of placating an irate sovereign was to present a beautiful damsel for his delectation. The veto of consanguinity did not receive very strict respect in these matters. Children of the same father might intermarry, but not those of the same mother; a canon which becomes explicable on observing that as wives usually lived apart from their husbands and had the sole custody of their offspring, two or more families often remained to the end unconscious of the fact that they had a common sire. There was a remarkable tendency to organize the nation into groups of persons following the same pursuit or charged with the same functions. A group thus composed was called *be*. The heads of the great families had titles—as *omi*, *muraji*, *miakho*, *wake*, &c.—and affairs of state were administered by the most renowned of these nobles, wholly subject to the sovereign's ultimate will. The provincial districts were ruled by scions of the Imperial family, who appear to have been, on the whole, entirely subservient to the Throne. There were no tribunals of justice: the ordeal of boiling water or heated metal was the sole test of guilt or innocence, apart, of course, from confession, which was often exacted under menace of torture. A celebrated instance of the ordeal of boiling water is recorded in 415, when this device was employed to correct the genealogies of families suspected of falsely claiming descent from emperors or divine beings. The test proved efficacious, for men conscious of forgery refused to undergo the ordeal. Deprivation of rank was the lightest form of punishment; death the commonest, and occasionally the whole family of an offender became serfs of the house against which the offence had been committed or which had been instrumental in disclosing a crime. There are, however, frequent examples of wrong-doing expiated by the voluntary surrender of lands or other property. We find several instances of that extreme type of loyalty which became habitual in later ages—suicide in preference to surviving a deceased lord. On the whole the successive sovereigns of these early times appear to have ruled with clemency and consideration for the people's welfare. But there were two notable exceptions—Yuriaku (457-479) and Muretsu (499-506). The former slew men ruthlessly in fits of passion or resentment, and the latter was the Nero of Japanese history, a man who loved to witness the agony of his fellows and knew no sentiment of mercy or remorse. Yet even Yuriaku did not fail to promote industrial pursuits. Skilled artisans were obtained from Korea, and it is related that, in 462, this monarch induced the empress and the ladies of the palace to plant mulberry trees with their own hands in order to encourage sericulture. Throughout the 5th and 6th centuries many instances are recorded of the acquisition of landed estates by the Throne, and their occasional bestowal upon princes or Imperial consorts, such gifts being frequently accompanied by the assignment of bodies of agriculturists who seem to have accepted the position of serfs. Meanwhile Chinese civilization was gradually becoming known, either by direct contact or through Korea. Several immigrations of Chinese or Korean settlers are on record. No less than 7053 householders

of Chinese subjects came, through Korea, in 540, and one of their number received high rank together with the post of director of the Imperial treasury. From these facts, and from a national register showing the derivation of all the principal families in Japan, it is clearly established that a considerable strain of Chinese and Korean blood runs in the veins of many Japanese subjects.

The most signal and far-reaching event of this epoch was the importation of the Buddhist creed, which took place in 552. **Introduction of Buddhism.** A Korean monarch acted as propagandist, sending a special envoy with a bronze image of the Buddha and with several volumes of the Sutras. Unfortunately the coming of the foreign faith happened to synchronize with an epidemic of plague, and conservatives at the Imperial court were easily able to attribute this visitation to resentment on the part of the ancestral deities against the invasion of Japan by an alien creed. Thus the spread of Buddhism was checked; but only for a time. Thirty-five years after the coming of the Sutras, the first temple was erected to enshrine a wooden image of the Buddha 16 ft. high. It has often been alleged that the question between the imported and the indigenous cults had to be decided by the sword. The statement is misleading. That the final adoption of Buddhism resulted from a war is true, but its adoption or rejection did not constitute the motive of the combat. A contest for the succession to the throne at the opening of Sujun's reign (588-592) found the partisans of the Indian faith ranged on one side, its opponents on the other, and in a moment of stress the leaders of the former, Soma and Prince Umayado, vowed to erect Buddhist temples should victory rest on their arms. From that time the future of Buddhism was assured. In 588 Korea sent Buddhist relics, Buddhist priests, Buddhist ascetics, architects of Buddhist temples, and casters of Buddhist images. She had already sent men learned in divination, in medicine, and in the calendar. The building of temples began to be fashionable in the closing years of the 6th century, as did also abdication of the world by people of both sexes; and a census taken in 623, during the reign of the empress Suiko (583-628), showed that there were then 46 temples, 816 priests and 569 nuns in the empire. This rapid growth of the alien faith was due mainly to two causes: first, that the empress Suiko, being of the Soga family, naturally favoured a creed which had found its earliest Japanese patron in the great statesman and general, Soga no Umako; secondly, that one of the most illustrious scholars and philosophers ever possessed by Japan, Prince Shōtoku, devoted all his energies to fostering Buddhism.

The adoption of Buddhism meant to the Japanese much more than the acquisition of a practical religion with a code of clearly defined morality in place of the amorphous and jejune cult of Shintō. It meant the introduction of Chinese civilization. Priests and scholars crossed in numbers from China, and men passed over from Japan to study the Sutras at what was then regarded as the fountain-head of Buddhism. There was also a constant stream of immigrants from China and Korea, and the result may be gathered from the fact that a census taken of the Japanese nobility in 814 indicated 382 Korean and Chinese families against only 796 of pure Japanese origin. The records show that in costume and customs a signal advance was made towards refinement. Hair-ornaments of gold or silver chiselled in the form of flowers; caps of sarcenet in twelve special tints, each indicating a different grade; garments of brocade and embroidery with figured thin silks of various colours—all these were worn on ceremonial occasions; the art of painting was introduced; a recorder's office was established; perfumes were largely employed; court picnics to gather medicinal herbs were instituted, princes and princesses attending in brilliant raiment; Chinese music and dancing were introduced; cross-bows and catapults were added to the weapons of war; domestic architecture made signal strides in obedience to the examples of Buddhist sacred edifices, which, from the first, showed magnificence of dimension and decoration hitherto unconceived in Japan; the arts of metal-casting and sculpture underwent great improve-

ment; Prince Shōtoku compiled a code, commonly spoken of as the first written laws of Japan, but in reality a collection of maxims evincing a moral spirit of the highest type. In some respects, however, there was no improvement. The succession to the throne still tended to provoke disputes among the Imperial princes; the sword constituted the principal weapon of punishment, and torture the chief judicial device. Now, too, for the first time, a noble family is found seeking to usurp the Imperial authority. The head of the Soga house, Umako, having compassed the murder of the emperor Sujun and placed on the throne his own niece (Suiko), swept away all opposition to the latter's successor, Jomei, and controlled the administration of state affairs throughout two reigns. In all this he was strongly seconded by his son, Iruka, who even surpassed him in contumelious assumption of power and parade of dignity. Iruka was slain in the presence of the empress Kōgyoku by Prince Naka with the assistance of the minister of the interior, Kamako, and it is not surprising to find the empress (Kōgyoku) abdicating immediately afterwards in favour of Kamako's protégé, Prince Karu, who is known in history as Kōtoku. This Kamako, planner and leader of the conspiracy which overthrew the Soga, is remembered by posterity under the name of Kamatari and as the founder of the most illustrious of Japan's noble houses, the Fujiwara. At this time (645), a habit which afterwards contributed materially to the effacement of the Throne's practical authority was inaugurated. Prince Furuibito, pressed by his brother, Prince Karu, to assume the sceptre in accordance with his right of primogeniture, made his refusal peremptory by abandoning the world and taking the tonsure. This retirement to a monastery was afterwards dictated to several sovereigns by ministers who found that an active occupant of the throne impeded their own exercise of administrative autocracy. Furuibito's recourse to the tonsure proved, however, to be merely a cloak for ambitious designs. Before a year had passed he conspired to usurp the throne and was put to death with his children, his consorts strangling themselves. Suicide to escape the disgrace of defeat had now become a common practice. Another prominent feature of this epoch was the prevalence of superstition. The smallest incidents—the growing of two lotus flowers on one stem; a popular ballad; the reputed song of a sleeping monkey; the condition of the water in a pond; rain without clouds—all these and cognate trifles were regarded as omens; wizards and witches deluded the common people; a strange form of caterpillar was worshipped as the god of the everlasting world, and the peasants impoverished themselves by making sacrifices to it.

An interesting epoch is now reached, the first legislative era of early Japanese history. It commenced with the reign of the emperor Kōtoku (645), of whom the *Chronicles* say **First Legislative Epoch.** that he "honoured the religion of Buddha and despised Shintō"; that "he was of gentle disposition; loved men of learning; made no distinction of noble and mean, and continually dispensed beneficent edicts." The customs calling most loudly for reform in his time were abuse of the system of forced labour; corrupt administration of justice; spoliation of the peasant class; assumption of spurious titles to justify oppression; indiscriminate distribution of the families of slaves and serfs; diversion of taxes to the pockets of collectors; formation of great estates, and a general lack of administrative centralization. The first step of reform consisted in ordering the governors of provinces to prepare registers showing the numbers of freemen and serfs within their jurisdiction as well as the area of cultivated land. It was further ordained that the advantages of irrigation should be shared equally with the common people; that no local governor might try and decide criminal cases while in his province; that any one convicted of accepting bribes should be liable to a fine of double the amount as well as to other punishment; that in the Imperial court a box should be placed for receiving petitions and a bell hung to be sounded in the event of delay in answering them or unfairness in dealing with them; that all absorption of land into great estates should cease; that barriers, outposts, guards and post-horses should be

provided; that high officials should be dowered with hereditary estates by way of emolument, the largest of such grants being 3000 homesteads; that men of unblemished character and proved capacity should be appointed aldermen for adjudicating criminal matters; that there should be chosen as clerks for governors and vice-governors of provinces men of solid competence "skilled in writing and arithmetic"; that the land should be parcelled out in fixed proportions to every adult unit of the population with right of tenure for a term of six years; that forced labour should be commuted for taxes of silk and cloth; and that for fiscal and administrative purposes households should be organized in groups of five, each group under an elder, and ten groups forming a township, which, again, should be governed by an elder. Incidentally to these reforms many of the evil customs of the time are exposed. Thus provincial governors when they visited the capital were accustomed to travel with great retinues who appear to have constituted a charge on the regions through which they passed. The law now limited the number of a chief governor's attendants to nine, and forbade him to use official houses or to fare at public cost unless journeying on public business. Again, men who had acquired some local distinction, though they did not belong to noble families, took advantage of the absence of historical records or official registers, and, representing themselves as descendants of magnates to whom the charge of public granaries had been entrusted, succeeded in usurping valuable privileges. The office of provincial governor had in many cases become hereditary, and not only were governors largely independent of Imperial control, but also, since every free man carried arms, there had grown up about these officials a population relying largely on the law of force. Kōtoku's reforms sought to institute a system of temporary governors, and directed that all arms and armour should be stored in arsenals built in waste places, except in the case of provinces adjoining lands where unsubdued aborigines (Yemishi) dwelt. Punishments were drastic, and in the case of a man convicted of treason, all his children were executed with him, his wives and consorts committing suicide. From a much earlier age suicide had been freely resorted to as the most honourable exit from pending disgrace, but as yet the samurai's method of disembowelment was not employed, strangulation or cutting the throat being the regular practice. Torture was freely employed and men often died under it. Signal abuses prevailed in regions beyond the immediate range of the central government's observation. It has been shown that from early days the numerous scions of the Imperial family had generally been provided for by grants of provincial estates. Gradually the descendants of these men, and the representatives of great families who held hereditary rank, extended their domains unscrupulously, employing forced labour to reclaim lands, which they let to the peasants, not hesitating to appropriate large slices of public property, and remitting to the central treasury only such fractions of the taxes as they found convenient. So prevalent had the exaction of forced labour become that country-folk, repairing to the capital to seek redress of grievances, were often compelled to remain there for the purpose of carrying out some work in which dignitaries of state were interested. The removal of the capital to a new site on each change of sovereign involved a vast quantity of unproductive toil. It is recorded that in 656, when the empress Saimei occupied the throne, a canal was dug which required the work of 30,000 men and a wall was built which had employed 70,000 men before its completion. The construction of tombs for grandees was another heavy drain on the people's labour. Some of these sepulchres attained enormous dimensions—that of the emperor Ōjin (270–310) measures 2312 yds. round the outer moat and is some 60 ft. high; the emperor Nintoku's (313–399) is still larger, and there is a tumulus in Kawachi on the flank of which a good-sized village has been built. Kōtoku's laws provided that the tomb of a prince should not be so large as to require the work of more than 1000 men for seven days, and that the grave of a petty official must be completed by 50 men in one day. Moreover, it was forbidden to bury with the body gold, silver,

copper, iron, jewelled shirts, jade armour or silk brocade. It appears that the custom of suicide or sacrifice at the tomb of grandees still survived, and that people sometimes cut off their hair or stabbed their thighs preparatory to declaiming a threnody. All these practices were vetoed. Abuses had grown up even in connexion with the Shintō rite of purgation. This rite required not only the reading of rituals but also the offering of food and fruits. For the sake of these edibles the rite was often harshly enforced, especially in connexion with pollution from contact with corpses; and thus it fell out that when of two brothers, returning from a scene of forced labour, one lay down upon the road and died, the other, dreading the cost of compulsory purgation, refused to take up the body. Many other evil customs came into existence in connexion with this rite, and all were dealt with in the new laws. Not the least important of the reforms then introduced was the organization of the ministry after the model of the Tang dynasty of China. Eight departments of state were created, and several of them received names which are similarly used to this day. Not only the institutions of China were borrowed but also her official costumes. During Kōtoku's reign 19 grades of head-gear were instituted, and in the time of Tenchi (668–671) the number was increased to 26, with corresponding robes. Throughout this era intercourse was frequent with China, and the spread of Buddhism continued steadily. The empress Saimei (655–661), who succeeded Kōtoku, was an earnest patron of the faith. By her command several public expositions of the Sutras were given, and the building of temples went on in many districts, estates being liberally granted for the maintenance of these places of worship.

The Fujiwara Era.—In the *Chronicles of Japan* the year 672 is treated as a kind of interregnum. It was in truth a year of something like anarchy, a great part of it being occupied by a conflict of unparalleled magnitude between Prince Ōtomo (called in history Emperor Kōbun) and Prince Ōama, who emerged victorious and is historically entitled Temmu (673–686). The four centuries that followed are conveniently designated the Fujiwara era, because throughout that long interval affairs of state were controlled by the Fujiwara family, whose daughters were given as consorts to successive sovereigns and whose sons filled all the high administrative posts. It has been related above that Kamako, chief of the Shintō officials, inspired the assassination of the Soga chief, Iruka, and thus defeated the latter's designs upon the throne in the days of the empress Kōgyoku. Kamako, better known to subsequent generations as Kamatari, was thenceforth regarded, with unlimited favour by successive sovereigns, and just before his death in 670, the family name of Fujiwara was bestowed on him by the emperor Tenchi. Kamatari himself deserved all the honour he received, but his descendants abused the high trust reposed in them, reduced the sovereign to a mere puppet, and exercised Imperial authority without openly usurping it. Much of this was due to the adoption of Chinese administrative systems, a process which may be said to have commenced during the reign of Kōtoku (645–654) and to have continued almost uninterruptedly until the 11th century. Under these systems the emperor ceased directly to exercise supreme civil or military power; he became merely the source of authority, not its wielder, the civil functions being delegated to a bureaucracy and the military to a soldier class. Possibly had the custom held of transferring the capital to a new site on each change of sovereign, and had the growth of luxurious habits been thus checked, the comparatively simple life of early times might have held the throne and the people in closer contact. But from the beginning of the 8th century a strong tendency to avoid these costly migrations developed itself. In 709 the court took up its residence at Nara, remaining there until 784; ten years after the latter date Kiōto became the permanent metropolis. The capital at Nara—established during the reign of the empress Gemmyō (708–715)—was built on the plan of the Chinese metropolis. It had nine gates and nine avenues, the palace being situated in the northern section and approached by a broad, straight avenue, which divided the city into two perfectly equal halves, all the other streets running parallel to this main

avenue or at right angles to it. Seven sovereigns reigned at Heijō (castle of peace), as Nara is historically called, and, during this period of 75 years, seven of the grandest temples ever seen in Japan were erected; a multitude of idols were cast, among them a colossal bronze Daibutsu 53½ ft. high; large temple-bells were founded, and all the best artists and artisans of the era devoted their services to these works. This religious mania reached its acme in the reign of the emperor Shōmu (724-748), a man equally superstitious and addicted to display. In Temmu's time the custom had been introduced of compelling large numbers of persons to enter the Buddhist priesthood with the object of propitiating heaven's aid to heal the illness of an illustrious personage. In Shōmu's day every natural calamity or abnormal phenomenon was regarded as calling for religious services on a large scale, and the great expense involved in all these buildings and ceremonials, supplemented by lavish outlays on court pageants, was severely felt by the nation. The condition of the agricultural class, who were the chief tax-payers, was further aggravated by the operation of the emperor Kōtoku's land system, which rendered tenure so uncertain as to deter improvements. Therefore, in the Nara epoch, the principle of private ownership of land began to be recognized. Attention was also paid to road-making, bridge-building, river control and house construction, a special feature of this last being the use of tiles for roofing purposes in place of the shingles or thatch hitherto employed. In all these steps of progress Buddhist priests took an active part. Costumes were now governed by purely Chinese fashions. This change had been gradually introduced from the time of Kōtoku's legislative measures—generally called the Taikwa reforms after the name of the era (645-650) of their adoption—and was rendered more thorough by supplementary enactments in the period 701-703 while Mommu occupied the throne. Ladies seem by this time to have abandoned the strings of beads worn in early eras round the neck, wrists and ankles. They used ornaments of gold, silver or jade in their hair, but in other respects their habiliments closely resembled those of men, and to make the difference still less conspicuous they straddled their horses when riding. Attempts were made to facilitate travel by establishing stores of grain along the principal highways, but as yet there were no hostleries, and if a wayfarer did not find shelter in the house of a friend, he had to bivouac as best he could. Such a state of affairs in the provinces offered a marked contrast to the luxurious indulgence which had now begun to prevail in the capital. There festivals of various kinds, dancing, verse-composing, flower picnics, archery, polo, football—of a very refined nature—hawking, hunting and gambling absorbed the attention of the aristocracy. Nothing disturbed the serenity of the epoch except a revolt of the northern Yemishi, which was temporarily subdued by a Fujiwara general, for the Fujiwara had not yet laid aside the martial habits of their ancestors. In 794 the Imperial capital was transferred from Nara to Kiōto by order of the emperor Kwammu, one of the greatest of Japanese sovereigns. Education, the organization of the civil service, riparian works, irrigation improvements, the separation of religion from politics, the abolition of sinecure offices, devices for encouraging and assisting agriculture, all received attention from him. But a twenty-two years' campaign against the northern Yemishi; the building of numerous temples; the indulgence of such a passionate love of the chase that he organized 140 hunting excursions during his reign of 25 years; profuse extravagance on the part of the aristocracy in Kiōto and the exactions of provincial nobles, conspired to sink the working classes into greater depths of hardship than ever. Farmers had to borrow money and seed-rice from local officials or Buddhist temples, hypothecating their land as security; thus the temples and the nobles extended their already great estates, whilst the agricultural population gradually fell into a position of practical serfdom.

Meanwhile the Fujiwara family were steadily developing their influence in Kiōto. Their methods were simple but thoroughly effective. "By progressive exercises of arbitrariness they gradually contrived that the choice of a

consort for the sovereign should be legally limited to a daughter of their family, five branches of which were specially designated to that honour through all ages. When a son was born to an emperor, the Fujiwara took the child into one of their palaces, and on his accession to the throne, the particular Fujiwara noble that happened to be his maternal grandfather became regent of the empire. This office of regent, created towards the close of the 6th century, was part of the scheme; for the Fujiwara did not allow the purple to be worn by a sovereign after he had attained his majority, or, if they suffered him to wield the sceptre during a few years of manhood, they compelled him to abdicate so soon as any independent aspirations began to impair his docility; and since for the purposes of administration in these constantly recurring minorities an office more powerful than that of prime minister (dajō daijin) was needed, they created that of regent (kwambaku), making it hereditary in their own family. In fact the history of Japan from the 6th to the 19th century may be described as the history of four families, the Fujiwara, the Taira, the Minamoto and the Tokugawa. The Fujiwara governed through the emperor; the Taira, the Minamoto and the Tokugawa governed in spite of the emperor. The Fujiwara based their power on matrimonial alliances with the Throne; the Taira, the Minamoto and the Tokugawa based theirs on the possession of armed strength which the throne had no competence to control. There another broad line of cleavage is seen. Throughout the Fujiwara era the centre of political gravity remained always in the court. Throughout the era of the Taira, the Minamoto and the Tokugawa the centre of political gravity was transferred to a point outside the court, the headquarters of a military feudalism." The process of transfer was of course gradual. It commenced with the granting of large tracts of tax-free lands to noblemen who had wrested them from the aborigines (Yemishi) or had reclaimed them by means of serf-labour. These tracts lay for the most part in the northern and eastern parts of the main island, at such a distance from the capital that the writ of the central government did not run there; and since such lands could be rented at rates considerably less than the tax levied on farms belonging to the state, the peasants by degrees abandoned the latter and settled on the former, with the result that the revenues of the Throne steadily diminished, while those of the provincial magnates correspondingly increased. Moreover, in the 7th century, at the time of the adoption of Chinese models of administration and organization, the court began to rely for military protection on the services of guards temporarily drafted from the provincial troops, and, during the protracted struggle against the Yemishi in the north and east in the 8th century, the fact that the power of the sword lay with the provinces began to be noted.

Kiōto remained the source of authority. But with the growth of luxury and effeminacy in the capital the Fujiwara became more and more averse from the hardships of campaigning, and in the 9th and 10th centuries, respectively, the Taira and the Minamoto families came into prominence as military leaders, the field of the Taira operations being the south and west, that of the Minamoto the north and east. Had the court reserved to itself and munificently exercised the privilege of rewarding these services, it might still have retained power and wealth. But by a niggardly and contemptuous policy on the part of Kiōto not only were the Minamoto leaders estranged but also they assumed the right of recompensing their followers with tax-free estates, an example which the Taira leaders quickly followed. By the early years of the 12th century these estates had attracted the great majority of the farming class, whereas the public land was left wild and uncultivated. In a word, the court and the Fujiwara found themselves without revenue, while the coffers of the Taira and the Minamoto were full: the power of the purse and the power of the sword had passed effectually to the two military families. Prominent features of the moral condition of the capital at this era (12th century) were superstition, refinement and effeminacy. A belief was widely held that calamity

¹ The Taira and the Minamoto both traced their descent from imperial princes; the Tokugawa were a branch of the Minamoto.

provided; that high officials should be dowered with hereditary estates by way of emolument, the largest of such grants being 3000 homesteads; that men of unblemished character and proved capacity should be appointed aldermen for adjudicating criminal matters; that there should be chosen as clerks for governors and vice-governors of provinces men of solid competence "skilled in writing and arithmetic"; that the land should be parcelled out in fixed proportions to every adult unit of the population with right of tenure for a term of six years; that forced labour should be commuted for taxes of silk and cloth; and that for fiscal and administrative purposes households should be organized in groups of five, each group under an elder, and ten groups forming a township, which, again, should be governed by an elder. Incidentally to these reforms many of the evil customs of the time are exposed. Thus provincial governors when they visited the capital were accustomed to travel with great retinues who appear to have constituted a charge on the regions through which they passed. The law now limited the number of a chief governor's attendants to nine, and forbade him to use official houses or to fare at public cost unless journeying on public business. Again, men who had acquired some local distinction, though they did not belong to noble families, took advantage of the absence of historical records or official registers, and, representing themselves as descendants of magnates to whom the charge of public granaries had been entrusted, succeeded in usurping valuable privileges. The office of provincial governor had in many cases become hereditary, and not only were governors largely independent of Imperial control, but also, since every free man carried arms, there had grown up about these officials a population relying largely on the law of force. Kōtoku's reforms sought to institute a system of temporary governors, and directed that all arms and armour should be stored in arsenals built in waste places, except in the case of provinces adjoining lands where unsubdued aborigines (Yemishi) dwelt. Punishments were drastic, and in the case of a man convicted of treason, all his children were executed with him, his wives and consorts committing suicide. From a much earlier age suicide had been freely resorted to as the most honourable exit from pending disgrace, but as yet the samurai's method of disembowelment was not employed, strangulation or cutting the throat being the regular practice. Torture was freely employed and men often died under it. Signal abuses prevailed in regions beyond the immediate range of the central government's observation. It has been shown that from early days the numerous scions of the Imperial family had generally been provided for by grants of provincial estates. Gradually the descendants of these men, and the representatives of great families who held hereditary rank, extended their domains unscrupulously, employing forced labour to reclaim lands, which they let to the peasants, not hesitating to appropriate large slices of public property, and remitting to the central treasury only such fractions of the taxes as they found convenient. So prevalent had the exaction of forced labour become that country-folk, repairing to the capital to seek redress of grievances, were often compelled to remain there for the purpose of carrying out some work in which dignitaries of state were interested. The removal of the capital to a new site on each change of sovereign involved a vast quantity of unproductive toil. It is recorded that in 656, when the empress Saimei occupied the throne, a canal was dug which required the work of 30,000 men and a wall was built which had employed 70,000 men before its completion. The construction of tombs for grandees was another heavy drain on the people's labour. Some of these sepulchres attained enormous dimensions—that of the emperor Ōjin (270–310) measures 2312 yds. round the outer moat and is some 60 ft. high; the emperor Nintoku's (313–399) is still larger, and there is a tumulus in Kawachi on the flank of which a good-sized village has been built. Kōtoku's laws provided that the tomb of a prince should not be so large as to require the work of more than 1000 men for seven days, and that the grave of a petty official must be completed by 50 men in one day. Moreover, it was forbidden to bury with the body gold, silver,

copper, iron, jewelled shirts, jade armour or silk brocade. It appears that the custom of suicide or sacrifice at the tomb of grandees still survived, and that people sometimes cut off their hair or stabbed their thighs preparatory to declaiming a threnody. All these practices were vetoed. Abuses had grown up even in connexion with the Shintō rite of purgation. This rite required not only the reading of rituals but also the offering of food and fruits. For the sake of these edibles the rite was often harshly enforced, especially in connexion with pollution from contact with corpses; and thus it fell out that when of two brothers, returning from a scene of forced labour, one lay down upon the road and died, the other, dreading the cost of compulsory purgation, refused to take up the body. Many other evil customs came into existence in connexion with this rite, and all were dealt with in the new laws. Not the least important of the reforms then introduced was the organization of the ministry after the model of the Tang dynasty of China. Eight departments of state were created, and several of them received names which are similarly used to this day. Not only the institutions of China were borrowed but also her official costumes. During Kōtoku's reign 19 grades of head-gear were instituted, and in the time of Tenchi (668–671) the number was increased to 26, with corresponding robes. Throughout this era intercourse was frequent with China, and the spread of Buddhism continued steadily. The empress Saimei (655–661), who succeeded Kōtoku, was an earnest patron of the faith. By her command several public expositions of the Sutras were given, and the building of temples went on in many districts, estates being liberally granted for the maintenance of these places of worship.

The Fujiwara Era.—In the *Chronicles of Japan* the year 672 is treated as a kind of interregnum. It was in truth a year of something like anarchy, a great part of it being occupied by a conflict of unparalleled magnitude between Prince Ōtomo (called in history Emperor Kōbun) and Prince Ōama, who emerged victorious and is historically entitled Temmu (673–686). The four centuries that followed are conveniently designated the Fujiwara era, because throughout that long interval affairs of state were controlled by the Fujiwara family, whose daughters were given as consorts to successive sovereigns and whose sons filled all the high administrative posts. It has been related above that Kamako, chief of the Shintō officials, inspired the assassination of the Soga chief, Iruka, and thus defeated the latter's designs upon the throne in the days of the empress Kōgyoku. Kamako, better known to subsequent generations as Kamatari, was thenceforth regarded, with unlimited favour by successive sovereigns, and just before his death in 670, the family name of Fujiwara was bestowed on him by the emperor Tenchi. Kamatari himself deserved all the honour he received, but his descendants abused the high trust reposed in them, reduced the sovereign to a mere puppet, and exercised Imperial authority without openly usurping it. Much of this was due to the adoption of Chinese administrative systems, a process which may be said to have commenced during the reign of Kōtoku (645–654) and to have continued almost uninterruptedly until the 11th century. Under these systems the emperor ceased directly to exercise supreme civil or military power; he became merely the source of authority, not its wielder, the civil functions being delegated to a bureaucracy and the military to a soldier class. Possibly had the custom held of transferring the capital to a new site on each change of sovereign, and had the growth of luxurious habits been thus checked, the comparatively simple life of early times might have held the throne and the people in closer contact. But from the beginning of the 8th century a strong tendency to avoid these costly migrations developed itself. In 709 the court took up its residence at Nara, remaining there until 784; ten years after the latter date Kiōto became the permanent metropolis. The capital at Nara—established during the reign of the empress Gemmyō (708–715)—was built on the plan of the Chinese metropolis. It had nine gates and nine avenues, the palace being situated in the northern section and approached by a broad, straight avenue, which divided the city into two perfectly equal halves, all the other streets running parallel to this main

greatly strengthening the basis of the feudal system. "It fared with the Hōjō as it had fared with all the great families that preceded them: their own misrule ultimately wrought their ruin. Their first eight representatives were talented and upright administrators. They took justice, simplicity and truth for guiding principles; they despised luxury and pomp; they never aspired to high official rank; they were content with two provinces for estates, and they sternly repelled the effeminate, depraved customs of Kiōto." Thus the greater part of the 13th century was, on the whole, a golden era for Japan, and the lower orders learned to welcome feudalism. Nevertheless no century furnished more conspicuous illustrations of the peculiarly Japanese system of vicarious government. Children occupied the position of shōgun in Kamakura under authority emanating from children on the throne in Kiōto; and members of the Hōjō family as shikken administered affairs at the mandate of the child shōguns. Through all three stages in the dignities of mikado, shōgun and shikken, the strictly regulated principle of heredity was maintained, according to which no Hōjō shikken could ever become shōgun; no Minamoto or Fujiwara could occupy the throne. At the beginning of the 14th century, however, several causes combined to shake the supremacy of the Hōjō. Under the sway of the ninth shikken (Takatoki), the austere simplicity of life and earnest discharge of executive duties which had distinguished the early chiefs of the family were exchanged for luxury, debauchery and perfunctory government. Thus the management of fiscal affairs fell into the hands of Takasuke, a man of usurious instincts. It had been the wise custom of the Hōjō constables to store grain in seasons of plenty, and distribute it at low prices in times of dearth. There occurred at this epoch a succession of bad harvests, but instead of opening the state granaries with benevolent liberality, Takasuke sold their contents at the highest obtainable rates; and, by way of contrast to the prevailing indigence, the people saw the constable in Kamakura affecting the pomp and extravagance of a sovereign waited upon by 37 mistresses, supporting a band of 2000 dancers, and keeping a pack of 5000 fighting dogs. The throne happened to be then occupied (1319-1338) by an emperor, Go-Daigo, who had reached full maturity before his accession, and was correspondingly averse from acting the puppet part assigned to the sovereigns of his time. Female influence contributed to his impatience. One of his concubines bore a son for whom he sought to obtain nomination as prince imperial, in defiance of an arrangement made by the Hōjō that the succession should pass alternately to the senior and junior branches of the Imperial family. Kamakura refused to entertain Go-Daigo's project, and thenceforth the child's mother importuned her sovereign and lover to overthrow the Hōjō. The *entourage* of the throne in Kiōto at this time was a counterpart of former eras. The Fujiwara, indeed, wielded nothing of their ancient influence. They had been divided by the Hōjō into five branches, each endowed with an equal right to the office of regent, and their strength was thus dissipated in struggling among themselves for the possession of the prize. But what the Fujiwara had done in their days of greatness, what the Taira had done during their brief tenure of power, the Saionji were now doing, namely, aspiring to furnish prime ministers and empresses from their own family solely. They had already given consorts to five emperors in succession, and jealous rivals were watching keenly to attack this clan which threatened to usurp the place long held by the most illustrious family in the land. A petty incident disturbed this state of very tender equilibrium before the plan of the Hōjō's enemies had fully matured, and the emperor presently found himself an exile in the island of Oki. But there now appeared upon the scene three men of great prowess: Kusunoki Masashige, Nitta Yoshisada and Ashikaga Takauji. The first espoused from the outset the cause of the Throne and, though commanding only a small force, held the Hōjō troops in check. The last two were both of Minamoto descent. Their common ancestor was Minamoto Yoshiie, whose exploits against the northern Yemishi in the second half of the 11th century had so impressed his countrymen that they gave him the title of Hachiman Tarō (first-

born of the god of war). Both men took the field originally in the cause of the Hōjō, but at heart they desired to be avenged upon the latter for disloyalty to the Minamoto. Nitta Yoshisada marched suddenly against Kamakura, carried it by storm and committed the city to the flames. Ashikaga Takauji occupied Kiōto, and with the suicide of Takatoki the Hōjō fell finally from rule after 115 years of supremacy (1219-1334). The emperor now returned from exile, and his son, Prince Moriyoshi, having been appointed to the office of shōgun at Kamakura, the restoration of the administrative power to the Throne seemed an accomplished fact.

Go-Daigo, however, was not in any sense a wise sovereign. The extermination of the Hōjō placed wide estates at his disposal, but instead of rewarding those who had deserved well of him, he used a great part of them to enrich his favourites, the companions of his dissipation. *The Ashikaga Shōguns.* Ashikaga Takauji sought just such an opportunity. The following year (1335) saw him proclaiming himself shōgun at Kamakura, and after a complicated pageant of incidents, the emperor Go-Daigo was obliged once more to fly from Kiōto. He carried the regalia with him, refused to submit to Takauji, and declined to recognize his usurped title of shōgun. The Ashikaga chief solved the situation by deposing Go-Daigo and placing upon the throne another scion of the Imperial family who is known in history as Kōmyō (1336-1348), and who, of course, confirmed Takauji in the office of shōgun. Thus commenced the Ashikaga line of shōguns, and thus commenced also a fifty-six-year period of divided sovereignty, the emperor Go-Daigo and his descendants reigning in Yoshino as the southern court (*nanchō*), and the emperor Kōmyō and his descendants reigning in Kiōto as the northern court (*hokuchō*). It was by the efforts of the shōgun Yoshimitsu, one of the greatest of the Ashikaga potentates, that this quarrel was finally composed, but during its progress the country had fallen into a deplorable condition. "The constitutional powers had become completely disorganized, especially in regions at a distance from the chief towns. The peasant was impoverished, his spirit broken, his hope of better things completely gone. He dreamed away his miserable existence and left the fields untilled. Bands of robbers followed the armies through the interior of the country, and increased the feeling of lawlessness and insecurity. The coast population, especially that of the island of Kiūshū, had given itself up in a great measure to piracy. Even on the shores of Korea and China these enterprising Japanese corsairs made their appearance." The shōgun Yoshimitsu checked piracy, and there ensued between Japan and China a renewal of cordial intercourse which, upon the part of the shōgun, developed phases plainly suggesting an admission of Chinese suzerainty.

For a brief moment during the sway of Yoshimitsu the country had rest from internecine war, but immediately after his death (1394) the struggle began afresh. Many of the great territorial lords had now grown too puissant to concern themselves about either mikado or shōgun. Each fought for his own hand, thinking only of extending his sway and his territories. By the middle of the 16th century Kiōto was in ruins, and little vitality remained in any trade or industry except those that ministered to the wants of the warrior. Again in the case of the Ashikaga shōguns the political tendency to exercise power vicariously was shown, as it had been shown in the case of the mikados in Kiōto and in the case of the Minamoto in Kamakura. What the regents had been to the emperors and the constables to the Minamoto shōguns, that the wardens (*kwanryō*) were to the Ashikaga shōguns. Therefore, for possession of this office of *kwanryō* vehement conflicts were waged, and at one time five rival shōguns were used as figure-heads by contending factions. Yoshimitsu had apportioned an ample allowance for the support of the Imperial court, but in the continuous warfare following his death the estates charged with the duty of paying this allowance ceased to return any revenue; the court nobles had to seek shelter and sustenance with one or other of the feudal chiefs in the provinces, and the court itself was reduced to such a state of indigence that when the emperor Go-Tsuchi died (1500),

provided; that high officials should be dowered with hereditary estates by way of emolument, the largest of such grants being 3000 homesteads; that men of unblemished character and proved capacity should be appointed aldermen for adjudicating criminal matters; that there should be chosen as clerks for governors and vice-governors of provinces men of solid competence "skilled in writing and arithmetic"; that the land should be parcelled out in fixed proportions to every adult unit of the population with right of tenure for a term of six years; that forced labour should be commuted for taxes of silk and cloth; and that for fiscal and administrative purposes households should be organized in groups of five, each group under an elder, and ten groups forming a township, which, again, should be governed by an elder. Incidentally to these reforms many of the evil customs of the time are exposed. Thus provincial governors when they visited the capital were accustomed to travel with great retinues who appear to have constituted a charge on the regions through which they passed. The law now limited the number of a chief governor's attendants to nine, and forbade him to use official houses or to fare at public cost unless journeying on public business. During Kōtoku's reign 19 grades of head-gear were instituted, and in the time of Tenchi (668–671) the number was increased to 26, with corresponding robes. Throughout this era intercourse was frequent with China, and the spread of Buddhism continued steadily. The empress Saimei (655–661), who succeeded Kōtoku, was an earnest patron of the faith. By her command several public expositions of the Sutras were given, and the building of temples went on in many districts, estates being liberally granted for the maintenance of these places of worship.

The Fujiwara Era.—In the *Chronicles of Japan* the year 672 is treated as a kind of interregnum. It was in truth a year of something like anarchy, a great part of it being occupied by a conflict of unparalleled magnitude between Prince Ōtomo (called in history Emperor Kōbun) and Prince Ōama, who emerged victorious and is historically entitled Temmu (673–686). The four centuries that followed are conveniently designated the Fujiwara era, because throughout that long interval affairs of state were controlled by the Fujiwara family, whose daughters were given as consorts to successive sovereigns and whose sons filled all the high administrative posts. It has been related above that Kamako, chief of the Shintō officials, inspired the assassination of the Soga chief, Iruka, and thus defeated the latter's designs upon the throne in the days of the empress Kōgyoku. Kamako, better known to subsequent generations as Kamatari, was thenceforth regarded, with unlimited favour by successive sovereigns, and just before his death in 670, the family name of Fujiwara was bestowed on him by the emperor Tenchi. Kamatari himself deserved all the honour he received, but his descendants abused the high trust reposed in them, reduced the sovereign to a mere puppet, and exercised Imperial authority without openly usurping it. Much of this was due to the adoption of Chinese administrative systems, a process which may be said to have commenced during the reign of Kōtoku (645–654) and to have continued almost uninterruptedly until the 11th century. Under these systems the emperor ceased directly to exercise supreme civil or military power; he became merely the source of authority, not its wielder, the civil functions being delegated to a bureaucracy and the military to a soldier class. Possibly had the custom held of transferring the capital to a new site on each change of sovereign, and had the growth of luxurious habits been thus checked, the comparatively simple life of early times might have held the throne and the people in closer contact. But from the beginning of the 8th century a strong tendency to avoid these costly migrations developed itself. In 709 the court took up its residence at Nara, remaining there until 784; ten years after the latter date Kiōto became the permanent metropolis. The capital at Nara—established during the reign of the empress Gemmyō (708–715)—was built on the plan of the Chinese metropolis. It had nine gates and nine avenues, the palace being situated in the northern section and approached by a broad, straight avenue, which divided the city into two perfectly equal halves, all the other streets running parallel to this main

to be reduced, and not only was its chief, Ujimasa, a formidable foe, but also the topographical features of the district represented fortifications of immense strength. After various unsuccessful overtures, having for their purpose to induce Ujimasa to visit the capital and pay homage to the emperor, Hideyoshi marched from Kiōto in the spring of 1590 at the head of 170,000 men, his colleagues Nobuo and Iyeyasu having under their orders 80,000 more. The campaign ended as did all Hideyoshi's enterprises, except that he treated his vanquished enemies with unusual severity. During the three months spent investing Odawara, the northern daemyōs surrendered, and thus the autumn of 1590 saw Hideyoshi master of Japan from end to end, and saw Tokugawa Iyeyasu established at Yedo as recognized ruler of the eight provinces of the Kwantō. These two facts should be bracketed together, because Japan's emergence from the deep gloom of long-continued civil strife was due not more to the brilliant qualities of Hideyoshi and Iyeyasu individually than to the fortunate synchronism of their careers, so that the one was able to carry the other's work to completion and permanence. The last eight years of Hideyoshi's life—he died in 1598—were chiefly remarkable for his attempt to invade China through Korea, and for his attitude towards Christianity (see § VIII.: FOREIGN INTERCOURSE).

The Tokugawa Era.—When Hideyoshi died he left a son, Hideyori, then only six years of age, and the problem of this child's future had naturally caused supreme solicitude to the peasant statesman. He finally entrusted the care of the boy and the management of state affairs to five regents, five ministers, and three intermediary councillors. But he placed chief reliance upon Iyeyasu, whom he appointed president of the board of regents. Among the latter was one, Ishida Mitsunari, who to insatiable ambition added an extraordinary faculty for intrigue and great personal magnetism. These qualities he utilized with such success that the dissensions among the daimyōs, which had been temporarily composed by Hideyoshi, broke out again, and the year 1600 saw Japan divided into two camps, one composed of Tokugawa Iyeyasu and his allies, the other of Ishida Mitsunari and his partisans.

The situation of Iyeyasu was eminently perilous. From his position in the east of the country, he found himself menaced by two powerful enemies on the north and on the south, respectively; the former barely contained by a greatly weaker force of his friends, and the latter moving up in seemingly overwhelming strength from Kiōto. He decided to hurl himself upon the southern army without awaiting the result of the conflict in the north. The encounter took place at Sekigahara in the province of Mino on the 21st of October 1600. The army of Iyeyasu had to move to the attack in such a manner that its left flank and its left rear were threatened by divisions of the enemy posted on commanding eminences. But with the leaders of these divisions Iyeyasu had come to an understanding by which they could be trusted to abide so long as victory did not declare against him. Such incidents were naturally common in an era when every man fought for his own hand. The southerners suffered a crushing defeat. The survivors fled pell-mell to Osaka, where in a colossal fortress, built by Hideyoshi, his son, Hideyori, and the latter's mother, Yodo, were sheltered behind ramparts held by 80,000 men. Hideyori's cause had been openly put forward by Ishida Mitsunari and his partisans, but Iyeyasu made no immediate attempt to visit the sin upon the head of his deceased benefactor's child. On the contrary, he sent word to the lady Yodo and her little boy that he absolved them of all complicity. The battle of Sekigahara is commonly spoken of as having terminated the civil war which had devastated Japan, with brief intervals, from the latter half of the 12th century to the beginning of the 17th. That is incorrect in view of the fact that Sekigahara was followed by other fighting, especially by the terrible conflict at Osaka in 1615 when Yodo and her son perished. But Sekigahara's importance cannot be over-rated. For had Iyeyasu been finally crushed there, the wave of internecine strife must have rolled again over the empire until providence provided another

Hideyoshi and another Iyeyasu to stem it. Sekigahara, therefore, may be truly described as a turning-point in Japan's career and as one of the decisive battles of the world. As for the fact that the Tokugawa leader did not at once proceed to extremities in the case of the boy Hideyori, though the events of the Sekigahara campaign had made it quite plain that such a course would ultimately be inevitable, we have to remember that only two years had elapsed since Hideyoshi was laid in his grave. His memory was still green and the glory of his achievements still enveloped his family. Iyeyasu foresaw that to carry the tragedy to its bitter end at once must have forced into Hideyori's camp many puissant daimyōs whose sense of allegiance would grow less cogent with the lapse of time. When he did lay siege to the Osaka castle in 1615, the power of the Tokugawa was wellnigh shattered against its ramparts; had not the onset been aided by treachery, the stronghold would probably have proved impregnable.

But signal as were the triumphs of the Tokugawa chieftain in the field, what distinguishes him from all his predecessors is the ability he displayed in consolidating his conquests. The immense estates that fell into his hands he parcelled out in such a manner that all important strategical positions were held by daimyōs whose fidelity could be confidently trusted, and every feudatory of doubtful loyalty found his fief within touch of a Tokugawa partisan. This arrangement, supplemented by a system which required all the great daimyōs to have mansions in the shōgun's capital, Yedo, to keep their families there always and to reside there themselves in alternate years, proved so potent a check to disaffection that from 1615, when the castle of Osaka fell, until 1864, when the Chōshū rōnin attacked Kiōto, Japan remained entirely free from civil war.

It is possible to form a clear idea of the ethical and administrative principles by which Iyeyasu and the early Tokugawa chiefs were guided in elaborating the system which gave to Japan an unprecedented era of peace and prosperity. Evidence is furnished not only by the system itself but also by the contents of a document generally called the *Testament of Iyeyasu*, though probably it was not fully compiled until the time of his grandson, Iyemitsu (1623-1650). The great Tokugawa chief, though he munificently patronized Buddhism and though he carried constantly in his bosom a miniature Buddhist image to which he ascribed all his success in the field and his safety in battle, took his ethical code from Confucius. He held that the basis of all legislation and administration should be the five relations of sovereign and subject, parent and child, husband and wife, brother and sister, friend and friend. The family was, in his eyes, the essential foundation of society, to be maintained at all sacrifices. Beyond these broad outlines of moral duty it was not deemed necessary to instruct the people. Therefore out of the hundred chapters forming the *Testament* only 22 contain what can be called legal enactments, while 55 relate to administration and politics; 16 set forth moral maxims and reflections, and the remainder record illustrative episodes in the career of the author. "No distinct line is drawn between law and morals, between the duty of a citizen and the virtues of a member of a family. Substantive law is entirely wanting, just as it was wanting in the so-called constitution of Prince Shōtoku. Custom, as sanctioned by public observance, must be complied with in the civil affairs of life. What required minute exposition was criminal law, the relations of social classes, etiquette, rank, precedence, administration and government.

Society under feudalism had been moulded into three sharply defined groups, namely, first, the Throne and the court nobles (*kuge*); secondly, the military class (*buke* or *samurai*); *Social Distinctions in the Tokugawa Era.* and thirdly, the common people (*heimin*). These lines of cleavage were emphasized as much as possible by the Tokugawa rulers. The divine origin of the mikado was held to separate him from contact with mundane affairs, and he was therefore strictly secluded in the palace at Kiōto, his main function being to mediate between his heavenly ancestors and his subjects, entrusting to the shōgun and the samurai the duty of transacting all worldly business on behalf

of the state. In obedience to this principle the mikado became a kind of sacrosanct abstraction. No one except his consorts and his chief ministers ever saw his face. In the rare cases when he gave audience to a privileged subject, he sat behind a curtain, and when he went abroad, he rode in a closely shut car drawn by oxen. A revenue of ten thousand *koku* of rice—the equivalent of about as many guineas—was apportioned for his support, and the right was reserved to him of conferring empty titles upon the living and rank upon the dead. His majesty had one wife, the empress (*kōgō*), necessarily taken from one of the five chosen families (*go-sekke*) of the Fujiwara, but he might also have twelve consorts, and if direct issue failed, the succession passed to one of the two princely families of Arisugawa and Fushimi, adoption, however, being possible in the last resort. The huge constituted the court nobility, consisting of 155 families all of whom traced their lineage to ancient mikados; they ranked far above the feudal chiefs, not excepting even the shōgun; filled by right of heredity nearly all the offices at the court, the emoluments attached being, however, a mere pittance; were entirely without the great estates which had belonged to them in ante-feudal times, and lived lives of proud poverty, occupying themselves with the study of literature and the practice of music and art. After the huge and at a long distance below them in theoretical rank came the military families, who, as a class, were called *buke* or *samurai*. They had hereditary revenues, and they filled the administrative posts, these, too, being often hereditary. The third, and by far the most numerous, section of the nation were the commoners (*heimin*). They had no social status; were not allowed to carry swords, and possessed no income except what they could earn with their hands. About 55 in every 1000 units of the nation were samurai, the latter's wives and children being included in this estimate.

Under the Hōjō and the Ashikaga shōguns the holders of the great estates changed frequently according to the vicissitudes of those troublesome times, but under the

Daimyos. Tokugawa no change took place, and there thus grew up a landed nobility of the most permanent character. Every one of these estates was a feudal kingdom, large or small, with its own usages and its own laws, based on the general principles above indicated and liable to be judged according to those principles by the shōgun's government (*baku-jū*) in Yedo. A daimyō or feudal chief drew from the peasants on his estate the means of subsistence for himself and his retainers. For this purpose the produce of his estate was assessed by the shōgun's officials in *koku* (one *koku* = 180·39 litres, worth about £1), and about one-half of the assessed amount went to the feudatory, the other half to the tillers of the soil. The richest daimyō was Mayeda of Kaga, whose fief was assessed at a little over a million *koku*, his revenue thus being about half a million sterling. Just as an empress had to be taken from one of five families designated to that distinction for all time, so a successor to the shōgunate, failing direct heir, had to be selected from three families (*sanke*), namely, those of the daimyōs of Owari, Kii and Mito, whose first representatives were three sons of Iyeyasu. Out of the total body of 255 daimyōs existing in the year 1862, 141 were specially distinguished as *judai*, or hereditary vassals of the Tokugawa house, and to 18 of these was strictly limited the perpetual privilege of filling all the high offices in the Yedo administration, while to 4 of them was reserved the special honour of supplying a regent (*go-tairō*) during the minority of the shōgun. Moreover, a *judai* daimyō was of necessity appointed to the command of the fortress of Nijō in Kiōto as well as of the great castles of Osaka and Fushimi, which Iyeyasu designated the keys of the country. No intermarriage might take place between members of the court nobility and the feudal houses without the consent of Yedo; no daimyō might apply direct to the emperor for an official title, or might put foot within the imperial district of Kiōto without the shōgun's permit, and at all entrances to the region known as the Kwantō there were established guard-houses, where every one, of whatever rank, must submit to be examined, in order to prevent the wives and children of the

daimyōs from secretly leaving Yedo for their own provinces. In their journeys to and from Yedo every second year the feudal chiefs had to travel by one of two great highways, the Tōkaidō or the Nakasendō, and as they moved with great retinues, these roads were provided with a number of inns and tea-houses equipped in a sumptuous manner, and having an abundance of female servants. A puissant daimyō's procession often numbered as many as 1000 retainers, and nothing illustrates more forcibly the wide interval that separated the soldier and the plebeian than the fact that at the appearance of the heralds who preceded these progresses all commoners who happened to be abroad had to kneel on the ground with bowed and uncovered heads; all wayside houses had to close the shutters of windows giving on the road, and none might venture to look down from a height on the passing magnate. Any violation of these rules of etiquette exposed the violator to instant death at the hands of the daimyō's retinue. Moreover, the samurai and the heimin lived strictly apart. A feudal chief had a castle which generally occupied a commanding position. It was surrounded by from one to three broad moats, the innermost crowned with a high wall of huge cut stones, its trace arranged so as to give flank defence, which was further provided by pagoda-like towers placed at the salient angles. Inside this wall stood the houses of the high officials on the outskirts of a park surrounding the residence of the daimyō himself, and from the scarps of the moats or in the intervals between the rose houses for the military retainers, barrack-like structures, provided, whenever possible, with small but artistically arranged and carefully tended gardens. All this domain of the military was called *yashiki* in distinction to the *machi* (streets) where the despised commoners had their habitat.

The general body of the samurai received stipends and lived frugally. Their pay was not reckoned in money: it took the form of so many rations of rice delivered from *Samurai.* their chief's granaries. A few had landed estates, usually bestowed in recognition of conspicuous merit. They were probably the finest type of hereditary soldiers the world ever produced. Money and all devices for earning it they profoundly despised. The right of wearing a sword was to them the highest conceivable privilege. They counted themselves the guardians of their fiefs' honour and of their country's welfare. At any moment they were prepared cheerfully to sacrifice their lives on the altar of loyalty. Their word, once given, must never be violated. The slightest insult to their honour might not be condoned. Stoicism was a quality which they esteemed next to courage: all outward display of emotion must be suppressed. The sword might never be drawn for a petty cause, but, if once drawn, must never be returned to its scabbard until it had done its duty. Martial exercises occupied much of their attention, but book learning also they esteemed highly. They were profoundly courteous towards each other, profoundly contemptuous towards the commoner, whatever his wealth. Filial piety ranked next to loyalty in their code of ethics. Thus the Confucian maxim, endorsed explicitly in the *Testament of Iyeyasu*, that a man must not live under the same sky with his father's murderer or his brother's slayer, received most literal obedience, and many instances occurred of vendettas pursued in the face of apparently insuperable difficulties and consummated after years of effort. By the standard of modern morality the Japanese samurai would be counted cruel. Holding that death was the natural sequel of defeat and the only certain way of avoiding disgrace, he did not seek quarter himself or think of extending it to an enemy. Yet in his treatment of the latter he loved to display courtesy until the supreme moment when all considerations of mercy were laid aside. It cannot be doubted that the practice of employing torture judicially tended to educate a mood of callousness towards suffering, or that the many idle hours of a military man's life in time of peace encouraged a measure of dissipation. But there does not seem to be any valid ground for concluding that either of these defects was conspicuous in the character of the Japanese samurai. Faithlessness towards women was the greatest fault that can be laid to his door. The

samurai lady claimed no privilege of timidity on account of her sex. She knew how to die in the cause of honour just as readily as her husband, her father or her brother died, and conjugal fidelity did not rank as a virtue in her eyes, being regarded as a simple duty. But her husband held marital faith in small esteem and ranked his wife far below his sword. It has to be remembered that when we speak of a samurai's suicide, there is no question of poison, the bullet, drowning or any comparatively painless manner of exit from the world. The invariable method was to cut open the abdomen (*hara-kiri* or *seppuku*) and afterwards, if strength remained, the sword was turned against the throat. To such endurance had the samurai trained himself that he went through this cruel ordeal without flinching in the smallest degree.

The heimin or commoners were divided into three classes—husbandmen, artisans and traders. The farmer, as the nation lived by his labour, was counted the most respectable among the bread-winners, and a cultivator of his own estate might even carry one sword but never two, that privilege being strictly reserved to a samurai. The artisan, too, received much consideration, as is easily understood when we remember that included in his ranks were artists, sword-smiths, armourers, sculptors of sacred images or sword-furniture, ceramists and lacquerers. Many artisans were in the permanent service of feudal chiefs from whom they received fixed salaries. Tradesmen, however, were regarded with disdain and stood lowest of all in the social organization. Too much despised to be even included in that organization were the *eta* (defiled folks) and the *hinin* (outcasts). The exact origin of these latter pariahs is uncertain, but the ancestors of the *eta* would seem to have been prisoners of war or the enslaved families of criminals. To such people were assigned the defiling duties of tending tombs, disposing of the bodies of the dead, slaughtering animals or tanning hides. The *hinin* were mendicants. On them devolved the task of removing and burying the corpses of executed criminals. Living in segregated hamlets, forbidden to marry with heimin, still less with samurai, not allowed to eat, drink or associate with persons above their own class, the *eta* remained under the ban of ostracism from generation to generation, though many of them contrived to amass much wealth. They were governed by their own headmen, and they had three chiefs, one residing in each of the cities of Yedo, Osaka and Kiôto. All these members of the submerged classes were relieved from proscription and admitted to the ranks of the commoners under the enlightened system of Meiji. The 12th of October 1871 saw their enfranchisement, and at that date the census showed 287,111 *eta* and 695,689 *hinin*.

Naturally, as the unbroken peace of the Tokugawa régime became habitual, the mood of the nation underwent a change. The samurai, no longer required to lead the frugal life of camp or barracks, began to live beyond their incomes. "They found difficulty in meeting the pecuniary engagements of everyday existence, so that money acquired new importance in their eyes, and they gradually forfeited the respect which their traditional disinterestedness had won for them in the past." At the same time the abuses of feudalism were thrown into increased salience. A large body of hereditary soldiers become an anomaly when fighting has passed even out of memory. On the other hand, the agricultural and commercial classes acquired new importance. The enormous sums disbursed every year in Yedo, for the maintenance of the great establishments which the feudal chiefs vied with each other in keeping there, enriched the merchants and traders so greatly that their scale of living underwent radical change. Buddhism was a potent influence, but its ethical restraints were weakened by the conduct of its priests, who themselves often yielded to the temptation of the time. The aristocracy adhered to its refined pastimes—performances of the *No*; tea reunions; poem composing; polo; football; equestrian archery; fencing and gambling—but the commoner, being excluded from all this realm and, at the same time, emerging rapidly from his old

position of penury and degradation, began to develop luxurious proclivities and to demand corresponding amusements. Thus the theatre came into existence; the dancing girl and the jester found lucrative employment; a popular school of art was founded and quickly carried to perfection; the *lupanar* assumed unprecedented dimensions; rich and costly costumes acquired wide vogue in despite of sumptuary laws enacted from time to time; wrestling became an important institution, and plutocracy asserted itself in the face of caste distinctions.

Simultaneously with the change of social conditions thus taking place, history repeated itself at the shôgun's court. The substance of administrative power passed into the hands of a minister, its shadow alone remaining to the shôgun. During only two generations were the successors of Iyeyasu able to resist this traditional tendency. The representative of the third—Iyetsuna (1661-1680)—succumbed to the machinations of an ambitious minister, Sakai Takakiyo, and it may be said that from that time the nominal repository of administrative authority in Yedo was generally a species of magnificent recluse, secluded from contact with the outer world and seeing and hearing only through the eyes and ears of the ladies of his household. In this respect the descendants of the great Tokugawa statesman found themselves reduced to a position precisely analogous to that of the emperor in Kiôto. Sovereign and shôgun were alike mere abstractions so far as the practical work of government was concerned. With the great mass of the feudal chiefs things fared similarly. These men who, in the days of Nobunaga, Hideyoshi and Iyeyasu, had directed the policies of their fiefs and led their armies in the field, were gradually transformed, during the long peace of the Tokugawa era, into voluptuous *fainéants* or, at best, thoughtless dilettanti, willing to abandon the direction of their affairs to seneschals and mayors, who, while on the whole their administration was able and loyal, found their account in contriving and perpetuating the effacement of their chiefs. Thus, in effect, the government of the country, taken out of the hands of the shôgun and the feudatories, fell into those of their vassals. There were exceptions, of course, but so rare as to be merely accidental.

Another important factor has to be noted. It has been shown above that Iyeyasu bestowed upon his three sons the rich fiefs of Owari, Kii (Kishû) and Mito, and that these three families exclusively enjoyed the privilege of furnishing an heir to the shôgun should the latter be without direct issue. Mito ought therefore to have been a most unlikely place for the conception and propagation of principles subversive of the shôgun's administrative autocracy. Nevertheless, in the days of the second of the Mito chiefs at the close of the 17th century, there arose in that province a school of thinkers who, revolting against the ascendancy of Chinese literature and of Buddhism, devoted themselves to compiling a history such as should recall the attention of the nation to its own annals and revive its allegiance to Shintô. It would seem that in patronizing the compilation of this great work the Mito chief was swayed by the spirit of pure patriotism and studentship, and that he discerned nothing of the goal to which the new researches must lead the literati of his fief. "He and they, for the sake of history and without any thought of politics, undertook a retrospect of their country's annals, and their frank analysis furnished conclusive proof that the emperor was the prime source of administrative authority and that its independent exercise by a shôgun must be regarded as a usurpation. They did not attempt to give practical effect to their discoveries; the era was essentially academical. But this galaxy of scholars projected into the future a light which burned with growing force in each succeeding generation and ultimately burst into a flame which consumed feudalism and the shôgunate," fused the nation into one, and restored the governing authority to the emperor. Of course the Mito men were not alone in this matter: many students subsequently trod in their footsteps and many others sought to stem the tendency; but the net result was fatal to faith in the dual system of government. Possibly had nothing occurred to furnish signal proof of the system's practical defects,

it might have long survived this theoretical disapproval. But the crisis caused by the advent of foreign ships and by the forceful renewal of foreign intercourse in the 19th century afforded convincing evidence of the shōgunate's incapacity to protect the state's supposed interests and to enforce the traditional policy of isolation which the nation had learned to consider essential to the empire's integrity.

Another important factor made for the fall of the shōgunate. That factor was the traditional disaffection of the two great southern fiefs, Satsuma and Chōshū. When Iyeyasu parcelled out the empire, he deemed it the wisest policy to leave these chieftains in full possession of their large estates. But this measure, construed as an evidence of weakness rather than a token of liberality, neither won the allegiance of the big feudatories nor cooled their ambition. Thus no sooner did the nation divide into two camps over the question of renewed foreign intercourse than men of the above clans, in concert with representatives of certain of the old court nobles, placed themselves at the head of a movement animated by two loudly proclaimed purposes: restoration of the administration to the emperor, and expulsion of aliens. This latter aspiration underwent a radical change when the bombardment of the Satsuma capital, Kagoshima, and the destruction of the Chōshū forts and ships at Shimonoseki proved conclusively to the Satsuma and Chōshū clans that Japan in her unequipped and backward condition could not hope to stand for a moment against the Occident in arms. But the unwelcome discovery was accompanied by a conviction that only a thoroughly united nation might aspire to preserve its independence, and thus the abolition of the dual form of government became more than ever an article of public faith. It is unnecessary to recount the successive incidents which conspired to undermine the shōgun's authority, and to destroy the prestige of the Yedo administration. Both had been reduced to vanishing quantities by the year 1866 when Keiki succeeded to the shōgunate.

Keiki, known historically as Yoshinobu, the last of the shōguns, was a man of matured intellect and high capacities. He had been put forward by the anti-foreign Conservatives for the succession to the shōgunate in 1857 when the complications of foreign intercourse were in their first stage of acuteness. But, like many other intelligent Japanese, he had learned, in the interval between 1857 and 1866, that to keep her doors closed was an impossible task for Japan, and very quickly after taking the reins of office he recognized that national union could never be achieved while power was divided between Kiōto and Yedo. At this juncture there was addressed to him by Yōdō, chief of the great Tosa fief, a memorial setting forth the hopelessness of the position in which the Yedo court now found itself, and urging that, in the interests of good government and in order that the nation's united strength might be available to meet the exigencies of its new career, the administration should be restored to the emperor. Keiki received this memorial in Kiōto. He immediately summoned a council of all the feudatories and high officials then in the Imperial city, announced to them his intention to lay down his office, and, the next day, presented his resignation to the sovereign. This happened on the 14th of October 1867. It must be ranked among the signal events of the world's history, for it signified the voluntary surrender of kingly authority wielded uninterruptedly for nearly three centuries. That the shōgun's resignation was tendered in good faith there can be no doubt, and had it been accepted in the same spirit, the great danger it involved might have been consummated without bloodshed or disorder. But the clansmen of Satsuma and Chōshū were distrustful. One of the shōgun's first acts after assuming office had been to obtain from the throne an edict for imposing penalties on Chōshū, and there was a precedent for suspecting that the renunciation of power by the shōgun might merely prelude its resumption on a firmer basis. Therefore steps were taken to induce the emperor, then a youth of fifteen, to issue a secret rescript to Satsuma and Chōshū, denouncing the shōgun as the nation's enemy and

enjoining his destruction. At the same time all officials connected with the Tokugawa or suspected of sympathy with them were expelled from office in Kiōto, and the shōgun's troops were deprived of the custody of the palace gates by methods which verged upon the use of armed force. In the face of such provocation Keiki's earnest efforts to restrain the indignation of his vassals and adherents failed. They marched against Kiōto and were defeated, whereupon Keiki left his castle at Osaka and retired to Yedo, where he subsequently made unconditional surrender to the Imperial army. There is little more to be set down on this page of the history. The Yedo court consented to lay aside its dignities and be stripped of its administrative authority, but all the Tokugawa vassals and adherents did not prove equally placable. There was resistance in the northern provinces, where the Aizu feudatory refused to abandon the Tokugawa cause; there was an attempt to set up a rival candidate for the throne in the person of an Imperial prince who presided over the Uyeno Monastery in Yedo; and there was a wild essay on the part of the admiral of the shōgun's fleet to establish a republic in the island of Yezo. But these were mere ripples on the surface of the broad stream which set towards the peaceful overthrow of the dual system of government and ultimately towards the fall of feudalism itself. That this system, the outcome of five centuries of nearly continuous warfare, was swept away in almost as many weeks with little loss of life or destruction of property constitutes, perhaps, the most striking incident, certainly the most momentous, in the history of the Japanese nation.

The Meiji Era.—It must be remembered that when reference is made to the Japanese nation in connexion with these radical changes, only the nobles and the samurai are indicated—in other words, a section of the population representing about one-sixteenth of the whole. The bulk of the people—the agricultural, the industrial and the mercantile classes—remained outside the sphere of politics, not sharing the anti-foreign prejudice, or taking any serious interest in the great questions of the time. Foreigners often noted with surprise the contrast between the fierce antipathy displayed towards them by certain samurai on the one hand, and the genial, hospitable reception given to them by the common people on the other. History teaches that the latter was the natural disposition of the Japanese, the former a mood educated by special experiences. Further, even the comparatively narrow statement that the restoration of the administrative power to the emperor was the work of the nobles and the samurai must be taken with limitations. A majority of the nobles entertained no idea of any necessity for change. They were either held fast in the vice of Tokugawa authority, or paralyzed by the sensuous seductions of the lives provided for them by the machinations of their retainers, who transferred the administrative authority of the fiefs to their own hands, leaving its shadow only to their lords. It was among the retainers that longings for a new order of things were generated. Some of these men were sincere disciples of progress—a small band of students and deep thinkers who, looking through the narrow Dutch window at Deshima, had caught a glimmering perception of the realities that lay beyond the horizon of their country's prejudices. But the influence of such Liberals was comparatively insignificant. Though they showed remarkable moral courage and tenacity of purpose, the age did not furnish any strong object lesson to enforce their propaganda of progress. The factors chiefly making for change were, first, the ambition of the southern clans to oust the Tokugawa, and, secondly, the samurai's loyal instinct, reinforced by the teachings of his country's history, by the revival of the Shintō cult, by the promptings of national enterprise, and by the object-lessons of foreign intercourse.

But though essentially imperialistic in its prime purposes, the revolution which involved the fall of the shōgunate, and ultimately of feudalism, may be called democratic with regard to the personnel of those who planned and directed it. They were, for the most part, men without either official rank or social standing. That is a point essential

samurai lady claimed no privilege of timidity on account of her sex. She knew how to die in the cause of honour just as readily as her husband, her father or her brother died, and conjugal fidelity did not rank as a virtue in her eyes, being regarded as a simple duty. But her husband held marital faith in small esteem and ranked his wife far below his sword. It has to be remembered that when we speak of a samurai's suicide, there is no question of poison, the bullet, drowning or any comparatively painless manner of exit from the world. The invariable method was to cut open the abdomen (*hara-kiri* or *seppuku*) and afterwards, if strength remained, the sword was turned against the throat. To such endurance had the samurai trained himself that he went through this cruel ordeal without flinching in the smallest degree.

The heimin or commoners were divided into three classes—husbandmen, artisans and traders. The farmer, as the nation lived by his labour, was counted the most respectable among the bread-winners, and a cultivator of his own estate might even carry one sword but never two, that privilege being strictly reserved to a samurai. The artisan, too, received much consideration, as is easily understood when we remember that included in his ranks were artists, sword-smiths, armourers, sculptors of sacred images or sword-furniture, ceramists and lacquerers. Many artisans were in the permanent service of feudal chiefs from whom they received fixed salaries. Tradesmen, however, were regarded with disdain and stood lowest of all in the social organization. Too much despised to be even included in that organization were the *eta* (defiled folks) and the *hinin* (outcasts). The exact origin of these latter pariahs is uncertain, but the ancestors of the *eta* would seem to have been prisoners of war or the enslaved families of criminals. To such people were assigned the defiling duties of tending tombs, disposing of the bodies of the dead, slaughtering animals or tanning hides. The *hinin* were mendicants. On them devolved the task of removing and burying the corpses of executed criminals. Living in segregated hamlets, forbidden to marry with heimin, still less with samurai, not allowed to eat, drink or associate with persons above their own class, the *eta* remained under the ban of ostracism from generation to generation, though many of them contrived to amass much wealth. They were governed by their own headmen, and they had three chiefs, one residing in each of the cities of Yedo, Osaka and Kiōto. All these members of the submerged classes were relieved from proscription and admitted to the ranks of the commoners under the enlightened system of Meiji. The 12th of October 1871 saw their enfranchisement, and at that date the census showed 287,111 *eta* and 695,689 *hinin*.

Naturally, as the unbroken peace of the Tokugawa régime became habitual, the mood of the nation underwent a change. The samurai, no longer required to lead the frugal life of camp or barracks, began to live beyond their incomes. "They found difficulty in meeting the pecuniary engagements of everyday existence, so that money acquired new importance in their eyes, and they gradually forfeited the respect which their traditional disinterestedness had won for them in the past." At the same time the abuses of feudalism were thrown into increased salience. A large body of hereditary soldiers become an anomaly when fighting has passed even out of memory. On the other hand, the agricultural and commercial classes acquired new importance. The enormous sums disbursed every year in Yedo, for the maintenance of the great establishments which the feudal chiefs vied with each other in keeping there, enriched the merchants and traders so greatly that their scale of living underwent radical change. Buddhism was a potent influence, but its ethical restraints were weakened by the conduct of its priests, who themselves often yielded to the temptation of the time. The aristocracy adhered to its refined pastimes—performances of the *No*; tea reunions; poem composing; polo; football; equestrian archery; fencing and gambling—but the commoner, being excluded from all this realm and, at the same time, emerging rapidly from his old

position of penury and degradation, began to develop luxurious proclivities and to demand corresponding amusements. Thus the theatre came into existence; the dancing girl and the jester found lucrative employment; a popular school of art was founded and quickly carried to perfection; the *lupanar* assumed unprecedented dimensions; rich and costly costumes acquired wide vogue in despite of sumptuary laws enacted from time to time; wrestling became an important institution, and plutocracy asserted itself in the face of caste distinctions.

Simultaneously with the change of social conditions thus taking place, history repeated itself at the shōgun's court. The substance of administrative power passed into the hands of a minister, its shadow alone remaining to the shōgun. During only two generations were the successors of Iyeyasu able to resist this traditional tendency. The representative of the third—Iyetsuna (1661-1680)—succumbed to the machinations of an ambitious minister, Sakai Takakiyo, and it may be said that from that time the nominal repository of administrative authority in Yedo was generally a species of magnificent recluse, secluded from contact with the outer world and seeing and hearing only through the eyes and ears of the ladies of his household. In this respect the descendants of the great Tokugawa statesman found themselves reduced to a position precisely analogous to that of the emperor in Kiōto. Sovereign and shōgun were alike mere abstractions so far as the practical work of government was concerned. With the great mass of the feudal chiefs things fared similarly. These men who, in the days of Nobunaga, Hideyoshi and Iyeyasu, had directed the policies of their fiefs and led their armies in the field, were gradually transformed, during the long peace of the Tokugawa era, into voluptuous *fainéants* or, at best, thoughtless dilettanti, willing to abandon the direction of their affairs to seneschals and mayors, who, while on the whole their administration was able and loyal, found their account in contriving and perpetuating the effacement of their chiefs. Thus, in effect, the government of the country, taken out of the hands of the shōgun and the feudatories, fell into those of their vassals. There were exceptions, of course, but so rare as to be merely accidental.

Another important factor has to be noted. It has been shown above that Iyeyasu bestowed upon his three sons the rich fiefs of Owari, Kii (Kishū) and Mito, and that these three families exclusively enjoyed the privilege of furnishing an heir to the shōgun should the latter be without direct issue. Mito ought therefore to have been a most unlikely place for the conception and propagation of principles subversive of the shōgun's administrative autocracy. Nevertheless, in the days of the second of the Mito chiefs at the close of the 17th century, there arose in that province a school of thinkers who, revolting against the ascendancy of Chinese literature and of Buddhism, devoted themselves to compiling a history such as should recall the attention of the nation to its own annals and revive its allegiance to Shintō. It would seem that in patronizing the compilation of this great work the Mito chief was swayed by the spirit of pure patriotism and studentship, and that he discerned nothing of the goal to which the new researches must lead the literati of his fief. "He and they, for the sake of history and without any thought of politics, undertook a retrospect of their country's annals, and their frank analysis furnished conclusive proof that the emperor was the prime source of administrative authority and that its independent exercise by a shōgun must be regarded as a usurpation. They did not attempt to give practical effect to their discoveries; the era was essentially academical. But this galaxy of scholars projected into the future a light which burned with growing force in each succeeding generation and ultimately burst into a flame which consumed feudalism and the shōgunate," fused the nation into one, and restored the governing authority to the emperor. Of course the Mito men were not alone in this matter: many students subsequently trod in their footsteps and many others sought to stem the tendency; but the net result was fatal to faith in the dual system of government. Possibly had nothing occurred to furnish signal proof of the system's practical defects,

great clans had now three representatives in the ministry. These clans were further persuaded to send to Tōkyō—whither the emperor had moved his court—contingents of troops to form the nucleus of a national army. Importance attaches to these details because the principle of clan representation, illustrated in the organization of the cabinet of 1871, continued to be approximately observed for many years in forming ministries, and ultimately became a target for the attacks of party politicians.

On the 29th of August 1871 an Imperial decree announced the abolition of the system of local autonomy, and the removal of the territorial nobles from the posts of governor. *Radical Measures.* The taxes of the former fiefs were to be paid thenceforth into the central treasury; all officials were to be appointed by the Imperial government, and the feudatories, retaining permanently an income of one-tenth of their original revenues, were to make Tōkyō their place of residence. As for the samurai, they remained for the moment in possession of their hereditary pensions. Radical as these changes seem, the disturbance caused by them was not great, since they left the incomes of the military class untouched. Some of the incomes were for life only, but the majority were hereditary, and all had been granted in consideration of their holders devoting themselves to military service. Four hundred thousand men approximately were in receipt of such emoluments, and the total amount annually taken from the taxpayers for this purpose was about £2,000,000. Plainly the nation would have to be relieved of this burden sooner or later. The samurai were essentially an element of the feudal system, and that they should survive the latter's fall would have been incongruous. On the other hand, suddenly and wholly to deprive these men and their families—a total of some two million persons—of the means of subsistence on which they had hitherto relied with absolute confidence, and in return for which they and their forefathers had rendered faithful service, would have been an act of inhumanity. It may easily be conceived that this problem caused extreme perplexity to the administrators of the new Japan. They left it unsolved for the moment, trusting that time and the loyalty of the samurai themselves would suggest some solution. As for the feudal chiefs, who had now been deprived of all official status and reduced to the position of private gentlemen, without even a patent of nobility to distinguish them from ordinary individuals, they did not find anything specially irksome or regrettable in their altered position. No scrutiny had been made into the contents of their treasuries. They were allowed to retain unquestioned possession of all the accumulated funds of their former fiefs, and they also became public creditors for annual allowances equal to one-tenth of their feudal revenues. They had never previously been so pleasantly circumstanced. It is true that they were entirely stripped of all administrative and military authority; but since their possession of such authority had been in most cases merely nominal, they only felt the change as a relief from responsibility.

By degrees public opinion began to declare itself with regard to the samurai. If they were to be absorbed into the bulk of the people and to lose their fixed revenues, some capital must be placed at their disposal to begin the world again. The samurai themselves showed a noble faculty of resignation. They had been a privileged class, but they had purchased their privileges with their blood and by serving as patterns of all the qualities most prized among Japanese national characteristics. The record of their acts and the recognition of the people entitled them to look for magnificent treatment at the hands of the government which they had been the means of setting up. Yet none of these considerations blinded them to the painful fact that the time had passed them by; that no place existed for them in the new polity. Many of them voluntarily stepped down into the company of the peasant or the tradesman, and many others signified their willingness to join the ranks of common bread-winners if some aid was given to equip them for such a career. After two years' consideration the government took action. A decree announced, in 1873, that the treasury was prepared to commute the pensions of the

samurai at the rate of six years' purchase for hereditary pensions and four years for life pensions—one-half of the commutation to be paid in cash, and one-half in bonds bearing interest at the rate of 8%. It will be seen that a perpetual pension of £10 would be exchanged for a payment of £20 in cash, together with securities giving an income of £2.8s.; and that a £50 life pensioner received £20 in cash and securities yielding £1.12s. annually. It is scarcely credible that the samurai should have accepted such an arrangement. Something, perhaps, must be ascribed to their want of business knowledge, but the general explanation is that they made a large sacrifice in the interests of their country. Nothing in all their career as soldiers became them better than their manner of abandoning it. They were told that they might lay aside their swords, and many of them did so, though from time immemorial they had cherished the sword as the mark of a gentleman, the most precious possession of a warrior, and the one outward evidence that distinguished men of their order from common toilers after gain. They saw themselves deprived of their military employment, were invited to surrender more than one-half of the income it brought, and knew that they were unprepared alike by education and by tradition to earn bread in any calling save that of arms. Yet, at the invitation of a government which they had helped to establish, many of them bowed their heads quietly to this sharp reverse of fortune. It was certainly a striking instance of the fortitude and resignation which the creed of the samurai required him to display in the presence of adversity. As yet, however, the government's measures with regard to the samurai were not compulsory. Men laid aside their swords and commuted their pensions at their own option.

Meanwhile differences of opinion began to occur among the leaders of progress themselves. Coalitions formed for destructive purposes are often found unable to endure the strain of constructive efforts. Such lack of cohesion *Saigō Takamori.* might easily have been foreseen in the case of the Japanese reformers. Young men without experience of public affairs, or special education to fit them for responsible posts, found the duty suddenly imposed on them not only of devising administrative and fiscal systems universally applicable to a nation hitherto divided into a congeries of semi-independent principalities, but also of shaping the country's demeanour towards novel problems of foreign intercourse and alien civilization. So long as the heat of their assault upon the shōgunate fused them into a homogeneous party they worked together successfully. But when they had to build a brand-new edifice on the ruins of a still vivid past, it was inevitable that their opinions should vary as to the nature of the materials to be employed. In this divergence of views many of the capital incidents of Japan's modern history had their origin. Of the fifty-five men whose united efforts had compassed the fall of the shōgunate, five stood conspicuous above their colleagues. They were Iwakura and Sanjō, court nobles; Saigō and Okuma, samurai of Satsuma, and Kido, a samurai of Chōshū. In the second rank came many men of great gifts, whose youth alone disqualified them for prominence—Ito, the constructive statesman of the Meiji era, who inspired nearly all the important measures of the time, though he did not openly figure as their originator; Inouye, who never lacked a resource or swerved from the dictates of loyalty; Okuma, a politician of subtle, versatile and vigorous intellect; Itagaki, the Rousseau of his era; and a score of others created by the extraordinary circumstances with which they had to deal. But the five first mentioned were the captains, the rest only lieutenants. Among the five, four were sincere reformers—not free, of course, from selfish motives, but truthfully bent upon promoting the interests of their country before all other aims. The fifth, Saigō Takamori, was a man in whom boundless ambition lay concealed under qualities of the noblest and most enduring type. His absolute freedom from every trace of sordidness gave currency to a belief that his aims were of the simplest; the story of his career satisfied the highest canons of the samurai; his massive physique, commanding presence and sunny aspect impressed and attracted even those who had no

opportunity of admiring his life of self-sacrificing effort or appreciating the remarkable military talent he possessed. In the first part of his career, the elevation of his clan to supreme power seems to have been his sole motive, but subsequently personal ambition appears to have swayed him. To the consummation of either object the preservation of the military class was essential. By the swords of the samurai alone could a new *imperium in imperio* be carved out. On the other hand, Saigō's colleagues in the ministry saw clearly not only that the samurai were an unwarrantable burden on the nation, but also that their continued existence after the fall of feudalism would be a menace to public peace as well as an anomaly. Therefore they took the steps already described, and followed them by a conscription law, making every adult male liable for military service without regard to his social standing. It is easy to conceive how painfully unwelcome this conscription law proved to the samurai. Many of them were not unwilling to commute their pensions, since their creed had always forbidden them to care for money. Many of them were not unwilling to abandon the habit of carrying swords, since the adoption of foreign costume rendered such a custom incongruous and inconvenient. But very few of them could readily consent to step down from their cherished position as the military class, and relinquish their traditional title to bear the whole responsibility and enjoy the whole honour of fighting their country's battles. They had supposed, not unreasonably, that service in the army and navy would be reserved exclusively for them and their sons, whereas now the commonest rustic, mechanic or tradesman would be equally eligible.

While the pain of this blow was still fresh there occurred a trouble with Korea. The little state had behaved with insulting contumely, and when Japan's course came to be debated in Tōkyō, a disruption resulted in the ranks of the reformers. Saigō saw in a foreign war the sole remaining chance of achieving his ambition by lawful means. The government's conscription scheme, yet in its infancy, had not produced even the skeleton of an army. If Korea had to be conquered, the samurai must be employed; and their employment would mean, if not their rehabilitation, at least their organization into a force which, under Saigō's leadership, might dictate a new policy. Other members of the cabinet believed that the nation would be disgraced if it tamely endured Korea's insults. Thus several influential voices swelled the clamour for war. But a peace party offered strenuous opposition. Its members saw the collateral issues of the problem, and declared that the country must not think of taking up arms during a period of radical transition. The final discussion took place in the emperor's presence. The advocates of peace understood the national significance of the issue and perceived that they were debating, not merely whether there should be peace or war, but whether the country should halt or advance on its newly adopted path of progress. They prevailed, and four members of the cabinet, including Saigō, resigned. This rupture was destined to have far-reaching consequences. One of the seceders immediately raised the standard of revolt. Among the devices employed by him to win adherents was an attempt to fan into flame the dying embers of the anti-foreign sentiment. The government easily crushed the insurrection. Another seceder was Itagaki Taisuke. The third and most prominent was Saigō, who seems to have concluded from that moment that he must abandon his aims or achieve them by force. He retired to his native province of Satsuma, and applied his whole resources, his great reputation and the devoted loyalty of a number of able followers to organizing and equipping a strong body of samurai. Matters were facilitated for him by the conservatism of the celebrated Shimazu Saburō, former chief of Satsuma, who, though not opposed to foreign intercourse, had been revolted by the wholesale iconoclasm of the time, and by the indiscriminate rejection of Japanese customs in favour of foreign. He protested vehemently against what seemed to him a slavish abandonment of the nation's individuality, and finding his protest fruitless, he set himself to preserve in his own distant

province, where the writ of the Yedo government had never run, the fashions, institutions and customs which his former colleagues in the administration were ruthlessly rejecting. Satsuma thus became a centre of conservative influences, among which Saigō and his constantly augmenting band of samurai found a congenial environment. During four years this breach between the central government and the southern clan grew constantly.

In the meanwhile (1876) two extreme measures were adopted by the government: a veto on the wearing of swords, and an edict ordering the compulsory commutation of the pensions and allowances received by the nobles and the samurai. Three years previously the discarding of swords had been declared optional, and a scheme of voluntary commutation had been announced. Many had bowed quietly to the spirit of these enactments. But many still retained their swords and drew their pensions as of old, obstructing, in the former respect, the government's projects for the reorganization of society, and imposing, in the latter, an intolerable burden on the resources of the treasury. The government thought that the time had come, and that its own strength sufficed, to substitute compulsion for persuasion. The financial measure—which was contrived so as to effect the smallest pension-holders least injuriously—evoked no complaint. The samurai remained faithful to the creed which forbade them to be concerned about money. But the veto against sword-wearing overtaxed the patience of the extreme Conservatives. It seemed to them that all the most honoured traditions of their country were being ruthlessly sacrificed on the altar of alien innovations. Armed protests ensued. A few score of samurai, equipping themselves with the hauberks and weapons of old times, fell upon the garrison of a castle, killed or wounded some 300, and then, retiring to an adjacent mountain, died by their own hands. Their example found imitators in two other places, and finally the Satsuma samurai rose in arms under Saigō.

This was an insurrection very different in dimensions and motives from the outbreaks that had preceded it. During four years the preparations of the Satsuma men had been unremitting. They were equipped with rifles and cannon; they numbered some 30,000; they were all of the military class, and in addition to high training in western tactics and in the use of modern arms of precision, they knew how to wield that formidable weapon, the Japanese sword, of which their opponents were for the most part ignorant. Ostensibly their object was to restore the samurai to their old supremacy, and to secure for them all the posts in the army, the navy and the administration. But although they doubtless entertained that intention, it was put forward mainly with the hope of winning the co-operation of the military class throughout the empire. The real purpose of the revolt was to secure the governing power for Satsuma. A bitter struggle ensued. Beginning on the 29th of January 1877, it was brought to a close on the 24th of September by the death, voluntary or in battle, of all the rebel leaders. During that period the number of men engaged on the government's side had been 66,000 and the number on the side of the rebels 40,000, out of which total the killed and wounded aggregated 35,000, or 33 % of the whole. Had the government's troops been finally defeated, there can be no doubt that the samurai's exclusive title to man and direct the army and navy would have been re-established, and Japan would have found herself permanently saddled with a military class, heavily burdening her finances, seriously impeding her progress towards constitutional government, and perpetuating all the abuses incidental to a policy in which the power of the sword rests entirely in the hands of one section of the people. The nation scarcely appreciated the great issues that were at stake. It found more interest in the struggle as furnishing a conclusive test of the efficiency of the new military system compared with the old. The army sent to quell the insurrection consisted of recruits drawn indiscriminately from every class of the people. Viewed in the light of history, it was an army of commoners, deficient in the fighting instinct, and traditionally

demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government's reforms seemed to outstrip the nation's readiness for them, and the results wore an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the construction of lighthouses and the organization of a navy. To Frenchmen was entrusted the work of recasting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? These questions did not trouble the Japanese nearly so much as they troubled strangers. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the *queue* irrevocably. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he reverted to his own comfortable and picturesque costume. Handsome houses were built and furnished according to Western models. But each had an annex where alcoves, verandas, matted floors and paper sliding doors continued to do traditional duty. Beefsteaks, beer, "grape-wine," knives and forks came into use on occasion. But rice-bowls and chopsticks held their everyday place as of old. In a word, though the Japanese adopted every convenient and serviceable attribute of foreign civilization, such as railways, steamships, telegraphs, post-offices, banks and machinery of all kinds; though they accepted Occidental sciences and, to a large extent, Occidental philosophies; though they recognized the superiority of European jurisprudence and set themselves to bring their laws into accord with it, they nevertheless preserved the essentials of their own mode of life and never lost their individuality. A remarkable spirit of liberalism and a fine eclectic instinct were needed for the part they acted, but they did no radical violence to their own traditions, creeds and conventions. There was indeed a certain element of incongruity and even grotesqueness in the nation's doings. Old people cannot fit their feet to new roads without some clumsiness. The Japanese had grown very old in their special paths, and their novel departure was occasionally disfigured by solecisms. The refined taste that guided them unerringly in all the affairs of life as they had been accustomed to live it, seemed to fail them signally when they emerged into an alien atmosphere. They have given their proofs, however. It is now seen that the apparently excessive rapidity of their progress did not overtax their capacities; that they have emerged safely from their destructive era and carried their constructive

career within reach of certain success, and that while they have still to develop some of the traits of their new civilization, there is no prospect whatever of its proving ultimately unsuited to them.

After the Satsuma rebellion, nothing disturbed the even tenor of Japan's domestic politics except an attempt on the part of some of her people to force the growth of parliamentary government. It is evident that the united effort made by the fiefs to overthrow the system of dual government and wrest the administrative power from the shōgun could have only one logical outcome: the combined exercise of the recovered power by those who had been instrumental in recovering it. That was the meaning of the oath taken by the emperor at the Restoration, when the youthful sovereign was made to say that wise counsels should be widely sought, and all things determined by public discussion. But the framers of the oath had the samurai alone in view. Into their consideration the common people—farmers, mechanics, tradesmen—did not enter at all, nor had the common people themselves any idea of advancing a claim to be considered. A voice in the administration would have been to them an embarrassing rather than a pleasing privilege. Thus the first deliberative assembly was composed of nobles and samurai only. A mere debating club without any legislative authority, it was permanently dissolved after two sessions. Possibly the problem of a parliament might have been long postponed after that fiasco, had it not found an ardent advocate in Itagaki Taisuke (afterwards Count Itagaki). A Tosa samurai conspicuous as a leader of the restoration movement, Itagaki was among the advocates of recourse to strong measures against Korea in 1873, and his failure to carry his point, supplemented by a belief that a large section of public opinion would have supported him had there been any machinery for appealing to it, gave fresh impetus to his faith in constitutional government. Resigning office on account of the Korean question, he became the nucleus of agitation in favour of a parliamentary system, and under his banner were enrolled not only discontented samurai but also many of the young men who, returning from direct observation of the working of constitutional systems in Europe or America, and failing to obtain official posts in Japan, attributed their failure to the oligarchical form of their country's polity. Thus in the interval between 1873 and 1877 there were two centres of disturbance in Japan: one in Satsuma, where Saigō figured as leader; the other in Tosa, under Itagaki's guidance. When the Satsuma men appealed to arms in 1877, a widespread apprehension prevailed lest the Tosa politicians should throw in their lot with the insurgents. Such a fear had its origin in failure to understand the object of the one side or to appreciate the sincerity of the other. Saigō and his adherents fought to substitute a Satsuma clique for the oligarchy already in power. Itagaki and his followers struggled for constitutional institutions. The two could not have anything in common. There was consequently no coalition. But the Tosa agitators did not neglect to make capital out of the embarrassment caused by the Satsuma rebellion. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the document admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. What they wanted was the creation of some machinery for securing to the samurai at large a voice in the management of state affairs. They chafed against the fact that, whereas the efforts and sacrifices demanded by the Restoration had fallen

Development of Representative Government.

opportunity of admiring his life of self-sacrificing effort or appreciating the remarkable military talent he possessed. In the first part of his career, the elevation of his clan to supreme power seems to have been his sole motive, but subsequently personal ambition appears to have swayed him. To the consummation of either object the preservation of the military class was essential. By the swords of the samurai alone could a new *imperium in imperio* be carved out. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the document admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. What they wanted was the creation of some machinery for securing to the samurai at large a voice in the management of state affairs. They chafed against the fact that, whereas the efforts and sacrifices demanded by the Restoration had fallen

Development of Representative Government.

opportunity of admiring his life of self-sacrificing effort or appreciating the remarkable military talent he possessed. In the first part of his career, the elevation of his clan to supreme power seems to have been his sole motive, but subsequently personal ambition appears to have swayed him. To the consummation of either object the preservation of the military class was essential. By the swords of the samurai alone could a new *imperium in imperio* be carved out. On the other hand, Saigō's colleagues in the ministry saw clearly not only that the samurai were an unwarrantable burden on the nation, but also that their continued existence after the fall of feudalism would be a menace to public peace as well as an anomaly. Therefore they took the steps already described, and followed them by a conscription law, making every adult male liable for military service without regard to his social standing. It is easy to conceive how painfully unwelcome this conscription law proved to the samurai. Many of them were not unwilling to commute their pensions, since their creed had always forbidden them to care for money. Many of them were not unwilling to abandon the habit of carrying swords, since the adoption of foreign costume rendered such a custom incongruous and inconvenient. But very few of them could readily consent to step down from their cherished position as the military class, and relinquish their traditional title to bear the whole responsibility and enjoy the whole honour of fighting their country's battles. They had supposed, not unreasonably, that service in the army and navy would be reserved exclusively for them and their sons, whereas now the commonest rustic, mechanic or tradesman would be equally eligible.

While the pain of this blow was still fresh there occurred a trouble with Korea. The little state had behaved with insulting contumely, and when Japan's course came to be debated in Tōkyō, a disruption resulted in the ranks of the reformers. Saigō saw in a foreign war the sole remaining chance of achieving his ambition by lawful means. The government's conscription scheme, yet in its infancy, had not produced even the skeleton of an army. If Korea had to be conquered, the samurai must be employed; and their employment would mean, if not their rehabilitation, at least their organization into a force which, under Saigō's leadership, might dictate a new policy. Other members of the cabinet believed that the nation would be disgraced if it tamely endured Korea's insults. Thus several influential voices swelled the clamour for war. But a peace party offered strenuous opposition. Its members saw the collateral issues of the problem, and declared that the country must not think of taking up arms during a period of radical transition. The final discussion took place in the emperor's presence. The advocates of peace understood the national significance of the issue and perceived that they were debating, not merely whether there should be peace or war, but whether the country should halt or advance on its newly adopted path of progress. They prevailed, and four members of the cabinet, including Saigō, resigned. This rupture was destined to have far-reaching consequences. One of the seceders immediately raised the standard of revolt. Among the devices employed by him to win adherents was an attempt to fan into flame the dying embers of the anti-foreign sentiment. The government easily crushed the insurrection. Another seceder was Itagaki Taisuke. The third and most prominent was Saigō, who seems to have concluded from that moment that he must abandon his aims or achieve them by force. He retired to his native province of Satsuma, and applied his whole resources, his great reputation and the devoted loyalty of a number of able followers to organizing and equipping a strong body of samurai. Matters were facilitated for him by the conservatism of the celebrated Shimazu Saburō, former chief of Satsuma, who, though not opposed to foreign intercourse, had been revolted by the wholesale iconoclasm of the time, and by the indiscriminate rejection of Japanese customs in favour of foreign. He protested vehemently against what seemed to him a slavish abandonment of the nation's individuality, and finding his protest fruitless, he set himself to preserve in his own distant

province, where the writ of the Yedo government had never run, the fashions, institutions and customs which his former colleagues in the administration were ruthlessly rejecting. Satsuma thus became a centre of conservative influences, among which Saigō and his constantly augmenting band of samurai found a congenial environment. During four years this breach between the central government and the southern clan grew constantly.

In the meanwhile (1876) two extreme measures were adopted by the government: a veto on the wearing of swords, and an edict ordering the compulsory commutation of the pensions and allowances received by the nobles and the samurai. Three years previously the discarding of swords had been declared optional, and a scheme of voluntary commutation had been announced. Many had bowed quietly to the spirit of these enactments. But many still retained their swords and drew their pensions as of old, obstructing, in the former respect, the government's projects for the reorganization of society, and imposing, in the latter, an intolerable burden on the resources of the treasury. The government thought that the time had come, and that its own strength sufficed, to substitute compulsion for persuasion. The financial measure—which was contrived so as to effect the smallest pension-holders least injuriously—evoked no complaint. The samurai remained faithful to the creed which forbade them to be concerned about money. But the veto against sword-wearing overtaxed the patience of the extreme Conservatives. It seemed to them that all the most honoured traditions of their country were being ruthlessly sacrificed on the altar of alien innovations. Armed protests ensued. A few score of samurai, equipping themselves with the hauberks and weapons of old times, fell upon the garrison of a castle, killed or wounded some 300, and then, retiring to an adjacent mountain, died by their own hands. Their example found imitators in two other places, and finally the Satsuma samurai rose in arms under Saigō.

This was an insurrection very different in dimensions and motives from the outbreaks that had preceded it. During four years the preparations of the Satsuma men had been unremitting. They were equipped with rifles and cannon; they numbered some 30,000; they were all of the military class, and in addition to high training in western tactics and in the use of modern arms of precision, they knew how to wield that formidable weapon, the Japanese sword, of which their opponents were for the most part ignorant. Ostensibly their object was to restore the samurai to their old supremacy, and to secure for them all the posts in the army, the navy and the administration. But although they doubtless entertained that intention, it was put forward mainly with the hope of winning the co-operation of the military class throughout the empire. The real purpose of the revolt was to secure the governing power for Satsuma. A bitter struggle ensued. Beginning on the 29th of January 1877, it was brought to a close on the 24th of September by the death, voluntary or in battle, of all the rebel leaders. During that period the number of men engaged on the government's side had been 66,000 and the number on the side of the rebels 40,000, out of which total the killed and wounded aggregated 35,000, or 33 % of the whole. Had the government's troops been finally defeated, there can be no doubt that the samurai's exclusive title to man and direct the army and navy would have been re-established, and Japan would have found herself permanently saddled with a military class, heavily burdening her finances, seriously impeding her progress towards constitutional government, and perpetuating all the abuses incidental to a policy in which the power of the sword rests entirely in the hands of one section of the people. The nation scarcely appreciated the great issues that were at stake. It found more interest in the struggle as furnishing a conclusive test of the efficiency of the new military system compared with the old. The army sent to quell the insurrection consisted of recruits drawn indiscriminately from every class of the people. Viewed in the light of history, it was an army of commoners, deficient in the fighting instinct, and traditionally

demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government's reforms seemed to outstrip the nation's readiness for them, and the results wore an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the construction of lighthouses and the organization of a navy. To Frenchmen was entrusted the work of recasting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? These questions did not trouble the Japanese nearly so much as they troubled strangers. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the *queue* irrevocably. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he reverted to his own comfortable and picturesque costume. Handsome houses were built and furnished according to Western models. But each had an annex where alcoves, verandas, matted floors and paper sliding doors continued to do traditional duty. Beefsteaks, beer, "grape-wine," knives and forks came into use on occasion. But rice-bowls and chopsticks held their everyday place as of old. In a word, though the Japanese adopted every convenient and serviceable attribute of foreign civilization, such as railways, steamships, telegraphs, post-offices, banks and machinery of all kinds; though they accepted Occidental sciences and, to a large extent, Occidental philosophies; though they recognized the superiority of European jurisprudence and set themselves to bring their laws into accord with it, they nevertheless preserved the essentials of their own mode of life and never lost their individuality. A remarkable spirit of liberalism and a fine eclectic instinct were needed for the part they acted, but they did no radical violence to their own traditions, creeds and conventions. There was indeed a certain element of incongruity and even grotesqueness in the nation's doings. Old people cannot fit their feet to new roads without some clumsiness. The Japanese had grown very old in their special paths, and their novel departure was occasionally disfigured by solecisms. The refined taste that guided them unerringly in all the affairs of life as they had been accustomed to live it, seemed to fail them signally when they emerged into an alien atmosphere. They have given their proofs, however. It is now seen that the apparently excessive rapidity of their progress did not overtax their capacities; that they have emerged safely from their destructive era and carried their constructive

career within reach of certain success, and that while they have still to develop some of the traits of their new civilization, there is no prospect whatever of its proving ultimately unsuited to them.

After the Satsuma rebellion, nothing disturbed the even tenor of Japan's domestic politics except an attempt on the part of some of her people to force the growth of parliamentary government. It is evident that the united effort made by the fiefs to overthrow the system of dual government and wrest the administrative power from the shōgun could have only one logical outcome: the combined exercise of the recovered power by those who had been instrumental in recovering it. That was the meaning of the oath taken by the emperor at the Restoration, when the youthful sovereign was made to say that wise counsels should be widely sought, and all things determined by public discussion. But the framers of the oath had the samurai alone in view. Into their consideration the common people—farmers, mechanics, tradesmen—did not enter at all, nor had the common people themselves any idea of advancing a claim to be considered. A voice in the administration would have been to them an embarrassing rather than a pleasing privilege. Thus the first deliberative assembly was composed of nobles and samurai only. A mere debating club without any legislative authority, it was permanently dissolved after two sessions. Possibly the problem of a parliament might have been long postponed after that fiasco, had it not found an ardent advocate in Itagaki Taisuke (afterwards Count Itagaki). A Tosa samurai conspicuous as a leader of the restoration movement, Itagaki was among the advocates of recourse to strong measures against Korea in 1873, and his failure to carry his point, supplemented by a belief that a large section of public opinion would have supported him had there been any machinery for appealing to it, gave fresh impetus to his faith in constitutional government. Resigning office on account of the Korean question, he became the nucleus of agitation in favour of a parliamentary system, and under his banner were enrolled not only discontented samurai but also many of the young men who, returning from direct observation of the working of constitutional systems in Europe or America, and failing to obtain official posts in Japan, attributed their failure to the oligarchical form of their country's polity. Thus in the interval between 1873 and 1877 there were two centres of disturbance in Japan: one in Satsuma, where Saigō figured as leader; the other in Tosa, under Itagaki's guidance. When the Satsuma men appealed to arms in 1877, a widespread apprehension prevailed lest the Tosa politicians should throw in their lot with the insurgents. Such a fear had its origin in failure to understand the object of the one side or to appreciate the sincerity of the other. Saigō and his adherents fought to substitute a Satsuma clique for the oligarchy already in power. Itagaki and his followers struggled for constitutional institutions. The two could not have anything in common. There was consequently no coalition. But the Tosa agitators did not neglect to make capital out of the embarrassment caused by the Satsuma rebellion. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the document admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. Development of Representative Government.

this privilege. These measures were necessary in any case as a consequence of the introduction of the Western methods and ideas, but they were hastened by the fact of their being a necessary preliminary to the revision of treaties. When the new code of laws was brought before the Diet at its first session, and there was a great opposition against it in the House of Peers on account of its many defects and especially of its ignoring many established usages, the chief argument in its favour, or at least one that had a great influence with many who were unacquainted with technical points, was that it was necessary for the revision of treaties and that the defects, if any, could be afterwards amended at leisure. These preparations on the part of the government, however, took a long time, and in the meantime the whole nation, or at least the more intelligent part of it, was chafing impatiently under what was considered a national indignity. The United States, by being the first to agree to its abandonment, although this agreement was rendered nugatory by a conditional clause, added to the stock of goodwill with which the Japanese have always regarded the Americans on account of their attitude towards them. When at last the consummation so long and ardently desired was attained, great was the joy with which it was greeted, for now it was felt that Japan was indeed on terms of equality with Occidental nations. Great Britain, by being the first to conclude the revised treaty—an act due to the remarkable foresight of her statesmen in spite of the opposition of their countrymen in Japan—did much to bring about the cordial feeling of the Japanese towards the British, which made them welcome with such enthusiasm the Anglo-Japanese alliance. The importance of this last as a powerful instrument for the preservation of peace in the extreme East has been, and always will be, appreciated at its full value by the more intelligent and thoughtful among the Japanese; but by the mass of the people it was received with great acclamation, owing partly to the already existing good feeling towards the British, but also in a large measure because it was felt that the fact that Great Britain should leave its “splendid isolation” to enter into this alliance proclaimed in the clearest possible way that Japan had entered on terms of full equality among the brotherhood of nations, and that henceforth there could be no ground for that discrimination against them as an Asiatic nation which had been so galling to the Japanese people.

There have been, and there still are being made, many charges against the Japanese government and people. While admitting that some of them may be founded on facts, it is permissible to point out that traits and acts of a few individuals have often been generalized to be the national characteristic or the result of a fixed policy, while in many cases such charges are due to misunderstandings arising from want of thorough knowledge of each other's language, customs, usages, ideas, &c. Take the principle of “the open door,” for instance; the Japanese government has been charged in several instances with acting contrary to it. It is natural that where (as in China) competition is very keen between men of different nationalities, individuals should sometimes feel aggrieved and make complaints of unfairness against the government of their competitors; it is also natural that people at home should listen to and believe in those charges made against the Japanese by their countrymen in the East, while unfortunately the Japanese, being so far away and often unaware of them, have not a ready means of vindicating themselves; but subsequent investigations have always shown those charges to be either groundless or due to misunderstandings, and it may be asserted that in no case has the charge been substantiated that the Japanese government has knowingly, deliberately, of *malice prepense* been guilty of breach of faith in violating the principle of “the open door” to which it has solemnly pledged itself. That it has often been accused by the Japanese subjects of weakness *vis-à-vis* foreign powers to the detriment of their interests, is perhaps a good proof of its fairness.

The Japanese have often been charged with looseness of commercial morality. This charge is harder to answer than the last, for it cannot be denied that there have been many instances of dishonesty on the part of Japanese tradesmen or employees; *in*

quoque is never a valid argument, but there are black sheep everywhere, and there were special reasons why foreigners should have come in contact with many such in their dealings with the Japanese. In days before the Restoration, merchants and tradesmen were officially classed as the lowest of four classes, the samurai, the farmers, the artisans and the merchants; practically, however, rich merchants serving as bankers and employers of others were held in high esteem, even by the samurai. Yet it cannot be denied that the position of the last three was low compared with that of the samurai; their education was not so high, and although of course there was the same code of morality for them all, there was no such high standard of honour as was enjoined upon the samurai by the bushidō or “the way of samurai.” Now, when foreign trade was first opened, it was naturally not firms with long-established credit and methods that first ventured upon the new field of business—some few that did failed owing to their want of experience—it was rather enterprising and adventurous spirits with little capital or credit who eagerly flocked to the newly opened ports to try their fortune. It was not to be expected that all or most of those should be very scrupulous in their dealings with the foreigners; the majority of those adventurers failed, while a few of the abler men, generally those who believed in and practised honesty as the best policy, succeeded and came to occupy an honourable position as business men. It is also asserted that foreigners, or at least some of them, did not scruple to take unfair advantage of the want of experience on the part of their Japanese customers to impose upon them methods which they would not have followed except in the East; it may be that such methods were necessary or were deemed so in dealing with those adventurers, but it is a fact that it afterwards took a long time and great effort on the part of Japanese traders to break through some usages and customs which were established in earlier days and which they deemed derogatory to their credit or injurious to their interests. Infringement of patent rights and fraudulent imitation of trade-marks have with some truth also been charged against the Japanese; about this it is to be remarked that although the principles of morality cannot change, their applications may be new; patents and trade-marks are something new to the Japanese, and it takes time to teach that their infringement should be regarded with the same moral censure as stealing. The government has done everything to prevent such practices by enacting and enforcing laws against them, and nowadays they are not so common. Be that as it may, such a state of affairs as that mentioned above is now passing away almost entirely; commerce and trade are now regarded as highly honourable professions, merchants and business men occupy the highest social positions, several of them having been lately raised to the peerage, and are as honourable a set of men as can be met anywhere. It is however to be regretted that in introducing Western business methods, it has not been quite possible to exclude some of their evils, such as promotion of swindling companies, tampering with members of legislature, and so forth.

The Japanese have also been considered in some quarters to be a bellicose nation. No sooner was the war with Russia over than they were said to be ready and eager to fight with the United States. This is another misrepresentation arising from want of proper knowledge of Japanese character and feelings. Although it is true that within the quarter of a century preceding 1909 Japan was engaged in two sanguinary wars, not to mention the Boxer affair, in which owing to her proximity to the scene of the disturbances she had to take a prominent part, yet neither of these was of her own seeking; in both cases she had to fight or else submit to become a mere cipher in the world, if indeed she could have preserved her existence as an independent state. The Japanese, far from being a bellicose people, deliberately cut off all intercourse with the outside world in order to avoid international troubles, and remained absolutely secluded from the world and at profound peace within their own territory for two centuries and a half. Besides, the Japanese have always regarded the Americans with a special goodwill, due no doubt to the steady liberal attitude of the American government and

demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government's reforms seemed to outstrip the nation's readiness for them, and the results wore an air of some artificiality and confusion. Development of Representative Government.

JARGOON, or **JARGON** (occasionally in old writings *jargounce* and *jacounce*), a name applied by modern mineralogists to those zircons which are fine enough to be cut as gem-stones, but are not of the red colour which characterizes the hyacinth or jacinth. The word is related to Arab *sargun* (zircon). Some of the finest jargoons are green, others brown and yellow, whilst some are colourless. The colourless jargoon may be obtained by heating certain coloured stones. When zircon is heated it sometimes changes in colour, or altogether loses it, and at the same time usually increases in density and brilliancy. The so-called Matura diamonds, formerly sent from Matura (or Matura), in Ceylon, were decolorized zircons. The zircon has strong refractive power, and its lustre is almost adamantine, but it lacks the fire of the diamond. The specific gravity of zircon is subject to considerable variation in different varieties; thus Sir A. H. Church found the sp. gr. of a fine leaf-green jargoon to be as low as 3.982, and that of a pure white jargoon as high as 4.705. Jargoon and tourmaline, when cut as gems, are sometimes mistaken for each other, but the sp. gr. is distinctive, since that of tourmaline is only 3 to 3.2. Moreover, in tourmaline the dichroism is strongly marked, whereas in jargoon it is remarkably feeble. The refractive indices of jargoon are much higher than those of tourmaline (see ZIRCON). (F. W. R.*)

JARIR IBN 'ATIYYA UL-KHATFI (d. 728), Arabian poet, was born in the reign of the caliph 'Ali, was a member of the tribe Kulaib, a part of the Tamim, and lived in Irak. Of his early life little is known, but he succeeded in winning the favour of Hajjaj, the governor of Irak (see CALIPHATE). Already famous for his verse, he became more widely known by his feud with Farazdaq and Akhtal. Later he went to Damascus and visited the court of Abdalmalik ('Abd ul-Malik) and that of his successor, Walid. From neither of these did he receive a warm welcome. He was, however, more successful with Omar II., and was the only poet received by the pious caliph.

His verse, which, like that of his contemporaries, is largely satire and eulogy, was published in 2 vols. (Cairo, 1896). (G. W. T.)

JARKENT, a town of Russian Central Asia, in the province of Semirychensk, 70 m. W.N.W. of Kulja and near to the Ili river. Pop. (1897), 16,372.

JARNAC, a town of western France in the department of Charente, on the right bank of the river Charente, and on the railway 23 m. W. of Angoulême, between that city and Cognac. Pop. (1906), 4493. The town is well built; and an avenue, planted with poplar trees, leads to a handsome suspension bridge. The church contains an interesting ogival crypt. There are communal colleges for both sexes. Brandy, wine and wine-casks are made in the town. Jarnac was in 1569 the scene of a battle in which the Catholics defeated the Protestants. A pyramid marks the spot where Louis, Prince de Condé, one of the Protestant generals, was slain. Jarnac gave its name to an old French family, of which the best known member is Gui Chabot, comte de Jarnac (d. c. 1575), whose lucky backstroke in his famous duel with Châteignerat gave rise to the proverbial phrase *coup de jarnac*, signifying an unexpected blow.

JARO, a town of the province of Iloilo, Panay, Philippine Islands, on the Jaro river, 2 m. N.W. of the town of Iloilo, the capital. Pop. (1903), 10,681. It lies on a plain in the midst of a rich agricultural district, has several fine residences, a cathedral, a curious three-tiered tower, a semi-weekly paper and a monthly periodical. Jaro was founded by the Spanish in 1584. From 1903 until February 1908 it was part of the town or municipality of Iloilo.

JAROSITE, a rare mineral species consisting of hydrous potassium and aluminium sulphate, and belonging to the group of isomorphous rhombohedral minerals enumerated below:—

Alunite	K ₂	[Al(OH) ₄] ₆	(SO ₄) ₄
Jarosite	K ₂	[Fe(OH) ₄] ₆	(SO ₄) ₄
Natrojarosite	Na ₂	[Fe(OH) ₄] ₆	(SO ₄) ₄
Plumbojarosite	Pb	[Fe(OH) ₄] ₆	(SO ₄) ₄

Jarosite usually occurs as drusy incrustations of minute

indistinct crystals with a yellowish-brown colour and brilliant lustre. Hardness 3; sp. gr. 3.15. The best specimens, consisting of crystalline crusts on limonite, are from the Jaroso ravine in the Sierra Almagrera, province of Almeria, Spain, from which locality the mineral receives its name. It has been also found, often in association with iron ores, at a few other localities. A variety occurring as concretionary or mulberry-like forms is known as moronolite (from Gr. *μῦρον*, "mulberry," and *λίθος*, "stone"); it is found at Monroe in Orange county, New York. The recently discovered species natrojarosite and plumbojarosite occur as yellowish-brown glistening powders consisting wholly of minute crystals, and are from Nevada and New Mexico respectively. (L. J. S.)

JARRAH WOOD (an adaptation of the native name *Jerryhl*), the product of a large tree (*Eucalyptus marginata*) found in south-western Australia, where it is said to cover an area of 14,000 sq. m. The trees grow straight in the stem to a great size, and yield squared timber up to 40 ft. length and 24 in. diameter. The wood is very hard, heavy (sp. gr. 1.010) and close-grained, with a mahogany-red colour, and sometimes sufficient "figure" to render it suitable for cabinet-makers' use. The timber possesses several useful characteristics; and great expectations were at first formed as to its value for shipbuilding and general constructive purposes. These expectations have not, however, been realized, and the exclusive possession of the tree has not proved that source of wealth to western Australia which was at one time expected. Its greatest merit for shipbuilding and marine purposes is due to the fact that it resists, better than any other timber, the attacks of the *Teredo navalis* and other marine borers, and on land it is equally exempt, in tropical countries, from the ravages of white ants. When felled with the sap at its lowest point and well seasoned, the wood stands exposure in the air, earth or sea remarkably well, on which account it is in request for railway sleepers, telegraph poles and piles in the British colonies and India. The wood, however, frequently shows longitudinal blisters, or lacunae, filled with resin, the same as may be observed in spruce fir timber; and it is deficient in fibre, breaking with a short fracture under comparatively moderate pressure. It has been classed at Lloyds for ship-building purposes in line three, table A, of the registry rules.

JARROW, a port and municipal borough in the Jarrow parliamentary division of Durham, England, on the right bank of the Tyne, 6½ m. below Newcastle, and on a branch of the North-Eastern railway. Pop. (1901), 34,295. The parish church of St Paul was founded in 685, and retains portions of pre-Norman work. The central tower is Norman, and there are good Decorated and Perpendicular details in the body of the church. Close by are the scattered ruins of the monastery begun by the pious Bishop in 681, and consecrated with the church by Ceolfrid in 685. Within the walls of this monastery the Venerable Bede spent his life from childhood; and his body was at first buried within the church, whither, until it was removed under Edward the Confessor to Durham, it attracted many pilgrims. The town is wholly industrial, devoted to ship-building, chemical works, paper mills and the neighbouring collieries. It owes its development from a mere pit village very largely to the enterprise of Sir Charles Mark Palmer (q.v.). Jarrow Slake, a river bay, 1 m. long by ½ m. broad, contains the Tyne docks of the North-Eastern railway company. A great quantity of coal is shipped. Jarrow was incorporated in 1875, and the corporation consists of a mayor, 6 aldermen and 18 councillors. Area, 783 acres.

JARRY, NICOLAS, one of the best-known 17th century French calligraphers. He was born at Paris about 1620, and was officially employed by Louis XIV. His most famous work is the *Guirlande de Julie* (1641). He died some time before 1674.

JARVIS, JOHN WESLEY (1780–1840), American artist, nephew of the great John Wesley, was born at South Shields, England, and was taken to the United States at the age of five. He was one of the earliest American painters to give

demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government's reforms seemed to outstrip the nation's readiness for them, and the results wore an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the construction of lighthouses and the organization of a navy. To Frenchmen was entrusted the work of recasting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? These questions did not trouble the Japanese nearly so much as they troubled strangers. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the *queue* irrevocably. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he reverted to his own comfortable and picturesque costume. Handsome houses were built and furnished according to Western models. But each had an annex where alcoves, verandas, matted floors and paper sliding doors continued to do traditional duty. Beefsteaks, beer, "grape-wine," knives and forks came into use on occasion. But rice-bowls and chopsticks held their everyday place as of old. In a word, though the Japanese adopted every convenient and serviceable attribute of foreign civilization, such as railways, steamships, telegraphs, post-offices, banks and machinery of all kinds; though they accepted Occidental sciences and, to a large extent, Occidental philosophies; though they recognized the superiority of European jurisprudence and set themselves to bring their laws into accord with it, they nevertheless preserved the essentials of their own mode of life and never lost their individuality. A remarkable spirit of liberalism and a fine eclectic instinct were needed for the part they acted, but they did no radical violence to their own traditions, creeds and conventions. There was indeed a certain element of incongruity and even grotesqueness in the nation's doings. Old people cannot fit their feet to new roads without some clumsiness. The Japanese had grown very old in their special paths, and their novel departure was occasionally disfigured by solecisms. The refined taste that guided them unerringly in all the affairs of life as they had been accustomed to live it, seemed to fail them signally when they emerged into an alien atmosphere. They have given their proofs, however. It is now seen that the apparently excessive rapidity of their progress did not overtax their capacities; that they have emerged safely from their destructive era and carried their constructive

career within reach of certain success, and that while they have still to develop some of the traits of their new civilization, there is no prospect whatever of its proving ultimately unsuited to them.

After the Satsuma rebellion, nothing disturbed the even tenor of Japan's domestic politics except an attempt on the part of some of her people to force the growth of parliamentary government. It is evident that the united effort made by the fiefs to overthrow the system of dual government and wrest the administrative power from the shōgun could have only one logical outcome: the combined exercise of the recovered power by those who had been instrumental in recovering it. That was the meaning of the oath taken by the emperor at the Restoration, when the youthful sovereign was made to say that wise counsels should be widely sought, and all things determined by public discussion. But the framers of the oath had the samurai alone in view. Into their consideration the common people—farmers, mechanics, tradesmen—did not enter at all, nor had the common people themselves any idea of advancing a claim to be considered. A voice in the administration would have been to them an embarrassing rather than a pleasing privilege. Thus the first deliberative assembly was composed of nobles and samurai only. A mere debating club without any legislative authority, it was permanently dissolved after two sessions. Possibly the problem of a parliament might have been long postponed after that fiasco, had it not found an ardent advocate in Itagaki Taisuke (afterwards Count Itagaki). A Tosa samurai conspicuous as a leader of the restoration movement, Itagaki was among the advocates of recourse to strong measures against Korea in 1873, and his failure to carry his point, supplemented by a belief that a large section of public opinion would have supported him had there been any machinery for appealing to it, gave fresh impetus to his faith in constitutional government. Resigning office on account of the Korean question, he became the nucleus of agitation in favour of a parliamentary system, and under his banner were enrolled not only discontented samurai but also many of the young men who, returning from direct observation of the working of constitutional systems in Europe or America, and failing to obtain official posts in Japan, attributed their failure to the oligarchical form of their country's polity. Thus in the interval between 1873 and 1877 there were two centres of disturbance in Japan: one in Satsuma, where Saigō figured as leader; the other in Tosa, under Itagaki's guidance. When the Satsuma men appealed to arms in 1877, a widespread apprehension prevailed lest the Tosa politicians should throw in their lot with the insurgents. Such a fear had its origin in failure to understand the object of the one side or to appreciate the sincerity of the other. Saigō and his adherents fought to substitute a Satsuma clique for the oligarchy already in power. Itagaki and his followers struggled for constitutional institutions. The two could not have anything in common. There was consequently no coalition. But the Tosa agitators did not neglect to make capital out of the embarrassment caused by the Satsuma rebellion. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the document admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. What they wanted was the creation of some machinery for securing to the samurai at large a voice in the management of state affairs. They chafed against the fact that, whereas the efforts and sacrifices demanded by the Restoration had fallen

Development of Representative Government.

of the best known and most highly esteemed of British hardy ligneous climbers, is a native of northern India and Persia, introduced about the middle of the 16th century. In the centre and south of Europe it is thoroughly acclimatized. Although it grows to the height of 12 and sometimes 20 ft., its stem is feeble and requires support; its leaves are opposite, pinnate and dark green, the leaflets are in three pairs, with an odd one, and are pointed, the terminal one larger and with a tapering point. The fragrant white flowers bloom from June to October; and, as they are found chiefly on the young shoots, the plant should only be pruned in the autumn. Varieties with golden and silver-edged leaves and one with double flowers are known.

The zambak or Arabian jasmine, *J. Sambac*, is an evergreen white-flowered climber, 6 or 8 ft. high, introduced into Britain in the latter part of the 17th century. Two varieties introduced somewhat later are respectively 3-leaved and double-flowered, and these, as well as that with normal flowers, bloom throughout the greater part of the

Jasminum grandiflorum, half natural size; flower, natural size.

year. On account of their exquisite fragrance the flowers are highly esteemed in the East, and are frequently referred to by the Persian and Arabian poets. An oil obtained by boiling the leaves is used to anoint the head for complaints of the eye, and an oil obtained from the roots is used medicinally to arrest the secretion of milk. The flowers of one of the double varieties are held sacred to Vishnu, and used as votive offerings in Hindu religious ceremonies. The Spanish, or Catalanian jasmine, *J. grandiflorum*, a native of the north-west Himalaya, and cultivated both in the old and new world, is very like *J. officinale*, but differs in the size of the leaflets; the branches are shorter and stouter, and the flowers very much larger, and reddish underneath. By grafting it on two-year-old plants of *J. officinale*, an erect bush about 3 ft. high is obtained, requiring no supports. In this way it is very extensively cultivated at Cannes and Grasse, in the south of France; the plants are set in rows, fully exposed to the sun; they come into full bearing the second year after grafting; the blossoms, which are very large and intensely fragrant, are produced from July till the end of October, but those of August and September are the most odoriferous.

The aroma is extracted by the process known as *enfleurage*, i.e. absorption by a fatty body, such as purified lard or olive oil. Square glass trays framed with wood about 3 in. deep are spread over with grease about half an inch thick, in which ridges are made to facilitate absorption, and sprinkled with freshly gathered flowers, which are renewed every morning during the whole time the plant remains in blossom; the trays are piled up in stacks to prevent the evaporation of the aroma; and finally the pomade is scraped off the

glass, melted at as low a temperature as possible, and strained. When oil is employed as the absorbent, coarse cotton cloths previously saturated with the finest olive oil are laid on wire-gauze frames, and repeatedly covered in the same manner with fresh flowers; they are then squeezed under a press, yielding what is termed *huile antique au jasmin*. Three pounds of flowers will perfume 1 lb of grease—this is exhausted by maceration in 1 pt. of rectified spirit to form the "extract." An essential oil is distilled from jasmine in Tunis and Algeria, but its high price prevents its being used to any extent. The East Indian oil of jasmine is a compound largely contaminated with sandalwood-oil.

The distinguishing characters of *J. odoratissimum*, a native of the Canary Islands and Madeira, consist principally in the alternate, obtuse, ternate and pinnate leaves, the 3-flowered terminal peduncles and the 5-cleft yellow corolla with obtuse segments. The flowers have the advantage of retaining when dry their natural perfume, which is suggestive of a mixture of jasmine, jonquil and orange-blossom. In China *J. paniculatum* is cultivated as an erect shrub, known as *sieu-hing-hwa*; it is valued for its flowers, which are used with those of *J. Sambac*, in the proportion of 10 lb of the former to 30 lb of the latter, for scenting tea—40 lb of the mixture being required for 100 lb of tea. *J. angustifolium* is a beautiful evergreen climber 10 to 12 ft. high, found in the Coromandel forests, and introduced into Britain during the present century. Its leaves are of a bright shining green; its large terminal flowers are white with a faint tinge of red, fragrant and blooming throughout the year.

In Cochinchina a decoction of the leaves and branches of *J. nervosum* is taken as a blood-purifier; and the bitter leaves of *J. floribundum* (called in Abyssinia *habbez-zelim*) mixed with koussou is considered a powerful anthelmintic, especially for tapeworm; the leaves and branches are added to some fermented liquors to increase their intoxicating quality. In Catalonia and in Turkey the wood of the jasmine is made into long, slender pipe-stems, highly prized by the Moors and Turks. Syrup of jasmine is made by placing in a jar alternate layers of the flowers and sugar, covering the whole with wet cloths and standing it in a cool place; the perfume is absorbed by the sugar, which is converted into a very palatable syrup. The important medicinal plant known in America as the "Carolina jasmine" is not a true jasmine (see *GELSEMIUM*).

Other hardy species commonly cultivated in gardens are the low or Italian yellow-flowered jasmine, *J. humile*, an East Indian species introduced and now found wild in the south of Europe, an erect shrub 3 or 4 ft. high, with angular branches, alternate and mostly ternate leaves, blossoming from June to September; the common yellow jasmine, *J. fruticans*, a native of southern Europe and the Mediterranean region, a hardy evergreen shrub, 10 to 12 ft. high, with weak, slender stems requiring support, and bearing yellow, odourless flowers from spring to autumn; and *J. nudiflorum* (China), which bears its bright yellow flowers in winter before the leaves appear. It thrives in almost any situation and grows rapidly.

JASON (Ἰάσων), in Greek legend, son of Aeson, king of Iolcus in Thessaly. He was the leader of the Argonautic expedition (see ARGONAUTS). After he returned from it he lived at Corinth with his wife Medea (*g.v.*) for many years. At last he put away Medea, in order to marry Glauce (or Creusa), daughter of the Corinthian king Creon. To avenge herself, Medea presented the new bride with a robe and head-dress, by whose magic properties the wearer was burnt to death, and slew her children by Jason with her own hand. A later story represents Jason as reconciled to Medea (Justin, xlii. 2). His death was said to have been due to suicide through grief, caused by Medea's vengeance (Diod. Sic. iv. 55); or he was crushed by the fall of the poop of the ship "Argo," under which, on the advice of Medea, he had laid himself down to sleep (argument of Euripides' *Medea*). The name (more correctly Iason) means "healer," and Jason is possibly a local hero of Iolcus to whom healing powers were attributed. The ancients regarded him as the oldest navigator, and the patron of navigation. By the moderns he has been variously explained as a solar deity; a god of summer; a god of storm; a god of rain, who carries off the rain-giving cloud (the golden fleece) to refresh the earth after a long period of drought. Some regard the legend as a chthonian myth, Aea (Colchis) being the under-world in the Aeolic religious system, from which Jason liberates himself and his betrothed; others, in view of certain resemblances between the story of Jason and that of Cadmus (the ploughing of the field, the sowing of the dragon's teeth, the fight with the Sparti, who are finally set fighting with one another by a stone hurled into their midst), associate both with Demeter the corn-goddess, and refer certain episodes to practices in use at country festivals, e.g. the stone-throwing, which, like the *βαλλήρις* at the Eleusinia and the *λιθοβολία* at

demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government's reforms seemed to outstrip the nation's readiness for them, and the results wore an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the construction of lighthouses and the organization of a navy. To Frenchmen was entrusted the work of recasting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? These questions did not trouble the Japanese nearly so much as they troubled strangers. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the *queue* irrevocably. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he reverted to his own comfortable and picturesque costume. Handsome houses were built and furnished according to Western models. But each had an annex where alcoves, verandas, matted floors and paper sliding doors continued to do traditional duty. Beefsteaks, beer, "grape-wine," knives and forks came into use on occasion. Development of Representative Government.

they were so fond. The process must have been complete by the middle of the 3rd century B.C.; for we find at that date illustrations of the Jātakas in the bas-reliefs on the railing round the Bharabat tope with the titles of the Jātika stories inscribed above them in the characters of that period.¹ The hero of each story is made into a Bodhisatta; that is, a being who is destined, after a number of subsequent births, to become a Buddha. This rapid development of the Bodhisatta theory is the distinguishing feature in the early history of Buddhism, and was both cause and effect of the simultaneous growth of the Jātika book. In adopting the folk-lore and fables already current in India, the Buddhists did not change them very much. The stories as preserved to us, are for the most part Indian rather than Buddhist. The ethics they inculcate or suggest are milk for babes; very simple in character and referring almost exclusively to matters common to all schools of thought in India, and indeed elsewhere. Kindness, purity, honesty, generosity, worldly wisdom, perseverance, are the usual virtues praised; the higher ethics of the Path are scarcely mentioned. These stories, popular with all, were especially appreciated by that school of Buddhists that laid stress on the Bodhisatta theory—a school that obtained its chief support, and probably had its origin, in the extreme north-west of India and in the highlands of Asia. That school adopted, from the early centuries of our era, the use of Sanskrit, instead of Pali, as the means of literary expression. It is almost impossible, therefore, that they would have carried the canonical Pali book, voluminous as it is, into Central Asia. Shorter collections of the original stories, written in Sanskrit, were in vogue among them. One such collection, the Jātaka-mālā by Ārya Śūra (6th century), is still extant. Of the existence of another collection, though the Sanskrit original has not yet been found, we have curious evidence. In the 6th century a book of Sanskrit fables was translated into Pahlavi, that is, old Persian (see BĪDPAI). In succeeding centuries this work was retranslated into Arabic and Hebrew, thence into Latin and Greek and all the modern languages of Europe. The book bears a close resemblance to the earlier chapters of a late Sanskrit fable book called, from its having five chapters, the *Pancha tantra*, or Pentateuch.

The introduction to the old Jātaka book gives the life of the historical Buddha. That introduction must also have reached Persia by the same route. For in the 8th century St John of Damascus put the story into Greek under the title of *Barlaam and Josephat*. This story became very popular in the West. It was translated into Latin, into seven European languages, and even into Icelandic and the dialect of the Philippine Islands. Its hero, that is the Buddha, was canonized as a Christian saint; and the 27th of November was officially fixed as the date for his adoration as such.

The book popularly known in Europe as *Aesop's Fables* was not written by Aesop. It was put together in the 14th century at Constantinople by a monk named Planudes, and he drew largely for his stories upon those in the Jātaka book that had reached Europe along various channels. The fables of Babrius and Phaedrus, written respectively in the 1st century before, and in the 1st century after, the Christian era, also contain Jātaka stories known in India in the 4th century B.C. A great deal has been written on this curious question of the migration of fables. But we are still very far from being able to trace the complete history of each story in the Jātaka book, or in any one of the later collections. For India itself the record is most incomplete. We have the original Jātaka book in text and translation. The history of the text of the *Pancha tantra*, about a thousand years later, has been fairly well traced out. But for the intervening centuries scarcely anything has been done. There are illustrations, in the bas-reliefs of the 3rd century B.C., of Jātakas not contained in the Jātaka book. Another collection, the *Cariyā piṭaka*, of about the same date, has been edited, but not translated. Other collections both in Pali and Sanskrit are known to be extant in MS.; and a large number of Jātaka stories, not included in any formal collection, are mentioned, or told in full, in other works.

(T. W. R. D.)

JATH, a native state of India, in the Deccan division of Bombay, ranking as one of the southern Mahratta jagirs. With the small state of Daphlapur, which is an integral part of it, it forms the Bijapur Agency, under the collector of Bijapur district. Area, including Daphlapur, 980 sq. m. Pop. (1901), 68,665, showing a decline of 14% in the decade. Estimated revenue, £24,000; tribute, £700. Agriculture and cattle-breeding are carried on; there are no important manufactures. The chief, whose title is deshmukh, is a Mahratta of the Daphle family. The town of JATH is 92 m. S.E. of Satara. Pop. (1901), 5404.

JÁTIVA (formerly written XATIVA), or SAN FELIPE DE JÁTIVA, a town of eastern Spain, in the province of Valencia, on the right bank of the river Albaida, a tributary of the Júcar, and at the junction of the Valencia-Murcia and Valencia-Albacete railways. Pop. (1900), 12,600. Játiva is built on the margin of a fertile and beautiful plain, and on the southern slopes of the Monte Bernisa, a hill with two peaks, each surmounted by a castle. With its numerous fountains, and spacious avenues shaded with elms or cypresses, the town has a clean and attractive appearance. Its collegiate church, dating from 1414, but rebuilt about a century later in the Renaissance style, was formerly a cathedral, and is the chief among many churches and convents. The town-hall and a church on the castle hill are partly constructed of inscribed Roman masonry, and several houses date from the Moorish occupation. There is a brisk local trade in grain, fruit, wine, oil and rice.

Játiva was the Roman Saetabis, afterwards Valeria Augusta, of Carthaginian or Iberian origin. Pliny (23-79) and Martial (c. 40-102) mention the excellence of its linen cloth. Under the Visigoths (c. 483-711) it became an episcopal see; but early in the 8th century it was captured by the Moors, under whom it attained great prosperity, and received its present name. It was reconquered by James I. of Aragon (1213-1276). During the 15th and 16th centuries, Játiva was the home of many members of the princely house of Borgia or Borja, who migrated hither from the town of Borja in the province of Saragossa. Alphonso Borgia, afterwards Pope Calixtus III., and Rodrigo Borgia, afterwards Pope Alexander VI., were natives of Játiva, born respectively in 1378 and 1431. The painter Jusepe Ribera was also born here in 1588. Owing to its gallant defence against the troops of the Archduke Charles in the war of the Spanish succession, Játiva received the additional name of San Felipe from Philip V. (1700-1746).

JĀTS, or JUTS, a people of north-western India, who numbered altogether more than 7 millions in 1901. They form a considerable proportion of the population in the Punjab, Rājputana and the adjoining districts of the United Provinces, and are also widely scattered through Sind and Baluchistan. Some writers have identified the Jāts with the ancient Getae, and there is strong reason to believe them a degraded tribe of Rājputs, whose Scythic origin has also been maintained. Hindu legends point to a prehistoric occupation of the Indus valley by this people, and at the time of the Mahomedan conquest of Sind (712) they, with a cognate tribe called Meds, constituted the bulk of the population. They enlisted under the banner of Mahomed bin Kāsim, but at a later date offered a vigorous resistance to the Arab invaders. In 836 they were overthrown by Amran, who imposed on them a tribute of dogs, and used their arms to vanquish the Meds. In 1025, however, they had gathered audacity, not only to invade Mansura, and compel the abjuration of the Mussulman amir, but to attack the victorious army of Mahmūd, laden with the spoil of Somnāth. Chastisement duly ensued: a formidable flotilla, collected at Mūltān, shattered in thousands the comparatively defenceless Jāt boats on the Indus, and annihilated their national pretensions. It is not until the decay of the Mogul Empire that the Jāts again appear in history. One branch of them, settled

¹ A complete list of these inscriptions will be found in Rhys Davids's *Buddhist India*, p. 209.

demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government's reforms seemed to outstrip the nation's readiness for them, and the results wore an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the construction of lighthouses and the organization of a navy. To Frenchmen was entrusted the work of recasting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? These questions did not trouble the Japanese nearly so much as they troubled strangers. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the *queue* irrevocably. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he reverted to his own comfortable and picturesque costume. Handsome houses were built and furnished according to Western models. But each had an annex where alcoves, verandas, matted floors and paper sliding doors continued to do traditional duty. Beefsteaks, beer, "grape-wine," knives and forks came into use on occasion. But rice-bowls and chopsticks held their everyday place as of old. In a word, though the Japanese adopted every convenient and serviceable attribute of foreign civilization, such as railways, steamships, telegraphs, post-offices, banks and machinery of all kinds; though they accepted Occidental sciences and, to a large extent, Occidental philosophies; though they recognized the superiority of European jurisprudence and set themselves to bring their laws into accord with it, they nevertheless preserved the essentials of their own mode of life and never lost their individuality. A remarkable spirit of liberalism and a fine eclectic instinct were needed for the part they acted, but they did no radical violence to their own traditions, creeds and conventions. There was indeed a certain element of incongruity and even grotesqueness in the nation's doings. Old people cannot fit their feet to new roads without some clumsiness. The Japanese had grown very old in their special paths, and their novel departure was occasionally disfigured by solecisms. The refined taste that guided them unerringly in all the affairs of life as they had been accustomed to live it, seemed to fail them signally when they emerged into an alien atmosphere. They have given their proofs, however. It is now seen that the apparently excessive rapidity of their progress did not overtax their capacities; that they have emerged safely from their destructive era and carried their constructive

career within reach of certain success, and that while they have still to develop some of the traits of their new civilization, there is no prospect whatever of its proving ultimately unsuited to them.

After the Satsuma rebellion, nothing disturbed the even tenor of Japan's domestic politics except an attempt on the part of some of her people to force the growth of parliamentary government. It is evident that the united effort made by the fiefs to overthrow the system of dual government and wrest the administrative power from the shōgun could have only one logical outcome: the combined exercise of the recovered power by those who had been instrumental in recovering it. That was the meaning of the oath taken by the emperor at the Restoration, when the youthful sovereign was made to say that wise counsels should be widely sought, and all things determined by public discussion. But the framers of the oath had the samurai alone in view. Into their consideration the common people—farmers, mechanics, tradesmen—did not enter at all, nor had the common people themselves any idea of advancing a claim to be considered. A voice in the administration would have been to them an embarrassing rather than a pleasing privilege. Thus the first deliberative assembly was composed of nobles and samurai only. A mere debating club without any legislative authority, it was permanently dissolved after two sessions. Possibly the problem of a parliament might have been long postponed after that fiasco, had it not found an ardent advocate in Itagaki Taisuke (afterwards Count Itagaki). A Tosa samurai conspicuous as a leader of the restoration movement, Itagaki was among the advocates of recourse to strong measures against Korea in 1873, and his failure to carry his point, supplemented by a belief that a large section of public opinion would have supported him had there been any machinery for appealing to it, gave fresh impetus to his faith in constitutional government. Resigning office on account of the Korean question, he became the nucleus of agitation in favour of a parliamentary system, and under his banner were enrolled not only discontented samurai but also many of the young men who, returning from direct observation of the working of constitutional systems in Europe or America, and failing to obtain official posts in Japan, attributed their failure to the oligarchical form of their country's polity. Thus in the interval between 1873 and 1877 there were two centres of disturbance in Japan: one in Satsuma, where Saigō figured as leader; the other in Tosa, under Itagaki's guidance. When the Satsuma men appealed to arms in 1877, a widespread apprehension prevailed lest the Tosa politicians should throw in their lot with the insurgents. Such a fear had its origin in failure to understand the object of the one side or to appreciate the sincerity of the other. Saigō and his adherents fought to substitute a Satsuma clique for the oligarchy already in power. Itagaki and his followers struggled for constitutional institutions. The two could not have anything in common. There was consequently no coalition. But the Tosa agitators did not neglect to make capital out of the embarrassment caused by the Satsuma rebellion. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the document admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. What they wanted was the creation of some machinery for securing to the samurai at large a voice in the management of state affairs. They chafed against the fact that, whereas the efforts and sacrifices demanded by the Restoration had fallen

Development of Representative Government.

retained bile, are apt to become affected in their structure by the long continuance of jaundice.

The symptoms of obstructive jaundice necessarily vary according to the nature of the exciting cause, but there generally exists evidence of some morbid condition before the yellow coloration appears. Thus, if the obstruction be due to an impacted gallstone in the common or hepatic duct, there will probably be the symptoms of intense suffering characterizing hepatic colic (see COLIC). In the cases most frequently seen—those, namely, arising from simple catarrh of the bile ducts due to gastro-duodenal irritation spreading through the common duct—the first sign to attract attention is the yellow appearance of the white of the eye, which is speedily followed by a similar colour on the skin over the body generally. The yellow tinge is most distinct where the skin is thin, as on the forehead, breast, elbows, &c. It may be also well seen in the roof of the mouth, but in the lips and gums the colour is not observed till the blood is first pressed from them. The tint varies, being in the milder cases faint, in the more severe a deep saffron yellow, while in extreme degrees of obstruction it may be of dark brown or greenish hue. The colour can scarcely, if at all, be observed in artificial light.

The urine exhibits well marked and characteristic changes in jaundice which exist even before any evidence can be detected on the skin or elsewhere. It is always of dark brown colour resembling porter, but after standing in the air it acquires a greenish tint. Its froth is greenish yellow, and it stains with this colour any white substance. It contains not only the bile colouring matter but also the bile acids. The former is detected by the play of colours yielded on the addition of nitric acid, the latter by the purple colour, produced by placing a piece of lump sugar in the urine tested, and adding thereto a few drops of strong sulphuric acid.

The contents of the bowels also undergo changes, being characterized chiefly by their pale clay colour, which is in proportion to the amount of hepatic obstruction, and to their consequent want of admixture with bile. For the same reason they contain a large amount of unabsorbed fatty matter, and have an extremely offensive odour.

Constitutional symptoms always attend jaundice with obstruction. The patient becomes languid, drowsy and irritable, and has generally a slow pulse. The appetite is usually but not always diminished, a bitter taste in the mouth is complained of, while flatulent eructations arise from the stomach. Intolerable itching of the skin is a common accompaniment of jaundice, and cutaneous eruptions or boils are occasionally seen. Yellow vision appears to be present in some very rare cases. Should the jaundice depend on advancing organic disease of the liver, such as cancer, the tinge becomes gradually deeper, and the emaciation and debility more marked towards the fatal termination, which in such cases is seldom long postponed. Apart from this, however, jaundice from obstruction may exist for many years, as in those instances where the walls of the bile ducts are thickened from chronic catarrh, but where they are only partially occluded. In the common cases of acute catarrhal jaundice recovery usually takes place in two or three weeks.

The treatment of this form of jaundice bears reference to the cause giving rise to the obstruction. In the ordinary cases of simple catarrhal jaundice, or that following the passing of gallstones, a light nutritious diet (milk, soups, &c., avoiding saccharine and farinaceous substances and alcoholic stimulants), along with counter-irritation applied over the right side and the use of laxatives and cholagogues, will be found to be advantageous. Diaphoretics and diuretics to promote the action of the skin and kidneys are useful in jaundice. In the more chronic forms, besides the remedies above named, the waters of Carlsbad are of special efficacy. In cases other than acute catarrhal, operative interference is often called for, to remove the gallstones, tumour, &c., causing the obstruction.

2. *Toxaemic Jaundice* is observed to occur as a symptom in certain fevers, e.g. yellow fever, ague, and in pyaemia also as the effect of certain poisons, such as phosphorus, and the venom

of snake-bites. Jaundice of this kind is almost always slight, and neither the urine nor the discharges from the bowels exhibit changes in appearance to such a degree as in the obstructive variety. Grave constitutional symptoms are often present, but they are less to be ascribed to the jaundice than to the disease with which it is associated.

3. *Hereditary Jaundice*.—Under this group there are the jaundice of new-born infants, which varies enormously in severity; the cases in which a slight form of jaundice obtains in several members of the same family, without other symptoms, and which may persist for years; and lastly the group of cases with hypertrophic cirrhosis.

The name *malignant jaundice* is sometimes applied to that very fatal form of disease otherwise termed acute yellow atrophy of the liver (see ATROPHY).

JAUNPUR, a city and district of British India, in the Benares division of the United Provinces. The city is on the left bank of the river Gumti, 34 m. N.W. from Benares by rail. Pop. (1901), 42,771. Jaunpur is a very ancient city, the former capital of a Mahomedan kingdom which once extended from Budaun and Etawah to Behar. It abounds in splendid architectural monuments, most of which belong to the period when the rulers of Jaunpur were independent of Delhi. The fort of Feroz Shah is in great part completely ruined, but there remain a fine gateway of the 16th century, a mosque dating from 1376, and the *hamams* or baths of Ibrahim Shah. Among other buildings may be mentioned the Atala Masjid (1408) and the ruined Jinjiri Masjid, mosques built by Ibrahim, the first of which has a great cloistered court and a magnificent façade; the Dariba mosque constructed by two of Ibrahim's governors; the Lal Darwaza erected by the queen of Mahmud; the Jama Masjid (1438–1478) or great mosque of Husain, with court and cloisters, standing on a raised terrace, and in part restored in modern times; and finally the splendid bridge over the Gumti, erected by Munim Khan, Mogul governor in 1569–1573. During the Mutiny of 1857 Jaunpur formed a centre of disaffection. The city has now lost its importance, the only industries surviving being the manufacture of perfumes and papier-mâché articles.

The DISTRICT OF JAUNPUR has an area of 1551 sq. m. It forms part of the wide Gangetic plain, and its surface is accordingly composed of a thick alluvial deposit. The whole country is closely tilled, and no waste lands break the continuous prospect of cultivated fields. It is divided into two unequal parts by the sinuous channel of the Gumti, a tributary of the Ganges, which flows past the city of Jaunpur. Its total course within the district is about 90 m., and it is nowhere fordable. It is crossed by two bridges, one at Jaunpur and the other 2 m. lower down. The Gumti is liable to sudden inundations during the rainy season, owing to the high banks it has piled up at its entrance into the Ganges, which act as dams to prevent the prompt outflow of its flooded waters. These inundations extend to its tributary the Sai. Much damage was thus effected in 1774; but the greatest recorded flood took place in September 1871, when 4000 houses in the city were swept away, besides 9000 more in villages along its banks. The other rivers are the Sai, Barna, Pili and Basohi. Lakes are numerous in the north and south; the largest has a length of 8 m. Pop. (1901), 1,202,920, showing a decrease of 5% in the decade. Sugar-refining is the principal industry. The district is served by the line of the Oudh & Rohilkhand railway from Benares to Fyzabad, and by branches of this and of the Bengal & North-Western systems.

In prehistoric times Jaunpur seems to have formed a portion of the Ajodhya principality, and when it first makes an appearance in authentic history it was subject to the rulers of Benares. With the rest of their dominions it fell under the yoke of the Mussulman invaders in 1194. From that time the district appears to have been ruled by a prince of the Kanauj dynasty, as a tributary of the Mahomedan suzerain. In 1388 Mālik Sarwar Khwāja was sent by Mahammed Tughlak to govern the eastern province. He fixed his residence at Jaunpur, made himself independent of the Delhi court, and assumed the title of Sultan-us-Shark, or "eastern emperor." For nearly a century

the Sharki dynasty ruled at Jaunpur, and proved formidable rivals to the sovereigns of Delhi. The last of the dynasty was Sultan Husain, who passed his life in a fierce and chequered struggle for supremacy with Bahlol Lodi, then actual emperor at Delhi. At length, in 1478, Bahlol succeeded in defeating his rival in a series of decisive engagements. He took the city of Jaunpur, but permitted the conquered Husain to reside there, and to complete the building of his great mosque, the Jama Masjid, which now forms the chief ornament of the town. Many other architectural works in the district still bear witness to its greatness under its independent Mussulman rulers. In 1775 the district was made over to the British by the Treaty of Lucknow. From that time nothing occurred which calls for notice till the Mutiny. On the 5th of June 1857, when the news of the Benares revolt reached Jaunpur, the sepoys mutinied. The district continued in a state of complete anarchy till the arrival of the Gurkha force from Azamgarh in September. In November the surrounding country was lost again, and it was not till May 1858 that the last smouldering embers of disaffection were stifled by the repulse of the insurgent leader at the hands of the people themselves.

See A. Führer, *The Shargi Architecture of Jaunpur* (1889).

JAUNTING-CAR, a light two-wheeled carriage for a single horse, in its commonest form with seats for four persons placed back to back, with the foot-boards projecting over the wheels. It is the typical conveyance for persons in Ireland (see **CAR**). The first part of the word is generally taken to be identical with the verb "to jaunt," now only used in the sense of to go on a short pleasure excursion, but in its earliest uses meaning to make a horse caracol or prance, hence to jolt or bump up and down. It would apparently be a variant of "jaunce," of the same meaning, which is supposed to be taken from O. Fr. *jancer*. Skeat takes the origin of jaunt and jaunce to be Scandinavian, and connects them with the Swedish dialect word *ganta*, to romp; and he finds cognate bases in such words as "jump," "high jinks." The word "jaunty," sprightly, especially used of anything done with an easy nonchalant air, is a corruption of "janty," due to confusion with "jaunt." "Janty," often spelt in the 17th and 18th centuries "janté" or "jantee," represents the English pronunciation of Fr. *gentil*, well-bred, neat, spruce.

JAUREGUI, JUAN (1562-1582), a Biscayan by birth, was in 1582 in the service of a Spanish merchant, Gaspar d'Anastro, who was resident at Antwerp. Tempted by the reward of 80,000 ducats offered by Philip II. of Spain for the assassination of William the Silent, prince of Orange, but being himself without courage to undertake the task, d'Anastro, with the help of his cashier Venero, persuaded Jauregui to attempt the murder for the sum of 2877 crowns. On Sunday the 18th of March 1582, as the prince came out of his dining-room Jauregui offered him a petition, and William had no sooner taken it into his hand than Jauregui fired a pistol at his head. The ball pierced the neck below the right ear and passed out at the left jaw-bone; but William ultimately recovered. The assassin was killed on the spot.

JAURÉGUIBERRY, JEAN BERNARD (1815-1887), French admiral, was born at Bayonne on the 26th of August 1815. He entered the navy in 1831, was made a lieutenant in 1845, commander in 1856, and captain in 1860. After serving in the Crimea and in China, and being governor of Senegal, he was promoted to rear-admiral in 1869. He served on land during the second part of the Franco-German War of 1870-71, in the rank of auxiliary general of division. He was present at Coulmiers, Villépion and Loigny-Poupry, in command of a division, and in Chanzy's retreat upon Le Mans and the battle at that place in command of a corps. He was the most distinguished of the many naval officers who did good service in the military operations. On the 9th of December he had been made vice-admiral, and in 1871 he commanded the fleet at Toulon; in 1875 he was a member of the council of admiralty; and in October 1876 he was appointed to command the evolutionary squadron in the Mediterranean. In February 1879 he became minister of

the navy in the Waddington cabinet, and on the 27th of May following was elected a senator for life. He was again minister of the navy in the Freycinet cabinet in 1880. A fine example of the fighting French seaman of his time, Jauréguiberry died at Paris on the 21st of October 1887.

JAUREGUI Y AGUILAR, JUAN MARTÍNEZ DE (1583-1642), Spanish poet, was baptized at Seville on the 24th of November 1583. In due course he studied at Rome, returning to Spain shortly before 1610 with a double reputation as a painter and a poet. A reference in the preface to the *Novelas ejemplares* has been taken to mean that he painted the portrait of Cervantes, who, in the second part of *Don Quixote*, praises the translation of Tasso's *Aminta* published at Rome in 1607. Jáuregui's *Rimas* (1618), a collection of graceful lyrics, is preceded by a controversial preface which attracted much attention on account of its outspoken declaration against *culteranismo*. Through the influence of Olivares, he was appointed groom of the chamber to Philip IV., and gave an elaborate exposition of his artistic doctrines in the *Discurso poético contra el hablar culto y oscuro* (1624), a skilful attack on the new theories, which procured for its author the order of Calatrava. It is plain, however, that the shock of controversy had shaken Jáuregui's convictions, and his poem *Orfeo* (1624) is visibly influenced by Góngora. Jáuregui died at Madrid on the 11th of January 1641, leaving behind him a translation of the *Pharsalia* which was not published till 1684. This rendering reveals Jáuregui as a complete convert to the new school, and it has been argued that, exaggerating the affinities between Lucan and Góngora—both of Cordovan descent—he deliberately translated the thought of the earlier poet into the vocabulary of the later master. This is possible; but it is at least as likely that Jáuregui unconsciously yielded to the current of popular taste, with no other intention than that of conciliating the public of his own day.

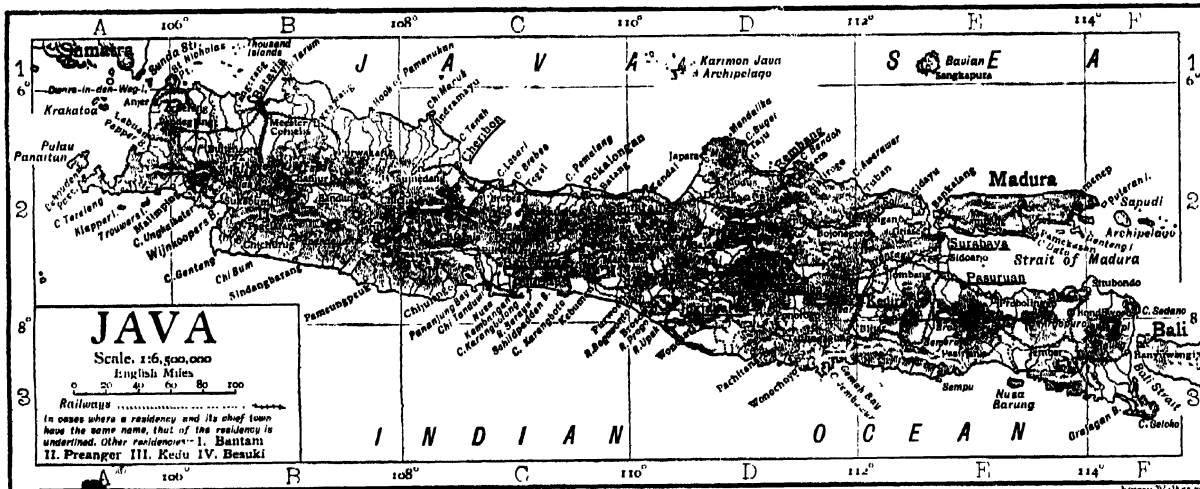

JAURÈS, JEAN LÉON (1859-), French Socialist leader, was born at Castres (Tarn) on the 3rd of September 1859. He was educated at the lycée Louis-le-Grand and the école normale supérieure, and took his degree as associate in philosophy in 1881. After teaching philosophy for two years at the lycée of Albi (Tarn), he lectured at the university of Toulouse. He was elected republican deputy for the department of Tarn in 1885. In 1886, after unsuccessfully contesting Castres, he returned to his professional duties at Toulouse, where he took an active interest in municipal affairs, and helped to found the medical faculty of the university. He also prepared two theses for his doctorate in philosophy, *De primis socialismi germanici lineamentis apud Lutherum, Kant, Fichte et Hegel* (1891), and *De la réalité du monde sensible*. In 1902 he gave energetic support to the miners of Carmaux who went out on strike in consequence of the dismissal of a socialist workman, Calvignac; and in the next year he was re-elected to the chamber as deputy for Albi. Although he was defeated at the elections of 1898 and was for four years outside the chamber, his eloquent speeches made him a force in politics as an intellectual champion of socialism. He edited the *Petite République*, and was one of the most energetic defenders of Captain Alfred Dreyfus. He approved of the inclusion of M. Millerand, the socialist, in the Waldeck-Rousseau ministry, though this led to a split with the more revolutionary section led by M. Guesde. In 1902 he was again returned as deputy for Albi, and during the Combes administration his influence secured the coherence of the radical-socialist coalition known as the *bloc*. In 1904 he founded the socialist paper, *L'Humanité*. The French socialist groups held a congress at Rouen in March 1905, which resulted in a new consolidation: the new party, headed by MM. Jaurès and Guesde, ceased to co-operate with the radicals and radical-socialists, and became known as the unified socialists, pledged to advance a collectivist programme. At the general elections of 1906 M. Jaurès was again elected for the Tarn. His ability and vigour were now generally recognized; but the strength of the socialist party, and the practical activity of its leader, still had to reckon with the equally practical and vigorous liberalism of M. Clemenceau. The latter was able to appeal to his countrymen (in a notable

speech in the spring of 1906) to rally to a radical programme which had no socialist Utopia in view; and the appearance in him of a strong and practical radical leader had the result of considerably diminishing the effect of the socialist propaganda. M. Jaurès, in addition to his daily journalistic activity, published *Les Preuves*; *affaire Dreyfus* (1900); *Action socialiste* (1899); *Études socialistes* (1902), and, with other collaborators, *Histoire socialiste* (1901), &c.

JAVA, one of the larger islands of that portion of the Malay Archipelago which is distinguished as the Sunda Islands. It lies between $105^{\circ} 12' 40''$ (St Nicholas Point) and $114^{\circ} 35' 38''$ E. (Cape Seloko) and between $5^{\circ} 52' 34''$ and $8^{\circ} 46' 46''$ S. It has a total length of 622 m. from Pepper Bay in the west to Banyuwangi in the east, and an extreme breadth of 121 m. from Cape Bugel in Japara to the coast of Jokjakarta, narrowing towards the middle to about 55 m. Politically and commercially it is important as the seat of the colonial government of the Dutch East Indies, all other parts of the Dutch territory being distinguished as the Outer Possessions (*Buitenbezittingen*). According to the triangulation survey (report published in 1901) the area of Java proper is 48,504 sq. m.; of Madura, the large adjacent and associated island, 1732; and of the smaller islands administratively included with Java and Madura 1416, thus

From Sumatra on the W., Java is separated by the Sunda Strait, which at the narrowest is only 14 m. broad, but widens elsewhere to about 50 m. On the E. the strait of Bali, which parts it from the island of that name, is at the northern end not more than $1\frac{1}{2}$ m. across. Through the former strong currents run for the greater part of the day throughout the year, outwards from the Java Sea to the Indian Ocean. In the strait of Bali the currents are perhaps even stronger and are extremely irregular. Pilots with local knowledge are absolutely necessary for vessels attempting either passage. In spite of the strength of the currents the Sunda Strait is steadily being diminished in width, and the process if continued must result in a restoration of that junction of Sumatra and Java which according to some authorities formerly existed.²

In general terms Java may be described as one of the break-water islands of the Indian Ocean—part of the mountainous rim (continuous more or less completely with Sumatra) of the partially submerged plateau which lies between the ocean on the S. and the Chinese Sea on the N., and has the massive island of Borneo as its chief subaerial portion. While the waves and currents of the ocean sweep away most of the products of denudation along the south coast or throw a small percentage back in the shape of sandy downs, the Java Sea on the north—

making a total of 50,970 sq. m. The more important of these islands are the following: Pulau Panaitan or Princes Island (*Prinseneiland*), 47 sq. m., lies in the Sunda Strait, off the southwestern peninsula of the main island, from which it is separated by the Behouden Passage. The Thousand Islands are situated almost due N. of Batavia. Of these five were inhabited in 1906 by about 1280 seafarers from all parts and their descendants. The Karimon Java archipelago, to the north of Semarang, numbers twenty-seven islands with an area of 16 sq. m. and a population of about 800 (having one considerable village on the main island). Bavian¹ (Bawian), 100 m. N. of Surabaya, is a ruined volcano with an area of 73 sq. m. and a population of about 44,000. About a third of the men are generally absent as traders or coolies. In Singapore and Sumatra they are known as Boyans. They are devout Mahomedans and many of them make the pilgrimage to Mecca. The Sapudi and Kangean archipelagoes are eastward continuations of Madura. The former, thirteen in all, with an area of 58 sq. m. and 53,000 inhabitants, export cattle, dried fish and trepang; and many of the male population work as day labourers in Java or as lumbermen in Sumbawa, Flores, &c. The main island of the Kangeans has an area of 19 sq. m.; the whole group 23 sq. m. It is best known for its limestone caves and its buffaloes. Along the south coast the islands are few and small—Klapper or Deli, Trouwers or Tingal, Nusa Kembangan, Sempu and Nusa Barung.

¹ It must be observed that Bavian, &c., are mere conventional appendices to Java.

not more than 50 fathoms deep—allows them to settle and to form sometimes with extraordinary rapidity broad alluvial tracts.³

It is customary and obvious to divide Java into three divisions, the middle part of the island narrowing into a kind of isthmus, and each of the divisions thus indicated having certain structural characteristics of its own. West Java, which consists of Bantam, Krawang and the Preanger Regencies, has an area of upwards of 18,000 sq. m. In this division the highlands lie for the most part in a compact mass to the south and the lowlands form a continuous tract to the north. The main portion of the uplands consists of the Preanger Mountains, with the plateaus of Bandung, Pekalongan, Tegal, Badung and Gurut, encircled with volcanic summits. On the borders of the Preanger, Batavia and Bantam are the Halimou Mountains (the Blue Mountains of the older travellers), reaching their greatest altitudes in the volcanic summits of Gedeh and Salak. To the west lie the highlands of Bantam, which extending northward cut off the northern lowlands from the Sunda Strait. Middle Java is the smallest of the three divisions, having an area of not much more than 13,200 sq. m. It comprises Tegal, Pekalongan, Banyumas, Bagelen, Kedu, Jokjakarta, Surakarta, and thus not only takes in the whole of the isthmus but encroaches on the broad eastern portion of the island. In the isthmus mountains are not so closely massed

² H. B. Guppy (*R. S. G. Soc. Magazine*, 1889) holds that there is no sufficient proof of this connexion but gives interesting details of the present movement.

³ See G. F. Tjiedeman's map of the depths of the sea in the eastern part of the Indian archipelago in M. Weber's *Siboga Expedition*, 1901. The details of the coast forms of the island have been studied by J. F. Snelleman and J. F. Niermeyer in a paper in the *Veth Feestbundel*, utilizing *inter alia* Guppy's observations.

in the south nor the plains so continuous on the north. The watershed culminating in Slamet lies almost midway between the ocean and the Java Sea, and there are somewhat extensive lowlands in the south. In that part of middle Java which physically belongs to eastern Java there is a remarkable series of lowlands stretching almost right across the island from Semarang in the north to Jokjakarta in the south. Eastern Java comprises Rembang, Madiun, Kediri, Surabaya, Pasuruan and Besuki, and has an area of about 17,500 sq. m. In this division lowlands and highlands are intermingled in endless variety except along the south coast, where the watershed-range forms a continuous breakwater from Jokjakarta to Besuki. The volcanic eminences, instead of rising in lines or groups, are isolated.

For its area Java is one of the most distinctly volcanic regions of the world. Volcanic forces made it, and volcanic forces have continued to devastate and fertilize it. According to R. D. M. Verbeek about 125 volcanic centres can be distinguished, a number which may be increased or diminished by different methods of classification. It is usual to arrange the volcanoes in the following groups: westernmost Java 11 (all extinct); Preanger 50 (5 active); Cheribon 2 (both extinct); Slamet 2 (1 active); middle Java 10 (2 active); Murio 2 (both extinct); Lahu 2 (extinct); Willis 2 (extinct); east Java 21 (5 active). The active volcanoes of the present time are Gedeh, Tangkuban, Prahu, Gutar, Papandayan, Galung-gung, Slamet, Sendor, Merapi, Kalut (or Klut), Bromo, Semeru, Lamongan, Raung, but the activity of many of these is trifling, consisting of slight ejections of steam and scorice.

The plains differ in surface and fertility, according to their geological formation. Built up of alluvium and diluvium, the plains of the north coast-lands in western and middle Java are at their lowest levels, near the mouths of rivers and the sea, in many cases marshy and abounding in lakes and coral remains, but for the rest they are fertile and available for culture. The plains, too, along the south coast of middle Java—of Banyumas and Bagelen—contain many morasses as well as sandy stretches and dunes impeding the outlet of the rivers. They are, nevertheless, available for the cultivation more particularly of rice, and are thickly peopled. In eastern Java, again, the narrow coast plains are to be distinguished from the wider plains lying between the parallel chains of limestone and between the volcanoes. The narrow plains of the north coast are constituted of yellow clay and tuffs containing chalk, washed down by the rivers from the mountain chains and volcanoes. Like the western plains, they, too, are in many cases low and marshy, and fringed with sand and dunes. The plains, on the other hand, at some distance from the sea, or lying in the interior of eastern Java, such as Surakarta, Madiun, Kediri, Pasuruan, Probolinggo and Besuki, owe their formation to the volcanoes at whose bases they lie, occupying levels as high as 1640 ft. down to 328 ft. above the sea, whence they decline to the lower plains of the coast. Lastly, the plains of Lusi, Solo and Brantas, lying between the parallel chains in Japara, Rembang and Surabaya, are in part the product of rivers formerly flowing at a higher level of 30 to 60 or 70 ft., in part the product of the sea, dating from a time when the northern part of the above-named residencies was an island, such as Madura, the mountains of which are the continuation of the north parallel chain, is still.

The considerable rivers of western Java all have their outlets on the north coast, the chief among them being the Chi (Dutch *Tji*) Tarum and the Chi Manuk. They are navigable for native boats and rafts, and are used for the transport of coffee and salt. On the south coast the Chi Tanduwi, on the east of the Preanger, is the only stream available as a waterway, and this only for a few miles above its mouth. In middle Java, also, the rivers discharging at the north coast—the Pamali, Chomal, &c.—are serviceable for the purposes of irrigation and cultivation, but are navigable only near their mouths. The rivers of the south coast—Progo, Serayu, Bogowonto, and Upak, enriched by rills from the volcanoes—serve abundantly to irrigate the plains of Bagelen, Banyumas, &c. Their stony beds, shallows and rapids, and the condition of their mouths lessen, however, their value as waterways. More navigable are the larger rivers of eastern Java. The Solo is navigable for large praus, or native boats, as far up as Surakarta, and above that town for lighter boats, as is also its affluent the Gentung. The canal constructed in 1893 at the lower part of this river, and alterations effected at its mouth, have proved of important service both in irrigating the plain and facilitating the river's outlet into the sea. The Brantas is also navigable in several parts. The smaller rivers of eastern Java are, however, much in the condition of those of western Java. They serve less as waterways than as reservoirs for the irrigation of the fertile plains through which they flow.

The north coast of Java presents everywhere a low strand covered with nipa or mangrove, morasses and fishponds, sandy stretches and low dunes, shifting river-mouths and coast-lines, ports and roads, demanding continual attention and regulation. The south coast is of a different make. The dunes of Banyumas, Bagelen, and Jokjakarta, ranged in three ridges, rising to 50 ft. high, and varying in breadth from 300 to over 1600 ft., liable, moreover, to transforma-

tion from tides and the east monsoon, oppose everywhere, also in Preanger and Besuki, a barrier to the discharge of the rivers and the drainage of the coast-lands. They assist the formation of lagoons and morasses. At intervals in the dune coast, running in the direction of the limestone mountains, there tower up steep inaccessible masses of land, showing neither ports nor bays, hollowed out by the sea, rising in perpendicular walls to a height of 160 ft. above sea-level. Sometimes two branches project at right angles from the chain on to the coast, forming a low bay between the capes or ends of the projecting branches, from 1000 to 1600 ft. high. Such a formation occurs frequently along the coast of Besuki, presenting a very irregular coast-line. Of course the north coast is of much greater commercial importance than the south coast.

Geology.—With the exception of a few small patches of schist, supposed to be Cretaceous, the whole island, so far as is known, is covered by deposits of Tertiary and Quaternary age. The ancient "schist formation," which occurs in Sumatra, Borneo, &c., does not rise to the surface anywhere in Java itself, but it is visible in the island of Karimon Java off the north coast. The Cretaceous schists have yielded fossils only at Banjarnegara, where a limestone with *Orbitolina* is interstratified with them. They are succeeded unconformably by Eocene deposits, consisting of sandstones with coal-seams and limestones containing *Nummulites*, *Alveolina* and *Orthophragmina*; and these beds are as limited in extent as the Cretaceous schists themselves. Sedimentary deposits of Upper Tertiary age are widely spread, covering about 38 % of the surface. They consist of breccias, marls and limestones containing numerous fossils, and are for the most part Miocene but probably include a part of the Pliocene also. They were laid down beneath the sea, but have since been folded and elevated to considerable heights. Fluvial deposits of late Pliocene age have been found in the east of Java, and it was in these that the remarkable anthropoid ape or ape-like man, *Pithecanthropus erectus* of Dubois, was discovered. The Quaternary deposits lie horizontally upon the upturned edges of the Tertiary beds. They are partly marine and partly fluvial, the marine deposits reaching to a height of some 350 ft. above the sea and thus indicating a considerable elevation of the island in recent times.

The volcanic rocks of Java are of great importance and cover about 28 % of the island. The eruptions began in the middle of the Tertiary period, but did not attain their maximum until Quaternary times, and many of the volcanoes are still active. Most of the cones seem to lie along faults parallel to the axis of the island, or on short cross fractures. The lavas and ashes are almost everywhere andesites and basalts, with a little obsidian. Some of the volcanoes, however, have erupted leucite rocks. Similar rocks, together with phonolite, occur in the island of Bavian.*

Climate.—Our knowledge of the climate of Batavia, and thus of that of the lowlands of western Java, is almost perfect; but, rainfall excepted, our information as to the climate of Java as a whole is extremely defective. The dominant meteorological facts are simple and obvious: Java lies in the tropics, under an almost vertical sun, and thus has a day of almost uniform length throughout the year.† It is also within the perpetual influence of the great atmospheric movements passing between Asia and Australia; and is affected by the neighbourhood of vast expanses of sea and land (Borneo and Sumatra). There are no such maxima of temperature as are recorded from the continents. The highest known at Batavia was 96° F. in 1877 and the lowest 66° in the same year. The mean annual temperature is 79°. The warmest months are May and October, registering 79.5° and 79.46° respectively; the coldest January and February with 77.63° and 77.7° respectively. The daily range is much greater; at one o'clock the thermometer has a mean height of 84°; after two o'clock it declines to about 73° at six o'clock; the greatest daily amplitude is in August and the least in January and February. Eastern Java and the inland plains of middle Java are said to be hotter, but scientific data are few. A very slight degree of elevation above the seaboard plains produces a remarkable difference in the climate, not so much in its mere temperature as in its influence on health. The dwellers in the coast towns are surprised at the invigorating effects of a change to health resorts from 300 to 1200 ft. above sea-level; and at greater elevations it may be uncomfortably cold at night, with chilly mists and occasional frosts. The year is divided into two seasons by the prevailing winds: the rainy season, that of the west monsoon, lasting from November to March, and the dry season, that of the east monsoon, during the rest of the year; the transition from one monsoon to another—the "canting" of the monsoons—being marked by

* R. D. M. Verbeek and R. Fennema, *Description géologique de Java et Madouwa* (2 vols. and atlas, Amsterdam, 1896; also published in Dutch)—a summary with map was published by Verbeek in *Peterm. Mit.* xlv. (1898), 24–33, pl. 3. Also K. Martin, *Die Eintheilung der vorstehenden Sedimente von Java*, *Samml. Geol. Reichsmus.* Leiden, ser. i., vol. vi. (1899–1902), 135–245.

† On the 16th of November the sun rises at 5.32 and sets at 5.57; on the 16th of July it rises at 6.12 and sets at 5.57. The longest day is in December and the shortest in June, while on the other hand the sun is highest in February and October and lowest in June and December.

† This Merapi must be carefully distinguished from Merapi the Fire Mountain of Sumatra.

irregularities. On the whole, the east monsoon blows steadily for a longer period than the west. The velocity of the wind is much less than in Europe—not more in the annual mean at Batavia than 3 ft. per second, against 12 to 18 ft. in Europe. The highest velocity ever observed at Batavia was 25 ft. Wind-storms are rare and hardly ever cyclonic. There are as a matter of course a large number of purely local winds, some of them of a very peculiar kind, but few of these have been scientifically dealt with. Thunderstorms are extremely frequent; but the loss of life from lightning is probably diminished by the fact that the palm-trees are excellent conductors. At night the air is almost invariably still. The average rainfall at Batavia is 72.28 in. per annum, of which 51.49 in. are contributed by the west monsoon. The amount varies considerably from year to year: in 1889, 1891 and 1897 there were about 47.24 in.; in 1868 and 1877 nearly 51.17, and in 1872 and 1882 no less than 94.8. There are no long tracts of unbroken rainfall and no long periods of continuous drought. The rainfall is heaviest in January, but it rains only for about one-seventh of the time. Next in order come February, March and December. August, the driest month, has from three to five days of rain, though the amount is usually less than an inch and not more than one and a half inches. The popular description of the rain falling not in drops but streams was proved erroneous by J. Wiesner's careful observations (see *Kais. Akad. d. Wiss. Math. naturw. Cl.*, Bd. xiv., Vienna, 1895), which have been confirmed by A. Woeikof ("Regensintensität und Regendauer in Batavia" in *Z. für Met.*, 1907). The greatest rainfall recorded in an hour (4.5 in.) is enormously exceeded by records even in Europe. From observations taken for the meteorological authorities at a very considerable number of stations, J. H. Boeseken constructed a map in 1900 (*Tijdschr. v. h. Kon. Ned. Aardr. Gen.*, 1900; reproduced in Veth, *Java*, iii. 1903). Among the outstanding facts are the following. The south coasts of both eastern and middle Java have a much heavier rainfall than the north. Majalenku has an annual fall of 175 in. In western Java the maximal district consists of a great ring of mountains from Salak and Gedeh in the west to Galunggung in the east, while the enclosed plateau-region of Chanjur Bandung and Garut are not much different from the sea-board. The whole of middle Java, with the exception of the north coast, has a heavy rainfall. At Chilachap the annual rainfall is 151.43 in., 87.8 in. of which is brought by the south-east monsoon. The great belt which includes the Slamet and the Dieng, and the country on the south coast between Chilachap and Parigi, are maximal. In comparison the whole of eastern Java, with the exception of the mountains from Wilis eastward to Ijen, has a low record which reaches its lowest along the north coast.¹

Fauna.—In respect of its fauna Java differs from Borneo, Sumatra and the Malay Peninsula far more than these differ among themselves; and, at the same time, it shows a close resemblance to the Malay Peninsula, on the one hand, and to the Himalayas on the other. Of the 176 mammals of the whole Indo-Malayan region the greater number occur in Java. Of these 41 are found on the continent of Asia, 8 are common to Java and Borneo, and 6 are common to Java and Sumatra (see M. Weber, *Die Indo-Malay Archipelago und die Geschichte seiner Tierwelt*, Jena, 1902). No genus has only a few species are confined to the island. Of the land-birds only a small proportion are peculiar. The elephant, the tapir, the bear, and various other genera found in the rest of the region are altogether absent. The Javanese rhinoceros (*Irhinoceros sondaicus*; *sarak* in Javanese, *badak* in Sundanese), the largest of the mammals on the island, differs from that of Sumatra in having one horn instead of two. It ranges over the highest mountains, and its regular paths, worn into deep channels, may be traced up the steepest slopes and round the rims of even active volcanoes. Two species of wild swine, *Sus vittatus* and *Sus verrucosus*, are exceedingly abundant, the former in the hot, the latter in the temperate region; and their depredations are the cause of much loss to the natives, who, however, being Mahomedans, to whom pork is abhorrent, do not hunt them for the sake of their flesh. Not much less than the rhinoceros is the banteng (*Bibos banteng* or *sundaicus*) found in all the uninhabited districts between 2000 and 7000 ft. of elevation. The kidang or muntjak (*Cervulus muntjak*) and the rusa or rusa (*Rusa hippelaphus* or *Rusa rusa*) are the representatives of the deer kind. The former is a delicate little creature occurring singly or in pairs both in the mountains and in the coast districts; the latter lives in herds of fifty to a hundred in the grassy opens, giving excellent sport to the native hunters. Another species (*Rusa kuhlii*) exists in Bavian. The kantjil (*Tragulus javanicus*) is a small creature allied to the musk-deer but forming a genus by itself. It lives in the high woods, for the most part singly, seldom in pairs. It is one of the most peculiar of the Javanese mammals. The royal tiger, the same species as that of India, is still common enough to make a tiger-hunt a characteristic Javanese scene. The leopard (*Felis pardus*) is frequent in the warm regions and often ascends to considerable altitudes. Black specimens occasionally occur, but the spots are visible on inspection; and the fact that in the Amsterdam zoological gardens a black leopard had one of its cubs black and the other normally spotted shows that this is only a case of melanism. In the tree-tops the birds find a dangerous enemy in the matjan

rembak, or wild cat (*Felis minuta*), about the size of a common cat. The dog tribe is represented by the fox-like adjag (*Cuon* or *Canis sulitans*), which hunts in ferocious packs; and by a wild dog, *Canis tenggeranus*, if this is not now exterminated. The Cheiroptera hold a prominent place in the fauna, the principal genera being *Pteropus*, *Cynonycteris*, *Cynopterus* and *Macroglossus*. Remarkable especially for size is the kalong, or flying fox, *Pteropus edulis*, a fruit-eating bat, which may be seen hanging during the day in black clusters asleep on the trees, and in the evening hastening in long lines to the favourite feeding grounds in the forest. The damage these do to the young coco-nut trees, the maize and the sugar-palms leads the natives to snare and shoot them; and their flesh is a favourite food with Europeans, who prefer to shoot them by night as, if shot by day, they often cling after death to the branches. Smaller kinds of bats are most abundant, perhaps the commonest being *Scotophilus Temminckii*. In certain places they congregate in myriads, like sea-fowl on the cliffs, and their excrement produces extensive guano deposits utilized by the people of Surakarta and Madiun. The creature known to the Europeans as the flying-cat and to the natives as the kubin is the *Galeopithecus volans* or *variegatus*—a sort of transition from the bats to the lemuroids. Of these last Java has several species held in awe by the natives for their supposed power of fascination. The apes are represented by the wou-wou (*Hylobates leuciscus*), the lutung, and kowi (*Semnopithecus maurus* and *pyrrhus*), the surili (*Semnopithecus mitratus*), and the munyuk (*Cercocebus*, or *Macacus cynomolgus*), the most generally distributed of all. From sunrise to sunset the wou-wou makes its presence known, especially in the second zone where it congregates in the trees, by its strange cry, at times harsh and cacophonous, at times weird and pathetic. The lutung or black ape also prefers the temperate region, though it is met with as high as 7000 ft. above the sea and as low as 2000. The *Cercocebus* or grey ape keeps for the most part to the warm coast lands. Rats (including the brown Norway rat, often called *Mus javanicus*, as if it were a native; a great plague); mice in great variety; porcupines (*Acanthion javanicum*); squirrels (five species) and flying squirrels (four species) represent the rodents. A hare, *Lepus nigricollis*, originally from Ceylon, has a very limited habitat; the insectivora comprise a shrew-mouse (*Rachyura indica*), two species of tupaya and *Hylomys suillus* peculiar to Java and Sumatra. The nearest relation to the beavers is *Arctitis binturong*. *Mydaus meliceps* and *Helictis orientalis* represent the badgers. In the upper part of the mountains occurs *Mustela hemia*, and an otter (*Onyx leptonyx*) in the streams of the hot zone. The coffee rat (*Paradoxurus hermaphroditus*), a civet cat (*Viverricula indica*), the Javanese ichneumon (*Herpestes javanicus*), and *Prionodon gracilis* may also be mentioned.

In 1820, 176 species of birds were known in Java; by 1900 Vorderman and O. Finsch knew 410. Many of these are, of course, rare and occupy a limited habitat far from the haunts of man. Others exist in myriads and are characteristic features in the landscape. Water-fowl of many kinds, ducks, geese, storks, pelicans, &c., give life to sea-shore and lake, river and marsh. Snipe-shooting is a favourite sport. Common night-birds are the owl (*Strix flammea*) and the goatsucker (*Caprimulgus affinis*). Three species of hornbill, the year-bird of the older travellers (*Buceros plicatus*, *sumatus* and *albivestris*) live in the tall trees of the forest zone. The Javanese peacock is a distinct species (*Pavo muticus* or *spiciferus*), and even exceeds the well-known Indian species in the splendour of its plumage. *Gallus Bankiva* is famous as the reputed parent of all barndoor fowls; *Gallus furcatus* is an exquisitely beautiful bird and can be trained for cock-fighting. Of parrots two species only are known: *Palaeornis Alexandri* or *javanicus* and the pretty little grass-green *Ceryllis pusilla*, peculiar to Java. As talkers and mimics they are beaten by the *Gracula javanensis*, a favourite cage-bird with the natives. A cuckoo, *Chrysococcyx basalis*, may be heard in the second zone. The grass-fields are the foraging-grounds of swarms of weaver-birds (*Ploceula javanensis* and *Ploceus baya*). They lay nearly as heavy a toll on the rice-fields as the gelatiks (*Munia oryzivora*), which are everywhere the rice-growers' principal foe. Hawks and falcons make both an easy prey. The *Nictuarius* or honey-birds (eight species) take the place of the humming-bird, which they rival in beauty and diminutiveness, ranging from the lowlands to an altitude of 4000 ft. In the upper regions the birds, like the plants, are more like those of Europe, and some of them—notably the kanchilan (*Hyloterpe philomela*)—are remarkable for their song. The edible-nest swallow (*Collocalia fuciphaga*) builds in caves in many parts of the island.²

As far back as 1859 P. Bleeker credited Java with eleven hundred species of fish; and naturalists are perpetually adding to the number.³ In splendour and grotesqueness of colouring many kinds, as is well known, look rather like birds than fish. In the neighbourhood of Batavia about three hundred and eighty species are used as food by the natives and the Chinese, who have added to the number by the introduction of the goldfish, which reaches a great size. The sea fish most prized by Europeans is *Lates calcarifer* (a perch). Of more than one hundred species of snakes about twenty-four species

¹ S. Figei, *Regenwaarnemingen in Nederlandsch Indië* (1902).

² See J. C. Konigsberger, "De vogels Java en hunne oecoonomische betekenis," *Med. int. s. Lands Plantentuin*.

³ See especially M. Weber, *Siboga Expedition*.

(including the cobra di capella) are poisonous and these are responsible for the deaths of between one hundred and two hundred persons per annum. Adders and lizards are abundant. Geckos are familiar visitors in the houses of the natives. There are two species of crocodiles.

As in other tropical-rain forest lands the variety and abundance of insects are amazing. At sundown the air becomes resonant for hours with their myriad voices. The *Coleoptera* and the *Lepidoptera* form the glory of all great collections for their size and magnificence. Of butterflies proper five hundred species are known. Of the beetles one of the largest and handsomest is *Chalcosoma atlas*. Among the spiders (a numerously represented order) the most notable is a bird-killing species, *Selene scomia javanensis*. In many parts the island is plagued with ants, termites and mosquitoes. Crops of all kinds are subject to disastrous attacks of creeping and winged foes—many still unidentified (see especially Snellen van Hollenhoven, *Essai d'une faune entomologique de l'Archipel Indo-Néerlandais*). Of still lower forms of life the profusion is no less perplexing. Among the worms the *Perichaeta musica* reaches a length of about twenty inches and produces musical sounds. The shell of the *Tridacna gigas* is the largest anywhere known.

Flora.—For the botanist Java is a natural paradise, affording him the means of studying the effects of moisture and heat, of air-currents and altitudes, without the interference of superincumbent arctic conditions. The botanic gardens of Buitenzorg have long been famous for their wealth of material, the ability with which their treasures have been accumulated and displayed, their value in connexion with the economic development of the island and the extensive scientific literature published by their directors.¹ There is a special establishment at Chibodas open to students of all nations for the investigation on the spot of the conditions of the primeval forest. Hardly any similar area in the world has a flora of richer variety than Java. It is estimated that the total number of the species of plants is about 5000; but this is probably under the mark (De Candolle knew of 2605 phanerogamous species), and new genera and species of an unexpected character are from time to time discovered. The lower parts of the island are always in the height of summer. The villages and even the smaller towns are in great measure concealed by the abundant and abiding verdure; and their position in the landscape is to be recognized mainly by their groves, orchards and cultivated fields. The amount and distribution of heat and moisture at the various seasons of the year form the dominant factors in determining the character of the vegetation. Thus trees which are evergreen in west Java are deciduous in the east of the island, some dropping their leaves (e.g. *Tetrameles nudiflora*) at the very time they are in bloom or ripening their fruit. This and other contrasts are graphically described from personal observation by A. F. W. Schimper in his *Pflanzen-Geographie auf physiologische Grundlage* (Jena, 1898). The abundance of epiphytes, orchids, pitcher-plants, mosses and fungi is a striking result of the prevalent humidity; and many trees and plants indeed, which in drier climates root in the soil, derive sufficient moisture from their stronger neighbours. Of orchids J. J. Smith records 562 species (100 genera), but the flowers of all except about a score are inconspicuous. This last fact is the more remarkable because, taken generally, the Javanese vegetation differs from that of many other tropical countries by being abundantly and often gorgeously floriferous. Many of the loftiest trees crown themselves with blossoms and require no assistance from the climbing plants that seek, as it were, to rival them in their display of colour. Shrubs, too, and herbaceous plants often give brilliant effects in the savannahs, the deserted clearings, the edges of the forest and the sides of the highways. The *lantana*, a verbenaceous alien introduced, it is said, from Jamaica by Lady Raffles, has made itself aggressively conspicuous in many parts of the island, more especially in the Preanger and middle Java, where it occupies areas of hundreds of acres.

The effect of mere altitude in the distribution of the flora was long ago emphasized by Friedrich Junghuhn, the Humboldt of Java, who divided the island into four vertical botanical zones—a division which has generally been accepted by his successors, though, like all such divisions, it is subject to many modifications and exceptions. The forest, or hot zone, extends to a height of 2000 ft. above the sea; the second, that of moderate heat, has its upper limit at about 4500; the third, or cool, zone reaches 7500; and the fourth, or coldest, comprises all that lies beyond. The lowest zone has, of course, the most extensive area; the second is only a fiftieth and the third a five-thousandth of the first; and the fourth is an insignificant remainder. The lowest is the region of the true tropical forest, of rice-fields and sugar-plantations, of coconut palms, cotton, sesamum, cinnamon and tobacco (though this last has a wide altitudinal range). Many parts of the coast (especially on the north) are fringed with mangrove (*Rhizophora mucronata*), &c., and species of *Bruguiera*; the downs have their characteristic flora—*Convolvulus* and *Spinifex squarrosus* catching

the eye for very different reasons. Farther inland along the seaboard appear the nipa dwarf palm (*Nipa fruticans*), the *Alstonia scholaris* (the wood of which is lighter than cork), Cycadaceae, tree-ferns, screw pines (*Pandanus*), &c. In west Java the gebang palm (*Corypha gebanga*) grows in clumps and belts not far from but never quite close to the coast; and in east Java a similar position is occupied by the loutar (*Borassus flabelliformis*), valuable for its timber, its sago and its sugar, and in former times for its leaves, which were used as a writing-material. The fresh-water lakes and ponds of this region are richly covered with *Utricularia* and various kinds of lotus (*Nymphaea lotus*, *N. stellata*, *Nelumbium speciosum*, &c.), interspersed with *Pistia stratiotes* and other floating plants. Vast prairies are covered with the silvery along-alang grass broken by bamboo thickets, clusters of trees and shrubs (*Buisa frondosa*, *Emblisia officinalis*, &c.) and islands of the taller esigedeh or glagah (*Saccharum spontaneum*). Along-alang (*Imperata arundinacea*, Cyr. var. *Benthani*) grows from 1 to 4 ft. in height. It springs up wherever the ground is cleared of trees and is a perfect plague to the cultivator. It cannot hold its own, however, with the ananas, the kratok (*Phaseolus lunatus*) or the lantana; and, in the natural progress of events, the forest resumes its sway except where the natives encourage the young growth of the grass by annually setting the prairies on fire. The true forest, which occupies a great part of this region, changes its character as we proceed from west to east. In west Java it is a dense rain-forest in which the struggle of existence is maintained at high pressure by a host of lofty trees and parasitic plants in bewildering profusion. The preponderance of certain types is remarkable. Thus of the Moraceae there are in Java (and mostly here) seven genera with ninety-five species, eighty-three of which are *Ficus* (see S. H. Koorders and T. Valeton, "Boomsorten op Java" in *Bijsdr. Med. Dep. Landbouwer* (1906). These include the so-called waringin, several kinds of figs planted as shade-trees in the parks of the nobles and officials. The Magnoliaceae and Anonaceae are both numerously represented. In middle Java the variety of trees is less, a large area being occupied by teak. In eastern Java the character of the forest is mainly determined by the abundance of the Casuarina or Chimoro (*C. montana* and *C. junghuhniana*). Another species, *C. equisetifolia*, is planted in west Java as an ornamental tree. These trees are not crowded together and encumbered with the heavy parasitic growths of the rain-forest; but their tall stems are often covered with multitudes of small vermilion fungi. Wherever the local climate has sufficient humidity, the true rain-forest claims its own. The second of Junghuhn's zones is the region of, more especially, tea, cinchona and coffee plantations, of maize and the sugar palm (areng). In the forest the trees are richly clad with ferns and enormous fungi; there is a profusion of underwood (*Pavetta macrophylla javanica* and *salicifolia*; several species of *Lasiacanthus*, *Boehmerias*, *Strobilanthes*, &c.), of woody lianas and ratans, of tree ferns (especially *Alsophila*). Between the bushes the ground is covered with ferns, lycopods, tradescantias, Bignoniaceae, species of *Aeschynomenus*. Of the lianas the largest is *Plectocomia elongata*; one specimen of which was found to have a length of nearly 700 ft. One of the fungi, *Telephora princeps*, is more than a yard in diameter. The trees are of different species from those of the hot zone even when belonging to the same genus; and new types appear mostly in limited areas. The third zone, which consists mainly of the upper slopes of volcanic mountains, but also comprises several plateaus (the Dieng, parts of the Tengger, the Ijen) is a region of clouds and mists. There are a considerable number of lakes and swamps in several parts of the region, and these have a luxuriant environment of grasses, Cyperaceae, Characeae and similar forms. The taller trees of the region—oaks, chestnuts, various Lauraceae, and four or five species of *Podocarpus*—with some striking exceptions, *Astromia spectabilis*, &c., are less floriferous than those of the lower zones; but the shrubs (*Rhododendron javanicum*, *Ardisia javanica*, &c.), herbs and parasites more than make up for this defect. There is little cultivation, except in the Tengger, where the natives grow maize, rye and tobacco, and various European vegetables (cabbage, potatoes, &c.), with which they supply the lowland markets. In western Java one of the most striking features of the upper parts of this temperate region is what Schimper calls the "absolute dominion of mosses," associated with the "elfin forest," as he quaintly calls it, a perfect tangle of "low, thick, oblique or even horizontal stems," almost choked to leaflessness by their grey and ghostly burden. Much of the lower vegetation begins to have a European aspect; violets, primulas, thalictrums, ranunculus, vacciniums, equisetums, rhododendrons (*Rhod. vetusum*). The *Primula imperialis*, found only on the Pangerango, is a handsome species, prized by specialists. In the fourth or alpine zone occur such distinctly European forms as *Artemisia vulgaris*, *Plantago major*, *Solanum nigrum*, *Stellaria media*; and altogether the alpine flora contains representatives of no fewer than thirty-three families. A characteristic shrub is *Anaphalis javanica*, popularly called the Javanese edelweiss, which "often entirely excludes all other woody plants."² The tallest and noblest

¹ The *Annales de Buitenzorg*, with their *Icones bogorienses*, are universally known; the *Teymannia* is named after a former director. A history of the gardens was published by Dr Treub, *Feetboek van's Lands Plantentuin* (1891).

² Bertha Hoola van Nooten published *Fleurs, fruits et feuillages de la flore et de la pomone de l'île de Java* in 1863, but the book is difficult of access. Excellent views of characteristic aspects of the vegetation will be found in Karsten and Schenck, *Vegetationsbilder* (1903).

of all the trees in the island is the rasamala or liquid-ambar (*Altingia excelsa*), which, rising with a straight clean trunk, sometimes 6 ft. in diameter at the base, to a height of 100 to 130 ft., spreads out into a magnificent crown of branches and foliage. When by chance a climbing plant has joined partnership with it, the combination of blossoms at the top is one of the finest colour effects of the forest. The rasamala, however, occurs only in the Preanger and in the neighbouring parts of Bantam and Buitenzorg. Of the other trees that may be classified as timber—from 300 to 400 species—many attain noble proportions. It is sufficient to mention *Calophyllum inophyllum*, which forms fine woods in the south of Bantam, *Mimusops acuminata*, *Irva glabra*, *Dalbergia latifolia* (sun wood, English black-wood) in middle and east Java; the rare but splendid *Pithecolobium junghuhnianum*; *Schima Noronhai*, *Bischofia javanica*, *Pterospermum javanicum* (greatly prized for ship-building), and the upas-tree. From the economic point of view all these hundreds of trees are of less importance than *Tectona grandis*, the jati or teak, which, almost to the exclusion of all others, occupies about a third of the government forest-lands. It grows best in middle and eastern Java, preferring the comparatively dry and hot climate of the plains and lower hills to a height of about 2000 ft. above the sea, and thriving best in more or less calciferous soils. In June it sheds its leaves and begins to bud again in October. Full-grown trees reach a height of 100 to 150 ft. In 1895 teak (with a very limited quantity of other timber) was felled to the value of about £101,800, and in 1904 the corresponding figure was about £119,935.

That an island which has for so long maintained a dense and growing population in its more cultivable regions should have such extensive tracts of primeval or quasi-primeval forest as have been above indicated would be matter of surprise to one who did not consider the simplicity of the life of the Javanese. They require but little fuel; and both their dwellings and their furniture are mostly constructed of bamboo supplemented with a palm or two. They destroy the forest mainly to get room for their rice-fields and pasture for their cattle. In doing this, however, they are often extremely reckless and wasteful; and if it had not been for the unusual humidity of the climate their annual fires would have resulted in widespread conflagrations. As it is, many mountains are now bare which within historic times were forested to the top; but the Dutch government has proved fully alive to the danger of denudation. The state has control of all the woods and forests of the island with the exception of those of the Preanger, the "particular lands," and Madura; and it has long been engaged in replanting with native trees and experimenting with aliens from other parts of the world—*Eucalyptus globulus*, the juar, *Cassia florida* from Sumatra, the surian (*Cedrela febrifuga*), &c. The greatest success has been with cinchona.

Left to itself Java would soon clothe itself again with even a richer natural vegetation than it had when it was first occupied by man. The open space left by the demolition of the fortifications on Nusa Kambangan was in twenty-eight years densely covered by thousands of shrubs and trees of about twenty varieties, many of the latter 80 ft. high. Resident Snijthoff succeeded about the close of the 19th century in re-forestation a large part of Mount Muria by the simple expedient of protecting the territory he had to deal with from all encroachments by natives.¹

Population.—The population of Java (including Madura, &c.) was 30,098,008 in 1905. In 1900 it was 28,746,688; in 1890, 23,912,564; and in 1880, 19,794,505. The natives consist of the Javanese proper, the Sundanese and the Madurese. All three belong to the Malay stock. Between Javanese and Sundanese the distinction is mainly due to the influence of the Hindus on the former and the absence of this on the latter. Between Javanese and Madurese the distinction is rather to be ascribed to difference of natural environment. The Sundanese have best retained the Malay type, both in physique and fashion of life. They occupy the west of the island. The Madurese area, besides the island of Madura and neighbouring isles, includes the eastern part of Java itself. The residencies of Tegal, Pekalongan, Banyumas, Bagelen, Kedu, Semarang, Japara, Surakarta, Jokjakarta, Rembang, Madiun, Kediri and Surabaya have an almost purely Javanese population. The Javanese are the most numerous and civilized of the three peoples.

The colour of the skin in all three cases presents various shades of yellowish brown; and it is observed that, owing perhaps to the Hindu strain, the Javanese are generally darker than the Sundanese. The eyes are always brown or black, the hair of the head black, long, lank and coarse. Neither breast nor limbs are provided with hair, and there is hardly even the suggestion of a beard. In stature the Sundanese is less than the Javanese

proper, being little over 5 ft. in average height, whereas the Javanese is nearly 5½ ft.; at the same time the Sundanese is more stoutly built. The Madurese is as tall as the Javanese, and as stout as the Sundanese. The eye is usually set straight in the head in the Javanese and Madurese; among the Sundanese it is often oblique. The nose is generally flat and small, with wide nostrils, a though among the Javanese it not infrequently becomes aquiline. The lips are thick, yet well formed; the teeth are naturally white, but often filed and stained. The cheek-bones are well developed, more particularly with the Madurese. In expressiveness of countenance the Javanese and Madurese are far in advance of the Sundanese. The women are not so well made as the men, and among the lower classes especially soon grow absolutely ugly. In the eyes of the Javanese a golden yellow complexion is the perfection of female beauty. To judge by their early history, the Javanese must have been a warlike and vigorous people, but now they are peaceable, docile, sober, simple and industrious.

One million only out of the twenty-six millions of natives are concentrated in towns, a fact readily explained by their sources of livelihood. The great bulk of the population is distributed over the country in villages usually called by Europeans *dessas*, from the Low Javanese word *désa* (High Javanese *dusun*). Every *desa*, however small (and those containing from 100 to 1000 families are exceptionally large), forms an independent community; and no sooner does it attain to any considerable size than it sends off a score of families or so to form a new *desa*. Each lies in the midst of its own area of cultivation. The general enclosure is formed by an impervious hedge of bamboos 40 to 70 ft. high. Within this lie the houses, each with its own enclosure, which, even when the fields are the communal property, belongs to the individual householder. The capital of a district is only a larger *desa*, and that of a regency has the same general type, but includes several *kampongs* or villages. The bamboo houses in the strictly Javanese districts are always built on the ground; in the Sunda lands they are raised on piles. Some of the well-to-do, however, have stone houses. The principal article of food is rice; a considerable quantity of fish is eaten, but little meat. Family life is usually well ordered. The upper class practise polygamy, but among the common people a man has generally only one wife. The Javanese are nominally Mahomedans, as in former times they were Buddhists and Brahmans; but in reality, not only such exceptional groups as the Kalangs of Surakarta and Jokjakarta and the Baduwis or nomad tribes of Bantam, but the great mass of the people must be considered as believers rather in the primitive animism of their ancestors, for their belief in Islam is overlaid with superstition. As we ascend in the social scale, however, we find the name of Mahomedan more and more applicable; and consequently in spite of the paganism of the populace the influence of the Mahomedan "priests" (this is their official title in Dutch) is widespread and real. Great prestige attaches to the pilgrimage to Mecca, which was made by 5068 persons from Java in 1900. In every considerable town there is a mosque. Christian missionary work is not very widely spread.

Languages.—In spite of Sundanese, Madurese and the intrusive Malay, Javanese has a right to the name. It is a rich and cultivated language which has passed through many stages of development and, under peculiar influences, has become a linguistic complex of an almost unique kind. Though it is customary and convenient to distinguish New Javanese from Kawi or Old Javanese, just as it was customary to distinguish English from Anglo-Saxon, there is no break of historical continuity. Kawi (Basa Kawi, i.e. the language of poetry) may be defined as the form spoken and written before the founding of Majapahit; and middle Javanese, still represented by the dialect of Banyumas, north Cheribon, north Krawang and north Bantam, as the form the language assumed under the Majapahit court influence; while New Javanese is the language as it has developed since the fall of that kingdom. Kawi continued to be a literary language long after it had become archaic. It contains more Sanskrit than any other language of the archipelago. New Javanese breaks up into two great varieties, so different that sometimes they are regarded as two distinct languages. The nobility use one form, *Kramā*; the common people another, *Ngoko*, the "thouing" language (cf. Fr. *tutoyant*, Ger. *duisend*); but each class understands the language of the other class. The aristocrat speaks

¹ It is interesting to compare this with the natural "reflorization" of Krakaton. See Penzig, *Ann. jard. de Buitenzorg*, vol. viii. (1902); and W. Botting in *Nature* (1903).

to the commonalty in the language of the commoner; the commoner speaks to the aristocracy in the language of the aristocrat; and, according to clearly recognized etiquette, every Javanese plays the part of aristocrat or commoner towards those whom he addresses. To speak Ngoko to a superior is to insult him; to speak Krāmā to an equal or inferior is a mark of respect. In this way Dipa Negārā showed his contempt for the Dutch General de Kock. The ordinary Javanese thinks in Ngoko; the children use it to each other, and so on. Between the two forms there is a kind of compromise, the Madya, or middle form of speech, employed by those who stand to each other on equal or friendly footing or by those who feel little constraint of etiquette. For every idea expressed in the language Krāmā has one vocable, the Ngoko another, the two words being sometimes completely different and sometimes differing only in the termination, the beginning or the middle. Thus every Javanese uses, as it were, two or even three languages delicately differentiated from each other. How this state of affairs came about is matter of speculation. Almost certainly the existence side by side of two peoples, speaking each its own tongue, and occupying towards each other the position intellectually and politically of superior and inferior, had much to do with it. But Professor Kern thinks that some influence must also be assigned to *pamela* or *pantang*, word-taboo—certain words being in certain circumstances regarded as of evil omen—a superstition still lingering, e.g. even among the Shetland fishermen (see G. A. F. Hazeu, *De taal pantangs*). It has sometimes been asserted that Krāmā contains more Sanskrit words than Ngoko does; but the total number in Krāmā does not exceed 20; and sometimes there is a Sanskrit word in Ngoko which is not in Krāmā. There is a village Krāmā which is not recognized by the educated classes: Krāmā inggil, with a vocabulary of about 300 words, is used in addressing the deity or persons of exalted rank. The Basa Kedaton or court language is a dialect used by all living at court except royalties, who use Ngoko. Among themselves the women of the court employ Krāmā or Madya, but they address the men in Basa Kedaton.

Literature.—Though a considerable body of Kavi literature is still extant, nothing like a history of it is possible. The date and authorship of most of the works are totally unknown. The first place may be assigned to the *Brata Yudā* (Sansk., *Bharata Yudha*, the conflict of the Bharatas), an epic poem dealing with the struggle between the Pandāwas and the Korāwas for the throne of Ngastina celebrated in parvas 5-10 of the *Mahābhārata*. To the conception, however, of the modern Javanese it is a purely native poem; its kings and heroes find their place in the native history and serve as ancestors to their noble families. (Cohen Stuart published the modern Javanese version with a Dutch translation and notes, *Brātā-Joedā*, &c., Samarang, 1877. The Kavi text was lithographed at the Hague by S. Lankhout.) Of greater antiquity probably is the *Arjunā Wiwādhā* (or marriage festival of Ardjuna), which Professor Kern thinks may be assigned to the first half of the 11th century of the Christian era. The name indicates its *Mahābhārata* origin. (Friedrich published the Kavi text from a Bali MS., and *Wiwādhā Djarwa en Brātā Joedo Kawi*, lithographed facsimiles of two palm-leaf MSS., Batavia, 1878. Djarwa is the name of the poetic diction of modern Javanese.) The oldest poem of which any trace is preserved is probably the mythological *Kāndā* (i.e. tradition); the contents are to some extent known from the modern Javanese version. In the literature of modern Javanese there exists a great variety of so-called *babads* or chronicles. It is sufficient to mention the "history" of Baron Sakender, which appears to give an account—often hardly recognizable—of the settlement of Europeans in Java (Cohen Stuart published text and translation, Batavia, 1851; J. Veth gives an analysis of the contents), and the *Babad Tanah Djawi* (the Hague, 1874, 1877), giving the history of the island to 1647 of the Javanese era. Even more numerous are the *wayangs* or puppet-plays which usually take their subjects from the Hindu legends or from those relating to the kingdoms of Majapahit and Pajajaram (see e.g. H. C. Humme, *Abidsā, een Javaansche toneelstuk*, the Hague, 1878). In these plays grotesque figures of gilded leather are moved by the performer, who recites the appropriate speeches and, as occasion demands, plays the part of chorus.

Several Javanese specimens are also known of the beast fable, which plays so important a part in Sanskrit literature (W. Palmer van den Broek, *Javaansche Vertellingen, bevattende de lotgevallen van een kantiil, een reebok, &c.*, the Hague, 1878). To the Hindu-Javanese literature there naturally succeeded a Mohammedan-Javanese literature consisting largely of translations or imitations of Arabic originals; it comprises religious romances, moral exhortations and mystical treatises in great variety.¹

Arts.—In mechanic arts the Javanese are in advance of the other peoples of the archipelago. Of thirty different crafts practised among them, the most important are those of the blacksmith or cutler, the carpenter, the kris-sheath maker, the coppersmith, the goldsmith

and the potter. Their skill in the working of the metals is the more noteworthy as they have to import the raw materials. The most esteemed product of the blacksmith's skill is the kris; every man and boy above the age of fourteen wears one at least as part of his ordinary dress, and men of rank two and sometimes four. In the finishing and adornment of the finer weapons no expense is spared; and ancient kris of good workmanship sometimes fetch enormous prices. The Javanese gold and silver work possesses considerable beauty, but there is nothing equal to the filigree of Sumatra; the brass musical instruments are of exceptional excellence. Both bricks and tiles are largely made, as well as a coarse unglazed pottery similar to that of Hindustan; but all the finer wares are imported from China. Cotton spinning, weaving and dyeing are carried on for the most part as purely domestic operations by the women. The usual mode of giving variety of colour is by weaving in stripes with a succession of different coloured yarns, but another mode is to cover with melted wax or damar the part of the cloth not intended to receive the dye. This process is naturally a slow one, and has to be repeated according to the number of colours required. As a consequence the *battiks*, as the cloths thus treated are called, are in request by the wealthier classes. For the most part quiet colours are preferred. To the Javanese of the present day the ancient buildings of the Hindu periods are the work of supernatural power. Except when employed by his European master he seldom builds anything more substantial than a bamboo or timber framework; but in the details of such erections he exhibits both skill and taste. When Europeans first came to the island they found native vessels of large size well entitled to the name of ships; and, though ship-building proper is now carried on only under the direction of Europeans, boat-building is a very extensive native industry along the whole of the north coast—the boats sometimes reaching a burden of 50 tons. The only one of the higher arts which the Javanese have carried to any degree of perfection is music; and in regard to the value of their efforts in this direction Europeans differ greatly. The orchestra (*gamelan*) consists of wind, string and percussion instruments, the latter being in preponderance to the other two. (Details of the instruments will be found in Raffles' *Java*, and a description of a performance in the *Tour du monde*, 1880.)

Chief Towns and Places of Note.—The capital of Java and of the Dutch East India possessions is Batavia (*q.v.*), pop. 115,567. At Meester Cornelis (pop. 33,119), between 6 and 7 m. from Batavia on the railway to Buitenzorg, the battle was fought in 1811 which placed Java in the hands of the British. In the vicinity lies Depok, originally a Christian settlement of freed slaves, but now with about 3000 Mohammedan inhabitants and only 500 Christians. The other chief towns, from west to east through the island, are as follows: Serang (pop. 5600) bears the same relation to Bantam, about 6 m. distant, which New Batavia bears to Old Batavia, its slight elevation of 100 ft. above the sea making it fitter for European occupation. Anjer (Angerlor, Anger) lies 96 m. from Batavia by rail on the coast at the narrowest part of the Sunda Strait; formerly European vessels were wont to call there for fresh provisions and water. Pandeglang (pop. 3644), 787 ft. above sea-level, is known for its hot and cold sulphur springs. About 17 m. west of Batavia lies Tangerang (pop. 13,535), a busy place with about 2800 or 3000 Chinese among its inhabitants. Buitenzorg (*q.v.*) is the country-seat of the governor-general, and its botanic gardens are famous. Krawang, formerly chief town of the residency of that name—the least populous of all—has lost its importance since Purwakerta (pop. 6862) was made the administrative centre. At Wanyasa in the neighbourhood the first tea plantations were attempted on a large scale.

The Preanger regencies—Bandung, Chanjur, Sukabumi, Sumedang, Garut and Tasikmalaya—constitute the most important of all the residencies, though owing to their lack of harbour on the south and the intractable nature of much of their soil they have not shared in the prosperity enjoyed by many other parts of the island. Bandung, the chief town since 1864, lies 2300 ft. above sea-level, 109 m. south of Batavia by rail; it is a well-built and flourishing place (pop. 28,965; Europeans 1522, Chinese 2650) with a handsome resident's house (1867), a large mosque (1867), a school for the sons of native men of rank, the most important quinine factory in the island, and a race-course where in July a good opportunity is afforded of seeing both the life of fashionable and official Java and the customs and costumes of the common people. The district is famous for its waterfalls, one of the most remarkable of which is where the Chi Tarum rushes through a narrow gully to leap down from the Bandung plateau. In the neighbourhood is the great military camp of Chimahi. Chanjur, formerly the chief town, in spite of its loss of administrative position still has a population of 13,599. From Sukabumi (pop. 12,112; 569 Europeans), a pleasant health resort among the hills at an altitude of 1965 ft., tourists are accustomed to visit Wijnkoopers Bay for the sake of the picturesque shore scenery. Chichalengka became after 1870 one of the centres of the coffee industry. Sumedang has only 8013 inhabitants, having declined since the railway took away the highway traffic: it is exceeded both by Garut (10,647) and by Tasikmalaya (9196), but it is a beautiful place well known to sportsmen for its proximity to the Ranca Ekek swamp, where great snipe-shooting matches are

¹ See Walbreken, *De Taalsvoren in het Javaansh*; and G. A. Wilken, *Handboek voor de vergelijkende Volkenkunde van Nederlandsch Indie*, edited by C. M. Pleyte (1893).

² See Van den Berg's account of the MSS. of the Batavian Society (the Hague, 1877); and a series of papers by C. Poensen in *Meded. van wege het Ned. Zendinggenootschap* (1880).

held every year. For natural beauty few parts of Java can compare with the plain of Tasikmalaya, itself remarkable, in a country of trees, for its magnificent avenues. N.E. of the Preanger lies the residency of Cheribon¹ (properly Chi Rebon, the shrimp river). The chief town (pop. 24,564) is one of the most important places on the north coast, though the unhealthiness of the site has caused Europeans to settle at Tangkil, 2 m. distant. The church (1842), the regent's residence, and the great prison are among the principal buildings; there are also extensive salt warehouses. The native part of the town is laid out more regularly than is usual, and the Chinese quarter (pop. 3352) has the finest Chinese temple in Java. The palaces of the old sultans of Cheribon are less extensive than those of Surakarta and Jokjakarta. Though the harbour has to be kept open by constant dredging the roadstead is good all the year round. A strange pleasure palace of Sultan Supeh, often described by travellers, lies about 2 m. off near Sunya Raja. Mundu, a village 4 m. south-east of Cheribon, is remarkable as the only spot on the north coast of the island visited by the ikan prut or belly-fish, a species about as large as a cod, caught in thousands and salted by the local fishermen. Indramayu, which lies on both banks of the Chi Manuk about 8 m. from the coast, is mentioned under the name of Dermayo as a port for the rice of the district and the coffee of the Preanger. The coffee trade is extinct but the rice trade is more flourishing than ever, and the town has 13,400 inhabitants, of whom 2200 are Chinese. It might have a great commercial future if money could be found for the works necessary to overcome the disadvantage of its position—the roads being safe only during the east monsoon and the river requiring to be deepened and regulated. Tegal has long been one of the chief towns of Java: commerce, native trade and industry, and fisheries are all well represented and the sugar factories give abundant employment to the inhabitants. The harbour has been the object of various improvements since 1871. The whole district is densely populated (3100 to the sq. m.), and the town proper with its 16,605 inhabitants is surrounded by extensive kampongs (Balapulung, Lebaksu, &c.). In Pekalongan (pop. 38,211) and Batang (21,286) the most important industry is the production of battiks and stamped cloths; there are also iron works and sugar factories. The two towns are only some 5 m. apart. The former has a large mosque, a Protestant church, an old fort and a large number of European houses. The Chinese quarters consist of neat stone or brick buildings. Pekalongan smoked ducks are well known. Brebes (13,474) on the Pamah is an important trade centre. Banyumas (5000) is the seat of a resident; it is exceeded by Purwokerto (12,610), Purbalingga (12,094) and Chilachap (12,000). This last possesses the best harbour on the south coast, and but for malaria would have been an important place. It was chosen as the seat of a great military establishment but had to be abandoned, the fort being blown up in 1893. Semarang (pop. 80,286, of whom 4800 are Europeans and 12,372 Chinese) lies on the Kali Ngaran near the centre of the north coast. Up to 1824 the old European town was surrounded by a wall and ditch. It was almost the exact reproduction of a Dutch town without the slightest accommodation to the exigencies of the climate, the streets narrow and irregular. The modern town is well laid out. Among the more noteworthy buildings of Semarang are the old Prince of Orange fort, the resident's house, the Roman Catholic church, the Protestant church, the mosque, the military hospital. A new impulse to the growth of the town was given by the opening of the railway to Surakarta and Jokjakarta in 1875. As a seaport the place is unfortunately situated. The river has long been silted up; the roadstead is insecure in the west monsoon. After many delays an artificial canal, begun in 1858, became available as a substitute for the river; but further works are necessary. A second great canal to the east, begun in 1896, helps to prevent inundations and thus improve the healthiness of the town. Demak, 13 m. N.E. of Semarang, though situated in a wretched region of swamps and having only 5000 inhabitants, is famous in ancient Javanese history. The mosque, erected by the first sultan of Demak, was rebuilt in 1845; only a small part of the old structure has been preserved, but as a sanctuary it attracts 6000 or 7000 pilgrims annually. To visit Demak seven times has the same ceremonial value as the pilgrimage to Mecca. The tombs of several of the sultans are still extant. Salatiga ("three stones," with allusion to three temples now destroyed) was in early times one of the resting places of ambassadors proceeding to the court of Mataram, and in the European history of Java its name is associated with the peace of 1755 and the capitulation of 1811. It is the seat of a cavalry and artillery camp. Its population, about 10,000, seems to be declining. Ambarawa with its railway station is, on the other hand, rapidly increasing. Its population of 14,745 includes 459 Europeans. About a mile to the N. lies the fortress of Willem I. which Van den Bosch meant to make the centre of the Javanese system of defensive works; the Banyubiru military camp is in the neighbourhood. Kendal (15,000) is a centre of the sugar industry. Kudus (31,000; 4300 Chinese) has grown to be one of the most important inland towns. Its cloth and battik pedlars are

¹ Cheribon is the form employed by the Dutch: an exception to their usual system, in which Tj- takes the place of the Ch- used in this article.

known throughout the island and the success of their enterprise is evident in the style of their houses. A good trade is also carried on in cattle, kapok, copra, pottery and all sorts of small wares. The mosque in the old town has interesting remains of Majapahit architecture; and the tomb of Pangeran Kudus is a noted Mohammedan sanctuary. A steam tramway leads northward towards, but does not reach, Japara, which in the 17th century was the chief port of the kingdom of Mataram and retained its commercial importance till the Dutch Company removed its establishment to Semarang. In 1818 Daendels transferred its resident to Pati. Ungaran, 1026 ft. above the sea, was a place of importance as early as the 17th century, and in modern times has become known as a sanatorium. Rembang, a well-built coast town and the seat of a resident, has grown rapidly to have a population of 29,538 with 210 Europeans. Very similar to each other are Surakarta or Solo and Jokjakarta, the chief towns of the quasi-independent states or Vorstenlanden. Surakarta (pop. 109,459; Chinese 5159, Europeans 1913) contains the palace (Kraton, locally called the Bata bumi) of the susuhunan (which the Dutch translated as emperor), the dalem of Prince Mangku Negara, the residences of the Solo nobles, a small Dutch fort (Vastenburg), a great mosque, an old Dutch settlement, and a Protestant church. Here the susuhunan lives in Oriental pomp and state. To visitors there are few more interesting entertainments than those afforded by the celebration of the 31st of August (the birthday of the queen of the Netherlands) or of the New Year and the Puasa festivals, with their wayangs, ballet-dancers, and so on. Jokjakarta (35 m. S.) has been a great city since Mangku Bumi settled there in 1755. The Kraton has a circuit of 3½ m., and is a little town in itself with the palace proper, the residences of the ladies of the court and kampongs for the hereditary smiths, carpenters, sculptors, masons, payong-makers, musical instrument makers, &c., of his highness. The independent Prince Paku Alam has a palace of his own. As in Surakarta there are an old Dutch town and a fort. The Jogka market is one of the most important of all Java, especially for jewelry. The total population is 72,235 with 1424 Europeans. To the south-east lies Pasar Gedeh, a former capital of Mataram, with tombs of the ancient princes in the Kraton, a favourite residence of wealthy Javanese traders. Surabaya (q.v.), on the strait of Madura, is the largest commercial town in Java. Its population increased from 118,000 in 1890 to 146,944 in 1900 (8906 Europeans). To the north lies Grissie or Gresik (25,688 inhabitants) with a fairly good harbour and of special interest in the early European history of Java. Inland is the considerable town of Lamongan (12,485 inhabitants). Fifteen miles S. by rail lies Sidoarjo (10,207; 185 Europeans), the centre of one of the most densely populated districts and important as a railway junction. In the neighbourhood is the populous village of Mojokari. Pasuruan was until modern times one of the chief commercial towns in Java, the staple being sugar. Since the opening of the railway to Surabaya it has greatly declined, and its warehouses and dwelling houses are largely deserted. The population is 27,152 with 663 Europeans. Probolinggo (called by the natives Banger) is a place of 13,240 inhabitants. The swampy tracts in the vicinity are full of fishponds. The baths of Banyubiru (blue water) to the south have Hindu remains much visited by devotees. Pasirian in the far south of the residency is a considerable market town and the terminus of a branch railway. Besuki, the easternmost of all the residencies, contains several places of some importance: the chief town Bondowoso (8289); Besuki, about the same size, but with no foreign trade; Jember, a small but rapidly increasing place, and Banyuwangi (17,559). This last was at one time the seat of the resident, now the eastern terminus of the railway system, and is a seaport on the Bali Strait with an important office of the telegraph company controlling communication with Port Darwin and Singapore. It has a very mingled population, besides Javanese and Madurese, Chinese and Arabs, Balinese, Buginese and Europeans. The chief town of Kediri (10,489) is the only residency town in the interior traversed by a navigable river, and is exceeded by Tulungagung; and the residency of Madiun has two considerable centres of population: Madiun (21,168) and Ponorogo (16,765).

Agriculture.—About 40 % of the soil of Java is under cultivation. Bantam and Besuki have each 16 % of land under cultivation; Krawang, 21 %; Preanger, 23 %; Rembang, 30 %; Japara, 62 %; Surabaya, 65 %; Kedu, 66 %; Samarang, 67 %. Proceeding along the south coast from its west end, we find that in Bantam all the land cultivated on its south shore amounts to at most but 5 % of that regency; in Preanger and Banyumas, as far as Chilachap, the land under cultivation amounts to a maximum to 20 %. East of Surakarta the percentages of land on the south coast under cultivation decline from 30 to 20 and 10. East of the residency of Probolinggo the percentage of land cultivated on the south coast sinks to as low as 2. On the north coast, in Krawang and Rembang, with their morasses and double chains of chalk, there are districts with only 20 % and 10 % of the soil under cultivation. In the residencies, on the other hand, of Batavia, Cheribon, Tegal, Samarang, Japara, Surabaya and Pasuruan, there are districts having 80 % to 90 % of soil, and even more, under cultivation.

The agricultural products of Java must be distinguished into those raised by the natives for their own use and those raised for the government and private proprietors. The land assigned to the

natives for their own culture and use amounts to about 9,625,000 acres. In western Java the prevailing crop is rice, less prominently cultivated in middle Java, while in eastern Java and Madura other articles of food take the first rank. The Javanese tell strange legends concerning the introduction of rice, and observe various ceremonies in connexion with its planting, paying more regard to them than to the proper cultivation of the cereal. The agricultural produce grown on the lands of the government and private proprietors, comprising an area of about 3½ million acres, consists of sugar, cinchona, coffee, tobacco, tea, indigo, &c. The Javanese possess buffaloes, ordinary cattle, horses, dogs and cats. The buffalo was probably introduced by the Hindus. As in agricultural products, so also in cattle-rearing, western Java is distinguished from middle and eastern Java. The average distribution of buffaloes is 106 per 1000 inhabitants, but it varies considerably in different districts, being greatest in western Java. The fact that rice is the prevailing culture in the west, while in eastern Java other plants constitute the chief produce, explains the larger number of buffaloes found in western Java, these animals being more in requisition in the culture of rice. The ordinary cattle are of mixed race; the Indian zebu having been crossed with the banting and with European cattle of miscellaneous origin. The horses, though small, are of excellent character, and their masters, according to their own ideas, are extremely particular in regard to purity of race. Riding comes naturally to the Javanese; horse-races and tournaments have been in vogue among them from early times.

Coffee is an alien in Java. Specimens brought in 1696 from Cannanore on the Malabar coast perished in an earthquake and floods in 1699; the effective introduction of the precious shrub was due to Hendrik Zwaardkron (see N. P. van den Berg, "Voortbrenging en verbruik van koffie," *Tijdschrift v. Nijverh. en Landb.* 1879; and the article "Koffie" in *Encyc. Ned. Ind.* Wijkawih is mentioned in a Kavi inscription of A.D. 850, and the bean-broth in David Tappen's list of Javanese beverages, 1667-1682, may have been coffee. The first consignment of coffee (894 lb) to the Netherlands was made in 1711-1712, but it was not till after 1721 that the early exports reached any considerable amount. The aggregate quantity sold in the home market from 1711 to 1791 was 2,036,437 piculs, or on an average about 143 tons per annum; and this probably represented nearly the whole production of the island. By the beginning of the 19th century the annual production was about 7143 tons and after the introduction of the Van den Bosch system of forced culture a further augmentation was effected. The forced culture system was, in 1909, however, of little importance. Official reports show that from 1840 to 1873 the amount ranged from 5226 tons to 7354. During the ten years 1869 to 1878 the average crop of the plantations under state control was 5226 tons, that of the private planters about 810. The government has shown a strange reluctance to surrender the old-fashioned monopoly, but the spirit of private enterprise has slowly gained the day. Though the appearance of the coffee blight (*Hemileia vastatrix*) almost ruined the industry the planters did not give in. An immune variety was introduced from Liberia, and scientific methods of treatment have been adopted in dealing with the plantations. In 1887, a record year, the value of the coffee crop reached £3,083,333, and at its average it was about £1,750,000 between 1886 and 1895. The value was only £1,106,666 in 1896. The greatest difficulties are the uncertainties both of the crop and of its marketable value. The former is well shown in the figures for 1903 to 1905: government 17,900, 3949 and 3511 tons, and private planters 22,395, 15,311 and 21,395 tons. Liberia coffee is still produced in much smaller quantity than Java coffee; the latter on an average of these three years 21,360 tons; the former 7409.

The cultivation of sugar has been long carried on in Java, and since the decline of the coffee plantations it has developed into the leading industry of the island. There are experimental stations at Pasuruan, Pekalongan and elsewhere, where attempts are made to overcome the many diseases to which the cane is subject. Many of the mills are equipped with high-class machinery and produce sugar of excellent colour and grain. In 1853-1857 the average crop was 98,094 tons; in 1869-1873, 170,831, and in 1875-1880, 204,678. By 1899-1900 the average had risen to 787,673 tons; and the crops for 1904 and 1905 were respectively 1,064,935 and 1,028,357 tons. Prices fluctuate, but the value of the harvest of 1905 was estimated at about £15,000,000.

The cultivation of indigo shows a strange vitality. Under the culture system the natives found this the most oppressive of all the state crops. The modern chemist at one time seemed to have killed the industry by his synthetic substitute, but in every year between 1899 and 1904 Java exported between one million and one and a half million pounds of the natural product. Japan and Russia were the largest buyers. As blue is a favourite colour with the Javanese proper a large quantity is used at home.

Tea was first introduced to Java by the Japanese scholar von Siebold in 1826. The culture was undertaken by the state in 1829 with plants from China, but in 1842 they handed it over to contractors, whose attempts to increase their profits by delivering an inferior article ultimately led to the abandonment of the contract system in 1860. In the meantime the basis of a better state of the industry had been laid by the Dutch tea-taster J. J. L. Jacobsen

of the Nederlandsch Handel Maatschappij, who introduced not only fresh stock, but expert growers from China in 1852-1853. The tea-planters (often taking possession of the abandoned coffee-plantations) have greatly improved the quality of their products. Assam tea was introduced in 1878, and this has rapidly extended its area. The exports increased from 12,110,724 lb in 1898 to 25,772,564 lb in 1905. More than half the total goes to the Netherlands; the United Kingdom ranks next, and, far behind both, Russia.

In 1854 the government introduced the culture of cinchona with free labour, and it had considerable success under F. Junghuhn and his successors, though the varieties grown were of inferior quality. Later seed of the best cinchona was obtained, and under skilful management Java has become the chief producer of quinine in the world. Cacao is produced in the Preanger regencies, Pekalongan, Semarang, Pasuruan, Besuki, Kediri and Surakarta. In 1903, a record year, 1,101,835 piculs (about 6540 tons) were produced. *Broussonetia papyrifera* is grown for the sake of its bark, so well known in Japan (Jap. *kodsu*) as a paper material. The ground-nut (the widely spread *Arachis hypogaea* from South America), locally known as *kachang china* or *tanah*, is somewhat extensively grown. The oil is exported to Holland, where it is sold as Delft salad oil. Tapioca has long been cultivated, especially in the Preanger. The industry is mainly in the hands of the Chinese, and the principal foreign purchasers are English biscuit manufacturers. The kapok is a tree from tropical America which, growing freely in any soil, is extensively used throughout Java along the highways as a support for telegraph and telephone wires, and planted as a prop in pepper and cube plantations. The silky fibre contained in its long capsuloid fruits is known as cotton wool; and among other uses it serves almost as well as cork for filling life-belts; and the oil from its seed is employed to adulterate ground-nut oil. The quantity of wool exported nearly trebled between 1890 and 1896, in the latter year the total sent to Holland, Australia, Singapore, &c., amounting to 38,586 bales. The rapid exhaustion of the natural supply of india-rubber and gutta-percha began to attract the attention of government in the latter decades of the 19th century. Extensive experiments have been made in the cultivation of *Ficus elastica* (the karet of the natives), *Castilloa elastica*, and *Hevea brasiliensis*. The planting of gutta-percha trees was begun about 1886, and a regular system introduced in the Preanger in 1901. The *Palaeum oblongifolium* plantations at Blavan, Kemutuk and Sewang in Banyumas have also been brought under official control. Java tobacco, amounting to about 35,200,000 lb a year, is cultivated almost exclusively in eastern Java. Among other products which are of some importance as articles of export may be mentioned nutmegs, mace, pepper, hides, arrack and copra.

Particular Lands.—At different times down to 1830 the government disposed of its lands in full property to individuals who, acquiring complete control of the inhabitants as well as of the soil, continued down to the 19th century to act as if they were independent of all superior authority. In this way more than 1½ millions of the people were subject not to the state but to "stock companies, absentee landlords and Chinese." According to the *Regeerings Almanak* (1906) these "particular lands," as they are called, were distributed as follows: Bantam 21, Batavia 36, Meester Cornelis 163, Tangerang 80, Buitenzorg 61, Semarang 32, Surabaya 46, Krawang and Demak 3 each, Cheribon 2, and Pekalongan, Kendal and Pasuruan 1 each. In Meester Cornelis no fewer than 297,912 persons were returned in 1905 as living on these lands. Of the 168 estates there are not 20 that grow anything but grass, rice and coconuts. In Buitenzorg (thanks probably to the Botanic Gardens) matters are better: tea, coffee, cinchona and india-rubber appearing amongst the objects of cultivation; and, in general, it must be noted that these estates have often natural difficulties to contend against far beyond their financial strength.

Minerals.—Of all the great islands of the archipelago Java is the poorest in metallic ores. Gold and silver are practically non-existent. Manganese is found in Jokjakarta and various other parts. A concession for working the magnetic iron sands in the neighbourhood of Chilachap was granted in 1904. Coal occurs in thin strata and small pockets in many parts (Bantam, Rembang, Jokjakarta, &c.); and in 1905 a concession was granted to a company to work the coal-beds at Bajah close to the harbour of Wijnkoopers Bay, a port of call of the Koninklijk Paketvaart Maatschappij. The discovery by De Groot in 1863 of petroleum added a most important industry to the list of the resources of Java. The great Dort Petroleum Company, now centred at Amsterdam, was founded in 1887. The production of this company alone rose from 79,179 kisten or cases (each 8.14 gall.) in 1891 to 1,642,780 in 1899, and to 1,967,124 in 1905. In 1904 there were no fewer than 36 concessions for petroleum. At the same time there is a larger importation of oil from Sumatra as well as from America and Russia. Sulphur is regularly worked in the Gunung Slamet, G. Sindoro, G. Sumbing, and in the crater of the Tangkuban Prahau as well as in other places in the Preanger regencies and in Pasuruan. Brine-wells exist in various parts. The bledags (salt-mud wells) of Grobogan in the Solo Valley, Semarang, are best known. They rise from Miocene strata and yield iodine and bromine products as well as common salt. The natives of the district are allowed to extract the salt for their own use, but elsewhere (except in Jokjakarta) the manufacture

of salt is a government monopoly and confined to the districts of Sumenep, Panekasan and Sampang in Madura, where from 3000 to 4000 people are hereditarily engaged in extracting salt from sea water, delivering it to the government at the rate of 10 fl. (nearly 17s.) per koyang (3700 lb). The distribution of this salt (rough-grained, greyish and highly hygroscopic) is extremely unsatisfactory. The waste was so great that in 1901 the government paid a prize of about f835 (10,000 fl.) to Karl Boltz von Bolzberg for an improved method of packing. Between 1888 and 1892 the annual amount delivered was 71,405 tons; in the next five years it rose to 89,932; and between 1898 and 1902 sank again to 88,856. The evil effects of this monopoly have been investigated by J. E. de Meyer, "Zout als middel van belasting," *De Ind. Gids*. (1905). The scarcity of salt has led to a great importation of salted fish from Siam (upwards of 6600 tons in 1902).

Communications.—Roads and railways for the most part follow the fertile plains and table-lands along the coast and between the volcanic areas. The principal railways are the Semarang-Jokjakarta and Batavia-Buitenzorg lines of the Netherlands-Indian railway company, and the Surabaya-Pasuruan, Bangil-Mulang, Sidoarjo-Paron, Kertosono-Tulung Agung, Buitenzorg-Chianjur, Surakarta-Madiun, Pasuruan-Probolinggo, Jokjakarta-Chilachap and other lines of the government. The earliest lines, between Batavia and Buitenzorg and between Semarang and the capitals of the sultanates, were built about 1870 by a private company with a state guarantee. Since 1875, when Dr van Goltstein, then a cabinet minister and afterwards Dutch minister in London, had an act passed for the construction of state railways in Java, their progress has become much more rapid. In addition, several private companies have built either light railways or tramways, such as that between Semarang and Joana, and the total length of all lines was 2460 in 1905. There are some 3500 miles of telegraph line, and cables connect Java with Madura, Bali and Sumatra, and Port Darwin in Australia. Material welfare was promoted by the establishment of lines of steamships between Java and the other islands, all belonging to a Royal Packet Company, established in 1888 under a special statute, and virtually possessing a monopoly on account of the government mail contracts.

Administration.—Each village (*desa*) forms an independent community, a group of *desas* forms a district, a group of districts a department and a group of departments a residency, of which there are seventeen. At the head of each residency is a resident, with an assistant resident and a controller, all Dutch officials. The officials of the departments and districts are natives appointed by the government; those of the *desa* are also natives, elected by the inhabitants and approved by the resident. In the two sultanates of Surakarta and Jokjakarta the native sultans govern under the supervision of the residents. (For the colonial administration of Netherlands India see MALAY ARCHIPELAGO.)

History.—The origin of the name Java is very doubtful. It is not improbable that it was first applied either to Sumatra or to what was known of the Indian Archipelago—the insular character of the several parts not being at once recognized. Jawa Dwipa, or "land of millet," may have been the original form and have given rise both to the Jaba diu of Ptolemy and to the Jc-pho-thi of Fahien, the Chinese pilgrim of the 4th–5th century. The oldest form of the name in Arabic is apparently Zābej. The first epigraphic occurrence of Jawa is in an inscription of 1343. In Marco Polo the name is the common appellation of all the Sunda islands. The Jawa of Ibn Batuta is Sumatra; Java is his Mul Jawa (*i.e.* possibly "original Java"). Jāwā is the modern Javanese name (in the court speech Jawi), sometimes with Nusa, "island," or Tanah, "country," prefixed.

It is impossible to extract a rational historical narrative from the earlier *babads* or native chronicles, and even the later are destitute of any satisfactory chronology. The first great era in the history is the ascendancy of the Hindus, and that breaks up into three periods—a period of Buddhism, a period of aggressive Sivaism, and a period of apparent compromise. Of the various Hindu states that were established in the island, that of Majapahit was the most widely dominant down to the end of the 15th century; its tributaries were many, and it even extended its sway into other parts of the archipelago. The second era of Javanese history is the invasion of Islam in the beginning of the 15th century; and the third is the establishment of European and more particularly of Dutch influence and authority in the island. About 1520 the Portuguese entered into commercial relationship with the natives, but at the close of the same century the Dutch began to establish themselves. At the time when the Dutch East India Company began to fix its trading factories on the coast towns, the chief native states

were Mataram, which had in the 16th century succeeded to the overlordship possessed by the house of Demak—one of the states that rose after the fall of Majapahit. The emperors of Java, as the princes of Mataram are called in the early accounts, had their capital at Kartasura, now an almost deserted place, 6 m. west of Surakarta. At first and for long the company had only forts and little fragments of territory at Jakatra (Batavia), &c.; but in 1705 it obtained definite possession of the Preanger by treaty with Mataram; and in 1745 its authority was extended over the whole north-east coast, from Cheribon to Banyuwangi. In 1755 the kingdom of Mataram was divided into the two states of Surakarta and Jokjakarta, which still retain a shadow of independence. The kingdom of Bantam was finally subjugated in 1808. By the English occupation of the island (1811–1818) the European ascendancy was rather strengthened than weakened; the great Java war (1825–30), in which Dipā Negārā, the last Javanese prince, a clever, bold and unscrupulous leader, struggled to maintain his claim to the whole island, resulted in the complete success of the Dutch. To subdue him and his following, however, taxed all the resources of the Dutch Indian army for a period of five years, and cost it the loss of 15,000 officers and soldiers, besides millions of guilders. Nor did his great influence die with him when his adventurous career came to a close in 1855 at Macassar. Many Javanese, who dream of a restoration of their ancient empire, do not believe even yet that Dipā Negārā is dead. They are readily persuaded by fanatical *hadjis* that their hero will suddenly appear to drive away the Dutch and claim his rightful heritage. Several times there have been political troubles in the native states of central Java, in which Dipā Negārā's name was used, notably in 1883, when many rebellious chieftains were exiled. Similar attempts at revolt had been made before, mainly in 1865 and 1870, but none so serious perhaps as that in 1849, in which a son and a brother of Dipā Negārā were implicated, aiming to deliver and reinstate him. All such attempts proved as futile there as others in different parts of Java, especially in Bantam, where the trouble of 1850 and 1888 had a religious origin, and in the end they directly contributed to the consolidation of Dutch sway. Being the principal Dutch colony in the Malay Archipelago, Java was the first to benefit from the material change which resulted from the introduction of the Grondwet or Fundamental Law of 1848 in Holland. The main changes were of an economical character, but the political developments were also important. Since 1850 Dutch authority has steadily advanced, principally at the expense of the semi-independent sultanates in central Java, which had been allowed to remain after the capture and exile of Dipā Negārā. The power of the sultans of Jokjakarta and Surakarta has diminished; in 1863 Dutch authority was strengthened in the neighbouring island of Madura, and Bantam has lost every vestige of independence. The strengthening of the Dutch power has largely resulted from a more statesmanlike and more generous treatment of the natives, who have been educated to regard the *orang blanda*, or white man, as their protector against the native rulers. Thus, in 1866, passports for natives travelling in Java were abolished by the then governor-general, Dr Sloet van de Beele, who also introduced many reforms, reducing the *corvée* in the government plantations to a minimum, and doing away with the monopoly of fisheries. Six years later a primary education system for the natives, and a penal code, whose liberal provisions seemed framed for Europeans, were introduced.

Antiquities.—Ordinary traces of early human occupation are few in Java. The native bamboo buildings speedily perish. Stone weapons are occasionally found. But remains of the temples and monastic buildings of the Hindu period are numerous and splendid, and are remarkable as representing architecture which reached a high standard without the use of mortar, supporting columns or arches. Chandis (*i.e.* temples, though the word originally meant a depository for the ashes of a saint) are not found in western Java. They exist in two great zones: one in middle Java, one in eastern Java, each with its own distinguishing characteristics, both architectural and religious. The former begins in the Dyeng plateau, in the east of Banyumas, and extends into the east of Bagelen, Kedu and the neighbouring districts of Semarang, northern Jokjakarta, and the western corner of Surakarta. The latter lies mainly in Surabaya, Kediri and Pasuruan. A considerable number of

ruins also exist in Probolinggo. Farther east they grow scarce. There is none in Madura. The remains of Macham Putih in Banyuwangi are possibly of non-Hindu origin. In the regency of Kendal (Semarang), to the north of Kedu, the place-names show that temples once existed.¹ Some of them are Sivaite, some Buddhist, some astoundingly composite. None of the Buddhist buildings shows traces of the older Himayana form of the creed. The greatest of all is a perfect sculptural exposition of the Mahayana doctrine. As to the period during which these temples were erected, authorities are not agreed. Ijzerman assigns the central Java groups to between the 8th and the 10th centuries. The seven-storeyed vihara (monastery) mentioned in the famous Menang-Kabu inscription (Sumatra) as founded by Maharaja Dhiraya Adityadharma in A.D. 656 is by some supposed to be Boro-Budur. A copper plate of 840 refers to Dyeng (Dhyang) as one of the sacred mountains of Java. One thing seems certain, that the temples of the eastern zone are of much more recent origin than most, at least, of the central zone. They are generally distinguished by the characteristics of a decadent and more voluptuous age, and show that the art of the time had become less Indian and more Javanese, with traces of influences derived from the more eastern East. At the same time it must be noted that even in Boro-Budur there are non-Indian elements in the decoration, indicating that the Hindu architect employed native artists and to some extent left them a free hand.

In his standard work on *Indian and Eastern Architecture* (London, 1876), James Fergusson asserted that the Javanese temples are in the Chalukyan style. But J. W. Ijzerman in an elaborate paper in the *Album-Kern* contends that the learned historian of architecture was misled by basing his opinion mainly on inaccurate drawings reproduced by Raffles. The Javanese temples, with the solitary exception of Chandi Bima in the Dyeng, are Dravidian and not Chalukyan. The very temples quoted by Fergusson, when more carefully examined, disprove his statement: a fact not without its bearing on the history of the Hindu immigration.

The wonderful scenery of the Dyeng plateau was already, in all probability, an object of superstitious awe to the aboriginal inhabitants of Java; and thus it would catch the attention of the earliest Hindu settlers. The old crater floor is full of traces of human occupation; though, in spite of the tradition of the existence of a considerable town, no sepulchral relics of the inhabitants have been discovered. There still remain five groups of temples—some well preserved, some mere heaps of stone—to prove the devotion their builders bore to Siva, his consort Durga, and Ganesha their son. The Arjuno group, in the middle of the plateau, consists of Chandi Arjuno (with its chapel or priests' residence, Ch. Semar), Ch. Srihahdi, Ch. Puntadeva and Ch. Sembador, each a simple square chamber with a portico reached by a flight of steps. The second group, Ch. Daravati and Ch. Parakesit, lies to the north-east. The third, now a ruined mound, lies to the east. The fourth, to the north-west, is a group of seven small temples of which Ch. Sanchaki is the most important, with a square ground plan and an octagon roof with a second circular storey. Of the fifth group, in the south, only one temple remains—the Chandi Bima—a small, beautiful and exceptionally interesting building, in "the form of a pyramid, the ribs of which stand out much more prominently than the horizontal lines of the niche-shaped ornaments which rest each on its lotus cushion." How this happens to be the one Chalukyan temple amid hundreds is a problem to be solved. The plateau lies 6500 ft. above the sea, and roads and stairways, locally known as Buddha roads, lead up from the lowlands of Bagelen and Pekalongan. The stairway between Lake Menjur and Lake Chebong alone consisted of 4700 steps. The width of the roadway, however, is only some three or four feet. A remarkable subterranean tunnel still exists, which served to drain the plateau.

Of all the Hindu temples of Java the largest and most magnificent is Boro-Budur, which ranks among the architectural marvels of the world. It lies in the residency of Kedu, a little to the west of the Progo, a considerable stream flowing south to the Indian Ocean. The place is best reached by taking the steam-tram from Magelang or Jokjakarta to the village of Muntlam Passar, where a conveyance may be hired. Strictly speaking, Boro-Budur is not a temple but a hill, rising about 150 ft. above the plain, encased with imposing terraces constructed of hewn lava-blocks and crowded with sculptures. The lowest terrace now above ground forms a square, each side 497 ft. long. About 50 ft. higher there is another terrace of similar shape. Then follow four other terraces of more irregular contour. The structure is crowned by a dome or cupola 52 ft. in diameter surrounded by sixteen smaller bell-shaped cupolas. Regarded as a whole, the main design, to quote Mr Sewell, may be described as "an archaic Indian temple, considerably flattened and consisting of a series of terraces, surmounted by a quasi-stupa

capped by a dagoba." It was discovered by the engineer J. W. Ijzerman in 1885 that the basement of the structure had been earthed up before the building was finished, and that the lowest retaining wall was completely concealed by the embankment. The architects had evidently found that their temple was threatened with a destructive subsidence; and, while the sculptors were still busy with the decoration of the lower façades, they had to abandon their work. But the unfinished bas-reliefs were carefully protected by clay and blocks of stone and left in position; and since 1896 they are gradually but systematically being exhumed and photographed by the Dutch archaeologists, who, however, have to proceed with caution, filling up one portion of the embankment before they go on to deal with another. The subjects treated in this lowest enceinte are of the most varied description, forming a picture-gallery of landscapes, scenes of outdoor and domestic life, mingled with mythological and religious designs. Among the genre class appear men shooting birds with blow-pipe or bow and arrow, fishermen with rod or net, a man playing a bagpipe, and so on. It would seem as if the architect had intended gradually to wean the devotees from the things of this world. When once they began to ascend from stage to stage of the temple-hill they were introduced to the realities of religion; and, by the time they reached the dagoba they had passed through a process of instruction and were ready, with enlightened eyes, to enter and behold the image of Buddha, symbolically left imperfect, as beyond the power of human art to realize or portray. From basement to summit the whole hill is a great picture bible of the Mahayana creed.

If the statues and bas-reliefs of Boro-Budur were placed side by side they would extend for 3 m. The eye of the spectator, looking up from the present ground-level, is caught, says Mr Sewell, by the rows of life-size Buddhas that adorn the retaining walls of the several terraces and the cage-like shrines on the circular platforms. All the great figures on the east side represent Akshobhya, the Dhyan Buddha of the East. His right hand is in the Chumiparsa mudra (pose) touching the earth in front of the right knee—"I swear by the earth." All the statues on the south side are Ratnasam Chavu in the varada mudra—the right hand displayed upwards—"I give you all." On the west side the statues represent Amitabha in the dhyana or padmasama mudra, the right hand resting palm upwards on the left, both being on the lap—the attitude of meditation. Those on the north represent Amoghasiddhi in the abhaya mudra, the right hand being raised and displayed, palm outwards—"Fear not, all is well."

Other remarkable groups of Hindu temples exist near the village of Prambanan² (less correctly Brambanan) in Surakarta, but not far from the borders of Jokjakarta, with a station on the railway between the two chief towns. The village has been named after the temples, Prambanan signifying the place of teachers. The whole ecclesiastical settlement was surrounded by three lines of wall, of which only the inmost is now visible above ground. Between the second and third walls are 157 small temples, and in the central enclosure are the ruins of six larger temples in a double row with two smaller ones at the side. The middle temple of the western row is the main building, full of statues of purely Sivaite character—Siva as Guru or teacher, Siva as Kala or Time the Destroyer, Durga, Ganesha, and so on. But, just as many churches in Christendom are called not after the Christ but after the Virgin, so this is known as Lara (i.e. Virgin) Janggrang from the popular name of Durga. In the southern temple of the row is a very fine figure of a four-armed Brahma; in the northern there was a Vishnu with attendant figures. Of the other row the middle temple is again the largest, with Siva, his nandi or bull, and other symbolic sculptures. To the north lies the extraordinary cluster of temples which, though it does not deserve its popular name of Chandi Sewu, the thousand shrines, consists of at least 240 small buildings gathered round a great central temple, richly adorned, though roofless and partially ruined since the earthquake of 1867. Among the more noteworthy figures are those of the huge and ungainly guardians of the temple kneeling at the four main gateways of each of the principal buildings. Colonel Yule pointed out that there are distinct traces of a fine coat of stucco on the exterior and the interior of the buildings, and he compared in this respect "the cave walls of Ellora, the great idols at Bamian, and the Doric order at Selinus." Other temples in the same neighbourhood as Chandi Sewu are Ch. Lumbung, Ch. Kali Bening (Baneng), with a monstrous Kala head as the centre of the design on the southern side, Ch. Kalong and Ch. Plaosan. Tradition assigns these temples to 1266–1296.

Of the temples of the eastern zone the best known is Chandi Jago (or Tumpang), elaborately described in the Archaeological Commission's monograph. According to the *Pararaton*, a native chronicle (published in the *Verhand. v. h. Bat. Gen. v. K. en W.*, 1896), it belongs to the 13th century, containing the tomb of Rangavuni or Vishnuvardhana, who died in 1272–1273. The shrine proper occupies the third of three platforms, the lowest of which forms a

¹ See R. Verbeek, "Liget der oudheden van Java," in *Verhand. v. h. Bat. Gen.*, xlvii, and his *Oudheid kundige kaart van Java*. R. Sewell's "Antiquarian Notes in Java," in *Journal of the Royal Asiatic Society* (1906), give the best conspectus available for English readers. W. B. Worsfold, *A Visit to Java* (London, 1893), has a good sketch of what was then known, revised by Professor W. Rhys Davids; but whoever wishes full information must refer to Dutch authorities. These are numerous but difficult of access.

² The chief authorities on Prambanan are J. W. Ijzerman, *Beschrijving der oudheden nabij de Grens der residenties Soerabarta en Djogjakarta* (Batavia, 1891, with photographs and atlas); and J. Groneman, *Tjandi Parambanan op Midden Java*; see also *Guide à travers l'exposition des Pays-Bas* (the Hague, 1900), No. 174 sqq.

square of 45 to 46 ft. each side. The building fronts the west, and is constructed of an andesitic tuff of inferior quality and dark colour. Of distinctly Buddhist influence there is no trace. The *makara* (elephant-fish head) is notably absent. The sculptures which run round the base and along the sides of the platforms or terraces are of the most elaborate and varied description—kings on thrones, dwarfs, elephants, supernatural beings, diabolical and grotesque, tree-monsters, palaces, temples, courtyards, lakes, gardens, forests—all are represented. In one place appears a Chinese- or Burmese-looking seven-rooted pagoda; in another, a tall temple strangely split down the centre, with a flight of steps running up the fissure. The inscriptions are in the Devanagari character. In the same neighbourhood are Ch. Singossari, Ch. Kudal, &c. Another of the most beautiful of the eastern temples is Ch. Jabung, mentioned in 1330. It is built of red brick; and its distinctly Javanese origin is suggested by the frequency of the snake-motif still characteristic of modern Javanese art. It may be added that a comparison of the several buildings of the zone affords an interesting study in the development of the pilaster as a decorative rather than structural element.

At Panabaram, near Blitar, Kediri, is another group of stone temples and other buildings. The chief temple is remarkable for the richness of its sculptures, which are peculiarly delicate and spirited in their details. The decoration of the mere robes of one of the free-standing stairway-guardians consists of scroll-work, interspersed with birds and animals rendered in a non-Indian style, reminiscent of Chinese or Japanese work. It has been described as one of the most beautiful pieces of sculpture in all the East.

Sculptures from the temples are scattered far and wide throughout Java, and it is one of the greatest difficulties of the archaeologist to determine the origin of many of the most interesting specimens. This, too, is often the case with those that have found their way to the museums of Java and Europe (Batavia, Leiden, Haarlem, Berlin, &c.). Minor relics of the past are to be found alike in the palaces of the nobles and the huts of the highland peasants. Zodiac cups of copper or bronze dating from the 12th or 13th century are in daily use among the Tengerese. The musical instruments used by the musicians of the native courts are often prized on account of their great antiquity.

As many of the Chinese came from China centuries ago and have not ceased to hold intercourse with their native country, the houses of the wealthier men among them are often rich in ancient specimens of Chinese art. The special exhibition organized by Henri Borel and other enthusiasts showed how much of value in this matter might be brought together in spite of the reluctance of the owners to commit the sacrilege of exposing to public gaze the images of their ancestral gods and heroes. Borel has given exquisite examples of images of Kwan-yin (the Chinese Virgin-Goddess), of Buddhas, of the ghoulish god of literature, of Lie-tai-Peh (the Chinese poet who has gone to live in the planet Venus), &c., in illustration of his papers in *L'Art flamand et hollandais*, pt. v. (1900), a translation of his monograph published at Batavia.

(H. A. W.; O. J. R. H.)

JAVELIN, a spear, particularly one light enough to be thrown, a dart. The javelin was often provided with a thong to help in casting (see **SPEAR**). Javelin-throwing is one of the contests in the athletic section at the international Olympic games. Formerly the sheriff of a county or borough had a body of men armed with javelins, and known as javelin-men, who acted as a bodyguard for the judges when they went on assize. Their duties are now performed by the ordinary police. The word itself is an adaptation of Fr. *javeline*. There are several words in Celtic and Scandinavian languages and in Old English, meaning a spear or dart, that seem to be connected with *javel*, the base form in French; thus Welsh *gaslach*, Irish *gabhlá*, O. Norwegian *gaflok*, O. E. *gafeluc*, later in the form *gavelock*, cf. O. Norman-Fr. *gavelot*, *javelot*, Ital. *giavelotto*. The origin

seems to be Celtic, and the word is cognate with Ir. *gafa*, a hook, fork, gaff; the root is seen in "gable" (*q.v.*), and in the German *Gabel*, fork. The change in meaning from fork, forked end of a spear, to the spear itself is obscure.

JAW (Mid. Eng. *jawe*, *jowe* and *geowe*, O. Eng. *cheowan*, connected with "chaw" and "chew," and in form with "jowl"), in anatomy, the term for the upper maxillary bone, and the mandible or lower maxillary bone of the skull; it is sometimes loosely applied to all the lower front parts of the skull (*q.v.*).

JAWĀLIQĪ, ABU MANSŪR MAUHŪB UL-JAWĀLIQĪ (1073–1145), Arabian grammarian, was born at Bagdad, where he studied philology under Tibrizī and became famous for his handwriting. In his later years he acted as imam to the caliph Moqtafi. His chief work is the *Kitāb ul-Mu'arrab*, or "Explanation of Foreign Words used in Arabic."

The text was edited from an incomplete manuscript by E. Sachau (Leipzig, 1867). Many of the lacunae in this have been supplied from another manuscript by W. Spitta in the *Journal of the German Oriental Society*, xxxiii. 208 sqq. Another work, written as a supplement to the *Durrat ul-Ghawwās* of Hariri (*q.v.*), has been published as "Le Livre des locutions vicieuses," by H. Derenbourg in *Morgenländische Forschungen* (Leipzig, 1875), pp. 107–166. (G. W. T.)

JAWHAR, a native state of India, in the Konkan division of Bombay, situated among the lower ranges of the western Ghats. Area, 310 sq. m. Pop. (1901), 47,538. The estimated revenue is £11,000; there is no tribute. The chief, who is a Koli by caste, traces back his descent to 1343. The leading exports are teak and rice. The principal village is that of Jawhar (pop. 3567).

JAWORÓW, a town in Galicia, Austria, 30 m. W. of Lemberg. Pop. (1900), 10,090. It has a pottery, a brewery, a distillery and some trade in agricultural produce. Not far from it is the watering-place of Szko with sulphur springs. The town was a favourite residence of John Sobieski, who there received the congratulations of the pope and the Venetian republic on his success against the Turks at Vienna (1683). At Jaworów Peter the Great was betrothed to Catherine I.

JAY, JOHN (1745–1829), American statesman, the descendant of a Huguenot family, and son of Peter Jay, a successful New York merchant, was born in New York City on the 12th of December 1745. On graduating at King's College (now Columbia University) in 1764, Jay entered the office of Benjamin Kissam, an eminent New York lawyer. In 1768 he was admitted to the bar, and rapidly acquired a lucrative practice. In 1774 he married Sarah, youngest daughter of William Livingston, and was thus brought into close relations with one of the most influential families in New York. Like many other able young lawyers, Jay took an active part in the proceedings that resulted in the independence of the United States, identifying himself with the conservative element in the Whig or patriot party. He was sent as a delegate from New York City to the Continental Congress at Philadelphia in September 1774, and though almost the youngest member, was entrusted with drawing up the address to the people of Great Britain. Of the second congress, also, which met at Philadelphia on the 10th of May 1775, Jay was a member; and on its behalf he prepared an address to the people of Canada and an address to the people of Jamaica and Ireland. In April 1776, while still retaining his seat in the Continental Congress, Jay was chosen as a member of the third provincial congress of New York; and his consequent absence from Philadelphia deprived him of the honour of affixing his signature to the Declaration of Independence. As a member of the fourth provincial congress he drafted a resolution by which the delegates of New York in the Continental Congress were authorized to sign the Declaration of Independence. In 1777 he was chairman of the committee of the convention which drafted the first New York state constitution. After acting for some time as one of the council of safety (which administered the state government until the new constitution came into effect), he was made chief justice of New York state in September 1777. A clause in the state constitution prohibited any justice of the Supreme Court from holding any other post save that of delegate to congress on a "special occasion,"

but in November 1778 the legislature pronounced the secession of what is now the state of Vermont from the jurisdiction of New Hampshire and New York to be such an occasion, and sent Jay to congress charged with the duty of securing a settlement of the territorial claims of his state. He took his seat in congress on the 7th of December, and on the 10th was chosen president in succession to Henry Laurens.

On the 27th of September 1779 Jay was appointed minister plenipotentiary to negotiate a treaty between Spain and the United States. He was instructed to endeavour to bring Spain into the treaty already existing between France and the United States by a guarantee that Spain should have the Floridas in case of a successful issue of the war against Great Britain, reserving, however, to the United States the free navigation of the Mississippi. He was also to solicit a subsidy in consideration of the guarantee, and a loan of five million dollars. His task was one of extreme difficulty. Although Spain had joined France in the war against Great Britain, she feared to imperil her own colonial interests by directly encouraging and aiding the former British colonies in their revolt against their mother country, and she had refused to recognize the United States as an independent power. Jay landed at Cadiz on the 22nd of January 1780, but was told that he could not be received in a formally diplomatic character. In May the king's minister, Count de Florida Blanca, intimated to him that the one obstacle to a treaty was the question of the free navigation of the Mississippi, and for months following this interview the policy of the court was clearly one of delay. In February 1781 Congress instructed Jay that he might make concessions regarding the navigation of the Mississippi, if necessary; but further delays were interposed, the news of the surrender of Yorktown arrived, and Jay decided that any sacrifice to obtain a treaty was no longer advisable. His efforts to procure a loan were not much more successful, and he was seriously embarrassed by the action of Congress in drawing bills upon him for large sums. Although by importuning the Spanish minister, and by pledging his personal responsibility, Jay was able to meet some of the bills, he was at last forced to protest others; and the credit of the United States was saved only by a timely subsidy from France.

In 1781 Jay was commissioned to act with Franklin, John Adams, Jefferson and Henry Laurens in negotiating a peace with Great Britain. He arrived in Paris on the 23rd of June 1782, and jointly with Franklin had proceeded far with the negotiations when Adams arrived late in October. The instructions of the American negotiators were as follow:—

"You are to make the most candid and confidential communications upon all subjects to the ministers of our generous ally, the king of France; to undertake nothing in the negotiations for peace or truce without their knowledge and concurrence; and ultimately to govern yourselves by their advice and opinion, endeavouring in your whole conduct to make them sensible how much we rely on his majesty's influence for effectual support in every thing that may be necessary to the present security, or future prosperity, of the United States of America."

Jay, however, in a letter written to the president of Congress from Spain, had expressed in strong terms his disapproval of such dependence upon France, and, on arriving in Paris, he demanded that Great Britain should treat with his country on an equal footing by first recognizing its independence, although the French minister, Count de Vergennes, contended that an acknowledgment of independence as an effect of the treaty was as much as could reasonably be expected. Finally, owing largely to Jay, who suspected the good faith of France, the American negotiators decided to treat independently with Great Britain. The provisional articles, which were so favourable to the United States as to be a great surprise to the courts of France and Spain, were signed on the 30th of November 1782, and were adopted with no important change as the final treaty on the 3rd of September 1783.

On the 24th of July 1784 Jay landed in New York, where he was presented with the freedom of the city and elected a delegate to Congress. On the 7th of May Congress had already chosen him to be secretary for foreign affairs, and in December Jay resigned

his seat in Congress and accepted the secretaryship. He continued to act in this capacity until 1790, when Jefferson became secretary of state under the new constitution. In the question of this constitution Jay had taken a keen interest, and as an advocate of its ratification he wrote over the name "Publius," five (Nos. 2, 3, 4, 5 and 64) of the famous series of papers known collectively as the *Federalist* (see HAMILTON, ALEXANDER). He published anonymously (though without succeeding in concealing the authorship) *An Address to the People of New York*, in vindication of the constitution; and in the state convention at Poughkeepsie he ably seconded Hamilton in securing its ratification by New York. In making his first appointments to federal offices President Washington asked Jay to take his choice; Jay chose that of chief justice of the Supreme Court, and held this position from September 1789 to June 1795. The most famous case that came before him was that of *Chisholm v. Georgia*, in which the question was, Can a state be sued by a citizen of another state? Georgia argued that it could not be so sued, on the ground that it was a sovereign state, but Jay decided against Georgia, on the ground that sovereignty in America resided with the people. This decision led to the adoption of the eleventh amendment to the federal constitution, which provides that no suit may be brought in the federal courts against any state by a citizen of another state or by a citizen or subject of any foreign state. In 1792 Jay consented to stand for the governorship of New York State, but a partisan returning-board found the returns of three counties technically defective, and though Jay had received an actual majority of votes, his opponent, George Clinton, was declared elected.

Ever since the War of Independence there had been friction between Great Britain and the United States. To the grievances of the United States, consisting principally of Great Britain's refusal to withdraw its troops from the forts on the north-western frontier, as was required by the peace treaty of 1783, her refusal to make compensation for negroes carried away by the British army at the close of the War of Independence, her restrictions on American commerce, and her refusal to enter into any commercial treaty with the United States, were added, after war broke out between France and Great Britain in 1793, the anti-neutral naval policy according to which British naval vessels were authorized to search American merchantmen and impress American seamen, provisions were treated as contraband of war, and American vessels were seized for no other reason than that they had on board goods which were the property of the enemy or were bound for a port which though not actually blockaded was declared to be blockaded. The anti-British feeling in the House of Representatives became so strong that on the 7th of April 1794 a resolution was introduced to prohibit commercial intercourse between the United States and Great Britain until the north-western posts should be evacuated and Great Britain's anti-neutral naval policy should be abandoned. Thereupon Washington, fearing that war might result, appointed Jay minister extraordinary to Great Britain to negotiate a new treaty, and the senate confirmed the appointment by a vote of 18 to 8, although the non-intercourse resolution which came from the house a few days later was defeated in the senate only by the casting vote of Vice-President John Adams. Jay landed at Falmouth in June 1794, signed a treaty with Lord Grenville on the 19th of November, and disembarked again at New York on the 28th of May 1795. The treaty, known in history as Jay's Treaty, provided that the north-western posts should be evacuated by the 1st of June 1796, that commissioners should be appointed to settle the north-east and the north-west boundaries, and that the British claims for British debts as well as the American claims for compensation for illegal seizures should be referred to commissioners. More than one-half of the clauses in the treaty related to commerce, and although they contained rather small concessions to the United States, they were about as much as could reasonably have been expected in the circumstances. One clause, the operation of which was limited to two years from the close of the existing war, provided that American vessels not exceeding 70 tons burden

might trade with the West Indies, but should carry only American products there and take away to American ports only West Indian products; moreover, the United States was to export in American vessels no molasses, sugar, coffee, cocoa or cotton to any part of the world. Jay consented to this prohibition under the impression that the articles named were peculiarly the products of the West Indies, not being aware that cotton was rapidly becoming an important export from the southern states. The operation of the other commercial clauses was limited to twelve years. By them the United States was granted limited privileges of trade with the British East Indies; some provisions were made for reciprocal freedom of trade between the United States and the British dominions in Europe; some articles were specified under the head of "contraband of war": it was agreed that whenever provisions were seized as contraband they should be paid for, and that in cases of the capture of a vessel carrying contraband goods such goods only and not the whole cargo should be seized; it was also agreed that no vessel should be seized merely because it was bound for a blockaded port, unless it attempted to enter the port after receiving notice of the blockade. The treaty was laid before the Senate on the 8th of June 1795, and, with the exception of the clause relating to trade with the West Indies, was ratified on the 24th by a vote of 20 to 10. As yet the public was ignorant of its contents, and although the Senate had enjoined secrecy on its members even after the treaty had been ratified, Senator Mason of Virginia gave out a copy for publication only a few days later. The Republican party, strongly sympathizing with France and strongly disliking Great Britain, had been opposed to Jay's mission, and had denounced Jay as a traitor and guillotined him in effigy when they heard that he was actually negotiating. The publication of the treaty only added to their fury. They filled newspapers with articles denouncing it, wrote virulent pamphlets against it, and burned Jay in effigy. The British flag was insulted. Hamilton was stoned at a public meeting in New York while speaking in defence of the treaty, and Washington was grossly abused for signing it. In the House of Representatives the Republicans endeavoured to prevent the execution of the treaty by refusing the necessary appropriations, and a vote (29th of April 1795) on a resolution that it ought to be carried into effect stood 49 to 49; but on the next day the opposition was defeated by a vote of 51 to 48. Once in operation, the treaty grew in favour. Two days before landing on his return from the English mission, Jay had been elected governor of New York state; notwithstanding his temporary unpopularity, he was re-elected in April 1798. With the close of this second term of office in 1801 he ended his public career. Although not yet fifty-seven years old, he refused all offers of office, and retiring to his estate near Bedford in Westchester county, N.Y., spent the rest of his life in rarely interrupted seclusion. In politics he was throughout inclined toward Conservatism, and after the rise of parties under the federal government he stood with Alexander Hamilton and John Adams as one of the foremost leaders of the Federalist party, as opposed to the Republicans or Democratic-Republicans. From 1821 until 1828 he was president of the American Bible Society. He died on the 17th of May 1829. The purity and integrity of his life are commemorated in a sentence by Daniel Webster: "When the spotless ermine of the judicial robe fell on John Jay, it touched nothing less spotless than itself."

See *The Correspondence and Public Papers of John Jay* (4 vols., New York, 1890-1893), edited by H. P. Johnston; *William Jay, Life of John Jay with Selections from his Correspondence and Miscellaneous Papers* (2 vols., New York, 1833); *William Whitelocke, Life and Times of John Jay* (New York, 1887); and *George Pellw, John Jay* (Boston, 1890), in the "American Statesmen Series."

John Jay's son, WILLIAM JAY (1789-1858), was born in New York City on the 16th of June 1789, graduated from Yale in 1807, and soon afterwards assumed the management of his father's large estate in Westchester county, N.Y. He was actively interested in peace, temperance and anti-slavery movements. He took a prominent part in 1816 in founding the

American Bible Society; was a judge of Westchester county from 1818 to 1843, when he was removed from office by the party in power in New York, which hoped, by sacrificing an anti-slavery judge, to gain additional strength in the southern states; joined the American anti-slavery society in 1834, and held several important offices in this organization. In 1840, however, when it began to advocate measures which he deemed too radical, he withdrew his membership, but with his pen he continued his labours on behalf of the slave, urging emancipation in the district of Columbia and the exclusion of slavery from the territories, though deprecating any attempt to interfere with slavery in the states. He was a member of the American peace society and was its president for several years. His pamphlet, *War and Peace: the Evils of the First with a Plan for Securing the Last*, advocating international arbitration, was published by the English Peace Society in 1842, and is said to have contributed to the promulgation, by the powers signing the Treaty of Paris in 1856, of a protocol expressing the wish that nations, before resorting to arms, should have recourse to the good offices of a friendly power. Among William Jay's other writings, the most important are *The Life of John Jay* (2 vols., 1833) and a *Review of the Causes and Consequences of the Mexican War* (1849). He died at Bedford on the 14th of October 1858.

See Bayard Tuckerman, *William Jay and the Constitutional Movement for the Abolition of Slavery* (New York, 1893).

William Jay's son, JOHN JAY (1817-1894), also took an active part in the anti-slavery movement. He was a prominent member of the free soil party, and was one of the organizers of the Republican party in New York. He was United States minister to Austria-Hungary in 1869-1875, and was a member, and for a time president, of the New York civil service commission appointed by Governor Cleveland in 1883.

JAY, WILLIAM (1769-1853). English Nonconformist divine, was born at Tisbury in Wiltshire on the 6th of May 1769. He adopted his father's trade of stone-mason, but gave it up in 1785 in order to enter the Rev. Cornelius Winter's school at Marlborough. During the three years that Jay spent there, his preaching powers were rapidly developed. Before he was twenty-one he had preached nearly a thousand times, and in 1788 he had for a while occupied Rowland Hill's pulpit in London. Wishing to continue his reading he accepted the humble pastorate of Christian Malford, near Chippenham, where he remained about two years. After one year at Hope chapel, Clifton, he was called to the ministry of Argyle Independent chapel in Bath; and on the 30th of January 1791 he began the work of his life there, attracting hearers of every religious denomination and of every rank, and winning for himself a wide reputation as a brilliant pulpit orator, an earnest religious author, and a friendly counsellor. Sheridan declared him to be the most manly orator he had ever heard. A long and honourable connexion of sixty-two years came to an end in January 1853, and he died on the 27th of December following.

The best-known of Jay's works are his *Morning and Evening Exercises*; *The Christian contemplated*; *The Domestic Minister's Assistant*; and his *Discourses*. He also wrote a *Life of Rev. Cornelius Winter*, and *Memoirs of Rev. John Clarke*. An edition of Jay's *Works* in 12 vols., 8vo, revised by himself, was issued in 1842-1844, and again in 1856. A new edition, in 8 vols., 8vo, was published in 1876. See *Autobiography* (1854); *S. Wilson's Memoir of Jay* (1854); *S. Newth in Pulpit Memorials* (1878).

JAY (Fr. *géai*), a well-known and very beautiful European bird, the *Corvus glandarius* of Linnaeus, the *Garrulus glandarius* of modern ornithologists. To this species are more or less closely allied numerous birds inhabiting the Palaearctic and Indian regions, as well as the greater part of America, but not occurring in the Antilles, in the southern portion of the Neotropical Region, or in the Ethiopian or Australian. All these birds are commonly called jays, and form a group of the crows or *Corvidae*, which may fairly be considered a sub-family, *Garrulinae*. Indeed there are, or have been, systematists who would elevate the jays to the rank of a family *Garrulidae*—a proceeding which seems unnecessary. Some of

them have an unquestionable resemblance to the pies, if the group now known by that name can be satisfactorily severed from the true *Corvinæ*. In structure the jays are not readily differentiated from the pies; but in habit they are much more arboreal, delighting in thick coverts, seldom appearing in the open, and seeking their food on or under trees. They seem also never to walk or run when on the ground, but always to hop. The body-feathers are commonly loose and soft; and, gaily coloured as are most of the species, in few of them has the plumage the metallic glossiness it generally presents in the pies, while the proverbial beauty of the "jay's wing" is due to the vivid tints of blue—turquoise and cobalt, heightened by bars of jet-black, an indication of the same style of ornament being observable in the greater

FIG. 1.—European Jay.

number of the other forms of the group, and in some predominating over nearly the whole surface. Of the many genera that have been proposed by ornithologists, perhaps about nine may be deemed sufficiently well established.

The ordinary European jay, *Garrulus glandarius* (fig. 1), has suffered so much persecution in the British Islands as to have become in many districts a rare bird. In Ireland it seems now to be indigenous to the southern half of the island only; in England generally, it is far less numerous than formerly; and in Scotland its numbers have decreased with still greater rapidity. There is little doubt that it would have been exterminated but for its stock being supplied in autumn by immigration, and for its shy and wary behaviour, especially at the breeding-season, when it becomes almost wholly mute, and thereby often escapes detection. No truthful man, however much he may love the bird, will gainsay the depredations on fruit and eggs that it at times commits; but the gardeners and gamekeepers of Britain, instead of taking a few simple steps to guard their charge from injury, deliberately adopt methods of wholesale destruction—methods that in the case of this species are only too easy and too effectual—by proffering temptation to trespass which it is not in jay-nature to resist, and accordingly the bird runs great chance of total extirpation. Notwithstanding the war carried on against the jay, its varied cries and active gesticulations show it to be a sprightly bird, and at a distance that renders its beauty-spots invisible, it is yet rendered conspicuous by its cinnamon-coloured body and pure white tail-coverts, which contrast with the deep black and rich chestnut that otherwise mark its plumage, and even the young at once assume a dress closely resembling that of the adult. The nest, generally concealed in a leafy tree or bush, is carefully built, with a lining formed of fine roots neatly interwoven. Herein from four to seven eggs, of a greenish white closely freckled, so as to seem suffused with light olive, are laid in March or April, and the young on quitting it accompany their parents for some weeks.

Though the common jay of Europe inhabits nearly the whole of this quarter of the globe south of 64° N. lat., its territory in the east of Russia is also occupied by *G. brandti*, a kindred form, which replaces it on the other side of the Ural, and ranges thence across Siberia to Japan; and again on the lower Danube and

thence to Constantinople the nearly allied *G. krynicki* (which alone is found in southern Russia, Caucasasia and Asia Minor) shares its haunts with it.¹ It also crosses the Mediterranean to Algeria and Morocco; but there, as in southern Spain, it is probably but a winter immigrant. The three forms just named have the widest range of any of the genus. Next to them come *G. atricapillus*, reaching from Syria to Baluchistan, *G. japonicus*, the ordinary jay of southern Japan, and *G. sinensis*, the Chinese bird. Other forms have a much more limited area, as *G. cervicalis*, the local and resident jay of Algeria, *G. hyrcanus*, found on the southern shores of the Caspian Sea, and *G. taevanus*, confined to the island of Formosa. The most aberrant of the true jays is *G. lidithi*, a very rare species, which seems to come from some part of Japan (*vide* Salvadori, *Atti Accad. Torino*, vii. 474), though its exact locality is not known.

Leaving the true jays of the genus *Garrulus*, it is expedient next to consider those of a group named, in 1831, *Perisoreus* by Prince C. L. Bonaparte (*Saggio, &c., Anim. Vertebrati*, p. 43) and *Dysornithia* by Swainson (*F. B.-Americana*, ii. 495).²

This group contains two species—one the *Lanius infaustus* of Linnaeus and the Siberian jay of English writers, which ranges throughout the pine-forests of the north of Europe and Asia, and the second the *Corvus canadensis* of the same author, or Canada jay, occupying a similar station in America. The so-called Siberian jay is one of the most entertaining birds in the world. Its versatile cries and actions, as seen and heard by those who penetrate the solitude of the northern forests it inhabits, can never be forgotten by one who has had experience of them, any more than the pleasing sight of its rust-coloured tail, which an occasional gleam of sunshine will light up into a brilliancy quite unexpected by those who have only surveyed the bird's otherwise gloomy

appearance in the glass-case of a museum. It seems scarcely to know fear, obtruding itself on the notice of any traveller who invades its haunts, and, should he halt, making itself at once a denizen of his bivouac. In confinement it speedily becomes friendly, but suitable food for it is not easily found. Linnaeus seems to have been under a misapprehension when he applied to it

FIG. 2.—American Blue Jay.

the trivial epithet it bears; for by none of his countrymen is it deemed an unlucky bird, but rather the reverse. In fact, no one can listen to the cheery sound of its ordinary calls with any but a hopeful feeling. The Canada jay, or "whisky-jack" (the corruption probably of a Cree name), seems to be of a similar nature, but it presents a still more sombre coloration, its nestling plumage,³ indeed, being thoroughly corvine in appearance and suggestive of its being a pristine form.

As though to make amends for the dull plumage of the species last mentioned, North America offers some of the most brilliantly

¹ Further information will possibly show that these districts are not occupied at the same season of the year by the two forms.

² Recent writers have preferred the former name, though it was only used sub-generically by its author, who assigned to it no characters, which the inventor of the latter was careful to do, regarding it at the same time as a genus.

³ In this it was described and figured (*F. B. Americana*, ii. 296, pl. 55) as a distinct species, *G. brachyrhynchus*.

coloured of the sub-family, and the common blue jay¹ of Canada and the eastern states of the Union, *Cyanurus cristatus* (fig. 2), is one of the most conspicuous birds of the Transatlantic woods. The account of its habits by Alexander Wilson is known to every student of ornithology, and Wilson's followers have had little to do but supplement his history with unimportant details. In this bird and its many allied forms, coloration, though almost confined to various tints of blue, seems to reach its climax, but want of space forbids more particular notice of them, or of the members of the other genera *Cyanocitta*, *Cyanocorax*, *Xanthura*, *Psittorhinus*, and more, which inhabit various parts of the Western continent. It remains, however, to mention the genus *Cissa*, including many beautiful forms belonging to the Indian region, and among them the *C. speciosa* and *C. sinensis*, so often represented in Oriental drawings, though doubts may be expressed whether these birds are not more nearly related to the pies than to the jays. (A. N.)

JEALOUSY (adapted from Fr. *jalousie*, formed from *jaloux*, jealous, Low Lat. *zelosus*, Gr. ζήλος, ardour, zeal, from the root seen in ζέω, to boil, ferment; cf. "yeast"), originally a condition of zealous emulation, and hence, in the usual modern sense, of resentment at being (or believing that one is or may be) supplanted or preferred in the love or affection of another, or in the enjoyment of some good regarded as properly one's own. Jealousy is really a form of envy, but implies a feeling of personal claim which in envy or covetousness is wanting. The jealousy of God, as in Exod. xx. 5, "For I, the Lord thy God, am a jealous God," has been defined by Pusey (*Minor Prophets*, 1860) as the attribute "whereby he does not endure the love of his creatures to be transferred from him." "Jealous," by etymology, is however, only another form of "zealous," and the identity is exemplified by such expressions as "I have been very jealous for the Lord God of Hosts" (1 Kings xix. 10). A kind of glass, thick, ribbed and non-transparent, was formerly known as "jealous-glass," and this application is seen in the borrowed French word *jalousie*, a blind or shutter, made of slats of wood, which slope in such a way as to admit air and a certain amount of light, while excluding rain and sun and inspection from without.

JEAN D'ARRAS, a 15th-century *trouvère*, about whose personal history nothing is known, was the collaborator with Antoine du Val and Fouquart de Cambrai in the authorship of a collection of stories entitled *Évangiles de quenouille*. They purposed to record the narratives of a group of ladies at their spinning, who relate the current theories on a great variety of subjects. The work dates from the middle of the 15th century and is of considerable value for the light it throws on medieval manners.

There were many editions of this book in the 15th and 16th centuries, one of which was printed by Wynkyn de Worde in English, as *The Gospelles of Dystaves*. A modern edition (Collection Jannet) has a preface by Anatole France.

Another *trouvère*, JEAN D'ARRAS who flourished in the second half of the 14th century, wrote, at the request of John, duke of Berry, a long prose romance entitled *Chronique de la princesse*. It relates with many digressions the antecedents and life of the fairy Mélusine (q.v.).

JEAN DE MEUN, or DE MEUNG (c. 1250–c. 1305), whose original name was Jean Clopinel or Chopinel, was born at Meun-sur-Loire. Tradition asserts that he studied at the university of Paris. At any rate he was, like his contemporary, Rutebeuf, a defender of Guillaume de Saint-Amour and a bitter critic of the mendicant orders. Most of his life seems to have been spent in Paris, where he possessed, in the Rue Saint-Jacques, a house with a tower, court and garden, which was described in 1305 as the house of the late Jean de Meung, and was then bestowed by a certain Adam d'Andely on the Dominicans. Jean de Meun says that in his youth he composed songs that were sung in every public place and school in France. In the enumeration of his own works he places first his continuation of the *Roman de la rose* of Guillaume de Lorris (q.v.). The date of this second part

is generally fixed between 1268 and 1285 by a reference in the poem to the death of Manfred and Conradin, executed (1268) by order of Charles of Anjou (d. 1285), who is described as the present king of Sicily. M. F. Guillon (*Jean Clopinel*, 1903), however, considering the poem primarily as a political satire, places it in the last five years of the 13th century. Jean de Meun doubtless edited the work of his predecessor, Guillaume de Lorris, before using it as the starting-point of his own vast poem, running to 19,000 lines. The continuation of Jean de Meun is a satire on the monastic orders, on celibacy, on the nobility, the papal see, the excessive pretensions of royalty, and especially on women and marriage. Guillaume had been the servant of love, and the exponent of the laws of "courtoisie"; Jean de Meun added an "art of love," exposing with brutality the vices of women, their arts of deception, and the means by which men may outwit them. Jean de Meun embodied the mocking, sceptical spirit of the *fabliaux*. He did not share in current superstitions, he had no respect for established institutions, and he scorned the conventions of feudalism and romance. His poem shows in the highest degree, in spite of the looseness of its plan, the faculty of keen observation, of lucid reasoning and exposition, and it entitles him to be considered the greatest of French medieval poets. He handled the French language with an ease and precision unknown to his predecessors, and the length of his poem was no bar to its popularity in the 13th and 14th centuries. Part of its vogue was no doubt due to the fact that the author, who had mastered practically all the scientific and literary knowledge of his contemporaries in France, had found room in his poem for a great amount of useful information and for numerous citations from classical authors. The book was attacked by Guillaume de Degulleville in his *Pèlerinage de la vie humaine* (c. 1330), long a favourite work both in England and France; by John Gerson, and by Christine de Pisan in her *Épître au dieu d'amour*; but it also found energetic defenders.

Jean de Meun translated in 1284 the treatise, *De re militari*, of Vegetius into French as *Le livre de Vegèce de l'art de chevalerie* (ed. Ulysse Robert, *Soc. des anciens textes fr.*, 1897). He also produced a spirited version, the first in French, of the letters of Abelard and Héloïse. A 14th-century MS. of this translation in the Bibliothèque Nationale has annotations by Petrarch. His translation of the *De consolazione philosophiae* of Boëtius is preceded by a letter to Philip IV. in which he enumerates his earlier works, two of which are lost—*De spirituelle amitié* from the *De spirituali amicitia* of Aelred of Rievaulx (d. 1169), and the *Livre des merveilles d'Irlande* from the *Topographia Hibernica*, or *De Mirabilibus Hiberniae* of Giraldus Cambrensis (Giraud de Barry). His last poems are doubtless his *Testament* and *Codicille*. The *Testament* is written in quatrains in monorime, and contains advice to the different classes of the community.

See also Paulin Paris in *Hist. lit. de la France*, xxviii. 391–439, and E. Langlois in *Hist. de la langue et de la lit. française*, ed. L. Petit de Julleville, ii. 125–161 (1896); and editions of the *Roman de la rose* (q.v.).

JEANNETTE, a borough of Westmoreland county, Pennsylvania, U.S.A., about 27 m. E. by S. of Pittsburgh. Pop. (1890), 3296; (1900), 5865, of whom 1340 were foreign-born. It is served by the Pennsylvania railroad, and is connected with Pittsburgh and Uniontown by electric railway. It is supplied with natural gas and is primarily a manufacturing centre, its principal manufactures being glass, table-ware and rubber goods. Jeannette was founded in 1888, and was incorporated as a borough in 1889.

JEANNIN, PIERRE (1540–1622), French statesman, was born at Autun. A pupil of the great jurist Jacques Cujas at Bourges, he was an advocate at Dijon in 1569 and became councillor and then president of the parlement of Burgundy. He opposed in vain the massacre of St Bartholomew in his province. As councillor to the duke of Mayenne he sought to reconcile him with Henry IV. After the victory of Fontaine-Française (1595), Henry took Jeannin into his council and in 1602 named him intendant of finances. He took part in the principal events of the reign, negotiated the treaty of Lyons with the duke of Savoy

¹ Jean de Meun's translation formed the basis of a rhymed version (1290) by Jean Priorat of Besançon, *Li abneyance de l'ordre de chevalerie*.

¹ The birds known as blue jays in India and Africa are rollers (q.v.).

(see HENRY IV.), and the defensive alliance between France and the United Netherlands in 1608. As superintendent of finances under Louis XIII., he tried to establish harmony between the king and the queen-mother.

JEBB, JOHN (1736-1786), English divine, was educated at Cambridge, where he was elected fellow of Peterhouse in 1761, having previously been second wrangler. He was a man of independent judgment and warmly supported the movement of 1771 for abolishing university and clerical subscription to the Thirty-nine Articles. In his lectures on the Greek Testament he is said to have expressed Socinian views. In 1775 he resigned his Suffolk church livings, and two years afterwards graduated M.D. at St Andrews. He practised medicine in London and was elected F.R.S. in 1779.

Another **JOHN JEBB** (1775-1833), bishop of Limerick, is best known as the author of *Sacred Literature* (London, 1820).

JEBB, SIR RICHARD CLAVERHOUSE (1841-1905), English classical scholar, was born at Dundee on the 27th of August 1841. His father was a well-known barrister, and his grandfather a judge. He was educated at Charterhouse and at Trinity College, Cambridge. He won the Porson and Craven scholarships, was senior classic in 1862, and became fellow and tutor of his college in 1863. From 1869 to 1875 he was public orator of the university; professor of Greek at Glasgow from 1875 to 1889, and at Cambridge from 1889 till his death on the 9th of December 1905. In 1891 he was elected member of parliament for Cambridge University; he was knighted in 1900. Jebb was acknowledged to be one of the most brilliant classical scholars of his time, a humanist in the best sense, and his powers of translation from and into the classical languages were unrivalled. A collected volume, *Translations into Greek and Latin*, appeared in 1873 (ed. 1909). He was the recipient of many honorary degrees from European and American universities, and in 1905 was made a member of the Order of Merit. He married in 1874 the widow of General A. J. Slemmer, of the United States army, who survived him.

Jebb was the author of numerous publications, of which the following are the most important: *The Characters of Theophrastus* (1870), text, introduction, English translation and commentary (re-edited by J. E. Sandys, 1909); *The Attic Orators from Antiphon to Isaeus* (2nd ed., 1893), with companion volume, *Selections from the Attic Orators* (2nd ed., 1888); *Bentley* (1882); *Sophocles* (3rd ed., 1893) the seven plays, text, English translation and notes, the promised edition of the fragments being prevented by his death; *Bacchylides* (1905), text, translation, and notes; *Homer* (3rd ed., 1888), an introduction to the *Iliad* and *Odyssey*; *Modern Greece* (1901); *The Growth and Influence of Classical Greek Poetry* (1893). His translation of the *Rhetoric* of Aristotle was published posthumously under the editorship of J. E. Sandys (1909). A selection from his *Essays and Addresses*, and a subsequent volume, *Life and Letters of Sir Richard Claverhouse Jebb* (with critical introduction by A. W. Verrall), were published by his widow in 1907; see also an appreciative notice by J. E. Sandys, *Hist. of Classical Scholarship*, vol. iii. (1908).

JEBEL (anc. *Gabal-Byblus*), a town of Syria pleasantly situated on a slight eminence near the sea, about 20 m. N. of Beirut. It is surrounded by a wall $1\frac{1}{2}$ m. in circumference, with square towers at the angles, and a castle at the south-east corner. Numerous broken granite columns in the gardens and vineyards that surround the town, with the number of ruined houses within the walls, testify to its former importance. The stele of Jehawmelek, king of Gebal, found here, is one of the most important of Phoenician monuments. The small port is almost choked up with sand and ruins. Pop. 3000, all Moslems.

The inhabitants of the Phoenician Gebal and Greek Byblus were renowned as stonecutters and ship-builders. Arrian (ii. 20. 1) represents Enylus, king of Byblus, as joining Alexander with a fleet, after that monarch had captured the city. Philo of Byblus makes it the most ancient city of Phoenicia, founded by Cronus, i.e. the Moloch who appears from the stele of Jehawmelek to have been with Baalit the chief deity of the city. According to Plutarch (*Mor.* 357), the ark with the corpse of Osiris was cast

ashore at Byblus, and there found by Isis. The orgies of Adonis in the temple of Baalit (Aphrodite Byblia) are described by Lucian, *De Dea Syr.*, cap. vi. The river Adonis is the Nahr al-Ibrahim, which flows near the town. The crusaders, after failing before it in 1099, captured "Giblet" in 1103, but lost it again to Saladin in 1189. Under Mahommedan rule it has gradually decayed. (D. G. H.)

JEBEL (plur. *jibāl*), also written **GEBEL** with hard g (plur. *gibāl*), an Arabic word meaning a mountain or a mountain chain. It is frequently used in place-names. The French transliteration of the word is *djebel*. *Jebeli* signifies a mountaineer. The pronunciation with a hard g sound is that used in the Egyptian dialect of Arabic.

JEDBURGH, a royal and police burgh and county-town of Roxburghshire, Scotland. Pop. of police burgh (1901), 3136. It is situated on Jed Water, a tributary of the Teviot, 564 m. S.E. of Edinburgh by the North British railway, via Roxburgh and St Boswells (49 m. by road), and 10 m. from the border at Catcleuch Shin, a peak of the Cheviots, 1742 ft. high. Of the name Jedburgh there have been many variants, the earliest being *Gedwearde* (800), *Jedwarth* (1251), and *Geddart* (1586), while locally the word is sometimes pronounced *Jethart*. The town is situated on the left bank of the Jed, the main streets running at right angles from each side of the central market-place. Of the renowned group of Border abbeys—Jedburgh, Melrose, Dryburgh and Kelso—that of Jedburgh is the stateliest. In 1118, according to tradition, but more probably as late as 1138, David, prince of Cumbria, here founded a priory for Augustinian monks from the abbey of St Quentin at Beauvais in France, and in 1147, after he had become king, erected it into an abbey dedicated to the Virgin. Repeatedly damaged in Border warfare, it was ruined in 1544-45 during the English invasion led by Sir Ralph Evers (or Eure). The establishment was suppressed in 1559, the revenues being temporarily annexed to the Crown. After changing owners more than once, the lands were purchased in 1637 by the 3rd earl of Lothian. Latterly five of the bays at the west end had been utilized as the parish church, but in 1873-1875 the 9th marquess of Lothian built a church for the service of the parish, and presented it to the heritors in exchange for the ruined abbey in order to prevent the latter from being injured by modern additions and alterations.

The abbey was built of Old Red sandstone, and belongs mostly to the end of the 12th and the beginning of the 13th centuries. The architecture is mixed, and the abbey is a beautiful example of the Norman and Transition styles. The total length is 235 ft., the nave being 133½ ft. long and 59½ ft. wide. The west front contains a great Norman porch and a fine wheel window. The nave, on each side, has nine pointed arches in the basement storey, nine round arches in the triforium, and thirty-six pointed arches in the cloister, through which an arcade is carried on both sides. The tower, at the intersection of the nave and transepts, is of unusually massive proportions, being 30 ft. square and fully 100 ft. high; the network baluster round the top is modern. With the exception of the north piers and a small portion of the wall above, which are Norman, the tower dates from the end of the 15th century. The whole of the south transept has perished. The north transept, with early Decorated windows, has been covered in and walled off, and is the burial-ground of the Kerrs of Fernihirst, ancestors of the marquess of Lothian. The earliest tombstone is dated 1524; one of the latest is the recumbent effigy, by G. F. Watts, R.A., of the 8th marquess of Lothian (1832-1870). All that is left of the choir, which contains some very early Norman work, is two bays with three tiers on each side, corresponding to the design of the nave. It is supposed that the aisle, with Decorated window and groined roof, south of the chancel, formed the grammar school (removed from the abbey in 1751) in which Samuel Rutherford (1600-1661), principal of St Mary's College, St Andrews, and James Thomson, author of *The Seasons*, were educated. The door leading from the south aisle into a herbaceous garden, formerly the cloister, is an exquisite copy of one which had become greatly decayed. It was designed by Sir Rowland Anderson, under whose superintendence restoration in the abbey was carried out.

The castle stood on high ground at the south end of the burgh, or "town-head." Erected by David I., it was one of the strongholds ceded to England in 1174, under the treaty of Falaise, for the ransom of William the Lion. It was, however, so often captured by the English that it became a menace rather than a protection, and the townsfolk demolished it in 1409. It had

occasionally been used as a royal residence, and was the scene, in November 1285, of the revels held in celebration of the marriage (solemnized in the abbey) of Alexander III. to Joleta, or Yolande, daughter of the count of Dreux. The site was occupied in 1823 by the county prison, now known as the castle, a castellated structure which gradually fell into disuse and was acquired by the corporation in 1890. A house exists in Backgate in which Mary Queen of Scots, resided in 1566, and one in Castlegate which Prince Charles Edward occupied in 1745.

The public buildings include the grammar school (built in 1883 to replace the successor of the school in the abbey), founded by William Turnbull, bishop of Glasgow (d. 1454), the county buildings, the free library and the public hall, which succeeded to the corn exchange destroyed by fire in 1898, a loss that involved the museum and its contents, including the banners captured by the Jethart weavers at Bannockburn and Killiecrankie. The old market cross still exists, and there are two public parks. The chief industry is the manufacture of woollens (blankets, hosiery), but brewing, tanning and iron-founding are carried on, and fruit (especially pears) and garden produce are in repute. Jedburgh was made a royal burgh in the reign of David I., and received a charter from Robert I. and another, in 1566, from Mary Queen of Scots. Sacked and burned time after time during the Border strife, it was inevitable that the townsmen should become keen fighters. Their cry of "Jethart's here!" was heard wherever the fray waxed most fiercely, and the Jethart axe of their invention—a steel axe on a 4-ft. pole—wrought havoc in their hands.

"Jethart or Jeddart justice," according to which a man was hanged first and tried afterwards, seems to have been a hasty generalization from a solitary fact—the summary execution in James VI.'s reign of a gang of rogues at the instance of Sir George Home, but has nevertheless passed into a proverb.

Old Jeddart, 4 m. S. of the present town, the first site of the burgh, is now marked by a few grassy mounds, and of the great Jedburgh forest, only the venerable oaks, the "Capon Tree" and the "King of the Woods" remain. Dunion Hill (1095 ft.), about 2 m. south-west of Jedburgh, commands a fine view of the capital of the county.

JEEJEEBHOY (JIBHAI), SIR JAMSETJEE (JAMSETJI). Bart. (1783–1859), Indian merchant and philanthropist, was born in Bombay in 1783, of poor but respectable parents, and was left an orphan in early life. At the age of sixteen, with a smattering of mercantile education and a bare pittance, he commenced a series of business travels destined to lead him to fortune and fame. After a preliminary visit to Calcutta, he undertook a voyage to China, then fraught with so much difficulty and risk that it was regarded as a venture betokening considerable enterprise and courage; and he subsequently initiated a systematic trade with that country, being himself the carrier of his merchant wares on his passages to and fro between Bombay and Canton and Shanghai. His second return voyage from China was made in one of the East India Company's fleet, which, under the command of Sir Nathaniel Dance, defeated the French squadron under Admiral Linois (Feb. 15, 1804). On his fourth return voyage from China, the Indiaman in which he sailed was forced to surrender to the French, by whom he was carried as a prisoner to the Cape of Good Hope, then a neutral Dutch possession; and it was only after much delay, and with great difficulty, that he made his way to Calcutta in a Danish ship. Nothing daunted, he undertook yet another voyage to China, which was more successful than any of the previous ones. By this time he had fairly established his reputation as a merchant possessed of the highest spirit of enterprise and considerable wealth, and thenceforward he settled down in Bombay, where he directed his commercial operations on a widely extended scale. By 1836 his firm was large enough to engross the energies of his three sons and other relatives; and he had amassed what at that period of Indian mercantile history was regarded as fabulous wealth. An essentially self-made man, having experienced in early life the miseries of poverty and want, in his days of affluence Jamsetjee Jeejeebhoy developed an active instinct

of sympathy with his poorer countrymen, and commenced that career of private and public philanthropy which is his chief title to the admiration of mankind. His liberality was unbounded, and the absorbing occupation of his later life was the alleviation of human distress. To his own community he gave lavishly, but his benevolence was mainly cosmopolitan. Hospitals, schools, homes of charity, pension funds, were founded or endowed by him, while numerous public works in the shape of wells, reservoirs, bridges, causeways, and the like, not only in Bombay, but in other parts of India, were the creation of his bounty. The total of his known benefactions amounted at the time of his death, which took place in 1859, to over £230,000. It was not, however, the amount of his charities so much as the period and circumstances in which they were performed that made his benevolent career worthy of the fame he won. In the first half of the 19th century the various communities of India were much more isolated in their habits and their sympathies than they are now. Jamsetjee Jeejeebhoy's unsectarian philanthropy awakened a common understanding and created a bond between them which has proved not only of domestic value but has had a national and political significance. His services were recognized first in 1842 by the bestowal of a knighthood upon him, and in 1858 by that of a baronetcy. These were the very first distinctions of their kind conferred by Queen Victoria upon a British subject in India.

His title devolved in 1859 on his eldest son CURSETJEE, who, by a special Act of the Viceroy's Council in pursuance of a provision in the letters-patent, took the name of Sir Jamsetjee Jeejeebhoy as second baronet. At his death in 1877 his eldest son, MENEKJEE, became Sir Jamsetjee Jeejeebhoy, the third baronet. Both had the advantage of a good English education, and continued the career of benevolent activity and devoted loyalty to British rule which had signalized the life-work of the founder of the family. They both visited England to do homage to their sovereign; and their public services were recognized by their nomination to the order of the Star of India, as well as by appointment to the Legislative Councils of Calcutta and Bombay.

On the death of the third baronet, the title devolved upon his brother, COWSAJEE (1853–1908), who became Sir Jamsetjee Jeejeebhoy, fourth baronet, and the recognized leader of the Parsee community all over the world. He was succeeded by his son RUSTOMJEE (b. 1878), who became Sir Jamsetjee Jeejeebhoy, fifth baronet.

Since their emigration from Persia, the Parsee community had never had a titular chief or head, its communal funds and affairs being managed by a public body, more or less democratic in its constitution, termed the Parsee panchayat. The first Sir Jamsetjee, by the hold that he established on the community, by his charities and public spirit, gradually came to be regarded in the light of its chief; and the recognition which he was the first in India to receive at the hands of the British sovereign finally fixed him and his successors in the baronetcy in the position and title of the official Parsee leader. (M. M. BH.)

JEFFERIES, RICHARD (1848–1887), English naturalist and author, was born on the 6th of November 1848, at the farmhouse of Coate about 2½ m. from Swindon, on the road to Marlborough. He was sent to school, first at Sydenham and then at Swindon, till the age of fifteen or so, but his actual education was at the hands of his father, who gave him his love for Nature and taught him how to observe. For the faculty of observation, as Jefferies, Gilbert White, and H. D. Thoreau have remarked, several gifts are necessary, including the possession of long sight and quick sight, two things which do not always go together. To them must be joined trained sight and the knowledge of what to expect. The boy's father first showed him what there was to look for in the hedge, in the field, in the trees, and in the sky. This kind of training would in many cases be wasted: to one who can understand it, the book of Nature will by-and-by offer pages which are blurred and illegible to the city-bred lad, and even to the country lad the power of reading them must be maintained by constant practice. To live amid streets or in the working world destroys

it. The observer must live alone and always in the country; he must not worry himself about the ways of the world; he must be always, from day to day, watching the infinite changes and variations of Nature. Perhaps, even when the observer can actually read this book of Nature, his power of articulate speech may prove inadequate for the expression of what he sees. But Jefferies, as a boy, was more than an observer of the fields; he was bookish, and read all the books that he could borrow or buy. And presently, as is apt to be the fate of a bookish boy who cannot enter a learned profession, he became a journalist and obtained a post on the local paper. He developed literary ambitions, but for a long time to come was as one beating the air. He tried local history and novels; but his early novels, which were published at his own risk and expense, were, deservedly, failures. In 1872, however, he published a remarkable letter in *The Times*, on "The Wiltshire Labourer," full of original ideas and of facts new to most readers. This was in reality the turning-point in his career. In 1873, after more false starts, Jefferies returned to his true field of work, the life of the country, and began to write for *Fraser's Magazine* on "Farming and Farmers." He had now found himself. The rest of his history is that of continual advance, from close observation becoming daily more and more close, to that intimate communion with Nature with which his later pages are filled. The developments of the later period are throughout touched with the melancholy that belongs to ill health. For, though in his prose poem called "The Pageant of Summer" the writer seems absolutely revelling in the strength of manhood that belongs to that pageant, yet, in the *Story of My Heart*, written about the same time, we detect the mind that is continually turned to death. He died at Goring, worn out with many ailments, on the 14th of August 1887. The best-known books of Richard Jefferies are: *The Gamekeeper at Home* (1878); *The Story of My Heart* (1883); *Life of the Fields* (1884), containing the best paper he ever wrote, "The Pageant of Summer"; *Amaryllis at the Fair* (1884), in which may be found the portraits of his own people; and *The Open Air*. He stands among the scanty company of men who address a small audience, for whom he read aloud these pages of Nature spoken of above, which only he, and the few like unto him, can decipher.

See Sir Walter Besant, *Eulogy of Richard Jefferies* (1888); H. S. Salt, *Richard Jefferies: a Study* (1894); Edward Thomas, *Richard Jefferies, his Life and Work* (1909). (W. Bz.)

JEFFERSON, JOSEPH (1829-1905), American actor, was born in Philadelphia on the 20th of February 1829. He was the third actor of this name in a family of actors and managers, and the most famous of all American comedians. At the age of three he appeared as the boy in Kotzebue's *Pizarro*, and throughout his youth he underwent all the hardships connected with theatrical touring in those early days. After a miscellaneous experience, partly as actor, partly as manager, he won his first pronounced success in 1858 as Asa Trenchard in Tom Taylor's *Our American Cousin* at Laura Keane's theatre in New York. This play was the turning-point of his career, as it was of Sothorn's. The naturalness and spontaneity of humour with which he acted the love scenes revealed a spirit in comedy new to his contemporaries, long used to a more artificial convention; and the touch of pathos which the part required revealed no less to the actor an unexpected power in himself. Other early parts were Newman Noggs in *Nicholas Nickleby*, Caleb Plummer in *The Cricket on the Hearth*, Dr Pangloss in *The Heir at Law*, Salem Scudder in *The Octoroon*, and Bob Acres in *The Rivals*, the last being not so much an interpretation of the character as Sheridan sketched it as a creation of the actor's. In 1859 Jefferson made a dramatic version of the story of *Rip Van Winkle* on the basis of older plays, and acted it with success at Washington. The play was given its permanent form by Dion Boucicault in London, where (1865) it ran 170 nights, with Jefferson in the leading part. Jefferson continued to act with undiminished popularity in a limited number of parts in nearly every town in the United States, his *Rip Van Winkle*, *Bob Acres*, and *Caleb Plummer* being the most popular. He was one of the first to establish the travelling combinations which

superseded the old system of local stock companies. With the exception of minor parts, such as the First Gravedigger in *Hamlet*, which he played in an "all star combination" headed by Edwin Booth, Jefferson created no new character after 1865; and the success of *Rip Van Winkle* was so pronounced that he has often been called a one-part actor. If this was a fault, it was the public's, who never wearied of his one masterpiece. Jefferson died on the 23rd of April 1905. No man in his profession was more honoured for his achievements or his character. He was the friend of many of the leading men in American politics, art and literature. He was an ardent fisherman and lover of nature, and devoted to painting. Jefferson was twice married: to an actress, Margaret Clements Lockyer (1832-1861), in 1850, and in 1867 to Sarah Warren, niece of William Warren the actor.

Jefferson's *Autobiography* (New York, 1889) is written with admirable spirit and humour, and its judgments with regard to the art of the actor and of the playwright entitle it to a place beside Cibber's *Apology*. See William Winter, *The Jeffersons* (1881), and *Life of Joseph Jefferson* (1894); Mrs. E. P. Jefferson, *Recollections of Joseph Jefferson* (1909).

JEFFERSON, THOMAS (1743-1826), third president of the United States of America, and the most conspicuous apostle of democracy in America, was born on the 13th of April 1743, at Shadwell, Albemarle county, Virginia. His father, Peter Jefferson (1707-1757), of early Virginian yeoman stock, was a civil engineer and a man of remarkable energy, who became a justice of the peace, a county surveyor and a Burgess, served the Crown in inter-colonial boundary surveys, and married into one of the most prominent colonial families, the Randolphs. Albemarle county was then in the frontier wilderness of the Blue Ridge, and was very different, socially, from the lowland counties where a few broad-acre families dominated an open-handed, somewhat luxurious and assertive aristocracy. Unlike his Randolph connexions, Peter Jefferson was a whig and a thorough democrat; from him, and probably, too, from the Albemarle environment, his son came naturally by democratic inclinations.

Jefferson carried with him from the college of William and Mary at Williamsburg, in his twentieth year, a good knowledge of Latin, Greek and French (to which he soon added Spanish, Italian and Anglo-Saxon), and a familiarity with the higher mathematics and natural sciences only possessed, at his age, by men who have a rare natural taste and ability for those studies. He remained an ardent student throughout life, able to give and take in association with the many scholars, American and foreign, whom he numbered among his friends and correspondents. With a liberal Scotsman, Dr William Small, then of the faculty of William and Mary and later a friend of Erasmus Darwin, and George Wythe (1726-1806), a very accomplished scholar and leader of the Virginia bar, Jefferson was an habitual member, while still in college, of a *partie carrée* at the table of Francis Fauquier (c. 1720-1768), the accomplished lieutenant-governor of Virginia. Jefferson was an expert violinist, a good singer and dancer, proficient in outdoor sports, and an excellent horseman. Thorough-bred horses always remained to him a necessary luxury. When it is added that Fauquier was a passionate gambler, and that the gentry who gathered every winter at Williamsburg, the seat of government of the province, were ruinously addicted to the same weakness, and that Jefferson had a taste for racing, it does credit to his early strength of character that of his social opportunities he took only the better. He never used tobacco, never played cards, never gambled, and was never party to a personal quarrel.

Soon after leaving college he entered Wythe's law office, and in 1767, after five years of close study, was admitted to the bar. His thorough preparation enabled him to compete from the first with the leading lawyers of the colony, and his success shows that the bar had no rewards that were not fairly within his reach. As an advocate, however, he did not shine; a weakness of voice made continued speaking impossible, and he had neither the ability nor the temperament for oratory. To his legal scholarship and collecting zeal Virginia owed the preservation of a large part of her early statutes. He seems to have lacked interest in litigiousness, which was extraordinarily developed in colonial

Virginia; and he saw and wished to reform the law's abuses. It is probable that he turned, therefore, the more willingly to politics; at any rate, soon after entering public life he abandoned practice (1774).

The death of his father had left him an estate of 1900 acres, the income from which (about £400) gave him the position of an independent country gentleman; and while engaged in the law he had added to his farms after the ambitious Virginia fashion, until, when he married in his thirtieth year, there were 5000 acres all paid for; and almost as much more¹ came to him in 1773 on the death of his father-in-law. On the 1st of January 1772 Jefferson married Martha Wayles Skelton (1749-1782), a childless widow of twenty-three, very handsome, accomplished, and very fond of music. Their married life was exceedingly happy, and Jefferson never remarried after her early death. Of six children born from their union, two daughters alone survived infancy. Jefferson was emotional and very affectionate in his home, and his generous and devoted relations with his children and grandchildren are among the finest features of his character.

Jefferson began his public service as a justice of the peace and parish vestryman; he was chosen a member of the Virginia house of burgesses in 1769 and of every succeeding assembly and convention of the colony until he entered the Continental Congress in 1775. His forceful, facile pen gave him great influence from the first; but though a foremost member of several great deliberative bodies, he can fairly be said never to have made a speech. He hated the "morbid rage of debate" because he believed that men were never convinced by argument, but only by reflection, through reading or unprovocative conversation; and this belief guided him through life. Moreover, it is very improbable that he could ever have shone as a public speaker, and to this fact unfriendly critics have attributed, at least in part, his abstinence from debate. The house of burgesses of 1769, and its successors in 1773 and 1774, were dissolved by the governor (see VIRGINIA) for their action on the subject of colonial grievances and inter-colonial co-operation. Jefferson was prominent in all; was a signer of the Virginia agreement of non-importation and economy (1769); and was elected in 1774 to the first Virginia convention, called to consider the state of the colony and advance inter-colonial union. Prevented by illness from attending, Jefferson sent to the convention elaborate resolutions, which he proposed as instructions to the Virginia delegates to the Continental Congress that was to meet at Philadelphia in September. In the direct language of reproach and advice, with no disingenuous loading of the Crown's policy upon its agents, these resolutions attacked the errors of the king, and maintained that "the relation between Great Britain and these colonies was exactly the same as that of England and Scotland after the accession of James and until the Union; and that our emigration to this country gave England no more rights over us than the emigration of the Danes and Saxons gave to the present authorities of their mother country over England." This was cutting at the common root of allegiance, emigration and colonization; but such radicalism was too thorough-going for the immediate end. The resolutions were published, however, as a pamphlet, entitled *A Summary View of the Rights of America*, which was widely circulated. In England, after receiving such modifications—attributed to Burke—as adapted it to the purposes of the opposition, this pamphlet ran through many editions, and procured for its author, as he said, "the honour of having his name inserted in a long list of proscriptions enrolled in a bill of attainder commenced in one of the two houses of parliament, but suppressed in embryo by the hasty course of events." It placed Jefferson among the foremost leaders of revolution, and procured for him the honour of drafting, later, the Declaration of Independence, whose historical portions were, in large part, only a revised transcript of the *Summary View*. In June 1775 he took his seat in the

Continental Congress, taking with him fresh credentials of radicalism in the shape of Virginia's answer, which he had drafted, to Lord North's conciliatory propositions. Jefferson soon drafted the reply of Congress to the same propositions. Reappointed to the next Congress, he signalized his service by the authorship of the Declaration of Independence (4.v.). Again reappointed, he surrendered his seat, and after refusing a proffered election to serve as a commissioner with Benjamin Franklin and Silas Deane in France, he entered again, in October 1776, the Virginia legislature, where he considered his services most needed.

The local work to which Jefferson attributed such importance was a revision of Virginia's laws. Of the measures proposed to this end he says: "I considered four, passed or reported, as forming a system by which every trace would be eradicated of ancient or future aristocracy, and a foundation laid for a government truly republican"—the repeal of the laws of entail; the abolition of primogeniture and the unequal division of inheritances (Jefferson was himself an eldest son); the guarantee of freedom of conscience and relief of the people from supporting, by taxation, an established church; and a system of general education. The first object was embodied in law in 1776, the second in 1785, the third² in 1786 (supplemented 1799, 1801). The last two were parts of a body of codified laws prepared (1776-1779) by Edmund Pendleton,³ George Wythe, and Jefferson, and principally by Jefferson. Not so fortunate were Jefferson's ambitious schemes of education. District, grammar and classical schools, a free state library and a state college, were all included in his plan. He was the first American statesman to make education by the state a fundamental article of democratic faith. His bill for elementary education he regarded as the most important part of the code, but Virginia had no strong middle class, and the planters would not assume the burden of educating the poor. At this time Jefferson championed the natural right of expatriation, and gradual emancipation of the slaves. His earliest legislative effort, in the five-day session of 1769, had been marked by an effort to secure to masters freedom to manumit their slaves without removing them from the state. It was unsuccessful, and the more radical measure he now favoured was even more impossible of attainment; but a bill he introduced to prohibit the importation of slaves was passed in 1778—the only important change effected in the slave system of the state during the War of Independence. Finally he endeavoured, though unsuccessfully, to secure the introduction of juries into the courts of chancery, and—a generation and more before the fruition of the labours of Romilly and his co-workers in England—aided in securing a humanitarian revision of the penal code,⁴ which, though lost by one vote in 1785, was sustained by public sentiment, and was adopted in 1796. Jefferson is of course not entitled to the sole credit for all these services: Wythe, George Mason and James Madison, in particular, were his devoted lieutenants, and—after his departure for France—the principals in the struggle; moreover, an approving public opinion must receive large credit. But Jefferson was throughout the chief inspirer and foremost worker.

In 1779, at almost the gloomiest stage of the war in the southern states, Jefferson succeeded Patrick Henry as the governor of Virginia, being the second to hold that office after the organization of the state government. In his second term (1780-1781) the state was overrun by British expeditions, and Jefferson, a civilian, was blamed for the ineffectual resistance. Though he cannot be said to have been eminently fitted for the task that devolved upon him in such a crisis, most of the criticism of his

² The first law of its kind in Christendom, although not the earliest practice of such liberty in America.

³ George Mason and Thomas I. Lee were members of the commission, but they were not lawyers, and did little actual work on the revision.

⁴ Capital punishment was confined to treason and murder; the former was not to be attended by corruption of blood, drawing, or quartering; all other felonies were made punishable by confinement and hard labour, save a few to which was applied, against Jefferson's desire, the principle of retaliation.

¹ It was embarrassed with a debt, however, of £3749, which, owing to conditions caused by the War of Independence, he really paid three times to his British creditors (not counting destruction on his estates, of equal amount, ordered by Lord Cornwallis). This greatly reduced his income for a number of years.

administration was undoubtedly grossly unjust. His conduct being attacked, he declined renomination for the governorship, but was unanimously returned by Albemarle as a delegate to the state legislature; and on the day previously set for legislative inquiry on a resolution offered by an impulsive critic, he received, by unanimous vote of the house, a declaration of thanks and confidence. He wished however to retire permanently from public life, a wish strengthened by the illness and death of his wife. At this time he composed his *Notes on Virginia*, a semi-statistical work full of humanitarian liberalism. Congress twice offered him an appointment as one of the plenipotentiaries to negotiate peace with England, but, though he accepted the second offer, the business was so far advanced before he could sail that his appointment was recalled. During the following winter (1783) he was again in Congress, and headed the committee appointed to consider the treaty of peace. In the succeeding session his service was marked by a report, from which resulted the present monetary system of the United States (the fundamental idea of its decimal basis being due, however, to Gouverneur Morris); and by the honour of reporting the first definitely formulated plan for the government of the western territories,¹ that embodied in the ordinance of 1784. He was already particularly associated with the great territory north-west of the Ohio; for Virginia had tendered to Congress in 1781, while Jefferson was governor, a cession of her claims to it, and now in 1784 formally transferred the territory by act of Jefferson and his fellow-delegates in congress: a consummation for which he had laboured from the beginning. His anti-slavery opinions grew in strength with years (though he was somewhat inconsistent in his attitude on the Missouri question in 1820-1821). Not only justice but patriotism as well pleaded with him the cause of the negroes,² for he foresaw the certainty that the race must some day, in some way, be freed, and the dire political dangers involved in the institution of slavery; and could any feasible plan of emancipation have been suggested he would have regarded its cost as a mere bagatelle.

From 1784 to 1789 Jefferson was in France, first under an appointment to assist Benjamin Franklin and John Adams in negotiating treaties of commerce with European states, and then as Franklin's successor (1785-1789) as minister to France.³ In these years he travelled widely in western Europe. Though the commercial principles of the United States were far too liberal for acceptance, as such, by powers holding colonies in America, Jefferson won some specific concessions to American trade. He was exceedingly popular as a minister. The criticism is even to-day current with the uninformed that Jefferson took his manners,⁴ morals, irreligion and political philosophy from his French residence; and it cannot be wholly ignored. It may therefore be said that there is nothing except unsubstantiated scandal to contradict the conclusion, which various evidence

¹ This plan applied to the south-western as well as to the north-western territory, and was notable for a provision that slavery should not exist therein after 1800. This provision was defeated in 1784, but was adopted in 1787 for the north-western territory—a step which is very often said to have saved the Union in the Civil War; the south-western territory (out of which were later formed Mississippi, Alabama, &c.) being given over to slavery. Thus the anti-slavery clause of the ordinance of 1784 was not adopted; and it was preceded by unofficial proposals to the same end; yet to it belongs rightly some special honour as blazoning the way for federal control of slavery in the territories, which later proved of such enormous consequence. Jefferson in the first draft of the Ordinance of 1784, suggested the names to be given to the states eventually to be formed out of the territory concerned. For his suggestions he has been much ridiculed. The names are as follows: Illinois, Michigan, Sylvania, Polypotamia, Assenisipia, Charroneus, Pelisipia, Saratoga, Metropotamia and Washington.

² He owned at one time above 150 slaves. His overseers were under contract never to bleed them; but he manumitted only a few at his death.

³ During this time he assisted in negotiating a treaty of amity and commerce with Prussia (1785) and one with Morocco (1786), and negotiated with France a "convention defining and establishing the functions and privileges of consuls and vice-consuls" (1788).

⁴ Patrick Henry humorously declaimed before a popular audience that Jefferson, who favoured French wine and cookery, had "abjured his native victuals."

supports, that Jefferson's morals were pure. His religious views and political beliefs will be discussed later. His theories had a deep and broad basis in English whiggism; and though he may well have found at least confirmation of his own ideas in French writers—and notably in Condorcet—he did not read sympathetically the writers commonly named, Rousseau and Montesquieu; besides, his democracy was seasoned, and he was rather a teacher than a student of revolutionary politics when he went to Paris. The *Notes on Virginia* were widely read in Paris, and undoubtedly had some influence in forwarding the dissolution of the doctrines of divine rights and passive obedience among the cultivated classes of France. Jefferson was deeply interested in all the events leading up to the French Revolution, and all his ideas were coloured by his experience of the five seething years passed in Paris. On the 3rd of June 1789 he proposed to the leaders of the third estate a compromise between the king and the nation. In July he received the extraordinary honour of being invited to assist in the deliberations of the committee appointed by the national assembly to draft a constitution. This honour his official position compelled him, of course, to decline; for he sedulously observed official proprieties, and in no way gave offence to the government to which he was accredited.

When Jefferson left France it was with the intention of soon returning; but President Washington tendered him the secretaryship of state in the new federal government, and Jefferson reluctantly accepted. His only essential objection to the constitution—the absence of a bill of rights—was soon met, at least partially, by amendments. Alexander Hamilton (*q.v.*) was secretary of the treasury. These two men, antipodal in temperament and political belief, clashed in irreconcilable hostility, and in the conflict of public sentiment, first on the financial measures of Hamilton, and then on the questions with regard to France and Great Britain, Jefferson's sympathies being predominantly with the former, Hamilton's with the latter, they formed about themselves the two great parties of Democrats and Federalists. The schools of thought for which they stood have since contended for mastery in American politics: Hamilton's gradually strengthened by the necessities of stronger administration, as time gave widening amplitude and increasing weight to the specific powers—and so to Hamilton's great doctrine of the "implied powers"—of the general government of a growing country; Jefferson's rooted in colonial life, and buttressed by the hopes and convictions of democracy.

The most perplexing questions treated by Jefferson as secretary of state arose out of the policy of neutrality adopted by the United States toward France, to whom she was bound by treaties and by a heavy debt of gratitude. Separation from European politics—the doctrine of "America for Americans" that was embodied later in the Monroe declaration—was a tenet cherished by Jefferson as by other leaders (not, however, Hamilton) and by none cherished more firmly, for by nature he was peculiarly opposed to war, and peace was a fundamental part of his politics. However deep, therefore, his French sympathies, he drew the same safe line as did Washington between French politics and American politics,⁵ and handled the Genet complications to the satisfaction of even the most partisan Federalist. He expounded, as a very high authority has said, "with remarkable clearness and power the nature and scope of neutral duty," and gave a "classic" statement of the doctrine of recognition.⁶

But the French question had another side in its reaction on American parties.⁷ Jefferson did not read excesses in Paris as warnings against democracy, but as warnings against the abuses

⁵ Jefferson did not sympathize with the temper of his followers who condoned the zealous excesses of Genet, and in general with the "misbehaviour" of the democratic clubs; but, as a student of English liberties, he could not accept Washington's doctrine that for a self-created permanent body to declare "this act unconstitutional, and that act pregnant with mischiefs" was "a stretch of arrogant presumption," which would, if unchecked, "destroy the country."

⁶ John Bassett Moore, *American Diplomacy* (New York, 1905).
⁷ Compare C. D. Hazen, *Contemporary American opinion of the French Revolution* (Johns Hopkins University, Baltimore, 1897).

of monarchy; nor did he regard Bonaparte's *coup d'état* as revealing the weakness of republics, but rather as revealing the danger of standing armies; he did not look on the war of the coalitions against France as one of mere powers, but as one between forms of government; and though the immediate fruits of the Revolution belied his hopes, as they did those of ardent humanitarians the world over, he saw the broad trend of history, which vindicated his faith that a successful reformation of government in France would insure "a general reformation through Europe, and the resurrection to a new life of their people." Each of these statements could be reversed as regards Hamilton. It is the key to an understanding of the times to remember that the War of Independence had disjointed society; and democracy—which Jefferson had proclaimed in the Declaration of Independence, and enthroned in Virginia—after strengthening its rights by the sword, had run to excesses, particularly in the Shays' rebellion, that produced a conservative reaction. To this reaction Hamilton explicitly appealed in the convention of 1787; and of this reaction various features of the constitution, and Hamiltonian federalism generally, were direct fruits. Moreover, independently of special incentives to the alarmist and the man of property, the opinions of many Americans turned again, after the war, into a current of sympathy for England, as naturally as American commerce returned to English ports. Jefferson, however, far from America in these years and unexposed to reactionary influences, came back with undiminished fervour of democracy, and the talk he heard of praise for England, and fearful recoil before even the beginning of the revolution in France, disheartened him, and filled him with suspicion.¹ Hating as he did feudal class institutions and Tudor-Stuart traditions of arbitrary rule,² his attitude can be imagined toward Hamilton's oft-avowed partialities—and Jefferson assumed, his intrigues—for British class-government with its eighteenth-century measure of corruption. In short, Hamilton took from recent years the lesson of the evils of lax government; whereas Jefferson clung to the other lesson, which crumbling colonial governments had illustrated, that governments derived their strength (and the Declaration had proclaimed that they derived their just rights) from the will of the governed. Each built his system accordingly: the one on the basis of order, the other on individualism—which led Jefferson to liberty alike in religion and in politics. The two men and the fate of the parties they led are understandable only by regarding one as the leader of reaction, the other as in line with the American tendencies. The educated classes characteristically furnished federalism with a remarkable body of alarmist leaders; and thus it happened that Jefferson, because, with only a few of his great contemporaries, he had a thorough trust and confidence in the people, became the idol of American democracy.

As Hamilton was somewhat officious and very combative, and Jefferson, although uncontentious, very suspicious and quite independent, both men holding inflexibly to opinions, cabinet harmony became impossible when the two secretaries had formed parties about them and their differences were carried into the

¹ It was at this period of his life that Jefferson gave expression to some of the opinions for which he has been most severely criticized and ridiculed. For the Shays' rebellion he felt little abhorrence, and wrote: "A little rebellion now and then is a good thing . . . an observation of this truth should render honest republican governors as mild in their punishment of rebellions as not to discourage them too much. It is a medicine necessary for the sound health of government" (*Writings*, Ford ed., iv. 362-363). Again, "Can history produce an instance of rebellion so honorably conducted? . . . God forbid that we should ever be twenty years without such a rebellion. . . . What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure" (*ibid.* iv. 467). Again he says: "Societies exist under three forms—(1) without government as among our Indians; (2) under governments wherein the will of every one has a just influence; (3) under governments of force. . . . It is a problem not clear in my mind that the first condition is not the best" (*ibid.* iv. 362).

² He turned law students from Blackstone's toryism to Coke on Littleton; and he would not read Walter Scott, so strong was his aversion to that writer's predilection for class and feudalism.

newspapers;³ and Washington abandoned perforce his idea "if parties did exist to reconcile them." Partly from discontent with a position in which he did not feel that he enjoyed the absolute confidence of the president,⁴ and partly because of the embarrassed condition of his private affairs, Jefferson repeatedly sought to resign, and finally on the 31st of December 1793, with Washington's reluctant consent, gave up his portfolio and retired to his home at Monticello, near Charlottesville.

Here he remained improving his estate (having refused a foreign mission) until elected vice-president in 1796. Jefferson was never truly happy except in the country. He loved gardening, experimented enthusiastically in varieties and rotations of crops and kept meteorological tables with diligence. For eight years he tabulated with painful accuracy the earliest and latest appearance of thirty-seven vegetables in the Washington market. When abroad he sought out varieties of grasses, trees, rice and olives for American experiment, and after his return from France received yearly for twenty-three years, from his old friend the superintendent of the *Jardin des plantes*, a box of seeds, which he distributed to public and private gardens throughout the United States. Jefferson seems to have been the first discoverer of an exact formula for the construction of mould-boards of least resistance for ploughs. He managed to make practical use of his calculus about his farms, and seems to have been remarkably apt in the practical application of mechanical principles.

In the presidential election of 1796 John Adams, the Federalist candidate, received the largest number of electoral votes, and Jefferson, the Republican candidate, the next largest number, and under the law as it then existed the former became president and the latter vice-president. Jefferson re-entered public life with reluctance, though doubtless with keen enough interest and resolution. He had rightly measured the strength of his followers, and was waiting for the government to "drift into unison" with the republican sense of its constituents, predicting that President Adams would be "overborne" thereby. This prediction was speedily fulfilled. At first the reign of terror and the X. Y. Z. disclosures strengthened the Federalists, until these, mistaking the popular resentment against France for a reaction against democracy—an equivalence in their own minds—passed the alien and sedition laws. In answer to those odious measures Jefferson and Madison prepared and procured the passage of the Kentucky and Virginia resolutions. These resolutions later acquired extraordinary and pernicious prominence in the historical elaboration of the states'-rights doctrine. It is, however, unquestionably true, that as a startling protest against measures "to silence," in Jefferson's words, "by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of our agents," they served, in this respect, a useful purpose; and as a counterblast against Hamiltonian principles of centralization they were probably, at that moment, very salutary; while even as pieces of constitutional interpretation it is to be remembered that they did not contemplate nullification by any single state, and, moreover, are not to be judged by constitutional principles established later by courts and war. The Federalist party had ruined itself, and it lost the presidential election of 1800. The Republican candidates, Jefferson and Aaron Burr (*q.v.*), receiving equal votes, it devolved upon the house of representatives, in accordance with the system which then obtained, to make one of the two president, the other vice-president. Party feeling in America has probably never been more dangerously impassioned than in the three years preceding

³ Hamilton wrote for the papers himself; Jefferson never did. A talented clerk in his department, however, Philip Freneau, set up an anti-administration paper. It was alleged that Jefferson appointed him for the purpose, and encouraged him. Undoubtedly there was nothing in the charge. The federalist outcry could only have been silenced by removal of Freneau, or by disclaimers or admonitions, which Jefferson did not think it incumbent upon himself—or, since he thought Freneau was doing good, desirable for him—to make.

⁴ Contrary to the general belief that Hamilton dominated Washington in the cabinet, there is the president's explicit statement that "there were as many instances" of his deciding against as in favour of the secretary of the treasury.

JEFFERSON, T.

this election; discount as one will the contrary obsessions of men like Fisher Ames, Hamilton and Jefferson, the time was fateful. Unable to induce Burr to avow federalist principles, influential Federalists, in defiance of the constitution, contemplated the desperate alternative of preventing an election, and appointing an extra-constitutional (Federalist) president *pro tempore*. Better counsels, however, prevailed; Hamilton used his influence in favour of Jefferson as against Burr, and Jefferson became president, entering upon his duties on the 4th of March 1801. Republicans who had affiliated with the Federalists at the time of the X. Y. Z. disclosures returned; very many of the Federalists themselves Jefferson placated and drew over. "Believing," he wrote, "that (excepting the ardent monarchists) all our citizens agreed in ancient whig principles"—or, as he elsewhere expressed it, in "republican forms"—"I thought it advisable to define and declare them, and let them see the ground on which we can rally." This he did in his inaugural, which, though somewhat rhetorical, is a splendid and famous statement of democracy.¹ His conciliatory policy produced a mild schism in his own party, but proved eminently wise, and the state elections of 1801 fulfilled his prophecy of 1791 that the policy of the Federalists would leave them "all head and no body." In 1804 he was re-elected by 162 out of 176 votes.

Jefferson's administrations were distinguished by the simplicity that marked his conduct in private life. He eschewed the pomp and ceremonies, natural inheritances from English origins, that had been an innocent setting to the character of his two noble predecessors. His dress was of "plain cloth" on the day of his inauguration. Instead of driving to the Capitol in a coach and six, he walked without a guard or servant from his lodgings—or, as a rival tradition has it, he rode, and hitched his horse to a neighbouring fence—attended by a crowd of citizens. Instead of opening Congress with a speech to which a formal reply was expected, he sent in a written message by a private hand. He discontinued the practice of sending ministers abroad in public vessels. Between himself and the governors of states he recognized no difference in rank. He would not have his birthday celebrated by state balls. The weekly *levée* was practically abandoned. Even such titles as "Excellency," "Honourable," "Mr" were distasteful to him. It was formally agreed in cabinet meeting that "when brought together in society, all are perfectly equal, whether foreign or domestic, titled or untitled, in or out of office." Thus diplomatic grades were ignored in social precedence and foreign relations were seriously compromised by dinner-table complications. One minister who appeared in gold lace and dress sword for his first, and regularly appointed, official call on the president, was received—as he insisted with studied purpose—by Jefferson in negligent undress and slippers down at the heel. All this was in part premeditated system²—a part of Jefferson's purpose to republicanize the government and public opinion, which was the distinguishing feature of his administration; but it was also simply the nature of the man. In the company he chose by preference, honesty and knowledge were his only tests. He knew absolutely no social distinctions in his willingness to perform services for the deserving. He held up to his daughter as an especial model the family of a poor but gifted mechanic as one wherein she would see "the best examples of rational living." "If it be possible," he said, "to be certainly conscious of anything, I am conscious of feeling no difference between writing to the highest and lowest being on earth."

Jefferson's first administration was marked by a reduction of the army, navy, diplomatic establishment and, to the uttermost, of governmental expenses; some reduction of the civil service, accompanied by a large shifting of offices to Republicans; and, above all, by the Louisiana Purchase (*q.v.*), following which Meriwether Lewis and William Clark, sent by Jefferson, con-

ducted their famous exploring expedition across the continent to the Pacific (see LEWIS, MERIWETHER). Early in his term he carried out a policy he had urged upon the government when minister to France and when vice-president, by despatching naval forces to coerce Tripoli into a decent respect for the trade of his country—the first in Christendom to gain honourable immunity from tribute or piracy in the Mediterranean. The Louisiana Purchase, although the greatest "inconsistency" of his career, was also an illustration, in corresponding degree, of his essential practicality, and one of the greatest proofs of his statesmanship. It was the crowning achievement of his administration. It is often said that Jefferson established the "spoils system" by his changes in the civil service. He was the innovator, because for the first time there was opportunity for innovation. But mere justice requires attention to the fact that incentive to that innovation, and excuse for it, were found in the absolute one-party monopoly maintained by the Federalists. Moreover, Jefferson's ideals were high; his reasons for changes were in general excellent; he at least so far resisted the great pressure for office—producing by his resistance dissatisfaction within his party—as not to have lowered, apparently, the personnel of the service; and there were no such blots on his administration as President Adams's "midnight judges." Nevertheless, his record here was not clear of blots, showing a few regrettable inconsistencies.³ Among important but secondary measures of his second administration were the extinguishment of Indian titles, and promotion of Indian emigration to lands beyond the Mississippi; reorganization of the militia; fortification of the seaports; reduction of the public debt; and a simultaneous reduction of taxes. But his second term derives most of its historical interest from the unsuccessful efforts to convict Aaron Burr of treasonable acts in the south-west, and from the efforts made to maintain, without war, the rights of neutrals on the high seas. In his diplomacy with Napoleon and Great Britain Jefferson betrayed a painful incorrigibility of optimism. A national policy of "growling before fighting"—later practised successfully enough by the United States—was not then possible; and one writer has very justly said that what chiefly affects one in the whole matter is the pathos of it—"a philosopher and a friend of peace struggling with a despot of superhuman genius, and a Tory cabinet of superhuman insolence and stolidity" (Trent). It is possible to regard the embargo policy dispassionately as an interesting illustration of Jefferson's love of peace. The idea—a very old one with Jefferson—was not entirely original; in essence it received other attempted applications in the Napoleonic period—and especially in the continental blockade. Jefferson's statesmanship had the limitations of an agrarian outlook. The extreme to which he carried his advocacy of diplomatic isolation, his opposition to the creation of an adequate navy,⁴ his estimate of cities as "sores upon the body politic," his prejudice against manufactures, trust in farmers, and political distrust of the artisan class, all reflect them.

When, on the 4th of March 1809, Jefferson retired from the presidency, he had been almost continuously in the public service for forty years. He refused to be re-elected for a third time, though requested by the legislatures of five states to be a candidate; and thus, with Washington's prior example, helped

³ See C. R. Fish, *The Civil Service and the Patronage* (Harvard Historical Studies, New York, 1905), ch. 2.

⁴ Jefferson's dislike of a navy was due to his desire for an economical administration and for peace. Shortly after his inauguration he expressed a desire to lay up the larger men of war in the eastern branch of the Potomac, where they would require only "one set of plunderers to take care of them." To Thomas Paine he wrote in 1807: "I believe that gunboats are the only water defence which can be useful to us and protect us from the ruinous folly of a navy" (*Works*, Ford ed., ix. 137). The gunboats desired by Jefferson were small, cheap craft equipped with one or two guns and kept on shore under sheds until actually needed, when they were to be launched and manned by a sort of naval militia. A large number of these boats were constructed and they afforded some protection to coasting vessels against privateers, but in bad weather, or when employed against a frigate, they were worse than useless, and Jefferson's "gunboat system" was admittedly a failure.

¹ See also Jefferson to E. Gerry, 26th of January 1799 (*Writings*, vii. 325), and to Dupont de Nemours (x. 23). Cf. Hamilton to J. Dayton, 1799 (*Works*, x. 329).

² In 1786 he suggested to James Monroe that the society of friends he hoped to gather in Albemarle might, in sumptuary matters, "set a good example" to a country (*i.e.* Virginia) that "needed" it.

of monarchy; nor did he regard Bonaparte's *coup d'état* as revealing the weakness of republics, but rather as revealing the danger of standing armies; he did not look on the war of the coalitions against France as one of mere powers, but as one between forms of government; and though the immediate fruits of the Revolution belied his hopes, as they did those of ardent humanitarians the world over, he saw the broad trend of history, which vindicated his faith that a successful reformation of government in France would insure "a general reformation through Europe, and the resurrection to a new life of their people." Each of these statements could be reversed as regards Hamilton. It is the key to an understanding of the times to remember that the War of Independence had disjointed society; and democracy—which Jefferson had proclaimed in the Declaration of Independence, and enthroned in Virginia—after strengthening its rights by the sword, had run to excesses, particularly in the Shays' rebellion, that produced a conservative reaction. To this reaction Hamilton explicitly appealed in the convention of 1787; and of this reaction various features of the constitution, and Hamiltonian federalism generally, were direct fruits. Moreover, independently of special incentives to the alarmist and the man of property, the opinions of many Americans turned again, after the war, into a current of sympathy for England, as naturally as American commerce returned to English ports. Jefferson, however, far from America in these years and unexposed to reactionary influences, came back with undiminished fervour of democracy, and the talk he heard of praise for England, and fearful recoil before even the beginning of the revolution in France, disheartened him, and filled him with suspicion.¹ Hating as he did feudal class institutions and Tudor-Stuart traditions of arbitrary rule,² his attitude can be imagined toward Hamilton's oft-avowed partialities—and Jefferson assumed, his intrigues—for British class-government with its eighteenth-century measure of corruption. In short, Hamilton took from recent years the lesson of the evils of lax government; whereas Jefferson clung to the other lesson, which crumbling colonial governments had illustrated, that governments derived their strength (and the Declaration had proclaimed that they derived their just rights) from the will of the governed. Each built his system accordingly: the one on the basis of order, the other on individualism—which led Jefferson to liberty alike in religion and in politics. The two men and the fate of the parties they led are understandable only by regarding one as the leader of reaction, the other as in line with the American tendencies. The educated classes characteristically furnished federalism with a remarkable body of alarmist leaders; and thus it happened that Jefferson, because, with only a few of his great contemporaries, he had a thorough trust and confidence in the people, became the idol of American democracy.

As Hamilton was somewhat officious and very combative, and Jefferson, although uncontentious, very suspicious and quite independent, both men holding inflexibly to opinions, cabinet harmony became impossible when the two secretaries had formed parties about them and their differences were carried into the

¹ It was at this period of his life that Jefferson gave expression to some of the opinions for which he has been most severely criticized and ridiculed. For the Shays' rebellion he felt little abhorrence, and wrote: "A little rebellion now and then is a good thing . . . an observation of this truth should render honest republican governors as mild in their punishment of rebellions as not to discourage them too much. It is a medicine necessary for the sound health of government" (*Writings*, Ford ed., iv. 362-363). Again, "Can history produce an instance of rebellion so honorably conducted? . . . God forbid that we should ever be twenty years without such a rebellion. . . . What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure" (*ibid.* iv. 467). Again he says: "Societies exist under three forms—(1) without government as among our Indians; (2) under governments wherein the will of every one has a just influence; (3) under governments of force. . . . It is a problem not clear in my mind that the first condition is not the best" (*ibid.* iv. 362).

² He turned law students from Blackstone's toryism to Coke on Littleton; and he would not read Walter Scott, so strong was his aversion to that writer's predilection for class and feudalism.

newspapers;³ and Washington abandoned perforce his idea "if parties did exist to reconcile them." Partly from discontent with a position in which he did not feel that he enjoyed the absolute confidence of the president,⁴ and partly because of the embarrassed condition of his private affairs, Jefferson repeatedly sought to resign, and finally on the 31st of December 1793, with Washington's reluctant consent, gave up his portfolio and retired to his home at Monticello, near Charlottesville.

Here he remained improving his estate (having refused a foreign mission) until elected vice-president in 1796. Jefferson was never truly happy except in the country. He loved gardening, experimented enthusiastically in varieties and rotations of crops and kept meteorological tables with diligence. For eight years he tabulated with painful accuracy the earliest and latest appearance of thirty-seven vegetables in the Washington market. When abroad he sought out varieties of grasses, trees, rice and olives for American experiment, and after his return from France received yearly for twenty-three years, from his old friend the superintendent of the *Jardin des plantes*, a box of seeds, which he distributed to public and private gardens throughout the United States. Jefferson seems to have been the first discoverer of an exact formula for the construction of mould-boards of least resistance for ploughs. He managed to make practical use of his calculus about his farms, and seems to have been remarkably apt in the practical application of mechanical principles.

In the presidential election of 1796 John Adams, the Federalist candidate, received the largest number of electoral votes, and Jefferson, the Republican candidate, the next largest number, and under the law as it then existed the former became president and the latter vice-president. Jefferson re-entered public life with reluctance, though doubtless with keen enough interest and resolution. He had rightly measured the strength of his followers, and was waiting for the government to "drift into unison" with the republican sense of its constituents, predicting that President Adams would be "overborne" thereby. This prediction was speedily fulfilled. At first the reign of terror and the X. Y. Z. disclosures strengthened the Federalists, until these, mistaking the popular resentment against France for a reaction against democracy—an equivalence in their own minds—passed the alien and sedition laws. In answer to those odious measures Jefferson and Madison prepared and procured the passage of the Kentucky and Virginia resolutions. These resolutions later acquired extraordinary and pernicious prominence in the historical elaboration of the states'-rights doctrine. It is, however, unquestionably true, that as a startling protest against measures "to silence," in Jefferson's words, "by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of our agents," they served, in this respect, a useful purpose; and as a counterblast against Hamiltonian principles of centralization they were probably, at that moment, very salutary; while even as pieces of constitutional interpretation it is to be remembered that they did not contemplate nullification by any single state, and, moreover, are not to be judged by constitutional principles established later by courts and war. The Federalist party had ruined itself, and it lost the presidential election of 1800. The Republican candidates, Jefferson and Aaron Burr (*q.v.*), receiving equal votes, it devolved upon the house of representatives, in accordance with the system which then obtained, to make one of the two president, the other vice-president. Party feeling in America has probably never been more dangerously impassioned than in the three years preceding

Trent, in his *Southern Statesmen of the Old Régime* (New York, 1897); that by John Fiske, *Essays, Historical and Literary*, vol. 1. (New York, 1902), has slighter merits. (F. S. P.)

JEFFERSON CITY (legally and officially the City of Jefferson), the capital of Missouri, U.S.A., and the county-seat of Cole county, on the Missouri river, near the geographical centre of the state, about 125 m. W. of St. Louis. Pop. (1890), 6742; (1900), 9664, of whom 786 were foreign-born and 1822 were negroes; estimated (1906), 11,416. It is served by the Missouri Pacific, the Chicago & Alton, and the Missouri, Kansas & Texas railways. Its site is partly in the bottom-lands of the river and partly on the steep banks at an elevation of about 600 ft. above the sea. A steel bridge spans the river. The state capitol, an imposing structure built on a bluff above the river, was built in 1838-1842 and enlarged in 1887-1888; it was first occupied in 1840 by the legislature, which previously had met (after 1837) in the county court house. Other prominent buildings are the United States court house and post office, the state supreme court house, the county court house, the state penitentiary, the state armoury and the executive mansion. The penitentiary is to a large extent self-supporting; in 1903-1904 the earnings were \$3493.80 in excess of the costs, but in 1904-1906 the costs exceeded the earnings by \$9044. Employment is furnished for the convicts on the penitentiary premises by incorporated companies. The state law library here is one of the best of the kind in the country, and the city has a public library. In the city is Lincoln Institute, a school for negroes, founded in 1866 by two regiments of negro infantry upon their discharge from the United States army, opened in 1868, taken over by the state in 1879, and having sub-normal, normal, college, industrial and agricultural courses. Coal and limestone are found near the city. In 1905 the total value of the factory product was \$3,926,632, an increase of 28.2 % since 1900. The original constitution of Missouri prescribed that the capital should be on the Missouri river within 40 m. of the mouth of the Osage, and a commission selected in 1821 the site of Jefferson City, on which a town was laid out in 1822, the name being adopted in honour of Thomas Jefferson. The legislature first met here in 1826; Jefferson City became the county-seat in 1828, and in 1839 was first chartered as a city. The constitutional conventions of 1845 and 1875, and the state convention which issued the call for the national liberal republican convention at Cincinnati in 1872, met here, and so for some of its sessions did the state convention of 1861-1863. In June 1861 Jefferson City was occupied by union forces, and in September-October 1864 it was threatened by confederate troops under General Sterling Price.

JEFFERSONVILLE, a city and the county-seat of Clark county, Indiana, U.S.A., situated on the N. bank of the Ohio river, opposite Louisville, Kentucky, with which it is connected by several bridges. Pop. (1890), 10,666; (1900), 10,774, of whom 1818 were of negro descent and 615 were foreign-born; (1906 estimate), 10,840. It is served by the Baltimore & Ohio South-western, the Cleveland, Cincinnati, Chicago & St. Louis, and the Pittsburg, Cincinnati, Chicago & St. Louis railways, and by three inter-urban electric lines. It is attractively situated on bluffs above the river, which at this point has a descent (known as the falls of the Ohio) of 26 ft. in 2 m. This furnishes

good water power for manufacturing purposes both at Jeffersonville and at Louisville. The total value of the factory product in 1905 was \$4,526,443, an increase of 20 % since 1900. The Indiana reformatory (formerly the Southern Indiana penitentiary) and a large supply dépôt of the United States army are at Jeffersonville. General George Rogers Clark started (June 24, 1778) on his expedition against Kaskaskia and Vincennes from Corn Island (now completely washed away) opposite what is now Jeffersonville. In 1786 the United States government established Fort Finney (built by Captain Walter Finney), afterwards re-named Fort Steuben, on the site of the present city; but the fort was abandoned in 1791, and the actual beginning of Jeffersonville was in 1802, when a part of the Clark grant (the site of the present city) was transferred by its original owner, Lieut. Isaac Bowman, to three trustees, under whose direction a town was laid out. Jeffersonville was incorporated as a town in 1815, and was chartered as a city in 1839.

JEFFREY, FRANCIS JEFFREY, LORD (1773-1850), Scottish judge and literary critic, son of a deputy-clerk in the Court of Session, was born at Edinburgh on the 23rd of October 1773. After attending the high school for six years, he studied at the university of Glasgow from 1787 to May 1789, and at Queen's College, Oxford, from September 1791 to June 1792. He had begun the study of law at Edinburgh before going to Oxford, and now resumed his studies there. He became a member of the speculative society, where he measured himself in debate with Scott, Brougham, Francis Horner, the marquess of Lansdowne, Lord Kinnaird and others. He was admitted to the Scotch bar in December 1794, but, having abandoned the Tory principles in which he had been educated, he found that his Whig politics seriously prejudiced his legal prospects. In consequence of his lack of success at the bar he went to London in 1798 to try his fortune as a journalist, but without success; he also made more than one vain attempt to obtain an office which would have secured him the advantage of a small but fixed salary. His marriage with Catherine Wilson in 1801 made the question of a settled income even more pressing. A project for a new review was brought forward by Sydney Smith in Jeffrey's flat in the presence of H. P. Brougham (afterwards Lord Brougham), Francis Horner and others; and the scheme resulted in the appearance on the 10th of October 1802 of the first number of the *Edinburgh Review*. At the outset the *Review* was not under the charge of any special editor. The first three numbers were, however, practically edited by Sydney Smith, and on his leaving for England the work devolved chiefly on Jeffrey, who, by an arrangement with Constable, the publisher, was eventually appointed editor at a fixed salary. Most of those associated in the undertaking were Whigs; but, although the general bias of the *Review* was towards social and political reforms, it was at first so little of a party organ that for a time it numbered Sir Walter Scott among its contributors: and no distinct emphasis was given to its political leanings until the publication in 1808 of an article by Jeffrey himself on the work of Don Pedro Cevallos on the *French Usurpation of Spain*. This article expressed despair of the success of the British arms in Spain, and Scott at once withdrew his subscription, the *Quarterly* being soon afterwards started in opposition. According to Lord Cockburn the effect of the first number of the *Edinburgh Review* was "electrical." The English reviews were at that time practically publishers' organs, the articles in which were written by hack-writers instructed to praise or blame according to the publishers' interests. Few men of any standing consented to write for them. The *Edinburgh Review*, on the other hand, enlisted a brilliant and independent staff of contributors, guided by the editor, not the publisher. They received sixteen guineas a sheet (sixteen printed pages), increased subsequently to twenty-five guineas in many cases, instead of the two guineas which formed the ordinary London reviewer's fee. Further, the review was not limited to literary criticism. It constituted itself the accredited organ of moderate Whig public opinion. The particular work which provided the starting-point of an article was in many cases merely the occasion for the exposition, always

of monarchy; nor did he regard Bonaparte's *coup d'état* as revealing the weakness of republics, but rather as revealing the danger of standing armies; he did not look on the war of the coalitions against France as one of mere powers, but as one between forms of government; and though the immediate fruits of the Revolution belied his hopes, as they did those of ardent humanitarians the world over, he saw the broad trend of history, which vindicated his faith that a successful reformation of government in France would insure "a general reformation through Europe, and the resurrection to a new life of their people." Each of these statements could be reversed as regards Hamilton. It is the key to an understanding of the times to remember that the War of Independence had disjointed society; and democracy—which Jefferson had proclaimed in the Declaration of Independence, and enthroned in Virginia—after strengthening its rights by the sword, had run to excesses, particularly in the Shays' rebellion, that produced a conservative reaction. He had rightly measured the strength of his followers, and was waiting for the government to "drift into unison" with the republican sense of its constituents, predicting that President Adams would be "overborne" thereby. This prediction was speedily fulfilled. At first the reign of terror and the X. Y. Z. disclosures strengthened the Federalists, until these, mistaking the popular resentment against France for a reaction against democracy—an equivalence in their own minds—passed the alien and sedition laws. In answer to those odious measures Jefferson and Madison prepared and procured the passage of the Kentucky and Virginia resolutions. These resolutions later acquired extraordinary and pernicious prominence in the historical elaboration of the states'-rights doctrine. It is, however, unquestionably true, that as a startling protest against measures "to silence," in Jefferson's words, "by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of our agents," they served, in this respect, a useful purpose; and as a counterblast against Hamiltonian principles of centralization they were probably, at that moment, very salutary; while even as pieces of constitutional interpretation it is to be remembered that they did not contemplate nullification by any single state, and, moreover, are not to be judged by constitutional principles established later by courts and war. The Federalist party had ruined itself, and it lost the presidential election of 1800. The Republican candidates, Jefferson and Aaron Burr (*q.v.*), receiving equal votes, it devolved upon the house of representatives, in accordance with the system which then obtained, to make one of the two president, the other vice-president. Party feeling in America has probably never been more dangerously impassioned than in the three years preceding

³ Hamilton wrote for the papers himself; Jefferson never did. A talented clerk in his department, however, Philip Freneau, set up an anti-administration paper. It was alleged that Jefferson appointed him for the purpose, and encouraged him. Undoubtedly there was nothing in the charge. The federalist outcry could only have been silenced by removal of Freneau, or by disclaimers or admonitions, which Jefferson did not think it incumbent upon himself—or, since he thought Freneau was doing good, desirable for him—to make.

⁴ Contrary to the general belief that Hamilton dominated Washington in the cabinet, there is the president's explicit statement that "there were as many instances" of his deciding against as in favour of the secretary of the treasury.

of April 1680; but when parliament met in October the House of Commons passed a hostile resolution which induced him to resign his recordership, a piece of pusillanimity that drew from the king the remark that Jeffreys was "not parliament-proof." Jeffreys nevertheless received from the city aldermen a substantial token of appreciation for his past services. In 1681 he was created a baronet. In June 1683 the first of the Rye House conspirators were brought to trial. Jeffreys was briefed for the Crown in the prosecution of Lord William Howard; and, having been raised to the bench as lord chief justice of the king's bench in September, he presided at the trials of Algernon Sidney in November 1683 and of Sir Thomas Armstrong in the following June. In the autumn of 1684 Jeffreys, who had been active in procuring the surrender of municipal charters to the Crown, was called to the cabinet, having previously been sworn of the privy council. In May 1685 he had the satisfaction of passing sentence on Titus Oates for perjury in the plot trials; and about the same time James II. rewarded his zeal with a peerage as Baron Jeffreys of Wem, an honour never before conferred on a chief justice during his tenure of office. Jeffreys had for some time been suffering from stone, which aggravated the irritability of his naturally violent temper; and the malady probably was in some degree the cause of the unmeasured fury he displayed at the trial of Richard Baxter (*q.v.*) for seditious libel—if the unofficial *ex parte* report of the trial, which alone exists, is to be accepted as trustworthy.

In August 1685 Jeffreys opened at Winchester the commission known in history as the "bloody assizes," his conduct of which has branded his name with indelible infamy. The number of persons sentenced to death at these assizes for complicity in the duke of Monmouth's insurrection is uncertain. The official return of those actually executed was 320; many hundreds more were transported and sold into slavery in the West Indies. In all probability the great majority of those condemned were in fact concerned in the rising, but the trials were in many cases a mockery of the administration of justice. Numbers were cajoled into pleading guilty; the case for the prisoners seldom obtained a hearing. The merciless severity of the chief justice did not however exceed the wishes of James II.; for on his return to London Jeffreys received from the king the great seal with the title of lord chancellor. For the next two years he was a strenuous upholder of prerogative, though he was less abjectly pliant than has sometimes been represented. There is no reason to doubt the sincerity of his attachment to the Church of England; for although the king's favour was capricious, Jeffreys never took the easy and certain path to secure it that lay through apostasy; and he even withstood James on occasion, when the latter pushed his Catholic zeal to extremes. Though it is true that he accepted the presidency of the ecclesiastical commission, Burnet's statement that it was Jeffreys who suggested that institution to James is probably incorrect; and he was so far from having instigated the prosecution of the seven bishops in 1688, as has been frequently alleged, that he disapproved of the proceedings and rejoiced secretly at the acquittal. But while he watched with misgiving the king's preferment of Roman Catholics, he made himself the masterful instrument of unconstitutional prerogative in coercing the authorities of Cambridge University, who in 1687 refused to confer degrees on a Benedictine monk, and the fellows of Magdalen College, Oxford, who declined to elect as their president a disreputable nominee of the king.

Being thus conspicuously identified with the most tyrannical measures of James II., Jeffreys found himself in a desperate plight when on the 11th of December 1688 the king fled from the country on the approach to London of William of Orange. The lord chancellor attempted to escape like his master; but in spite of his disguise as a common seaman he was recognized in a tavern at Wapping—possibly, as Roger North relates, by an attorney whom Jeffreys had terrified on some occasion in the court of chancery—and was arrested and conveyed to the Tower. The malady from which he had long suffered had recently made fatal progress, and he died in the Tower on

the 18th of April 1689. He was succeeded in the peerage by his son, John (2nd Baron Jeffreys of Wem), who died without male issue in 1702, when the title became extinct.

It is impossible to determine precisely with what justice tradition has made the name of "Judge Jeffreys" a byword of infamy. The Revolution, which brought about his fall, handed over his reputation at the same time to the mercy of his bitterest enemies. They alone have recorded his actions and appraised his motives and character. Even the adherents of the deposed dynasty had no interest in finding excuse for one who served as a convenient scapegoat for the offences of his master. For at least half a century after his death no apology for Lord Jeffreys would have obtained a hearing; and none was attempted. With the exception therefore of what is to be gathered from the reports of the state trials, all knowledge of his conduct rests on testimony tainted by undisguised hostility. Innumerable scurrilous lampoons vilifying the hated instrument of James's tyranny, but without a pretence of historic value, flooded the country at the Revolution; and these, while they fanned the indiscriminating hatred of contemporaries who remembered the judge's severities, and perpetuated that hatred in tradition, have not been sufficiently discounted even by modern historians like Macaulay and Lord Campbell. The name of Jeffreys has therefore been handed down as that of a coarse, ignorant, dissolute, foul-mouthed, inhuman bully, who prostituted the seat of justice. That there was sufficient ground for the execration in which his memory was long held is not to be gainsaid. But the portrait has nevertheless been blackened overmuch. An occasional significant admission in his favour may be gleaned even from the writings of his enemies. Thus Roger North declares that "in matters indifferent," *i.e.* where politics were not concerned, Jeffreys became the seat of justice better than any other that author had seen in his place. Sir J. Jekyll, master of the rolls, told Speaker Onslow that Jeffreys "had great parts and made a great chancellor in the business of his court. In mere private matters he was thought an able and upright judge wherever he sat." His keen sense of humour, allied with a spirit of inveterate mockery and an exuberant command of pungent eloquence, led him to rail and storm at prisoners and witnesses in grossly unseemly fashion. But in this he did not greatly surpass most of his contemporaries on the judicial bench, and it was a failing from which even the dignified and virtuous Hale was not altogether exempt. The intemperance of Jeffreys which shocked North, certainly did not exceed that of Saunders; in violence he was rivalled by Scroggs; though accused of political apostasy, he was not a shameless renegade like Williams; and there is no evidence that in pecuniary matters he was personally venal, or that in licentiousness he followed the example set by Charles II. and most of his courtiers. Some of his actions that have incurred the sternest reprobation of posterity were otherwise estimated by the best of his contemporaries. His trial of Algernon Sidney, described by Macaulay and Lord Campbell as one of the most heinous of his iniquities, was warmly commended by Dr William Lloyd, who was soon afterwards to become a popular idol as one of the illustrious seven bishops (see letter from the bishop of St Asaph in H. B. Irving's *Life of Judge Jeffreys*, p. 184). Nor was the habitual illegality of his procedure on the bench so unquestionable as many writers have assumed. Sir James Stephen inclined to the opinion that no actual abuse of law tainted the trials of the Rye House conspirators, or that of Alice Lisle, the most prominent victim of the "bloody assizes." The conduct of the judges in Russell's trial was, he thinks, "moderate and fair in general"; and the trial of Sidney "much resembled that of Russell." The same high authority pronounces that the trial of Lord Delamere in the House of Lords was conducted by Jeffreys "with propriety and dignity." And if Jeffreys judged political offenders with cruel severity, he also crushed some glaring abuses; conspicuous examples of which were the frauds of attorneys who infested Westminster Hall, and the systematic kidnapping practised by the municipal authorities of Bristol. Moreover, if any value is to be attached to the evidence of physiognomy, the

traditional estimate of the character of Jeffreys obtains no confirmation from the refinement of his features and expression as depicted in Kneller's portrait in the National Portrait Gallery of London. But even though the popular notion requires to be thus modified in certain respects, it remains incontestable that Jeffreys was probably on the whole the worst example of a period when the administration of justice in England had sunk to the lowest degradation, and the judicial bench had become the too willing tool of an unconstitutional and unscrupulous executive.

BIBLIOGRAPHY.—The chief contemporary authorities for the life of Jeffreys are Bishop Burnet's *History of my own Time* (1724), and see especially the edition "with notes by the Earls of Dartmouth and Hardwick, Speaker Onslow and Dean Swift" (Oxford Univ. Press, 1833); Roger North's *Life of the Right Hon. Francis North, Baron of Guildford* (1808) and *Autobiography* (ed. by Augustus Jessopp, 1887); *Ellis Correspondence, Verney Papers* (Hist. MSS. Comm.), *Hatton Correspondence* (Camden Soc. Pub.); the earl of Ailesbury's *Memoirs*; Evelyn's *Diary*. The only trustworthy information as to the judicial conduct and capacity of Jeffreys is to be found in the reports of the *State Trials*, vols. vii.-xii.; and cf. Sir J. F. Stephen's *History of the Criminal Law of England* (1883). For details of the "bloody assizes," see *Harl. MSS.*, 4089; George Roberts, *The Life, Progress and Rebellion of James Duke of Monmouth*, vol. ii. (1844); also many pamphlets, lampoons, &c., in the British Museum, as to which see the article on "Sources of History for Monmouth's Rebellion and the Bloody Assizes," by A. L. Humphreys, in *Proceedings of the Somersetshire Archaeological and Natural Hist. Soc.* (1892). Later accounts are by H. W. Woolrych, *Memoirs of the Life of Judge Jeffreys* (1827); Lord Campbell, *The Lives of the Lord Chancellors* (1845), 1st series, vol. iii.; E. Foss, *The Judges of England* (1864), vol. vii.; Henry Roscoe, *Lives of Eminent British Lawyers* (1830); Lord Macaulay, *History of England* (1848; and many subsequent editions). Most of these works, and especially those by Macaulay and Campbell, are uncritical in their hostility to Jeffreys, and are based for the most part on untrustworthy authorities. The best modern work on the subject, though unduly favourable to Jeffreys, is H. B. Irving's *Life of Judge Jeffreys* (1898), the appendix to which contains a full bibliography.

(R. J. M.)

JEHOIACHIN (Heb. "Yah[weh] establisheth"), in the Bible, son of Jehoiakim and king of Judah (2 Kings xxiv. 8 seq.; 2 Chron. xxxvi. 9 seq.). He came to the throne at the age of eighteen in the midst of the Chaldean invasion of Judah, and is said to have reigned three months. He was compelled to surrender to Nebuchadrezzar and was carried off to Babylon (597 B.C.). This was the First Captivity, and from it Ezekiel (one of the exiles) dates his prophecies. Eight thousand people of the better class (including artisans, &c.) were removed, the Temple was partially despoiled (see Jer. xxvii. 18-20; xxviii. 3 seq.),¹ and Jehoiachin's uncle Mattaniah (son of Josiah) was appointed king. Jehoiachin's fate is outlined in Jer. xxii. 20-30 (cf. xxvii. 20). Nearly forty years later, Nebuchadrezzar II. died (562 B.C.) and Evil-Merodach (Anil-Marduk) his successor released the unfortunate captive and gave him precedence over the other subjugated kings who were kept prisoners in Babylon. With this gleam of hope for the unhappy Judeans both the book of Kings and the prophecies of Jeremiah conclude (2 Kings xxv. 27-30; Jer. lii. 31-34).

See, further, JEREMIAH (especially chaps. xxiv., xxvii. seq.), and JEWS, § 17.

JEHOIAKIM (Heb. "Yah[weh] raiseth up"), in the Bible, son of Josiah (*q.v.*) and king of Judah (2 Kings xxiii. 34-xxiv. 6). On the defeat of Josiah at Megiddo his younger brother Jehoahaz (or Shallum) was chosen by the Judeans, but the Egyptian conqueror Necho summoned him to his headquarters at Riblah (south of Hamath on the Orontes) and removed him to Egypt, appointing in his stead Eliakim, whose name ("El [God] raiseth up") was changed to its better-known synonym, Jehoiakim. For a time Jehoiakim remained under the protection of Necho and paid heavy tribute; but with the rise of the new Chaldean Empire under Nebuchadrezzar II., and the overthrow of Egypt at the battle of Carchemish (605 B.C.) a vital change occurred. After three years of allegiance the king revolted. Invasions followed by Chaldeans, Syrians, Moabites and Ammonites, per-

haps the advance troops despatched by the Babylonian king; the power of Egypt was broken and the whole land came into the hands of Nebuchadrezzar. It was at the close of Jehoiakim's reign, apparently just before his death, that the enemy appeared at the gates of Jerusalem, and although he himself "slept with his fathers" his young son was destined to see the first captivity of the land of Judah (597 B.C.). (See JEHOIACHIN.)

Which "three years" (2 Kings xxiv. 1) are intended is disputed; it is uncertain whether Judah suffered in 605 B.C. (Berossus in *Jos. c. Ap. i. 19*) or was left unharmed (*Jos. Ant. x. 6. 1*); perhaps Nebuchadrezzar made his first incursion against Judah in 602 B.C. because of its intrigue with Egypt (H. Winckler, *Klein-Schrift u. d. alte Test. pp. 107 seq.*), and the three years of allegiance extends to 599. The chronicler's tradition (2 Chron. xxxvi. 5-8) speaks of Jehoiakim's captivity, apparently confusing him with Jehoiachin. The Septuagint, however, still preserves there the record of his peaceful death, in agreement with the earlier source in 2 Kings, but against the prophecy of Jeremiah (xxii. 18 seq., xxxvi. 30), which is accepted by *Jos. Ant. x. 6. 3*. The different traditions can scarcely be reconciled. Nothing certain is known of the marauding bands sent against Jehoiakim; for Syrians (*Aram*) one would expect Edomites (*Edom*), but see Jer. xxxv. 11; some recensions of the Septuagint even include the "Samaritans"! (For further references to this reign see especially JEREMIAH; see also JEWS: History, § 17.) (S. A. C.)

JEHOL ("hot stream"), or CH'ENG-T'É-FU, a city of China, formerly the seat of the emperor's summer palace, near 118° E. and 41° N., about 140 m. N.E. of Peking, with which it is connected by an excellent road. Pop. (estimate), 10,000. It is a flourishing town, and consists of one great street, about 2 m. long, with smaller streets radiating in all directions. The people are well-to-do and there are some fine shops. The palace, called Pi-shu-shan-chuang, or "mountain lodge for avoiding heat," was built in 1703 on the plan of the palace of Yuen-ming-yuen near Peking. A substantial brick wall 6 m. in circuit encloses several well-wooded heights and extensive gardens, rockeries, pavilions, temples, &c. Jehol was visited by Lord Macartney on his celebrated mission to the emperor K'ienlung in 1793; and it was to Jehol that the emperor Hienfeng retired when the allied armies of England and France occupied Peking in 1860. In the vicinity of Jehol are numerous Lama monasteries and temples, the most remarkable being Potala-su, built on the model of the palace of the grand lama of Tibet at Potala.

JEHORAM, or JORAM (Heb. "Yah[weh] is high"), the name of two Biblical characters.

1. The son of Ahab, and king of Israel in succession to his brother Ahaziah.² He maintained close relations with Judah, whose king came to his assistance against Moab which had revolted after Ahab's death (2 Kings i. 1; iii.). The king in question is said to have been Jehoshaphat; but, according to Lucian's recension, it was Ahaziah, whilst i. 17 would show that it was Jehoram's namesake (see 2). The result of the campaign appears to have been a defeat for Israel (see on the incidents EDOM, ELISHA, MOAB). The prophetic party were throughout hostile to Jehoram (with his reform iii. 2 contrast x. 27), and the singular account of the war of Benhadad king of Syria against the king of Israel (vi. 24-vii.) shows the feeling against the reigning dynasty. But whether the incidents in which Elisha and the unnamed king of Israel appear originally belonged to the time of Jehoram is very doubtful, and in view of the part which Elisha took in securing the accession of Jehu, it has been urged with much force that they belong to the dynasty of the latter, when the high position of the prophet would be perfectly natural.³ The briefest account is given of Jehoram's alliance with Ahaziah (son of 2 below) against Hazael of Syria, at Ramoth-Gilead

² 2 Kings i. 17 seq.; see Lucian's reading (cf. Vulg. and Pesh.). Apart from the allusion 1 Kings xxii. 49 (see 2 Chron. xx. 35), and the narrative in 2 Kings i. (see ELIJAH), nothing is known of this Ahaziah. Notwithstanding his very brief reign (1 Kings xxii. 51; 2 Kings iii. 1), the compiler passes the usual hostile judgment (1 Kings xxii. 52 seq.); see KINGS (Books). The chronology in 1 Kings xxii. 51 is difficult; if Lucian's text (twenty-fourth year of Jehoshaphat) is correct, Jehoram 1 and 2 must have come to their respective thrones at almost the same time.

³ In vii. 6 the hostility of Hittites and Mizraim (*q.v.*) points to a period after 842 B.C. (See JEWS, § 10 seq.)

¹ 2 Kings xxiv. 13 seq. gives other numbers and a view of the disaster which is more suitable for the Second Captivity. (See ZEDEKIAH.)

(2 Kings viii. 25-29), and the incident—with the wounding of the Israelite king in or about the critical year 842 B.C.—finds a noteworthy parallel in the time of Jehoshaphat and Ahab (1 Kings xxii. 29-36) at the period of the equally momentous events in 854 (see AHAB). See further JEHU.

2. The son of Jehoshaphat and king of Judah. He married Athaliah the daughter of Ahab, and thus was brother-in-law of 1. above, and contemporary with him (2 Kings i. 17). In his days Edom revolted, and this with the mention of Libnah's revolt (2 Kings viii. 20 sqq.) suggests some common action on the part of Philistines and Edomites. The chronicler's account of his life (2 Chron. xxi.-xxii. 1) presupposes this, but adds many remarkable details: he began his reign by massacring his brethren (cf. Jehu son of Jehoshaphat, and his bloodshed, 2 Kings ix. seq.); for his wickedness he received a communication from Elijah foretelling his death from disease (cf. Elijah and Ahaziah of Israel, 2 Kings i.); in a great invasion of Philistines and Arabian tribes he lost all his possessions and family, and only Jehoahaz (i.e. Ahaziah) was saved.¹ His son Ahaziah reigned only for a year (cf. his namesake of Israel); he is condemned for his Israelite sympathies, and met his end in the general butchery which attended the accession of Jehu (2 Kings viii. 25 sqq.; 2 Chron. xxii. 3 seq., 7; with 2 Kings ix. 27 seq., note the variant tradition in 2 Chron. xxii. 8 seq., and the details which the LXX (Lucian) appends to 2 Kings x.). (S. A. C.)

JEHOSHAPHAT (Heb. "Yahweh judges"), in the Bible, son of Asa, and king of Judah, in the 9th century B.C. During his period close relations subsisted between Israel and Judah; the two royal houses were connected by marriage (see ATHALIAH; JEHOAM, 2), and undertook joint enterprise in war and commerce. Jehoshaphat aided Ahab in the battle against Benhadad at Ramoth-Gilead in which Ahab was slain (1 Kings xxii.; 2 Chron. xviii.; cf. the parallel incident in 2 Kings viii. 25-29), and trading journeys to Ophir were undertaken by his fleet in conjunction no doubt with Ahab as well as with his son Ahaziah (2 Chron. xx. 35 sqq.; 1 Kings xxii. 47 sqq.). The chronicler's account of his war against Moab, Ammon and Edomite tribes (2 Chron. xx.), must rest ultimately upon a tradition which is presupposed in the earlier source (1 Kings xxii. 47), and the disaster to the ships at Ezion-Geber at the head of the Gulf of Akaba preceded, if it was not the introduction to, the great revolt in the days of Jehoshaphat's son Jehoram, where, again, the details in 2 Chron. xxi. must rely in the first instance upon an old source. Apart from what is said of Jehoshaphat's legislative measures (2 Chron. xix. 4 sqq.; cf. the meaning of his name above), an account is preserved of his alliance with Jehoram of Israel against Moab (2 Kings iii.), on which see JEHOAM; MOAB. The "valley of Jehoshaphat" (Joel iii. 12) has been identified by tradition (as old as Eusebius) with the valley between Jerusalem and the mount of Olives. (S. A. C.)

JEHOVAH (YAHWEH²), in the Bible, the God of Israel. "Jehovah" is a modern mispronunciation of the Hebrew name, resulting from combining the consonants of that name, *Jhwh*, with the vowels of the word *ādōnāy*, "Lord," which the Jews substituted for the proper name in reading the scriptures. In such cases of substitution the vowels of the word which is to be read are written in the Hebrew text with the consonants of the word which is not to be read. The consonants of the word to be substituted are ordinarily written in the margin; but inasmuch as Adonay was regularly read instead of the ineffable name *Jhwh*, it was deemed unnecessary to note the fact at every occurrence. When Christian scholars began to study the Old Testament in Hebrew, if they were ignorant of this general rule or regarded the substitution as a piece of Jewish superstition, reading what actually stood in the text, they would inevitably pronounce the name *Jēhōvāh*. It is an unprofitable inquiry who first made this blunder; probably many fell into it independently. The statement still commonly repeated that it originated with Petrus

Galatinus (1518) is erroneous; *Jehova* occurs in manuscripts at least as early as the 14th century.

The form *Jehovah* was used in the 16th century by many authors, both Catholic and Protestant, and in the 17th was zealously defended by Fuller, Gataker, Leusden and others, against the criticisms of such scholars as Drusius, Cappellus and the elder Buxtorf. It appeared in the English Bible in Tyndale's translation of the Pentateuch (1530), and is found in all English Protestant versions of the 16th century except that of Coverdale (1535). In the Authorized Version of 1611 it occurs in Exod. vi. 3; Ps. lxxxiii. 18; Isa. xii. 2; xxvi. 4, beside the compound names *Jehovah-jireh*, *Jehovah-nissi*, *Jehovah-shalom*; elsewhere, in accordance with the usage of the ancient versions, *Jhwh* is represented by LORD (distinguished by capitals from the title "Lord," Heb. *adonay*). In the Revised Version of 1885 *Jehovah* is retained in the places in which it stood in the A. V., and is introduced also in Exod. vi. 2, 6, 7, 8; Ps. lxxviii. 20; Isa. xlix. 14; Jer. xvi. 21; Hab. iii. 19. The American committee which co-operated in the revision desired to employ the name *Jehovah* wherever *Jhwh* occurs in the original, and editions embodying their preferences are printed accordingly.

Several centuries before the Christian era the name *Jhwh* had ceased to be commonly used by the Jews. Some of the later writers in the Old Testament employ the appellative *Elohim*, God, prevailingly or exclusively; a collection of Psalms (Ps. xlii.-lxxxiii.) was revised by an editor who changed the *Jhwh* of the authors into *Elohim* (see e.g. xlv. 7; xlviii. 10; l. 7; li. 14); observe also the frequency of "the Most High," "the God of Heaven," "King of Heaven," in Daniel, and of "Heaven" in First Maccabees. The oldest Greek versions (Septuagint), from the third century B.C., consistently use *Κύριος*, "Lord," where the Hebrew has *Jhwh*, corresponding to the substitution of *Adonay* for *Jhwh* in reading the original; in books written in Greek in this period (e.g. Wisdom, 2 and 3 Maccabees), as in the New Testament, *Κύριος* takes the place of the name of God. Josephus, who as a priest knew the pronunciation of the name, declares that religion forbids him to divulge it; Philo calls it ineffable, and says that it is lawful for those only whose ears and tongues are purified by wisdom to hear and utter it in a holy place (that is, for priests in the Temple); and in another passage, commenting on Lev. xxiv. 15 seq.: "If any one, I do not say should blaspheme against the Lord of men and gods, but should even dare to utter his name unseasonably, let him expect the penalty of death."³

Various motives may have concurred to bring about the suppression of the name. An instinctive feeling that a proper name for God implicitly recognizes the existence of other gods may have had some influence; reverence and the fear lest the holy name should be profaned among the heathen were potent reasons; but probably the most cogent motive was the desire to prevent the abuse of the name in magic. If so, the secrecy had the opposite effect; the name of the god of the Jews was one of the great names in magic, heathen as well as Jewish, and miraculous efficacy was attributed to the mere utterance of it.

In the liturgy of the Temple the name was pronounced in the priestly benediction (Num. vi. 27) after the regular daily sacrifice (in the synagogues a substitute—probably *Adonay*—was employed);⁴ on the Day of Atonement the High Priest uttered the name ten times in his prayers and benediction. In the last generations before the fall of Jerusalem, however, it was pronounced in a low tone so that the sounds were lost in the chant of the priests.⁵

³ See Josephus, *Ant.* ii. 12. 4; Philo, *Vita Mosis*, iii. 11 (ii. § 114, ed. Cohn and Wendland); *ibid.* iii. 27 (ii. § 206). The Palestinian authorities more correctly interpreted Lev. xxiv. 15 seq., not of the mere utterance of the name, but of the use of the name of God in blaspheming God.

⁴ *Siphre*, Num. §§ 30, 43; *M. Sotah*, iii. 7; *Sotah*, 38a. The tradition that the utterance of the name in the daily benedictions ceased with the death of Simeon the Just, two centuries or more before the Christian era, perhaps arose from a misunderstanding of *Menaḥoth*, 109b; in any case it cannot stand against the testimony of older and more authoritative texts.

⁵ *Yoma*, 39b; *Jer. Yoma*, iii. 7; *Kiddushin*, 71a.

¹ These details are scarcely the invention of the chronicler; see *CHRONICLES*, and *Expositor*, Aug. 1906, p. 191.

² This form, *Yahweh*, as the correct one, is generally used in the separate articles throughout this work.

After the destruction of the Temple (A.D. 70) the liturgical use of the name ceased, but the tradition was perpetuated in the schools of the rabbis.¹ It was certainly known in Babylonia in the latter part of the 4th century,² and not improbably much later. Nor was the knowledge confined to these pious circles; the name continued to be employed by healers, exorcists and magicians, and has been preserved in many places in magical papyri. The vehemence with which the utterance of the name is denounced in the Mishna—"He who pronounces the Name with its own letters has no part in the world to come!"³ suggests that this misuse of the name was not uncommon among Jews.

The Samaritans, who otherwise shared the scruples of the Jews about the utterance of the name, seem to have used it in judicial oaths to the scandal of the rabbis.⁴

The early Christian scholars, who inquired what was the true name of the God of the Old Testament, had therefore no great difficulty in getting the information they sought. Clement of Alexandria (d. c. 212) says that it was pronounced *laoue*.⁵ Epiphanius (d. 404), who was born in Palestine and spent a considerable part of his life there, gives *laβe* (one cod. *laue*).⁶ Theodoret (d. c. 457),⁷ born in Antioch, writes that the Samaritans pronounced the name *laβe* (in another passage, *laβai*), the Jews *Aia*.⁸ The latter is probably not *Jhvh* but *Ehyeh* (Exod. iii. 14), which the Jews counted among the names of God; there is no reason whatever to imagine that the Samaritans pronounced the name *Jhvh* differently from the Jews. This direct testimony is supplemented by that of the magical texts, in which *laβe* ζεβουθ (*Jahveh* Sebäôth), as well as *laβa*, occurs frequently.⁹ In an Ethiopic list of magical names of Jesus, purporting to have been taught by him to his disciples, *Yawē* is found.¹⁰ Finally, there is evidence from more than one source that the modern Samaritan priests pronounce the name *Yahweh* or *Yahwa*.¹¹

There is no reason to impugn the soundness of this substantially consentient testimony to the pronunciation *Yahweh* or *Jahveh*, coming as it does through several independent channels. It is confirmed by grammatical considerations. The name *Jhvh* enters into the composition of many proper names of persons in the Old Testament, either as the initial element, in the form *Jeho-* or *Jo-* (as in *Jehoram*, *Joram*), or as the final element, in the form *-jahu* or *-jah* (as in *Adonijahu*, *Adonijah*). These various forms are perfectly regular if the divine name was *Yahweh*, and; taken altogether, they cannot be explained on any other hypothesis. Recent scholars, accordingly, with but few exceptions, are agreed that the ancient pronunciation of the name was *Yahweh* (the first *h* sounded at the end of the syllable).

Genebrardus seems to have been the first to suggest the pronunciation *Jahuē*,¹² but it was not until the 19th century that it became generally accepted.

Jahveh or *Yahweh* is apparently an example of a common type of Hebrew proper names which have the form of the 3rd pers. sing. of the verb, e.g. *Jabneh* (name of a city), *Jābīn*, *Jamlēk*, *Jiptāh* (*Jephthah*), &c. Most of these really are verbs, the suppressed or implicit subject being *ʾēl*, "numen, god," or the name of a god; cf. *Jabneh* and *Jabnē-ēl*, *Jiptāh* and *Jiptah-ēl*.

The ancient explanations of the name proceed from Exod. iii. 14, 15, where "*Yahweh*¹³ hath sent me" in v. 15 corresponds to "*Ehyeh* hath sent me" in v. 14, thus seeming to connect the name *Yahweh* with the Hebrew verb *hāyāh*, "to become, to be." The Palestinian interpreters found in this the promise that

God would be with his people (cf. v. 12) in future oppressions as he was in the present distress, or the assertion of his eternity, or eternal constancy; the Alexandrian translation *Ἐγὼ εἰμι ὁ ὢν* . . . *Ὁ ὢν ἀπείστολκέν με πρὸς ὑμᾶς*, understands it in the more metaphysical sense of God's absolute being. Both interpretations, "He (who) is (always the same)," and "He (who) is (absolutely, the truly existent)," import into the name all that they profess to find in it; the one, the religious faith in God's unchanging fidelity to his people, the other, a philosophical conception of absolute being which is foreign both to the meaning of the Hebrew verb and to the force of the tense employed. Modern scholars have sometimes found in the name the expression of the aseity¹⁴ of God; sometimes of his reality, in contrast to the imaginary gods of the heathen. Another explanation, which appears first in Jewish authors of the middle ages and has found wide acceptance in recent times, derives the name from the causative of the verb; He (who) causes things to be, gives them being; or calls events into existence, brings them to pass; with many individual modifications of interpretation—creator, life-giver, fulfiller of promises. A serious objection to this theory in every form is that the verb *hāyāh*, "to be," has no causative stem in Hebrew; to express the ideas which these scholars find in the name *Yahweh* the language employs altogether different verbs.

This assumption that *Yahweh* is derived from the verb "to be," as seems to be implied in Exod. iii. 14 seq., is not, however, free from difficulty. "To be" in the Hebrew of the Old Testament is not *hāwāh*, as the derivation would require, but *hāyāh*; and we are thus driven to the further assumption that *hāwāh* belongs to an earlier stage of the language, or to some older speech of the forefathers of the Israelites. This hypothesis is not intrinsically improbable—and in Aramaic, a language closely related to Hebrew, "to be" actually is *hāwā*—but it should be noted that in adopting it we admit that, using the name Hebrew in the historical sense, *Yahweh* is not a Hebrew name. And, inasmuch as nowhere in the Old Testament, outside of Exod. iii. 14 seq., is there the slightest indication that the Israelites connected the name of their God with the idea of "being" in any sense, it may fairly be questioned whether, if the author of Exod. iii. 14 seq., intended to give an etymological interpretation of the name *Yahweh*,¹⁵ his etymology is any better than many other paronomastic explanations of proper names in the Old Testament, or than, say, the connexion of the name *Ἀπόλλων* with *ἀπολύνειν*, *ἀπολύειν* in Plato's *Cratylus*, or the popular derivation from *ἀπόλλυμι*.

A root *hāwāh* is represented in Hebrew by the nouns *hāwāh* (Ezek., Isa. xlvii. 11) and *hawwāh* (Ps., Prov., Job) "disaster, calamity, ruin."¹⁶ The primary meaning is probably "sink down, fall," in which sense—common in Arabic—the verb appears in Job xxxvii. 6 (of snow falling to earth). A Catholic commentator of the 16th century, Hieronymus ab Oleastro, seems to have been the first to connect the name "*Jehova*" with *hāwāh*, interpreting it *contritio*, *sive perniciēs* (destruction of the Egyptians and Canaanites); Daumer, adopting the same etymology, took it in a more general sense: *Yahweh*, as well as *Shaddai*, meant "Destroyer," and fitly expressed the nature of the terrible god whom he identified with Moloch.

The derivation of *Yahweh* from *hāwāh* is formally unimpeachable, and is adopted by many recent scholars, who proceed, however, from the primary sense of the root rather than from the specific meaning of the nouns. The name is accordingly interpreted, He (who) falls (*baetyl*, *βαίτυλος*, meteorite); or causes (rain or lightning) to fall (storm god); or casts down (his foes, by his thunderbolts). It is obvious that if the derivation be correct, the significance of the name, which in itself denotes only "He falls" or "He fells," must be learned, if at all, from early Israelitish conceptions of the nature of *Yahweh* rather than from etymology.

¹⁴ *A-se-itas*, a scholastic Latin expression for the quality of existing by oneself.

A more fundamental question is whether the name Yahweh originated among the Israelites or was adopted by them from some other people and speech.¹ The biblical author of the history of the sacred institutions (P) expressly declares that the name Yahweh was unknown to the patriarchs (Exod. vi. 3), and the much older Israelite historian (E) records the first revelation of the name to Moses (Exod. iii. 13-15), apparently following a tradition according to which the Israelites had not been worshippers of Yahweh before the time of Moses, or, as he conceived it, had not worshipped the god of their fathers under that name. The revelation of the name to Moses was made at a mountain sacred to Yahweh (the mountain of God) far to the south of Palestine, in a region where the forefathers of the Israelites had never roamed, and in the territory of other tribes; and long after the settlement in Canaan this region continued to be regarded as the abode of Yahweh (Judg. v. 4; Deut. xxxiii. 2 sqq.; 1 Kings xix. 8 sqq., &c.). Moses is closely connected with the tribes in the vicinity of the holy mountain; according to one account, he married a daughter of the priest of Midian (Exod. ii. 16 sqq.; iii. 1); to this mountain he led the Israelites after their deliverance from Egypt; there his father-in-law met him, and extolling Yahweh as "greater than all the gods," offered (in his capacity as priest of the place?) sacrifices, at which the chief men of the Israelites were his guests; there the religion of Yahweh was revealed through Moses, and the Israelites pledged themselves to serve God according to its prescriptions. It appears, therefore, that in the tradition followed by the Israelite historian the tribes within whose pasture lands the mountain of God stood were worshippers of Yahweh before the time of Moses; and the surmise that the name Yahweh belongs to their speech, rather than to that of Israel, has considerable probability. One of these tribes was Midian, in whose land the mountain of God lay. The Kenites also, with whom another tradition connects Moses, seem to have been worshippers of Yahweh. It is probable that Yahweh was at one time worshipped by various tribes south of Palestine, and that several places in that wide territory (Horeb, Sinai, Kadesh, &c.) were sacred to him; the oldest and most famous of these, the mountain of God, seems to have lain in Arabia, east of the Red Sea. From some of these peoples and at one of these holy places, a group of Israelite tribes adopted the religion of Yahweh, the God who, by the hand of Moses, had delivered them from Egypt.²

The tribes of this region probably belonged to some branch of the great Arab stock, and the name Yahweh has, accordingly, been connected with the Arabic *hawā*, "the void" (between heaven and earth), "the atmosphere," or with the verb *hawā*, cognate with Heb. *hāwāh*, "sink, glide down" (through space); *hawwā* "blow" (wind). "He rides through the air, He blows" (Wellhausen), would be a fit name for a god of wind and storm. There is, however, no certain evidence that the Israelites in historical times had any consciousness of the primitive significance of the name.

The attempts to connect the name Yahweh with that of an Indo-European deity (Jehovah-Jove, &c.), or to derive it from Egyptian or Chinese, may be passed over. But one theory which has had considerable currency requires notice, namely, that Yahweh, or Yahu, Yaho,³ is the name of a god worshipped throughout the whole, or a great part, of the area occupied by the Western Semites. In its earlier form this opinion rested chiefly on certain misinterpreted testimonies in Greek authors about a god *Ἰάω*, and was conclusively refuted by Baudissin; recent adherents of the theory build more largely on the occurrence in various parts of this territory of proper names of persons

and places which they explain as compounds of Yahu or Yah.⁴ The explanation is in most cases simply an assumption of the point at issue; some of the names have been misread; others are undoubtedly the names of Jews. There remain, however, some cases in which it is highly probable that names of non-Israelites are really compounded with Yahweh. The most conspicuous of these is the king of Hamath who in the inscriptions of Sargon (722-705 B.C.) is called Yaubi'di and Ilubi'di (compare Jehoiaakim-Eliakim). Azriyau of Jaudi, also, in inscriptions of Tiglath-Pileser (745-728 B.C.), who was formerly supposed to be Azariah (Uzziah) of Judah, is probably a king of the country in northern Syria known to us from the Zenjirli inscriptions as Ja'di.

Friedrich Delitzsch brought into notice three tablets, of the age of the first dynasty of Babylon, in which he read the names of *Ya-a'-ve-ilu*, *Ya-ve-ilu*, and *Ya-ū-um-ilu* ("Yahweh is God"), and which he regarded as conclusive proof that Yahweh was known in Babylonia before 2000 B.C.; he was a god of the Semitic invaders in the second wave of migration, who were, according to Winckler and Delitzsch, of North Semitic stock (Canaanites, in the linguistic sense).⁵ We should thus have in these tablets evidence of the worship of Yahweh among the Western Semites at a time long before the rise of Israel. The reading of the names is, however, extremely uncertain, not to say improbable, and the far-reaching inferences drawn from them carry no conviction. In a tablet attributed to the 14th century B.C. which Sellin found in the course of his excavations at Tell Ta'annuk (the Taanach of the O.T.) a name occurs which may be read Ahi-Yawi (equivalent to Hebrew Ahijah);⁶ if the reading be correct, this would show that Yahweh was worshipped in Central Palestine before the Israelite conquest. The reading is, however, only one of several possibilities. The fact that the full form Yahweh appears, whereas in Hebrew proper names only the shorter Yahu and Yah occur, weighs somewhat against the interpretation, as it does against Delitzsch's reading of his tablets.

It would not be at all surprising if, in the great movements of populations and shifting of ascendancy which lie beyond our historical horizon, the worship of Yahweh should have been established in regions remote from those which it occupied in historical times; but nothing which we now know warrants the opinion that his worship was ever general among the Western Semites.

Many attempts have been made to trace the West Semitic Yahu back to Babylonia. Thus Delitzsch formerly derived the name from an Akkadian god, I or Ia; or from the Semitic nominative ending, Yau;⁷ but this deity has since disappeared from the pantheon of Assyriologists. The combination of Yah with Ea, one of the great Babylonian gods, seems to have a peculiar fascination for amateurs, by whom it is periodically "discovered." Scholars are now agreed that, so far as Yahu or Yah occurs in Babylonian texts, it is as the name of a foreign god.

Assuming that Yahweh was primitively a nature god, scholars in the 19th century discussed the question over what sphere of nature he originally presided. According to some he was the god of consuming fire; others saw in him the bright sky, or the heaven; still others recognized in him a storm god, a theory with which the derivation of the name from Heb. *hāwāh* or Arab. *hawā* well accords. The association of Yahweh with storm and fire is frequent in the Old Testament; the thunder is the voice of Yahweh, the lightning his arrows, the rainbow his bow. The revelation at Sinai is amid the awe-inspiring phenomena of tempest. Yahweh leads Israel through the desert in a pillar of cloud and fire; he kindles Elijah's altar by lightning, and translates the prophet in a chariot of fire. See also Judg. v. 4 seq.;

⁴ See a collection and critical estimate of this evidence by Zimmern, *Die Keilschriften und das Alte Testament*, 465 sqq.

⁵ *Babel und Bibel*, 1902. The enormous, and for the most part ephemeral, literature provoked by Delitzsch's lecture cannot be cited here.

¹ See HEBREW RELIGION.

² The divergent Judæan tradition, according to which the forefathers had worshipped Yahweh from time immemorial, may indicate that Judah and the kindred clans had in fact been worshippers of Yahweh before the time of Moses.

³ The form *Yahu*, or *Yaho*, occurs not only in composition, but by itself; see *Aramaic Papyri discovered at Assuan*, B 4, 6, 11; E 14; J 6. This is doubtless the original of *Ἰάω*, frequently found in Greek authors and in magical texts as the name of the God of the Jews.

Deut. xxxiii. 1; Ps. xviii. 7-15; Hab. iii. 3-6. The cherub upon which he rides when he flies on the wings of the wind (Ps. xviii. 10) is not improbably an ancient mythological personification of the storm cloud, the genius of tempest (cf. Ps. civ. 3). In Ezekiel the throne of Yahweh is borne up on Cherubim, the noise of whose wings is like thunder. Though we may recognize in this poetical imagery the survival of ancient and, if we please, mythical notions, we should err if we inferred that Yahweh was originally a departmental god, presiding specifically over meteorological phenomena, and that this conception of him persisted among the Israelites till very late times. Rather, as the god—or the chief god—of a region and a people, the most sublime and impressive phenomena, the control of the mightiest forces of nature are attributed to him. As the God of Israel Yahweh becomes its leader and champion in war; he is a warrior, mighty in battle; but he is not a god of war in the specific sense.

In the inquiry concerning the nature of Yahweh the name Yahweh S baoth (E.V., The LORD of Hosts) has had an important place. The hosts have by some been interpreted of the armies of Israel (see 1 Sam. xvii. 45, and note the association of the name in the Books of Samuel, where it first appears, with the ark, or with war); by others, of the heavenly hosts, the stars conceived as living beings, later, perhaps, the angels as the court of Yahweh and the instruments of his will in nature and history (Ps. lxxxix.); or of the forces of the world in general which do his bidding, cf. the common Greek renderings, *Kύριος τῶν δυνάμεων* and *Κ. παντοκράτωρ*, Universal Ruler). It is likely that the name was differently understood in different periods and circles; but in the prophets the hosts are clearly superhuman powers. In many passages the name seems to be only a more solemn substitute for the simple Yahweh, and as such it has probably often been inserted by scribes. Finally, Sebaoth came to be treated as a proper name (cf. Ps. lxxx. 5, 8, 20), and as such is very common in magical texts.

JEHU, son of Jehoshaphat and grandson of Nimshi, in the Bible, a general of Ahab and Jehoram, and, later, king of Israel. Ahaziah son of Jehoram of Judah and Jehoram brother of Ahaziah of Israel had taken joint action against the Aramaeans of Damascus who were attacking Ramoth-Gilead under Hazael. Jehoram had returned wounded to his palace at Jezreel, whither Ahaziah had come down to visit him. Jehu, meanwhile, remained at the seat of war, and the prophet Elisha sent a messenger to anoint him king. The general at once acknowledged the call, "drove furiously" to Jezreel, and, having slain both kings, proceeded to exterminate the whole of the royal family (2 Kings ix., x.). A similar fate befell the royal princes of Judah (see ATHALIAH), and thus, for a time at least, the new king must have had complete control over the two kingdoms (cf. 2 Chron. xxii. 9). Israelite historians viewed these events as a great religious revolution inspired by Elijah and initiated by Elisha, as the overthrow of the worship of Baal, and as a retribution for the cruel murder of Naboth the Jezreelite (see JEZEBEL). A vivid description is given of the destruction of the prophets of Baal at the temple in Samaria (2 Kings x. 27; contrast iii. 2). While Jehu was supported by the Rechabites in his reforming zeal, a similar revolt against Baalism in Judah is ascribed to the priest Jehoiada (see JOASH). In the tragedies of the period it seems clear that Elisha's interest in both Jehu and the Syrian Hazael (2 Kings viii. 7 sqq.) had some political significance, and in opposition to the "Deuteronomic" commendation in 2 Kings x. 28 sqq., Hosea's denunciation (i. 4) indicates the judgment which was passed upon Jehu's bloodshed in other circles.

In the course of an expedition against Hazael in 842 Shalmaneser II. of Assyria received tribute of silver and gold from Ya-u-a son of Omri,¹ Tyre and Sidon; another attack followed in 839. For some years after this Assyria was unable to interfere, and war broke out between Damascus and Israel. The Israelite story, which may perhaps be supplemented from Judæan sources (see JOASH), records a great loss of territory on the east of the Jordan (2 Kings x. 32 seq.). Under Jehu's successor Jehoahaz there was continual war with Hazael and his son Ben-hadad, but relief was obtained by his grandson Joash, and the land recovered complete independence under Jeroboam.

Jehu is also the name of a prophet of the time of Baasha and Jehoshaphat (1 Kings xvi.; 2 Chron. xix., xx.). (S. A. C.)

JEKYLL, SIR JOSEPH (1663-1738), English lawyer and master of the rolls, son of John Jekyll, was born in London, and after studying at the Middle Temple was called to the bar in 1687. He rapidly rose to be chief justice of Chester (1697), serjeant-at-law and king's serjeant (1700), and a knight. In 1717 he was made master of the rolls. A Whig in politics, he sat in parliament for various constituencies from 1697 to the end of his life, and took an active part there in debating constitutional questions with much learning, though, according to Lord Hervey (*Mem.* i. 474), with little "approbation." He was censured by the House of Commons for accepting a brief for the defence of Lord Halifax in a prosecution ordered by the house. He was one of the managers of the impeachment of the Jacobite earl of Wintoun in 1715, and of Harley (Lord Oxford) in 1717. In later years he supported Walpole. He became very unpopular in 1736 for his introduction of the "gin act," taxing the retailing of spirituous liquors, and his house had to be protected from the mob. Pope has an allusion to "Jekyll or some odd Whig, Who never changed his principle or wig" (*Epilogue to the Satires*). Jekyll was also responsible for the Mortmain Act of 1736, which was not superseded till 1888. He died without issue in 1738.

His great-nephew JOSEPH JEKYLL (d. 1837) was a lawyer, politician and wit, who excited a good deal of contemporary satire, and who wrote some *jeux d'esprit* which were well known in his time. His *Letters of the late Ignatius Sancho, an African*, was published in 1782. In 1894 his correspondence was edited, with a memoir, by the Hon. Algernon Bourke.

JELLACHICH, JOSEF, COUNT (1801-1859), Croatian statesman, was born on the 16th of October 1801 at Pétervárad. He entered the Austrian army (1819), fought against the Bosnians in 1845, was made ban of Croatia, Slavonia and Dalmatia in 1848 on the petition of the Croats, and was simultaneously raised to the rank of lieutenant-general by the emperor. As ban, Jellachich's policy was directed to preserving the Slav kingdoms for the Habsburg monarchy by identifying himself with the nationalist opposition to Magyar ascendancy, while at the same time discouraging the extreme "Illyrism" advocated by Lodovik Gáj (1800-1872). Though his separatist measures at first brought him into disfavour at the imperial court, their true objective was soon recognized, and, with the triumph of the more violent elements of the Hungarian revolution, he was hailed as the most conspicuous champion of the unity of the empire, and was able to bring about that union of the imperial army with the southern Slavs by which the revolution in Vienna and Budapest was overthrown (see AUSTRIA-HUNGARY: History). He began the war of independence in September 1848 by crossing the Drave at the head of 40,000 Croats. After the bloody battle of Buda he concluded a three days' truce with the Hungarians to enable him to assist Prince Windischgrätz to reduce Vienna, and subsequently fought against the Magyars at Schwechat. During the winter campaign of 1848-49 he commanded, under Windischgrätz, the Austrian right wing, capturing Magyar-Ovar and Raab, and defeating the Magyars at Mór. After the recapture of Buda he was made commander-in-chief of the southern army.

¹ I.e. either descendant of, or from the same district as, Omri (see Hogg, *Ency. Bib.* col. 2291). The Assyrian king's sculpture, depicting the embassy and its gifts, is the so-called "black obelisk" now in the British Museum (Nimroud Central Gallery, No. 98; *Guide to Bab. and Ass. Antiq.*, 1900, p. 24 seq., pl. ii.).

At first he gained some successes against Bem (*q.v.*), but on the 14th of July 1849 was routed by the Hungarians at Hegyes and driven behind the Danube. He took no part in the remainder of the war, but returned to Agram to administer Croatia. In 1853 he was appointed commander-in-chief of the army sent against Montenegro, and in 1855 was created a count. He died on the 20th of May 1859. His *Gedichte* were published at Vienna in 1851.

See the anonymous *The Croatian Revolution of the Year 1848* (Croat.), Agram, 1898. (R. N. B.)

JELLINEK, ADOLF (1821-1893), Jewish preacher and scholar, was born in Moravia. After filling clerical posts in Leipzig, he became *Prediger* (preacher) in Vienna in 1856. He was associated with the promoters of the New Learning within Judaism, and wrote on the history of the Kabbala. His bibliographies (each bearing the Hebrew title *Qontres*) were useful compilations. But his most important work lay in three other directions. (1) *Midrashic*. Jellinek published in the six parts of his *Beth ha-Midrash* (1853-1878) a large number of smaller *Midrashi*, ancient and medieval homilies and folk-lore records, which have been of much service in the recent revival of interest in Jewish apocalyptic literature. A translation of these collections of Jellinek into German was undertaken by A. Wuensche, under the general title *Aus Israels Lehrhalle*. (2) *Psychological*. Before the study of ethnic psychology had become a science, Jellinek devoted attention to the subject. There is much keen analysis and original investigation in his two essays *Der jüdische Stamm* (1869) and *Der jüdische Stamm in nicht-jüdischen Spruch-wörtern* (1881-1882). It is to Jellinek that we owe the oft-repeated comparison of the Jewish temperament to that of women in its quickness of perception, versatility and sensibility. (3) *Homiletic*. Jellinek was probably the greatest synagogue orator of the 19th century. He published some 200 sermons, in most of which are displayed unobtrusive learning, fresh application of old sayings, and a high conception of Judaism and its claims. Jellinek was a powerful apologist and an accomplished homilist, at once profound and ingenious.

His son, GEORGE JELLINEK, was appointed professor of international law at Heidelberg in 1891. Another son, MAX HERMANN JELLINEK, was made assistant professor of philology at Vienna in 1892.

A brother of Adolf, HERMANN JELLINEK (b. 1823), was executed at the age of 26 on account of his association with the Hungarian national movement of 1848. One of Hermann Jellinek's best-known works was *Uriel Acosta*. Another brother, MORITZ JELLINEK (1823-1883), was an accomplished economist, and contributed to the Academy of Sciences essays on the price of cereals and on the statistical organization of the country. He founded the Budapest tramway company (1864), and was also president of the corn exchange.

See *Jewish Encyclopedia*, vii. 92-94. For a character sketch of Adolf Jellinek see S. Singer, *Lectures and Addresses* (1908), pp. 88-93; Kohut, *Berühmte israelitische Männer und Frauen*. (I. A.)

JEMAPPES, a town in the province of Hainault, Belgium, near Mons, famous as the scene of the battle at which Dumouriez, at the head of the French Revolutionary Army, defeated the Austrian army (which was greatly outnumbered) under the duke of Saxe-Teschen and Clerfayt on the 6th of November 1792 (see FRENCH REVOLUTIONARY WARS).

JENA, a university town of Germany, in the grand duchy of Saxe-Weimar, on the left bank of the Saale, 56 m. S.W. from Leipzig by the Grossberigen-Saalfeld and 12 m. S.E. of Weimar by the Weimar-Gera lines of railway. Pop. (1905), 26,355. Its situation in a broad valley environed by limestone hills is somewhat dreary. To the north lies the plateau, descending steeply to the valley, famous as the scene of the battle of Jena. The town is surrounded by promenades occupying the site of the old fortifications; it contains in addition to the medieval market square, many old-fashioned houses and quaint narrow streets. Besides the old university buildings, the most interesting edifices are the 15th-century church of St Michael, with a

tower 318 ft. high, containing an altar, beneath which is a doorway leading to a vault, and a bronze statue of Luther, originally destined for his tomb; the university library, in which is preserved a curious figure of a dragon; and the bridge across the Saale, as long as the church steeple is high, the centre arch of which is surmounted by a stone carved head of a malefactor. Across the river is the "mountain," or hill, whence a fine view is obtained of the town and surroundings, and hard by the Fuchsturm (Fox tower) celebrated for student orgies, while in the centre of the town is the house of an astronomer, Weigel, with a deep shaft through which the stars can be seen in the daytime. Thus the seven marvels of Jena are summed up in the Latin lines:—

*Ara, caput, draco, mons, pons, vulpecula turris,
Weigeliana domus; septem miracula Jenae.*

There must also be mentioned the university church, the new university buildings, which occupy the site of the ducal palace (Schloss) where Goethe wrote his *Hermann und Dorothea*, the Schwarzer Bär Hotel, where Luther spent the night after his flight from the Wartburg, and four towers and a gateway which now alone mark the position of the ancient walls. The town has of late years become a favourite residential resort and has greatly extended towards the west, where there is a colony of pleasant villas. Its chief prosperity centres, however, in the university. In 1547 the elector John Frederick the Magnanimous of Saxony, while a captive in the hands of the emperor Charles V., conceived the plan of founding a university at Jena, which was accordingly established by his three sons. After having obtained a charter from the emperor Ferdinand I., it was inaugurated on the 2nd of February 1558. It was most numerous about the middle of the 18th century; but the most brilliant professoriate was under the duke Charles Augustus, Goethe's patron (1787-1806), when Fichte, Hegel, Schelling, Schlegel and Schiller were on its teaching staff. Founded as a home for the new religious opinions of the 16th century, it has ever been in the forefront of German universities in liberally accepting new ideas. It distances perhaps every other German university in the extent to which it carries out what are popularly regarded as the characteristics of German student-life—duelling and the passion for *Freiheit*. At the end of the 18th and the beginning of the 19th century, the opening of new universities, co-operating with the suspicions of the various German governments as to the democratic opinions which obtained at Jena, militated against the university, which has never regained its former prosperity. In 1905 it was attended by about 1100 students, and its teaching staff (including *privatdozenten*) numbered 112. Amongst its numerous auxiliaries may be mentioned the library, with 200,000 volumes, the observatory, the meteorological institute, the botanical garden, seminaries of theology, philology and education, and well equipped clinical, anatomical and physical institutes. There are also veterinary and agricultural colleges in connexion with the university. The manufactures of Jena are not considerable. The book trade has of late years revived, and there are several printing establishments.

Jena appears to have possessed municipal rights in the 13th century. At the beginning of the 14th century it was in the possession of the margraves of Meissen, from whom it passed in 1423 to the elector of Saxony. Since 1485 it has remained in the Ernestine line of the house of Saxony. In 1662 it fell to Bernhard, youngest son of William duke of Weimar, and became the capital of a small separate duchy. Bernhard's line having become extinct in 1690, Jena was united with Eisenach, and in 1741 reverted with that duchy to Weimar. In more modern times Jena has been made famous by the defeat inflicted in the vicinity, on the 14th of October 1806, by Napoleon upon the Prussian army under the prince of Hohenlohe (see NAPOLEONIC CAMPAIGNS).

E. A. Martin and O. Devrient (1888-1903).

JENATSCH, GEORG (1596-1639), Swiss political leader, one of the most striking figures in the troubled history of the Grisons in the 17th century, was born at Samaden (capital of the Upper Engadine). He studied at Zürich and Basel, and in 1617 became the Protestant pastor of Scharans (near Thusis). But almost at once he plunged into active politics, taking the side of the Venetian and Protestant party of the Salis family, as against the Spanish and Romanist policy supported by the rival family, that of Planta. He headed the "preachers" who in 1618 tortured to death the arch-priest Rusca, of Sondrio, and outlawed the Plantas. As reprisals, a number of Protestants were massacred at Tirano (1620), in the Valtellina, a very fertile valley, of considerable strategical importance (for through it the Spaniards in Milan could communicate by the Umbrail Pass with the Austrians in Tirol), which then fell into the hands of the Spanish. Jenatsch took part in the murder (1621) of Pompey Planta, the head of the rival party, but later with his friends was compelled to fly the country, giving up his position as a pastor, and henceforth acting solely as a soldier. He helped in the revolt against the Austrians in the Prättigau (1622), and in the invasion of the Valtellina by a French army (1624), but the peace made (1626) between France and Spain left the Valtellina in the hands of the pope, and so destroyed Jenatsch's hopes. Having killed his colonel, Ruinelli, in a duel, Jenatsch had once more to leave his native land, and took service with the Venetians (1629-1630). In 1631 he went to Paris, and actively supported Richelieu's schemes for driving the Spaniards out of the Valtellina, which led to the successful campaign of Rohan (1635), one of whose firmest supporters was Jenatsch. But he soon saw that the French were as unwilling as the Spaniards to restore the Valtellina to the Grisons (which had seized it in 1512). So he became a Romanist (1635), and negotiated secretly with the Spaniards and Austrians. He was the leader of the conspiracy which broke out in 1637, and resulted in the expulsion of Rohan and the French from the Grisons. This treachery on Jenatsch's part did not, however, lead to the freeing of the Valtellina from the Spaniards, and once more he tried to get French support. But on the 24th of January 1639 he was assassinated at Coire by the Plantas; later in the same year the much coveted valley was restored by Spain to the Grisons, which held it till 1797. Jenatsch's career is of general historical importance by reason of the long conflict between France and Spain for the possession of the Valtellina, which forms one of the most bloody episodes in the Thirty Years' War. (W. A. B. C.)

See biography by E. Hafner (Davos, 1894).

JENGHIZ KHAN (1162-1227), Mongol emperor, was born in a tent on the banks of the river Onon. His father Yesukai was absent at the time of his birth, in a campaign against a Tatar chieftain named Temuchin. The fortune of war favoured Yesukai, who having slain his enemy returned to his encampment in triumph. Here he was met by the news that his wife Yulun had given birth to a son. On examining the child he observed in its clenched fist a clot of coagulated blood like a red stone. In the eyes of the superstitious Mongol this circumstance referred to his victory over the Tatar chieftain, and he therefore named the infant Temuchin. The death of Yesukai, which placed Temuchin at the age of thirteen on the Mongol throne, was the signal also for the dispersal of several tribes whose allegiance the old chieftain had retained by his iron rule. When remonstrated with by Temuchin, the rebels replied: "The deepest wells are sometimes dry, and the hardest stone is sometimes broken; why should we cling to thee?" But Yulun was by no means willing to see her son's power melt away; she led those retainers who remained faithful against the deserters, and succeeded in bringing back fully one half to their allegiance. With this doubtful material, Temuchin succeeded in holding his ground against the plots and open hostilities of the neighbouring tribes, more especially of the Naimans, Keraites and Merkits. With one or other of these he maintained an almost unceasing warfare until 1206, when he felt strong enough to proclaim himself the ruler of an empire. He therefore summoned the notables

of his kingdom to an assembly on the banks of the Onon, and at their unanimous request adopted the name and title of Jenghiz Khan (Chinese, Chêng-sze, or "perfect warrior"). At this time there remained to him but one open enemy on the Mongolian steppes, Polo the Naiman khan. Against this chief he now led his troops, and in one battle so completely shattered his forces that Kushlek, the successor of Polo, who was left dead upon the field, fled with his ally Toto, the Merkit khan, to the river Irtysh.

Jenghiz Khan now meditated an invasion of the empire of the Kin Tatars, who had wrested northern China from the Sung dynasty. As a first step he invaded western Hia, and, having captured several strongholds, retired in the summer of 1208 to Lung-ting to escape the great heat of the plains. While there news reached him that Toto and Kushlek were preparing for war. In a pitched battle on the river Irtysh he overthrew them completely. Toto was amongst the slain, and Kushlek fled for refuge to the Khitan Tatars. Satisfied with his victory, Jenghiz again directed his forces against Hia. After having defeated the Kin army under the leadership of a son of the sovereign, he captured the Wu-liang-hai Pass in the Great Wall, and penetrated as far as Ning-sia Fu in Kansuh. With unceasing vigour he pushed on his troops, and even established his sway over the province of Liao-tung. Several of the Kin commanders, seeing how persistently victory attended his banners, deserted to him, and garrisons surrendered at his bidding. Having thus secured a firm footing within the Great Wall, he despatched three armies in the autumn of 1213 to overrun the empire. The right wing, under his three sons, Juji, Jagatai and Ogotai, marched towards the south; the left wing, under his brothers Hochar, Kwang-tsin Noyen and Chow-tse-te-po-shi, advanced eastward towards the sea; while Jenghiz and his son Tule with the centre directed their course in a south-easterly direction. Complete success attended all three expeditions. The right wing advanced as far as Honan, and after having captured upwards of twenty-eight cities rejoined headquarters by the great western road. Hochar made himself master of the country as far as Liao-si; and Jenghiz ceased his triumphal career only when he reached the cliffs of the Shan-tung promontory. But either because he was weary of the strife, or because it was necessary to revisit his Mongolian empire, he sent an envoy to the Kin emperor in the spring of the following year (1214), saying, "All your possessions in Shan-tung and the whole country north of the Yellow River are now mine with the solitary exception of Yenking (the modern Peking). By the decree of heaven you are now as weak as I am strong, but I am willing to retire from my conquests; as a condition of my doing so, however, it will be necessary that you distribute largess to my officers and men to appease their fierce hostility." These terms of safety the Kin emperor eagerly accepted, and as a peace offering he presented Jenghiz with a daughter of the late emperor, another princess of the imperial house, 500 youths and maidens, and 3000 horses. No sooner, however, had Jenghiz passed beyond the Great Wall than the Kin emperor, fearing to remain any longer so near the Mongol frontier, moved his court to K'ai-feng Fu in Honan. This transfer of capital appearing to Jenghiz to indicate a hostile attitude, he once more marched his troops into the doomed empire.

While Jenghiz was thus adding city to city and province to province in China, Kushlek, the fugitive Naiman chief, was not idle. With characteristic treachery he requested permission from his host, the Khitan khan, to collect the fragments of his army which had been scattered by Jenghiz at the battle on the Irtysh, and thus having collected a considerable force he leagued himself with Mahommed, the shah of Khwarizm, against the confiding khan. After a short but decisive campaign the allies remained masters of the position, and the khan was compelled to abdicate the throne in favour of the late guest.

With the power and prestige thus acquired, Kushlek prepared once again to measure swords with the Mongol chief. On receiving the news of his hostile preparations, Jenghiz at once took the field, and in the first battle routed the Naiman troops and made Kushlek a prisoner. His ill-gotten kingdom became

an apauage of the Mongol Empire. Jenghiz now held sway up to the Khwārizm frontier. Beyond this he had no immediate desire to go, and he therefore sent envoys to Mahommed, the shah, with presents, saying, "I send thee greeting; I know thy power and the vast extent of thine empire; I regard thee as my most cherished son. On my part thou must know that I have conquered China and all the Turkish nations north of it; thou knowest that my country is a magazine of warriors, a mine of silver, and that I have no need of other lands. I take it that we have an equal interest in encouraging trade between our subjects." This peaceful message was well received by the shah, and in all probability the Mongol armies would never have appeared in Europe but for an unfortunate occurrence. Shortly after the despatch of this first mission Jenghiz sent a party of traders into Transoxiana who were seized and put to death as spies by Inaljuk, the governor of Otrar. As satisfaction for this outrage Jenghiz demanded the extradition of the offending governor. Far from yielding to this summons, however, Mahommed beheaded the chief of the Mongol envoys, and sent the others back without their beards. This insult made war inevitable, and in the spring of 1219 Jenghiz set out from Karakorum on a campaign which was destined to be as startling in its immediate results as its ulterior effects were far-reaching. The invading force was in the first instance divided into two armies: one commanded by Jenghiz's second son Jagatai was directed to march against the Kankalis, the northern defenders of the Khwārizm empire; and the other, led by Juji, his eldest son, advanced by way of Signak against Jand (Jend). Against this latter force Mahommed led an army of 400,000 men, who were completely routed, leaving it is said 160,000 dead upon the field. With the remnant of his host Mahommed fled to Samarkand. Meanwhile Jagatai marched down upon the Syr Daria (Jaxartes) by the pass of Taras and invested Otrar, the offending city. After a siege of five months the citadel was taken by assault, and Inaljuk and his followers were put to the sword. The conquerors levelled the walls with the ground, after having given the city over to pillage. At the same time a third army besieged and took Khojent on the Jaxartes; and yet a fourth, led by Jenghiz and his youngest son Tulē, advanced in the direction of Bokhara. Tashkent and Nur surrendered on their approach, and after a short siege Bokhara fell into their hands. On entering the town Jenghiz ascended the steps of the principal mosque, and shouted to his followers, "The hay is cut; give your horses fodder." No second invitation to plunder was needed; the city was sacked, and the inhabitants either escaped beyond the walls or were compelled to submit to infamies which were worse than death. As a final act of vengeance the town was fired, and before the last of the Mongols left the district, the great mosque and certain palaces were the only buildings left to mark the spot where the "centre of science" once stood. From the ruins of Bokhara Jenghiz advanced along the valley of the Sogd to Samarkand, which, weakened by treachery, surrendered to him, as did also Balkh. But in neither case did submission save either the inhabitants from slaughter or the city from pillage. Beyond this point Jenghiz went no farther westward, but sent Tulē, at the head of 70,000 men, to ravage Khorasan, and two flying columns under Chêpē and Sabutai Bahadar to pursue after Mahommed who had taken refuge in Nishapur. Defeated and almost alone, Mahommed fled before his pursuers to the village of Astara on the shore of the Caspian Sea, where he died of an attack of pleurisy, leaving his empire to his son Jelaeddīn (Jalāl ud-din). Meanwhile Tulē carried his arms into the fertile province of Khorasan, and after having captured Nessa by assault appeared before Merv. By an act of atrocious treachery the Mongols gained possession of the city, and, after their manner, sacked and burnt the town. From Merv Tulē marched upon Nishapur, where he met with a most determined resistance. For four days the garrison fought desperately on the walls and in the streets, but at length they were overpowered, and, with the exception of 400 artisans who were sent into Mongolia, every man, woman and child was slain. Herat escaped the fate which had overtaken Merv and Nishapur by

opening its gates to the Mongols. At this point of his victorious career Tulē received an order to join Jenghiz before Talikhan in Badakshan, where that chieftain was preparing to renew his pursuit of Jelaeddīn, after a check he had sustained in an engagement fought before Ghazni. As soon as sufficient reinforcements arrived Jenghiz advanced against Jelaeddīn, who had taken up a position on the banks of the Indus. Here the Turks, though far outnumbered, defended their ground with undaunted courage, until, beaten at all points, they fled in confusion. Jelaeddīn, seeing that all was lost, mounted a fresh horse and jumped into the river, which flowed 20 ft. below. With admiring gaze Jenghiz watched the desperate venture of his enemy, and even saw without regret the dripping horseman mount the opposite bank. From the Indus Jenghiz sent in pursuit of Jelaeddīn, who fled to Delhi, but failing to capture the fugitive the Mongols returned to Ghazni after having ravaged the provinces of Lahore, Peshawar and Melikpur. At this moment news reached Jenghiz that the inhabitants of Herat had deposed the governor whom Tulē had appointed over the city, and had placed one of their own choice in his room. To punish this act of rebellion Jenghiz sent an army of 80,000 men against the offending city, which after a siege of six months was taken by assault. For a whole week the Mongols ceased not to kill, burn and destroy, and 1,600,000 persons are said to have been massacred within the walls. Having consummated this act of vengeance, Jenghiz returned to Mongolia by way of Balkh, Bokhara and Samarkand.

Meanwhile Chêpē and Sabutai marched through Azerbaijan, and in the spring of 1222 advanced into Georgia. Here they defeated a combined force of Lesghians, Circassians and Kipchaks, and after taking Astrakhan followed the retreating Kipchaks to the Don. The news of the approach of the mysterious enemy of whose name even they were ignorant was received by the Russian princes at Kiev with dismay. At the instigation, however, of Mitislaf, prince of Galicia, they assembled an opposing force on the Dnieper. Here they received envoys from the Mongol camp, whom they barbarously put to death. "You have killed our envoys," was the answer made by the Mongols; "well, as you wish for war you shall have it. We have done you no harm. God is impartial; He will decide our quarrel." In the first battle, on the river Kaleza, the Russians were utterly routed, and fled before the invaders, who, after ravaging Great Bulgaria retired, gorged with booty, through the country of Saksin, along the river Aktuba, on their way to Mongolia.

In China the same success had attended the Mongol arms as in western Asia. The whole of the country north of the Yellow river, with the exception of one or two cities, was added to the Mongol rule, and, on the death of the Kin emperor Süan Tsung in 1223, the Kin empire virtually ceased to be, and Jenghiz's frontiers thus became continuous with those of the Sung emperors who held sway over the whole of central and southern China. After his return from Central Asia, Jenghiz once more took the field in western China. While on this campaign the five planets appeared in a certain conjunction, which to the superstitiously minded Mongol chief foretold that evil was awaiting him. With this presentiment strongly impressed upon him he turned his face homewards, and had advanced no farther than the Si-Kiang river in Kansuh when he was seized with an illness of which he died a short time afterwards (1227) at his travelling palace at Ha-lao-tu, on the banks of the river Sale in Mongolia. By the terms of his will Ogotai was appointed his successor, but so essential was it considered to be that his death should remain a secret until Ogotai was proclaimed that, as the funeral procession moved northwards to the great ordu on the banks of the Kerulen, the escort killed every one they met. The body of Jenghiz was then carried successively to the ordu of his several wives, and was finally laid to rest in the valley of Kilien.

Thus ended the career of one of the greatest conquerors the world has ever seen. Born and nurtured as the chief of a petty Mongolian tribe, he lived to see his armies victorious from the China Sea to the banks of the Dnieper; and, though the empire

JENNÉ, a city of West Africa, formerly the capital of the Songhoi empire, now included in the French colony of Upper Senegal and Niger. Jenné is situated on a marigot or natural canal connecting the Niger and its affluent the Bani or Mahel Balével, and is within a few miles of the latter stream. It lies 250 m. S.W. of Timbuktu in a straight line. The city is surrounded by channels connected with the Bani but in the dry season it ceases to be an island. On the north is the Moorish quarter; on the north-west, the oldest part of the city, stood the citadel, converted by the French since 1893 into a modern fort. The market-place is midway between the fort and the commercial harbour. The old mosque, partially destroyed in 1830, covered a large area in the south-west portion of the city. It was built on the site of the ancient palace of the Songhoi kings. The architecture of many of the buildings bears a resemblance to Egyptian, the façades of the houses being adorned with great buttresses of pylon form. There is little trace of the influence of Moorish or Arabian art. The buildings are mostly constructed of clay made into flat long bricks. Massive clay walls surround the city. The inhabitants are great traders and the principal merchants have representatives at Timbuktu and all the chief places on the Niger. The boats built at Jenné are famous throughout the western Sudan.

Jenné is believed to have been founded by the Songhoi in the 8th century, and though it has passed under the dominion of many races it has never been destroyed. Jenné seems to have been at the height of its power from the 12th to the 16th century, when its merchandise was found at every port along the west coast of Africa. From this circumstance it is conjectured that Jenné (Guinea) gave its name to the whole coast (see GUINEA). Subsequently, under the control of Moorish, Tuareg and Fula invaders, the importance of the city greatly declined. With the advent of the French, commerce again began to flourish.

See F. Dubois, *Tombouctou la mystérieuse* (Paris, 1897), in which several chapters are devoted to Jenné; also SONGHOI: TIMBUKTU; and SENEGAL.

JENNER, EDWARD (1749–1823), English physician and discoverer of vaccination, was born at Berkeley, Gloucestershire, on the 17th of May 1749. His father, the Rev. Stephen Jenner, rector of Rockhampton and vicar of Berkeley, came of a family that had been long established in that county, and was possessed of considerable landed property; he died when Edward was only six years old, but his eldest son, the Rev. Stephen Jenner, brought his brother up with paternal care and tenderness. Edward received his early education at Wotton-under-Edge and Cirencester, where he already showed a strong taste for natural history. The medical profession having been selected for him, he began his studies under Daniel Ludlow, a surgeon of Sodbury near Bristol; but in his twenty-first year he proceeded to London, where he became a favourite pupil of John Hunter, in whose house he resided for two years. During this period he was employed by Sir Joseph Banks to arrange and prepare the valuable zoological specimens which he had brought back from Captain Cook's first voyage in 1771. He must have acquitted himself satisfactorily in this task, since he was offered the post of naturalist in the second expedition, but declined it as well as other advantageous offers, preferring rather to practise his profession in his native place, and near his eldest brother, to whom he was much attached. He was the principal founder of a local medical society, to which he contributed several papers of marked ability, in one of which he apparently anticipated later discoveries concerning rheumatic inflammations of the heart. He maintained a correspondence with John Hunter, under whose direction he investigated various points in biology, particularly the hibernation of hedgehogs and habits of the cuckoo; his paper on the latter subject was laid by Hunter before the Royal Society, and appeared in the *Phil. Trans.* for 1788. He also devoted considerable attention to the

varied geological character of the district in which he lived, and constructed the first balloon seen in those parts. He was a great favourite in general society, from his agreeable and instructive conversation, and the many accomplishments he possessed. Thus he was a fair musician, both as a part singer and as a performer on the violin and flute, and a very successful writer, after the fashion of that time, of fugitive pieces of verse. In 1788 he married Catherine Kingscote, and in 1792 he obtained the degree of doctor of medicine from St Andrews.

Meanwhile the discovery that is associated with his name had been slowly maturing in his mind. When only an apprentice at Sodbury, his attention had been directed to the relations between cow-pox and small-pox in connexion with a popular belief which he found current in Gloucestershire, as to the antagonism between these two diseases. During his stay in London he appears to have mentioned the thing repeatedly to Hunter, who, being engrossed by other important pursuits, was not so strongly persuaded as Jenner was of its possible importance, yet spoke of it to his friends and in his lectures. After he began practice in Berkeley, Jenner was always accustomed to inquire what his professional brethren thought of it; but he found that, when medical men had noticed the popular report at all, they supposed it to be based on imperfect induction. His first careful investigation of the subject dated from about 1775, and five years elapsed before he had succeeded in clearing away the most perplexing difficulties by which it was surrounded. He first satisfied himself that two different forms of disease had been hitherto confounded under the term cow-pox, only one of which protected against small-pox, and that many of the cases of failure were to be thus accounted for; and his next step was to ascertain that the true cow-pox itself only protects when communicated at a particular stage of the disease. At the same time he came to the conclusion that "the grease" of horses is the same disease as cow-pox and small-pox, each being modified by the organism in which it was developed. For many years, cow-pox being scarce in his county, he had no opportunity of inoculating the disease, and so putting his discovery to the test, but he did all he could in the way of collecting information and communicating what he had ascertained. Thus in 1788 he carried a drawing of the cow-pox, as seen on the hands of a milkmaid, to London, and showed it to Sir E. Home and others, who agreed that it was "an interesting and curious subject." At length, on the 14th of May 1796, he was able to inoculate James Phipps, a boy about eight years old, with matter from cow-pox vesicles on the hand of Sarah Nelmes. On the 1st of the following July the boy was carefully inoculated with variolous matter, but (as Jenner had predicted) no small-pox followed. The discovery was now complete, but Jenner was unable to repeat his experiment until 1798, owing to the disappearance of cow-pox from the dairies. He then repeated his inoculations with the utmost care, and prepared a pamphlet (*Inquiry into the Cause and Effects of the Variolae Vaccinae*) which should announce his discovery to the world. Before publishing it, however, he thought it well to visit London, so as to demonstrate the truth of his assertions to his friends; but he remained in London nearly three months, without being able to find any person who would submit to be vaccinated. Soon after he had returned home, however, Henry Cline, surgeon of St Thomas's Hospital, inoculated some vaccine matter obtained from him over the diseased hip-joint of a child, thinking the counter-irritation might be useful, and found the patient afterwards incapable of acquiring small-pox. In the autumn of the same year, Jenner met with the first opposition to vaccination; and this was the more formidable because it proceeded from J. Ingenhousz, a celebrated physician and man of science. But meanwhile Cline's advocacy of vaccination brought it much more decidedly before the medical profession, of whom the majority were prudent enough to suspend their judgment until they had more ample information. But besides these there were two noisy and troublesome factions, one of which opposed vaccination as a useless and dangerous practice, while the other endangered its success much more by rash and self-seeking advocacy. At the head of the latter was George Pearson,

who in November 1798 published a pamphlet speculating upon the subject, before even seeing a case of cow-pox, and afterwards endeavoured, by lecturing on the subject and supplying the virus, to put himself forward as the chief agent in the cause. The matter which he distributed, which had been derived from cows that were found to be infected in London, was found frequently to produce, not the slight disease described by Jenner, but more or less severe eruptions resembling small-pox. Jenner concluded at once that this was due to an accidental contamination of the vaccine with variolous matter, and a visit to London in the spring of 1799 convinced him that this was the case. In the course of this year the practice of vaccination spread over England, being urged principally by non-professional persons of position; and towards its close attempts were made to found institutions for gratuitous vaccination and for supplying lymph to all who might apply for it. Pearson proposed to establish one of these in London, without Jenner's knowledge, in which he offered him the post of honorary corresponding physician! On learning of this scheme to supplant him, and to carry on an institution for public vaccination on principles which he knew to be partly erroneous, Jenner once more visited London early in 1800, when he had influence enough to secure the abandonment of the project. He was afterwards presented to the king, the queen and the prince of Wales, whose encouragement materially aided the spread of vaccination in England. Meanwhile it had made rapid progress in the United States, where it was introduced by Benjamin Waterhouse, then professor of physic at Harvard, and on the continent of Europe, where it was at first diffused by De Carro of Vienna. In consequence of the war between England and France, the discovery was later in reaching Paris; but, its importance once realized, it spread rapidly over France, Spain and Italy.

A few of the incidents connected with its extension may be mentioned. Perhaps the most striking is the expedition which was sent out by the court of Spain in 1803, for the purpose of diffusing cow-pox through all the Spanish possessions in the Old and New Worlds, and which returned in three years, having circumnavigated the globe, and succeeded beyond its utmost expectations. Clergymen in Geneva and Holland urged vaccination upon their parishioners from the pulpit; in Sicily, South America and Naples religious processions were formed for the purpose of receiving it; the anniversary of Jenner's birthday, or of the successful vaccination of James Phipps, was for many years celebrated as a feast in Germany; and the empress of Russia caused the first child operated upon to receive the name of Vaccinov, and to be educated at the public expense. About the close of the year 1801 Jenner's friends in Gloucestershire presented him with a small service of plate as a testimonial of the esteem in which they held his discovery. This was intended merely as a preliminary to the presenting of a petition to parliament for a grant. The petition was presented in 1802, and was referred to a committee, of which the investigations resulted in a report in favour of the grant, and ultimately in a vote of £10,000.

Towards the end of 1802 steps were taken to form a society for the proper spread of vaccination in London, and the Royal Jennerian Society was finally established, Jenner returning to town to preside at the first meeting. This institution began very prosperously, more than twelve thousand persons having been inoculated in the first eighteen months, and with such effect that the deaths from small-pox, which for the latter half of the 18th century had averaged 208 annually, fell in 1804 to 622. Unfortunately the chief resident inoculator soon set himself up as an authority opposed to Jenner, and this led to such dissensions as caused the society to die out in 1808.

Jenner was led, by the language of the chancellor of the exchequer when his grant was proposed, to attempt practice in London, but after a year's trial he returned to Berkeley. His grant was not paid until 1804, and then, after the deduction of about £1000 for fees, it did little more than pay the expenses attendant upon his discovery. For he was so thoroughly known everywhere as the discoverer of vaccination that, as he himself said, he

was "the vaccine clerk of the whole world." At the same time he continued to vaccinate gratuitously all the poor who applied to him on certain days, so that he sometimes had as many as three hundred persons waiting at his door. Meanwhile honours began to shower upon him from abroad: he was elected a member of almost all the chief scientific societies on the continent of Europe, the first being that of Göttingen, where he was proposed by J. F. Blumenbach. But perhaps the most flattering proof of his influence was derived from France. On one occasion, when he was endeavouring to obtain the release of some of the unfortunate Englishmen who had been detained in France on the sudden termination of the Peace of Amiens, Napoleon was about to reject the petition, when Josephine uttered the name of Jenner. The emperor paused and exclaimed: "Ah, we can refuse nothing to that name." Somewhat later he did the same service to Englishmen confined in Mexico and in Austria; and during the latter part of the great war persons before leaving England would sometimes obtain certificates signed by him which served as passports. In his own country his merits were less recognized. His applications on behalf of French prisoners in England were less successful; he never shared in any of the patronage at the disposal of the government, and was even unable to obtain a living for his nephew George.

In 1806 Lord Henry Petty (afterwards the marquess of Lansdowne) became chancellor of the exchequer, and was so convinced of the inadequacy of the former parliamentary grant that he proposed an address to the Crown, praying that the college of physicians should be directed to report upon the success of vaccination. Their report being strongly in its favour, the then chancellor of the exchequer (Spencer Perceval) proposed that a sum of £10,000 without any deductions should be paid to Jenner. The anti-vaccinationists found but one advocate in the House of Commons; and finally the sum was raised to £20,000. Jenner, however, at the same time had the mortification of learning that government did not intend to take any steps towards checking small-pox inoculation, which so persistently kept up that disease. About the same time a subscription for his benefit was begun in India, where his discovery had been gratefully received, but the full amount of this (£7383) only reached him in 1812.

The Royal Jennerian Society having failed, the national vaccine establishment was founded, for the extension of vaccination, in 1808. Jenner spent five months in London for the purpose of organizing it, but was then obliged, by the dangerous illness of one of his sons, to return to Berkeley. He had been appointed director of the institution; but he had no sooner left London than Sir Lucas Pepys, president of the college of physicians, neglected his recommendations, and formed the board out of the officials of that college and the college of surgeons. Jenner at once resigned his post as director, though he continued to give the benefit of his advice whenever it was needed, and this resignation was a bitter mortification to him. In 1810 his eldest son died, and Jenner's grief at his loss, and his incessant labours, materially affected his health. In 1813 the university of Oxford conferred on him the degree of M.D. It was believed that this would lead to his election into the college of physicians, but that learned body decided that he could not be admitted until he had undergone an examination in classics. This Jenner at once refused; to brush up his classics would, he said, "be irksome beyond measure. I would not do it for a diadem. That indeed would be a bauble; I would not do it for John Hunter's museum."

He visited London for the last time in 1814, when he was presented to the Allied Sovereigns and to most of the principal personages who accompanied them. In the next year his wife's death was the signal for him to retire from public life: he never left Berkeley again, except for a day or two, as long as he lived. He found sufficient occupation for the remainder of his life in collecting further evidence on some points connected with his great discovery, and in his engagements as a physician, a naturalist and a magistrate. In 1818 a severe epidemic of small-pox prevailed, and fresh doubts were thrown on the

efficacy of vaccination, in part apparently owing to the bad quality of the vaccine lymph employed. This caused Jenner much annoyance, which was relieved by an able defence of the practice, written by Sir Gilbert Blane. But this led him, in 1821, to send a circular letter to most of the medical men in the kingdom inquiring into the effect of other skin diseases in modifying the progress of cow-pox. A year later he published his last work, *On the Influence of Artificial Eruptions in Certain Diseases*; and in 1823 he presented his last paper—"On the Migration of Birds"—to the Royal Society. On the 24th of January 1823 he retired to rest apparently as well as usual, and next morning rose and came down to his library, where he was found insensible on the floor, in a state of apoplexy, and with the right side paralysed. He never rallied, and died on the following morning.

A public subscription was set on foot, shortly after his death, by the medical men of his county, for the purpose of erecting some memorial in his honour, and with much difficulty a sufficient sum was raised to enable a statue to be placed in Gloucester Cathedral. In 1850 another attempt was made to set up a monument to him; this appears to have failed, but at length, in 1858, a statue of him was erected by public subscription in London.

Jenner's life was written by the intimate friend of his later years, Dr John Baron of Gloucester (2 vols., 1827, 1838). See also **VACCINATION**.

JENNER, SIR WILLIAM, BART. (1815-1898), English physician, was born at Chatham on the 30th of January 1815, and educated at University College, London. He became M.R.C.S. in 1837, and F.R.C.P. in 1852, and in 1844 took the London M.D. In 1847 he began at the London fever hospital investigations into cases of "continued" fever which enabled him finally to make the distinction between typhus and typhoid on which his reputation as a pathologist principally rests. In 1849 he was appointed professor of pathological anatomy at University College, and also assistant physician to University College Hospital, where he afterwards became physician (1854-1876) and consulting physician (1879), besides holding similar appointments at other hospitals. He was also successively Holme professor of clinical medicine and professor of the principles and practice of medicine at University College. He was president of the college of physicians (1881-1888); he was elected F.R.S. in 1864, and received honorary degrees from Oxford, Cambridge and Edinburgh. In 1861 he was appointed physician extraordinary, and in 1862 physician in ordinary, to Queen Victoria, and in 1863 physician in ordinary to the prince of Wales; he attended both the prince consort and the prince of Wales in their attacks of typhoid fever. In 1868 he was created a baronet. As a consultant Sir William Jenner had a great reputation, and he left a large fortune when he died, at Bishop's Waltham, Hants, on the 11th of December 1898, having then retired from practice for eight years owing to failing health.

JENNET, a small Spanish horse; the word is sometimes applied in English to a mule, the offspring of a she-ass and a stallion. Jennet comes, through Fr. *genet*, from Span. *jinele*, a light horseman who rides *à la gineta*, explained as "with his legs tucked up." The name is taken to be a corruption of the Arabic Zenāta, a Berber tribe famed for its cavalry. English and French transferred the word from the rider to his horse, a meaning which the word has only acquired in Spain in modern times.

JENOLAN CAVES, a series of remarkable caverns in Roxburgh county, New South Wales, Australia; 113 m. W. by N. of Sydney, and 36 m. from Tarana, which is served by railway. They are the most celebrated of several similar groups in the limestone of the country; they have not yielded fossils of great interest, but the stalactitic formations, sometimes pure white, are of extraordinary beauty. The caves have been rendered easily accessible to visitors and lighted by electricity.

JENSEN, WILHELM (1837-), German author, was born at Heiligenhafen in Holstein on the 15th of February 1837, the son of a local Danish magistrate, who came of old patrician Frisian stock. After attending the classical schools at Kiel and

Lübeck, Jensen studied medicine at the universities of Kiel, Würzburg and Breslau. He, however, abandoned the medical profession for that of letters, and after engaging for some years in individual private study proceeded to Munich, where he associated with men of letters. After a residence in Stuttgart (1865-1869), where for a short time he conducted the *Schwäbische Volks-Zeitung*, he became editor in Flensburg of the *Norddeutsche Zeitung*. In 1872 he again returned to Kiel, lived from 1876 to 1888 in Freiburg im Breisgau, and since 1888 has been resident in Munich.

Jensen is perhaps the most fertile of modern German writers of fiction, more than one hundred works having proceeded from his pen; but only comparatively few of them have caught the public taste; such are the novels, *Karin von Schweden* (Berlin, 1878); *Die braune Erica* (Berlin, 1868); and the tale, *Die Pfeifer von Dusenbach, Eine Geschichte aus dem Elsass* (1884). Among others may be mentioned: *Barthenia* (Berlin, 1877); *Götz und Gisela* (Berlin, 1886); *Heimkunft* (Dresden, 1894); *Aus See und Sand* (Dresden, 1897); *Luv und Lee* (Berlin, 1897); and the narratives, *Aus den Tagen der Hansa* (Leipzig, 1885); *Aus stiller Zeit* (Berlin, 1881-1885); and *Heimath* (1901). Jensen also published some tragedies, among which *Dido* (Berlin, 1870) and *Der Kampf für's Reich* (Freiburg im Br., 1884) may be mentioned.

JENYNS, SOAME (1704-1787), English author, was born in London on the 1st of January 1704, and was educated at St John's College, Cambridge. In 1742 he was chosen M.P. for Cambridgeshire, in which his property lay, and he afterwards sat for the borough of Dunwich and the town of Cambridge. From 1755 to 1780 he was one of the commissioners of the board of trade. He died on the 18th of December 1787.

For the measure of literary repute which he enjoyed during his life Jenyns was indebted as much to his wealth and social standing as to his accomplishments and talents, though both were considerable. His poetical works, the *Art of Dancing* (1727) and *Miscellanies* (1770), contain many passages graceful and lively though occasionally verging on licence. The first of his prose works was his *Free Inquiry into the Nature and Origin of Evil* (1756). This essay was severely criticized on its appearance, especially by Samuel Johnson in the *Literary Magazine*. Johnson, in a slashing review—the best paper of the kind he ever wrote—condemned the book as a slight and shallow attempt to solve one of the most difficult of moral problems. Jenyns, a gentle and amiable man in the main, was extremely irritated by his failure. He put forth a second edition of his work, prefaced by a vindication, and tried to take vengeance on Johnson after his death by a sarcastic epitaph.¹ In 1776 Jenyns published his *View of the Internal Evidence of the Christian Religion*. Though at one period of his life he had affected a kind of deistic scepticism, he had now returned to orthodoxy, and there seems no reason to doubt his sincerity, questioned at the time, in defending Christianity on the ground of its total variance with the principles of human reason. The work was deservedly praised in its day for its literary merits, but is so plainly the production of an amateur in theology that as a scientific treatise it is valueless.

A collected edition of the works of Jenyns appeared in 1790, with a biography by Charles Nalson Cole. There are several references to him in Boswell's *Johnson*.

JEOPARDY, a term meaning risk or danger of death, loss or other injury. The word, in Mid. Eng. *jupartie*, *jeupartie*, &c., was adapted from O. Fr. *ju*, later *jeu*, and *parti*, even game, in medieval Latin *jocus partitus*. This term was originally used of a problem in chess or of a stage in any other game at which the chances of success or failure are evenly divided between the players. It was thus early transformed to any state of uncertainty.

JEPHSON, ROBERT (1736-1803), British dramatist, was born in Ireland. After serving for some years in the British army, he retired with the rank of captain, and lived in England, where he was the friend of Garrick, Reynolds, Goldsmith, Johnson, Burke, Burney and Charles Townshend. His appointment as master of the horse to the lord-lieutenant of Ireland

¹ Two lines will suffice:—

Boswell and Thrale, retailers of his wit,
Will tell you how he wrote, and talk'd, and cough'd, and spit.

who in November 1798 published a pamphlet speculating upon the subject, before even seeing a case of cow-pox, and afterwards endeavoured, by lecturing on the subject and supplying the virus, to put himself forward as the chief agent in the cause. The matter which he distributed, which had been derived from cows that were found to be infected in London, was found frequently to produce, not the slight disease described by Jenner, but more or less severe eruptions resembling small-pox. Jenner concluded at once that this was due to an accidental contamination of the vaccine with variolous matter, and a visit to London in the spring of 1799 convinced him that this was the case. In the course of this year the practice of vaccination spread over England, being urged principally by non-professional persons of position; and towards its close attempts were made to found institutions for gratuitous vaccination and for supplying lymph to all who might apply for it. That indeed would be a bauble; I would not do it for John Hunter's museum."

He visited London for the last time in 1814, when he was presented to the Allied Sovereigns and to most of the principal personages who accompanied them. In the next year his wife's death was the signal for him to retire from public life: he never left Berkeley again, except for a day or two, as long as he lived. He found sufficient occupation for the remainder of his life in collecting further evidence on some points connected with his great discovery, and in his engagements as a physician, a naturalist and a magistrate. In 1818 a severe epidemic of small-pox prevailed, and fresh doubts were thrown on the

finches, the proportionate length of the thigh-bone or femur to the tibia and foot (metatarsus and toes) is constant, being 2 to 5; in animals, on the other hand, such as hares, horses and frogs, which use all four feet, the corresponding lengths are 4 to 7. The resemblance between the jerboa's and the bird's skeleton is owing to adaptation to a similar mode of existence. In the young jerboa the proportion of the femur to the rest of the leg is the same as in ordinary running animals. Further, at an early stage of development the fibula is a complete and separate bone, while the three metatarsals, which subsequently fuse together to form the cannon-bone, are likewise separate. In addition to their long hind and short fore limbs, jerboas are mostly characterized by their silky coats—of a fawn colour to harmonize with their desert surroundings—their large eyes, and long tails and ears. As is always the case with large-eared animals, the tympanic bullae of the skull are of unusually large size; the size varying in the different genera according to that of the ears. (For the characteristics of the family and of its more important generic representatives, see RODENTIA.)

In the Egyptian jerboa the length of the body is 8 in., and that of the tail, which is long, cylindrical and covered with short hair terminated by a tuft, 10 in. The five-toed front limbs are extremely short, while the hind pair are six times as long. When about to spring, this jerboa raises its body by means of the hinder extremities, and supports itself at the same time upon its tail, while the fore-feet are so closely pressed to the breast as to be scarcely visible, which doubtless suggested the name *Dipus*, or two-tooted. It then leaps into the air and alights upon its four feet, but instantaneously erecting itself, it makes another spring, and so on in such rapid succession as to appear as if rather flying than running. It is a gregarious animal, living in considerable colonies in burrows, which it excavates with its nails and teeth in the sandy soil of Egypt and Arabia. In these it remains during great part of the day, emerging at night in search of the herbs on which it feeds. It is exceedingly shy, and this, together with its extraordinary agility, renders it difficult to capture. The Arabs, however, succeed by closing up all the exits from the burrows with a single exception, by which the rodents are forced to escape, and over which a net is placed for their capture. When confined, they will gnaw through the hardest wood in order to make their escape. The Persian jerboa (*Alactaga indica*) is also a nocturnal burrowing animal, feeding chiefly on grain, which it stores up in underground repositories, closing these when full, and only drawing upon them when the supply of food above ground is exhausted (see also JUMPING MOUSE).

(R. L.)*

JERDAN, WILLIAM (1782–1869), Scottish journalist, was born on the 16th of April 1782, at Kelso, Scotland. During the years between 1799 and 1806 he spent short periods in a country lawyer's office, a London West India merchant's counting-house, an Edinburgh solicitor's chambers, and held the position of surgeon's mate on board H.M. guardship "Gladiator" in Portsmouth Harbour, under his uncle, who was surgeon. He went to London in 1806, and became a newspaper reporter. He was in the lobby of the House of Commons on the 11th of May 1812 when Spencer Perceval was shot, and was the first to seize the assassin. By 1812 he had become editor of *The Sun*, a semi-official Tory paper; he occasionally inserted literary articles, then quite an unusual proceeding; but a quarrel with the chief proprietor brought that engagement to a close in 1817. He passed next to the editor's chair of the *Literary Gazette*, which he conducted with success for thirty-four years. Jerdan's position as editor brought him into contact with many distinguished writers. An account of his friends, among whom Canning was a special intimate, is to be found in his *Men I have Known* (1866). When Jerdan retired in 1850 from the editorship of the *Literary Gazette* his pecuniary affairs were far from satisfactory. A testimonial of over £900 was subscribed by his friends; and in 1853 a government pension of 100 guineas was conferred on him by Lord Aberdeen. He published his *Autobiography* in 1852–1853, and died on the 11th of July 1869.

JEREMIAH, in the Bible, the last pre-exilic prophet (fl. 626–586 B.C.?), son of Hilkiah.

Early Days of Jeremiah.—There must anciently have existed one or more prose works on Jeremiah and his times, written partly to do honour to the prophet, partly to propagate those views respecting Israel's past with which the name of

Jeremiah was associated. Some fragments of this work (or these works) have come down to us; they greatly add to the popularity of the Book of Jeremiah. Strict historical truth we must not ask of them, but they do give us what was believed concerning Jeremiah in the following age, and we must believe that the personality so honoured was an extraordinary one. We have also a number of genuine prophecies which admit us into Jeremiah's inner nature. These are our best authorities, but they are deficient in concrete facts. By birth Jeremiah was a countryman; he came of a priestly family whose estate lay at Anathoth "in the land of Benjamin" (xxxii. 3; cf. i. 1). He came forward as a prophet in the thirteenth year of Josiah (626 B.C.), still young but irresistibly impelled. Unfortunately the account of the call and of the object of the divine caller come to us from a later hand (ch. i.), but we can well believe that the concrete fact which the prophetic call illuminated was an impending blow to the state (i. 13–16; cf. ch. iv.). What the blow exactly was is disputed,¹ but it is certain that Jeremiah saw the gathering storm and anticipated its result, while the statesmen were still wrapped in a false security. Five years later came the reform movement produced by the "finding" of the "book of the law" in the Temple in 621 B.C. (2 Kings xxii. 8), and some critics have gathered from Jer. xi. 1–8 that Jeremiah joined the ranks of those who publicly supported this book in Jerusalem and elsewhere. To others this view appears in itself improbable. How can a man like Jeremiah have advocated any such panacea? He was indeed not at first a complete pessimist, but to be a preacher of Deuteronomy required a sanguine temper which a prophet of the school of Isaiah could not possess. Besides, there is a famous passage (viii. 8, see R.V.) in which Jeremiah delivers a vehement attack upon the "scribes" (or, as we might render, "bookmen") and their "false pen." If, as Wellhausen and Duhm suppose, this refers to Deuteronomy (i.e. the original Deuteronomy), the incorrectness of the theory referred to is proved. And even if we think that the phraseology of viii. 8 applies rather to a body of writings than to a single book, yet there is no good ground (xi. 1–8 and xxxiv. 12 being of doubtful origin) for supposing that Jeremiah would have excepted Deuteronomy from his condemnation.

Stages of his Development.—At first our prophet was not altogether a pessimist. He aspired to convince the better minds that the only hope for Israelites, as well as for Israel, lay in "returning" to the true Yahweh, a deity who was no mere national god, and was not to be cajoled by the punctual offering of costly sacrifices. When Jeremiah wrote iv. 1–4 he evidently considered that the judgment could even then be averted. Afterwards he became less hopeful, and it was perhaps a closer acquaintance with the manners of the capital that served to disillusionize him. He began his work at Anathoth, but v. 1–5 (as Duhm points out) seems to come from one who has just now for the first time "run to and fro in the streets of Jerusalem," observing and observed. And what is the result of his expedition? That he cannot find a single just and honest man; that high and low, rich and poor, are all ignorant of the true method of worshipping God ("the way of Yahweh," v. 4). It would seem as if Anathoth were less corrupt than the capital, the moral state of which so shocked Jeremiah. And yet he does not really go beyond the great city-prophet Isaiah who calls the men of Jerusalem "a people of Gomorrah" (i. 10). With all reverence, an historical student has to deduct something from both these statements. It is true that commercial prosperity had put a severe strain on the old morality, and that contact with other

¹ Davidson (Hast., D.B., ii. 570 b) mentions two views. (1) The foe might be "a creation of his moral presentiment and assigned to the north as the cloudy region of mystery." (2) The more usual view is that the Scythians (see Herod. i. 76, 103–106; iv. 1) are meant. Neither of these views is satisfactory. The passage v. 15–17 is too definite for (1), and as for (2), the idea of a threatened Scythian invasion lacks a sufficient basis. Those who hold (2) have to suppose that original references to the Scythians were retouched under the impression of Chaldean invasions. Hence Cheyne's theory of a north Arabian invasion from the land of Zaphon = Zibeon (Gen. xxxvi. 2, 14), i.e. Ishmael. Cf. N. Schmidt, *Ency. Bib.*, Zibeon, "Scythians," § 8; Cheyne, *Critica Biblica*, part i. (Isaiah and Jeremiah).

peoples, as well as the course of political history, had appeared to lower the position of the God of Israel in relation to other gods. Still, some adherents of the old Israelitish moral and religious standards must have survived, only they were not to be found in the chief places of concourse, but as a rule in coteries which handed on the traditions of Amos and Isaiah in sorrowful retirement.

Danger of Book Religion.—Probably, too, even in the highest class there were some who had a moral sympathy with Jeremiah; otherwise we can hardly account for the contents of Deuteronomy, at least if the book "found" in the Temple at all resembled the central portion of our Deuteronomy. And the assumption seems to be confirmed by the respectful attitude of certain "elders of the land" in xxvi. 17 sqq., and of the "princes" in xxxvi. 19, 25, towards Jeremiah, which may, at any rate in part, have been due to the recent reform movement. If therefore Jeremiah aimed at Deuteronomy in the severe language of viii. 8, he went too far. History shows that book religion has special dangers of its own.¹ Nevertheless the same incorruptible adviser also shows that book religion may be necessary as an educational instrument, and a compromise between the two types of religion is without historical precedent.

Reaction: Opposition to Jeremiah.—This, however, could not as yet be recognized by the friends of prophecy, even though it seemed for a time as if the claims of book religion were rebuffed by facts. The death of the pious king Josiah at Megiddo in 608 B.C. dashed the high hopes of the "book-men," but meant no victory for Jeremiah. Its only result for the majority was a falling back on the earlier popular cultus of the Baals, and on the heathen customs introduced, or reintroduced, by Josiah's grandfather, Manasseh. Would that we possessed the section of the prophet's biography which described his attitude immediately after the news of the battle of Megiddo! Let us, however, be thankful for what we have, and notably for the detailed narratives in chs. xxvi. and xxxvi. The former is dated in the beginning of the reign of Jehoiakim, though Wellhausen suspects that the date is a mistake, and that the real occasion was the death of Josiah. The one clear-sighted patriot saw the full meaning of the tragedy of Megiddo, and for "prophesying against this city"—secured, as men thought, by the Temple (vii. 4)—he was accused by "the priests, the prophets, and all the people" of high treason. But the divinity which hedged a prophet saved him. The "princes," supported by certain "elders" and by "the people" (quick to change their leaders), succeeded in quashing the accusation and setting the prophet free. No king, be it observed, is mentioned. The latter narrative is still more exciting. In the fourth year of Jehoiakim (= the first of Nebuchadrezzar, xxv. 1) Jeremiah was bidden to write down "all the words that Yahweh had spoken to him against Jerusalem (so LXX), Judah and all the nations from the days of Josiah onwards" (xxxvi. 2). So at least the authors of Jeremiah's biography tell us. They add that in the next year Jeremiah's scribe Baruch read the prophecies of Jeremiah first to the people assembled in the Temple, then to the "princes," and then to the king, who decided his own future policy by burning Baruch's roll in the brazier. We cannot, however, bind ourselves to this tradition. Much more probably the prophecy was virtually a new one (i.e. even if some old passages were repeated yet the setting was new), and the burden of the prophecy was "The king of Babylon shall come and destroy this land."² We cannot therefore assent to the judgment that "we have, at least as regards [the] oldest portions [of the book] information considerably more specific than is usual in the case of the writings of the prophets."³

Fall of the State.—Under Zedekiah the prophet was less fortunate. Such was the tension of feeling that the "princes," who

were formerly friendly to Jeremiah, now took up an attitude of decided hostility to him. At last they had him consigned to a miry dungeon, and it was the king who (at the instance of the Cushite Ebed-melech) intervened for his relief, though he remained a prisoner in other quarters till the fall of Jerusalem (586 B.C.). Nebuchadrezzar, who is assumed to have heard of Jeremiah's constant recommendations of submission, gave him the choice either of going to Babylon or of remaining in the country (chs. xxxviii, seq.). He chose the latter and resided with Gedaliah, the native governor, at Mizpah. On the murder of Gedaliah he was carried to Mizraim or Egypt, or perhaps to the land of Mizrim in north Arabia—against his will (chs. xl.-xliii.). How far all this is correct we know not. The graphic style of a narrative is no sufficient proof of its truth. Conceivably enough the story of Jeremiah's journey to Egypt (or Mizrim) may have been imagined to supply a background for the artificial prophecies ascribed to Jeremiah in chs. xli.-li. A legend in Jerome and Epiphanius states that he was stoned to death at Daphnac, but the biography, though not averse from horrors, does not mention this.

A Patriot?—Was Jeremiah really a patriot? The question has been variously answered. He was not a Phocion, for he never became the tool of a foreign power. To say with Winckler⁴ that he was "a decided adherent of the Chaldean party" is to go beyond the evidence. He did indeed counsel submission, but only because his detachment from party gave him a clearness of vision (cf. xxxviii. 17, 18) which the politicians lacked. How he suffered in his uphill course he has told us himself (xv. 10-21). In after ages the oppressed people saw in his love for Israel and his patient resignation their own realized ideal. "And Onias said, This is the lover of the brethren, he who prayeth much for the people and the holy city, Jeremiah the prophet of God" (2 Macc. xv. 14). And in proportion as the popular belief in Jeremiah rose, fresh prophecies were added to the book (notably those of the new covenant and of the restoration of the people after seventy years) to justify it. Professor N. Schmidt has gone further into the character of this sympathetic prophet, *Ency. Bib.* "Jeremiah," § 5.

Jeremiah's Prophecies.—It has been said above that our best authorities are Jeremiah's own prophecies. Which may these be? Before answering we must again point out (see also ISAIAH) that the records of the pre-exilic prophets came down in a fragmentary form, and that these fragments needed much supplementing to adapt them to the use of post-exilic readers. In Jeremiah, as in Isaiah, we must constantly ask to what age do the phraseology, the ideas and the implied circumstances most naturally point? According to Duhm there are many passages in which metre (see also Amos) may also be a factor in our critical conclusions. Jeremiah, he thinks, always uses the same metre. Giesebrecht, on the other hand, maintains that there are passages which are certainly Jeremiah's, but which are not in what Duhm calls Jeremiah's metre; Giesebrecht also, himself rather conservative, considers Duhm remarkably free with his emendations. There has also to be considered whether the text of the poetical passages has not often become corrupt, not only from ordinary causes but through the misunderstanding and misreading of north Arabian names on the part of late scribes and editors, the danger to Judah from north Arabia being (it is held) not less in pre-exilic times than the danger from Assyria and Babylon, so that references to north Arabia are only to be expected. To bring educated readers into touch with critical workers it is needful to acquaint them with these various points, the neglect of any one of which may to some extent injure the results of criticism.

It is a new stage of criticism on which we have entered, so that no single critic can be reckoned as the authority on Jeremiah. But since the results of the higher criticism depend on the soundness and thoroughness of the criticism called "lower," and since Duhm has the advantage of being exceptionally free from that exaggerated respect for the letters of the traditional text which has survived the destruction of the old superstitious veneration for the vowel-points, it may be best to give the student his "higher critical" results, dated 1901. Let us premise, however, that the portions mentioned in the 9th edition of the *Ency. Brit.* as having been "entirely or in part denied," to Jeremiah, viz. x. 1-16; xxx.; xxxiii.; l.-li. and lii., are still regarded in their present form as non-Jeremianic. The question which next awaits decision is whether any part of the booklet on foreign nations (xxv., xli.-li.) can safely be regarded as Jeremianic. Giesebrecht still asserts the genuineness of xxv. 15-24 (apart from glosses), xlvii. (in the main) and xlix. 7, 8, 10, 11. Against these views see N. Schmidt, *Ency. Bib.*, col. 2384.

¹ Cf. Ewald, *The Prophets*, Eng. trans., iii. 63, 64.

² Cheyne, *Ency. Brit.* (9th ed.), "Jeremiah," suggests after Grätz that the roll simply contained ch. xxv., omitting the most obvious interpolations. Against this view see N. Schmidt, *Ency. Bib.*, "Jeremiah (Book)," § 8, who, however, accepts the negative part of Cheyne's arguments.

³ Driver, *Introd. to the Lit. of the O.T.* (6), p. 249.

⁴ In Helmolt's *Weltgeschichte*, iii. 211.

Let us now listen to Duhm, who analyses the book into six groups of passages. These are (a) i.-xxv., the "words of Jeremiah" (i. 1); (b) xxvi.-xxix., passages from Baruch's biography of Jeremiah; (c) xxx.-xxxii., the book of the future of Israel and Judah; (d) xxxiii.-xliv., from Baruch; (e) xlv.-li., the prophecies "concerning the nations"; (f) lii., historical appendix. Upon examining these groups we find that besides a prose letter (ch. xxix.), about sixty poetical pieces may be Jeremiah's. A: Anathoth passages before 621, (a) ii. 2b, 3, 14-28; ii. 29-37; iii. 1-5; iii. 12b, 13, 19, 20; iii. 21-25; iv. 1, 3, 4; these form a cycle. (b) xxxi. 2-6; 15-20; 21, 22; another cycle. (c) iv. 5-8; 11b, 12a, 13, 15-17a; 19-21; 23-26; 29-31; visions and "auditions" of the impending invasion. B: Jerusalem passages. (d) v. 1-6a; 6b-9; 10-17; vi. 1-5; 6b-8; 9-14; 16, 17, 20; 22-26a; 27-30; vii. 28, 29; viii. 4-7a; 8, 9, 13; 14-17; viii. 18-23; ix. 1-8; 9 (short song); 16-18; 19-21; x. 19, 20, 22; reign of Josiah, strong personal element. (e) xxii. 10 (Jehoiachaz). xxii. 13-17; probably too xi. 15, 16; xii. 7-12 (Jehoiakim). xxii. 18, 19, perhaps too xxii. 6b, 7; 20-23; and the cycle xiii. 15, 16; 17; 18, 19; 20, 21a, 22-25a, 26, 27 (later, Jehoiakim). xxii. 24; xxii. 28 (Jehoiachin). (f) Later poems. xiv. 2-10; xv. 5-9; xvi. 5-7; xviii. 13-17; xxiii. 9-12; 13-15; xi. 18-20; xv. 10-12; 15-19a, and 20, 21; xvii. 9, 10, 14, 16, 17; xviii. 18-20; xx. 7-11; xx. 14-18; xiv. 17, 18; xvii. 1-4; xxxviii. 24; assigned to the close of Zedekiah's time.

Two Recensions of the Text.—It has often been said that we have virtually two recensions of the text, that represented by the Septuagint and the Massoretic text, and critics have taken different sides, some for one and some for the other. "Recension," however, is a bad term; it implies that the two texts which undeniably exist were the result of revising and editing according to definite critical principles. Such, however, is not the case. It is true that "there are (in the LXX) many omissions of words, sentences, verses and whole passages, in fact, that altogether about 2700 words are wanting, or the eighth part of the Massoretic text" (Bleek). It may also be admitted that the scribes who produced the Hebrew basis of the Septuagint version, conscious of the unsettled state of the text, did not shrink from what they considered a justifiable simplification. But we must also grant that those from whom the "written" Hebrew text proceeds allowed themselves to fill up and to repeat without any sufficient warrant. In each case in which there is a genuine difference of reading between the two texts, it is for the critic to decide; often, however, he will have to seek to go behind what both the texts present in order to constitute a truer text than either. Here is the great difficulty of the future. We may add to the credit of the Septuagint that the position given to the prophecies on "the nations" (chs. xlv.-li. in our Bible) in the Septuagint is probably more original than that in the Massoretic text. On this point see especially Schmidt, *Ency. Bib.* "Jeremiah (Book)" §§ 6 and 21; Davidson, *Hastings's Dict. Bible*, ii. 573b-575; Driver, *Introduction* (8th ed.), pp. 209, 270.

The best German commentary is that of Cornill (1905). A skilful translation by Driver, with notes intended for ordinary students (1906) should also be mentioned. (T. K. C.)

JEREMY, EPISTLE OF, an apocryphal book of the Old Testament. This letter purports to have been written by Jeremiah to the exiles who were already in Babylon or on the way thither. The author was a Hellenistic Jew, and not improbably a Jew of Alexandria. His work, which shows little literary skill, was written with a serious practical purpose. He veiled his fierce attack on the idol gods of Egypt by holding up to derision the idolatry of Babylon. The fact that Jeremiah (xxix. 1 sqq.) was known to have written a letter of this nature naturally suggested to a Hellenist, possibly of the 1st century B.C. or earlier, the idea of a second epistolary undertaking, and other passages of Jeremiah's prophecy (x. 1-12; xxix. 4-23) may have determined also its general character and contents.

The writer warned the exiles that they were to remain in captivity for seven generations; that they would there see the worship paid to idols, from all participation in which they were to hold aloof; for that idols were nothing save the work of men's hands, without the powers of speech, hearing or self-preservation. They could not bless their worshippers even in the smallest concerns of life; they were indifferent to moral qualities, and were of less value than the commonest household objects, and finally, "with rare irony, the author compared an idol to a scarecrow (v. 70), impotent to protect, but deluding to the imagination" (MARSHALL).

The date of the epistle is uncertain. It is believed by some scholars to be referred to in 2 Macc. ii. 2, which says that Jeremiah charged the exiles "not to forget the statutes of the Lord, neither

to be led astray in their minds when they saw images of gold and silver and the adornment thereof." But the reference is disputed by Fritzsche, Gifford, Schürer and others. The epistle was included in the Greek canon. There was no question of its canonicity till the time of Jerome, who termed it a pseudepigraph.

See Fritzsche, *Handb. zu den Apoc.*, 1851; Gifford, in *Speaker's Apoc.* ii. 280-303; Marshall, in *Hastings's Dict. Bible*, ii. 578-579. (R. H. C.)

JERÉZ DE LA FRONTERA (formerly XERES), a town of southern Spain, in the province of Cadiz, near the right bank of the river Guadalete, and on the Seville-Cadiz railway, about 7 m. from the Atlantic coast. Pop. (1900), 63,473. Jeréz is built in the midst of an undulating plain of great fertility. Its whitewashed houses, clean, broad streets, and squares planted with trees extend far beyond the limits formerly enclosed by the Moorish walls, almost entirely demolished. The principal buildings are the 15th-century church of San Miguel, the 17th-century collegiate church with its lofty bell-tower, the 16th-century town-hall, superseded, for official purposes, by a modern edifice, the bull-ring, and many hospitals, charitable institutions and schools, including academies of law, medicine and commerce. But the most characteristic features of Jeréz are the huge *bodegas*, or wine lodges, for the manufacture and storage of sherry, and the vineyards, covering more than 150,000 acres, which surround it on all sides. The town is an important market for grain, fruit and livestock, but its staple trade is in wine. Sherry is also produced in other districts, but takes its name, formerly written in English as *sherris* or *xeres*, from Jeréz. The demand for sherry diminished very greatly during the last quarter of the 19th century, especially in England, which had been the chief consumer. In 1872 the sherry shipped from Cadiz to Great Britain alone was valued at £2,500,000; in 1902 the total export hardly amounted to one-fifth of this sum. The wine trade, however, still brings a considerable profit, and few towns of southern Spain display greater commercial activity than Jeréz. In the earlier part of the 18th century the neighbourhood suffered severely from yellow fever; but it was rendered comparatively healthy when in 1869 an aqueduct was opened to supply pure water. Strikes and revolutionary disturbances have frequently retarded business in more recent years.

Jeréz has been variously identified with the Roman Municipium Serienne; with Asido, perhaps the original of the Moorish Sherish; and with Hasta Regia, a name which may survive in the designation of La Mesa de Asta, a neighbouring hill. Jeréz was taken from the Moors by Ferdinand III. of Castile (1217-1252); but it was twice recaptured before Alphonso X. finally occupied it in 1264. Towards the close of the 14th century it received the title *de la Frontera*, i.e. "of the frontier," common to several towns on the Moorish border.

JERÉZ DE LOS CABALLEROS, a town of south-western Spain in the province of Badajoz, picturesquely situated on two heights overlooking the river Ardila, a tributary of the Guadiana, 12 m. E. of the Portuguese frontier. Pop. (1900), 10,271. The old town is surrounded by a Moorish wall with six gates; the newer portion is well and regularly built, and planted with numerous orange and other fruit trees. Owing to the lack of railway communication Jeréz is of little commercial importance; its staple trade is in agricultural produce, especially in ham and bacon from the large herds of swine which are reared in the surrounding oak forests. The town is said to have been founded by Alphonso IX. of Leon in 1229; in 1232 it was extended by his son St Ferdinand, who gave it to the knights templar. Hence the name *Jeréz de los Caballeros*, "Jeréz of the knights."

JERICHO (יִרְיָחוֹ, once יִרְיָחוֹ, a word of disputed meaning, whether "fragrant" or "moon [-god] city"), an important town in the Jordan valley some 5 m. N. of the Dead Sea. The references to it in the Pentateuch are confined to rough geographical indications of the latitude of the trans-Jordanic camp of the Israelites in Moab before their crossing of the river. This was the first Canaanite city to be attacked and reduced by the victorious Israelites. The story of its conquest is

¹ li. 59-64a, however, is a specimen of imaginative "Midrashic" history. See Giesebrecht's monograph.

fully narrated in the first seven chapters of Joshua. There must be some little exaggeration in the statement that Jericho was totally destroyed; a hamlet large enough to be enumerated among the towns of Benjamin (Josh. xviii. 21) must have remained; but that it was small is shown by the fact that it was deemed a suitable place for David's ambassadors to retire to after the indignities put upon them by Hanun (2 Sam. x. 5; 1 Chron. xix. 5). Its refortification was due to a Bethelite named Hiel, who endeavoured to avert the curse of Joshua by offering his sons as sacrifices at certain stages of the work (1 Kings xvi. 34). After this event it grew again into importance and became the site of a college of prophets (2 Kings ii. 4 sqq.) for whom Elisha "healed" its poisonous waters. The principal spring in the neighbourhood of Jericho still bears (among the foreign residents) the name of Elisha; the natives call it, Ain es-Sultan, or "Sultan's spring." To Jericho the victorious Israelite marauders magnanimously returned their Judahite captives at the bidding of the prophet Oded (2 Chron. xxviii. 15). Here was fought the last fight between the Babyonians and Zedekiah, wherein the kingdom of Judah came to an end (2 Kings xxv. 5; Jer. xxxix. 5, lii. 8). In the New Testament Jericho is connected with the well-known stories of Bar-Timaeus (Matt. xx. 29; Mark x. 46; Luke xviii. 35) and Zacchaeus (Luke xix. 1) and with the good Samaritan (Luke x. 30).

The extra-Biblical history of Jericho is as disastrous as are the records preserved in the Scriptures. Bacchides, the general of the Syrians, captured and fortified it (1 Macc. ix. 50), Aristobulus (Jos. Ant. XIV. i. 2) also took it, Pompey (ib. XIV. iv. 1) encamped here on his way to Jerusalem. Before Herod its inhabitants ran away (ib. XIV. xv. 3) as they did before Vespasian (Wars, IV. viii. 2). The reason of this lack of wall-like quality was no doubt the enervating effect of the great heat of the depression in which the city lies, which has the same effect on the handful of degraded humanity that still occupies the ancient site.

Few places in Palestine are more fertile. It was the city of palm trees of the ancient record of the Israelite invasion preserved in part in Judg. i. 16; and Josephus speaks of its fruitfulness with enthusiasm (Wars IV. 8, 3). Even now with every possible hindrance in the way of cultivation it is an important centre of fruit-growing.

The modern er-Riha is a poor squalid village of, it is estimated, about 300 inhabitants. It is not built exactly on the ancient site. Indeed, the site of Jericho has shifted several times. The mound of Tell es-Sultan, near "Elisha's Fountain," north of the modern village, no doubt covers the Canaanite town. There are two later sites, of Roman or Herodian date, one north, the other west, of this. It was probably the crusaders who established the modern site. An old tower attributed to them is to be seen in the village, and in the surrounding mountains are many remains of early monasticism. Aqueducts, ruined sugar-mills, and other remains of ancient industry abound in the neighbourhood. The whole district is the private property of the sultan of Turkey. In 1907-8 the Canaanite Jericho was excavated under the direction of Professor Sellin of Vienna.

See "The German Excavations at Jericho," *Pal. Explor. Fund. Quart. Statem.* (1910), pp. 54-68.

JERKIN, a short close-fitting jacket, made usually of leather, and without sleeves, the typical male upper garment of the 16th and 17th centuries. The origin of the word is unknown. The Dutch word *jurk*, a child's frock, often taken as the source, is modern, and represents neither the sound nor the sense of the English word. In architecture the term "jerk-roofed" is applied, probably with some obscure connexion with the garment, to a particular form of gable end, the gable being cut off half way up the roof and sloping back like a "hipped roof" to the edge.

JEROBOAM (Heb. *yārob'am*, apparently "Am ['the clan,' here perhaps a divine name] contends"; LXX *υποβοαμ*), the name of two kings in the Bible.

1. The first king of (north) Israel after the disruption (see SOLOMON). According to the traditions of his early life (1 Kings xi. 26 sqq. and LXX), he was an Ephraimite who for his ability was placed over the forced levy of Ephraim and Manasseh. Having subsequently incurred Solomon's suspicions he fled to Shishak, king of Egypt, and remained with him until Rehoboam's accession. When the latter came to be made king at Shechem, the old religious centre (see ABIMELECH), hopes were entertained that a more lenient policy would be introduced.

But Rehoboam refused to depart from Solomon's despotic rule, and was tactless enough to send Adoniram, the overseer of the *corvée*. He was stoned to death, and Rehoboam realizing the temper of the people fled to Jerusalem and prepared for war. Jeroboam became the recognized leader of the northern tribes.¹ Conflicts occurred (1 Kings xiv. 30), but no details are preserved except the late story of Rehoboam's son Abijah in 2 Chron. xiii. Jeroboam's chief achievement was the fortification of Shechem (his new capital) and of Peniel in east Jordan. To counteract the influence of Jerusalem he established golden calves at Dan and Bethel, an act which to later ages was as gross a piece of wickedness as his rebellion against the legitimate dynasty of Judah. No notice has survived of Shishak's invasion of Israel (see REHOBAM), and after a reign of twenty-two years Jeroboam was succeeded by Nadab, whose violent death two years later brought the whole house of Jeroboam to an end.

The history of the separation of Judah and Israel in the 10th century B.C. was written from a strong religious standpoint at a date considerably later than the event itself. The visit of Ahijah to Shiloh (xi. 29-39), to announce symbolically the rending of the kingdom, replaces some account of a rebellion in which Jeroboam "lifted up his hand" (v. 27) against Solomon. To such an account, not to the incident of Ahijah and the cloak, his flight (v. 40) is the natural sequel. The story of Ahijah's prophecy against Jeroboam (ch. xiv.) is not in the original LXX, but another version of the same narrative appears at xii. 24 (LXX), in which there is no reference to a previous promise to Jeroboam through Ahijah, but the prophet is introduced as a new character. Further, in this version (xii. 24) the incident of the tearing of the cloak is related of Shemaiah and placed at the convention of Shechem. Shemaiah is the prophet who counselled Rehoboam to refrain from war (xii. 21-24); the injunction is opposed to xiv. 30, but appears to be intended to explain Rehoboam's failure to overcome north Israel. (See W. R. Smith, *Old Test. in Jewish Church* (2nd ed.), 117 sqq.; Winckler, *Alt. Test. Untersuch.* 12 sqq., and J. Skinner, *Century Bible: Kings*, pp. 443 sqq.)

2. **JEROBOAM**, son of Joash (2), a contemporary of Azariah, king of Judah. He was one of the greatest of the kings of Israel. He succeeded in breaking the power of Damascus, which had long been devastating his land, and extended his kingdom from Hamath on the Orontes to the Dead Sea. The brief summary of his achievements preserved in 2 Kings xiv. 23 sqq. may be supplemented by the original writings of Amos and Hosca.² There appears to be an allusion in Amos vi. 13 to the recovery of Ashteroth-Karnaim and Lodebar in E. Jordan, and the conquest of Moab (Isa. xv. seq.) is often ascribed to this reign. After a period of prosperity, internal disturbances broke out and the northern kingdom hastened to its fall. Jeroboam was succeeded by his son Zechariah, who after six months was killed at Ibleam (so read in 2 Kings xv. 10; cf. ix. 27, murder of Ahaziah) by Shallum the son of Jabesh—i.e. possibly of Jabesh-Gilead—who a month later fell to Menahem (q.v.).

See, further, *Jews* §§ 7, 9 and §§ 12, 13.

(S. A. C.)

JEROME, ST (HIERONYMUS, in full EUSEBIUS SOPHRONIUS HIERONYMUS) (c. 340-420), was born at Strido (modern Strigau?), a town on the border of Dalmatia fronting Pannonia, destroyed by the Goths in A.D. 377. What is known of Jerome has mostly been recovered from his own writings. He appears to have been born about 340; his parents were Christians, orthodox though living among people mostly Arians and wealthy. He was at first educated at home, Bonosus, a life-long friend, sharing his youthful studies, and was afterwards sent to Rome. Donatus taught him grammar and explained the Latin poets. Victorinus taught him rhetoric. He attended the law-courts, and listened to the Roman advocates pleading in the Forum. He went to the schools of philosophy and heard lectures on Plato, Diogenes, Chitomachus and Carneades; the conjunction of names shows how philosophy had become a dead tradition.

¹ On the variant traditions in the Hebrew text and the Septuagint, see the commentaries on Kings.

² See also JONAH. In 2 Kings xiv. 28, "Hamath, which had belonged to Judah" (R.V.) is incorrect; Winckler (*Kaiserschrift u. Alt. Test.*, 2nd ed., 262) suspects a reference to Israel's overlordship in Judah; Burney (*Heb. Text of Kings*) reads: "how he fought with Damascus and how he turned away the wrath of Yahweh from Israel"; see also *Ency. Bib.* col. 2406 n. 4, and the commentaries.

His Sundays were spent in the catacombs in discovering graves of the martyrs and deciphering inscriptions. Pope Liberius baptized him in 360; three years later the news of the death of the emperor Julian came to Rome, and Christians felt relieved from a great dread.

When his student days were over Jerome returned to Strido, but did not stay there long. His character was formed. He was a scholar, with a scholar's tastes and cravings for knowledge, easily excited, bent on scholarly discoveries. From Strido he went to Aquileia, where he formed some friendships among the monks of the large monastery, notably with Rufinus, with whom he was destined to quarrel bitterly over the question of Origen's orthodoxy and worth as a commentator; for Jerome was a man who always sacrificed a friend to an opinion, and when he changed sides in a controversy expected his acquaintances to follow him. From Aquileia he went to Gaul (366-370), visiting in turn the principal places in that country, from Narbonne and Toulouse in the south to Treves on the north-east frontier. He stayed some time at Treves studying and observing, and it was there that he first began to think seriously upon sacred things. From Treves he returned to Strido, and from Strido to Aquileia. He settled down to literary work in Aquileia (370-373) and composed there his first original tract, *De muliere septies percussa*, in the form of a letter to his friend Innocentius. Some dispute caused him to leave Aquileia suddenly; and with a few companions, Innocentius, Evagrius, and Heliodorus being among them, he started for a long tour in the East. The epistle to Rufinus (3rd in Vallarsi's enumeration) tells us the route. They went through Thrace, visiting Athens, Bithynia, Galatia, Pontus, Cappadocia and Cilicia, to Antioch, Jerome observing and making notes as they went. He was interested in the theological disputes and schisms in Galatia, in the two languages spoken in Cilicia, &c. At Antioch the party remained some time. Innocentius died of a fever, and Jerome was dangerously ill. This illness induced a spiritual change, and he resolved to renounce whatever kept him back from God. His greatest temptation was the study of the literature of pagan Rome. In a dream Christ reproached him with caring more to be a Ciceronian than a Christian. He disliked the uncouth style of the Scriptures. "O Lord," he prayed, "thou knowest that whenever I have and study secular MSS. I deny thee," and he made a resolve henceforth to devote his scholarship to the Holy Scripture. "David was to be henceforth his Simonides, Pindar and Alcaeus, his Flaccus, Catullus and Severus." Fortified by these resolves he betook himself to a hermit life in the wastes of Chalcis, S.E. from Antioch (373-379). Chalcis was the Thebaid of Syria. Great numbers of monks, each in solitary cell, spent lonely lives, scorched by the sun, ill-clad and scantily fed, pondering on portions of Scripture or copying MSS. to serve as objects of meditation. Jerome at once set himself to such scholarly work as the place afforded. He discovered and copied MSS., and began to study Hebrew. There also he wrote the life of St Paul of Thebes, probably an imaginary tale embodying the facts of the monkish life around him. Just then the Meletian schism, which arose over the relation of the orthodox to Arian bishops and to those baptized by Arians, distressed the church at Antioch (see MELETIUS OF ANTIOCH), and Jerome as usual eagerly joined the fray. Here as elsewhere he had but one rule to guide him in matters of doctrine and discipline—the practice of Rome and the West; for it is singular to see how Jerome, who is daringly original in points of scholarly criticism, was a ruthless partisan in all other matters; and, having discovered what was the Western practice, he set tongue and pen to work with his usual bitterness (*Allercatio luciferiani et orthodoxi*).

At Antioch in 379 he was ordained presbyter. From there he went to Constantinople, where he met with the great Eastern scholar and theologian Gregory of Nazianzus, and with his aid tried to perfect himself in Greek. The result of his studies there was the translation of the *Chronicon* of Eusebius, with a continuation¹ of twenty-eight homilies of Origen on Jeremiah and

Ezekiel, and of nine homilies of Origen on the visions of Isaiah.

In 381 Meletius died, and Pope Damasus interfered in the dispute at Antioch, hoping to end it. Jerome was called to Rome in 382 to give help in the matter, and was made secretary during the investigation. His work brought him into intercourse with this great pontiff, who soon saw what he could best do, and how his vast scholarship might be made of use to the church. Damasus suggested to him to revise the "Old Latin" translation of the Bible; and to this task he henceforth devoted his great abilities. At Rome were published the Gospels (with a dedication to Pope Damasus, an explanatory introduction, and the canons of Eusebius), the rest of the New Testament and the version of the Psalms from the Septuagint known as the *Psalterium romanum*, which was followed (c. 388) by the *Psalterium gallicanum*, based on the Hexaplar Greek text. These scholarly labours, however, did not take up his whole time, and it was almost impossible for Jerome to be long anywhere without getting into a dispute. He was a zealous defender of that monastic life which was beginning to take such a large place in the church of the 4th century, and he found enthusiastic disciples among the Roman ladies. A number of widows and maidens met together in the house of Marcella to study the Scriptures with him; he taught them Hebrew, and preached the virtues of the celibate life. His arguments and exhortations may be gathered from many of his epistles and from his tract *Adversus Helvidium*, in which he defends the perpetual virginity of Mary against Helvidius, who maintained that she bore children to Joseph. His influence over these ladies alarmed their relatives and excited the suspicions of the regular priesthood and of the populace, but while Pope Damasus lived Jerome remained secure. Damasus died, however, in 384, and was succeeded by Siricius, who did not show much friendship for Jerome. He found it expedient to leave Rome, and set out for the East in 385. His letters (especially Ep. 45) are full of outcries against his enemies and of indignant protestations that he had done nothing unbecoming a Christian, that he had taken no money, nor gifts great nor small, that he had no delight in silken attire, sparkling gems or gold ornaments, that no matron moved him unless by penitence and fasting, &c. His route is given in the third book *In Rufinum*; he went by Rhegium and Cyprus, where he was entertained by Bishop Epiphanius to Antioch. There he was joined by two wealthy Roman ladies, Paula, a widow, and Eustochium, her daughter, one of Jerome's Hebrew students. They came accompanied by a band of Roman maidens vowed to live a celibate life in a nunnery in Palestine. Accompanied by these ladies Jerome made the tour of Palestine, carefully noting with a scholar's keenness the various places mentioned in Holy Scripture. The results of this journey may be traced in his translation with emendations of the book of Eusebius on the situation and names of Hebrew places, written probably three years afterwards, when he had settled down at Bethlehem. From Palestine Jerome and his companions went to Egypt, remaining some time in Alexandria; and they visited the convents of the Nitrian desert. Jerome's mind was evidently full of anxiety about his translation of the Old Testament, for we find him in his letters recording the conversations he had with learned men about disputed readings and doubtful renderings; the blind Didymus of Alexandria, whom he heard interpreting Hosea, appears to have been most useful. When they returned to Palestine they all settled at Bethlehem, where Paula built four monasteries, three for nuns and one for monks. She was at the head of the nunneries until her death in 404, when Eustochium succeeded her; Jerome presided over the fourth monastery. Here he did most of his literary work and, throwing aside his unfinished plan of a translation from Origen's Hexaplar text, translated the Old Testament directly from the Hebrew, with the aid of Jewish scholars. He mentions a rabbi from Lydda, a rabbi from Tiberias, and above all rabbi Ben Anina, who came to him by night secretly for fear of the Jews. Jerome was not familiar enough with Hebrew to be able to dispense with such assistance, and he makes the synagogue responsible for the

¹ Cf. Schoene's critical edition (Berlin, 1866, 1875).

accuracy of his version: "Let him who would challenge aught in this translation," he says, "ask the Jews." The result of all this labour was the Latin translation of the Scriptures which, in spite of much opposition from the more conservative party in the church, afterwards became the Vulgate or authorized version; but the Vulgate as we have it now is not exactly Jerome's Vulgate, for it suffered a good deal from changes made under the influence of the older translations; the text became very corrupt during the middle ages, and in particular all the Apocrypha, except Tobit and Judith, which Jerome translated from the Chaldee, were added from the older versions. (See *BIBLE: O.T. Versions.*)

Notwithstanding the labour involved in translating the Scriptures, Jerome found time to do a great deal of literary work, and also to indulge in violent controversy. Earlier in life he had a great admiration for Origen, and translated many of his works, and this lasted after he had settled at Bethlehem, for in 389 he translated Origen's homilies on Luke; but he came to change his opinion and wrote violently against two admirers of the great Alexandrian scholar, John, bishop of Jerusalem, and his own former friend Rufinus.

At Bethlehem also he found time to finish *Didymi de spiritu sancto liber*, a translation begun at Rome at the request of Pope Damasus, to denounce the revival of Gnostic heresies by Jovinianus and Vigilantius (*Adv. Jovinianum lib. II. and Contra Vigilantium liber*), and to repeat his admiration of the hermit life in his *Vita S. Hilarii eremite*, in his *Vita Malchi monachi captivi*, in his translations of the Rule of St Pachomius (the Benedict of Egypt), and in his *S. Pachonii et S. Theodorici epistolae et verba mystica*. He also wrote at Bethlehem *De viris illustribus sive de scriptoribus ecclesiasticis*, a church history in biographies, ending with the life of the author; *De nominibus Hebraicis*, compiled from Philo and Origen; and *De situ et nominibus locorum Hebraeorum*.¹ At the same place, too, he wrote *Quaestiones Hebraicae* on Genesis,² and a series of commentaries on Isaiah, Jeremiah, Ezekiel, Daniel, the Twelve Minor Prophets, Matthew and the Epistles of St Paul. About 394 Jerome came to know Augustine, for whom he held a high regard. He engaged in the Pelagian controversy with more than even his usual bitterness (*Dialogi contra pelagianos*); and it is said that the violence of his invective so provoked his opponents that an armed mob attacked the monastery, and that Jerome was forced to flee and to remain in concealment for nearly two years. He returned to Bethlehem in 418, and after a lingering illness died on the 30th of September 420.

Jerome "is one of the few Fathers to whom the title of Saint appears to have been given in recognition of services rendered to the Church rather than for eminent sanctity. He is the great Christian scholar of his age, rather than the profound theologian or the wise guide of souls." His great work was the Vulgate, but his achievements in other fields would have sufficed to distinguish him. His commentaries are valuable because of his knowledge of Greek and Hebrew, his varied interests, and his comparative freedom from allegory. To him we owe the distinction between canonical and apocryphal writings; in the *Prologus Galeatus* prefixed to his version of Samuel and Kings, he says that the church reads the Apocrypha "for the edification of the people, not for confirming the authority of ecclesiastical doctrines." He was a pioneer in the fields of patrology and of biblical archaeology. In controversy he was too fond of mingling personal abuse with legitimate argument, and this weakness mars his letters, which were held in high admiration in the early middle ages, and are valuable for their history of the man and his times. Luther in his *Table Talk* condemns them as dealing only with fasting, meats, virginity, &c. "If he only had insisted upon the works of faith and performed them! But he teaches nothing either about faith, or love, or hope, or the works of faith."

¹ Compare the critical edition of these two works in Lagarde's *Onomastica sacra* (Götting. 1870).

² See Lagarde's edition appended to his *Genesis Graeca* (Leipzig, 1868).

Editions of the complete works: Erasmus (9 vols., Basel, 1516-1520); Mar. Victorius, bishop of Rieti (9 vols., Rome, 1505-1572); F. Calixtus and A. Tribbeckovius (12 vols., Frankfurt and Leipzig, 1684-1690); J. Martianay (5 vols., incomplete Benedictine ed., Paris, 1693-1706); D. Vallarsi (11 vols., Verona, 1734-1742), the best; Migne, *Patrol. Ser. Lat.* (xxii.-xxix.). The *De viris illust.* was edited by Herding in 1879. A selection is given in translation by W. H. Fremantle, "Select Library of Nicene and Post Nicene Fathers," 2nd series, vol. vi. (New York, 1893). Biographies are prefixed to most of the above editions. See also lives by F. Z. Collombet (Paris and Lyons, 1844); O. Zöckler (Gotha, 1865); E. L. Cutts (London, 1878); C. Martin (London, 1888); P. Largent (Paris, 1898); F. W. Farrar, *Lives of the Fathers*, ii. 150-297 (Edinburgh, 1889). Additional literature is cited in Hauck-Herzog's *Realencycl. für prot. Theol.* viii. 42.

JEROME, JEROME KLAPKA (1859-), English author, was born on the 2nd of May 1859. He was educated at the philological school, Marylebone, London; and was by turns clerk, schoolmaster and actor, before he settled down to journalism. He made his reputation as a humorist in 1889 with *Idle Thoughts of an Idle Fellow* and *Three Men in a Boat*, and from 1892 to 1897 he was co-editor of *The Idler* with Robert Barr. At the same time he was also the editor of *To-Day*. A one-act play of his, *Barbara*, was produced at the Globe theatre in 1886, and was followed by many others, among them *Sunset* (1888), *Wood Barrow Farm* (1891), *The Passing of the Third Floor Back* (1907). Among his later books are *Letters to Clarinda* (1898), *The Second Thoughts of an Idle Fellow* (1898), *Three Men on the Bummel* (1900), *Tommy and Co.* (1904), *They and I* (1909).

JEROME OF PRAGUE (d. 1416), an early Bohemian church-reformer and friend of John Hus. Jerome's part in the Hussite movement was formerly much overrated. Very little is known of his early years. He is stated to have belonged to a noble Bohemian family³ and to have been a few years younger than Hus. After beginning his studies at the university of Prague, where he never attempted to obtain any ecclesiastical office, Jerome proceeded to Oxford in 1398. There he became greatly impressed by the writings of Wycliffe, of whose *Dialogus* and *Trilogus* he made copies. Always inclined to a roving life, he soon proceeded to the university of Paris and afterwards continued his studies at Cologne and Heidelberg, returning to Prague in 1407. In 1403 he is stated to have undertaken a journey to Jerusalem. At Paris his open advocacy of the views of Wycliffe brought him into conflict with John Gerson, chancellor of the university. In Prague Jerome soon attracted attention by his advanced and outspoken opinions. He gave great offence also by exhibiting a portrait of Wycliffe in his room. Jerome was soon on terms of friendship with Hus, and took part in all the controversies of the university. When in 1408 a French embassy arrived at Kutná Hora, the residence of King Wenceslaus of Bohemia, and proposed that the papal schism should be terminated by the refusal of the temporal authorities further to recognize either of the rival popes, Wenceslaus summoned to Kutná Hora the members of the university. The Bohemian *magistri* spoke strongly in favour of the French proposals, while the Germans maintained their allegiance to the Roman pope, Gregory XII. The re-organization of the university was also discussed, and as Wenceslaus for a time favoured the Germans, Hus and Jerome, as leaders of the Bohemians, incurred the anger of the king, who threatened them with death by fire should they oppose his will.

In 1410 Jerome, who had incurred the hostility of the archbishop of Prague by his speeches in favour of Wycliffe's teaching, went to Ofen, where King Sigismund of Hungary resided, and, though a layman, preached before the king denouncing strongly the rapacity and immorality of the clergy. Sigismund shortly afterwards received a letter from the archbishop of Prague containing accusations against Jerome. He was imprisoned by order of the king, but does not appear to have been detained long in Hungary. Appearing at Vienna, he was again brought

³ The statement that Jerome's family name was Faulfiss, is founded on a misunderstood passage of Aeneas Sylvius, *Historica Bohemica*. Aeneas Sylvius names as one of the early Bohemian reformers a man "*generis nobilis, ex domo quam Putridi Piscis vocant.*" This was erroneously believed to refer to Jerome.

before the ecclesiastical authorities. He was accused of spreading Wycliffe's doctrines, and his general conduct at Oxford, Paris, Cologne, Prague and Ofen was censured. Jerome vowed that he would not leave Vienna till he had cleared himself from the accusation of heresy. Shortly afterwards he secretly left Vienna, declaring that this promise had been forced on him. He went first to Vöttau in Moravia, and then to Prague. In 1412 the representatives of Pope Gregory XII. publicly offered indulgences for sale at Prague, wishing to raise money for the pope's campaign against King Ladislaus of Naples, an adherent of the antipope of Avignon. Contrary to the wishes of the archbishop of Prague a meeting of the members of the university took place, at which both Hus and Jerome spoke strongly against the sale of indulgences. The fiery eloquence of Jerome, which is noted by all contemporary writers, obtained for him greater success even than that of Hus, particularly among the younger students, who conducted him in triumph to his dwelling-place. Shortly afterwards Jerome proceeded to Poland—it is said on the invitation of King Wladislaus. His courtly manners and his eloquence here also caused him to become very popular, but he again met with strong opposition from the Roman Church. While travelling with the grand-duke Lithold of Lithuania Jerome took part in the religious services of the Greek Orthodox Church.

During his stay in northern Europe Jerome received the news that Hus had been summoned to appear before the council of Constance. He wrote to his friend advising him to do so and adding that he would also proceed there to afford him assistance. Contrary to the advice of Hus he arrived at Constance on the 4th of April 1415. Advised to fly immediately to Bohemia, he succeeded in reaching Hirschau, only 25 m. from the Bohemian frontier. He was here arrested and brought back in chains to Constance, where he was examined by judges appointed by the council. His courage failed him in prison and, to regain his freedom, he renounced the doctrines of Wycliffe and Hus. He declared that Hus had been justly executed and stated in a letter addressed on the 12th of August 1415 to Lucek, lord of Kravár—the only literary document of Jerome that has been preserved—that "the dead man (Hus) had written many false and harmful things." Full confidence was not placed in Jerome's recantation. He claimed to be heard at a general meeting of the council, and this was granted to him. He now again maintained all the theories which he had formerly advocated, and, after a trial that lasted only one day, he was condemned to be burnt as a heretic. The sentence was immediately carried out on the 30th of May 1416, and he met his death with fortitude. As Poggio Bracciolini writes, "none of the Stoics with so constant and brave a soul endured death, which he (Jerome) seemed rather to long for." The eloquence of the Italian humanist has bestowed a not entirely merited aureole on the memory of Jerome of Prague.

See all works dealing with Hus; and indeed all histories of Bohemia contain detailed accounts of the career of Jerome. *The Lives of John Wicliffe, Lord Cobham, John Huss, Jerome of Prague and Žižka* by William Gilpin (London, 1765) still has a certain value. (L.)

JERROLD, DOUGLAS WILLIAM (1803-1857), English dramatist and man of letters, was born in London on the 3rd of January 1803. His father, Samuel Jerrold, actor, was at that time lessee of the little theatre of Wilsby near Cranbrook in Kent, but in 1807 he removed to Sheerness. There, among the blue-jackets who swarmed in the port during the war with France, Douglas grew into boyhood. He occasionally took a child's part on the stage, but his father's profession had little attraction for the boy. In December 1813 he joined the guardship "Namur," where he had Jane Austen's brother as captain, and he served as a midshipman until the peace of 1815. He saw nothing of the war save a number of wounded soldiers from Waterloo; but till his dying day there lingered traces of his early passion for the sea. The peace of 1815 ruined Samuel Jerrold; there was no more prize money. On the 1st of January 1816 he removed with his family to London, where the ex-midshipman began the world again as a printer's apprentice, and in 1819 became a compositor in the printing-office of the *Sunday Monitor*. Several short papers and copies of verses by him had already appeared

in the sixpenny magazines, and one evening he dropped into the editor's box a criticism of the opera *Der Freischütz*. Next morning he received his own copy to set up, together with a flattering note from the editor, requesting further contributions from the anonymous author. Thenceforward Jerrold was engaged in journalism. In 1821 a comedy that he had composed in his fifteenth year was brought out at Sadler's Wells theatre, under the title *More Frightened than Hurt*. Other pieces followed, and in 1825 he was engaged for a few pounds weekly to produce dramas and farces to the order of Davidge of the Coburg theatre. In the autumn of 1824 the "little Shakespeare in a camlet cloak," as he was called, married Mary Swann; and, while he was engaged with the drama at night, he was steadily pushing his way as a journalist. For a short while he was part proprietor of a small Sunday newspaper. In 1829, through a quarrel with the exacting Davidge, Jerrold left the Coburg; and his three-act melodrama, *Black-eyed Susan; or, All in the Downs*, was brought out by R. W. Elliston at the Surrey theatre. The success of the piece was enormous. With its free gallant sea-flavour, it took the town by storm, and "all London went over the water to see it." Elliston made a fortune by the piece; T. P. Cooke, who played William, made his reputation; Jerrold received about £60 and was engaged as dramatic author at five pounds a week. But his fame as a dramatist was achieved. In 1830 it was proposed that he should adapt something from the French for Drury Lane. "No," was his reply, "I shall come into this theatre as an original dramatist or not at all." *The Bride of Ludgate* (December 8, 1831) was the first of a number of his plays produced at Drury Lane. The other patent houses threw their doors open to him also (the Adelphi had already done so); and in 1836 Jerrold became co-manager of the Strand theatre with W. J. Hammond, his brother-in-law. The venture was not successful, and the partnership was dissolved. While it lasted Jerrold wrote his only tragedy, *The Painter of Ghent*, and himself appeared in the title-rôle, without any very marked success. He continued to write sparkling comedies till 1854, the date of his last piece, *The Heart of Gold*.

Meanwhile he had won his way to the pages of numerous periodicals—before 1830 of the second-rate magazines only, but after that to those of more importance. He was a contributor to the *Monthly Magazine*, *Blackwood's*, the *New Monthly*, and the *Athenaeum*. To *Punch*, the publication which of all others is associated with his name, he contributed from its second number in 1841 till within a few days of his death. He founded and edited for some time, though with indifferent success, the *Illuminated Magazine*, *Jerrold's Shilling Magazine*, and *Douglas Jerrold's Weekly Newspaper*; and under his editorship *Lloyd's Weekly Newspaper* rose from almost nonentity to a circulation of 182,000. The history of his later years is little more than a catalogue of his literary productions, interrupted now and again by brief visits to the Continent or to the country. Douglas Jerrold died at his house, Kilburn Priory, in London, on the 8th of June 1857.

Jerrold's figure was small and spare, and in later years bowed almost to deformity. His features were strongly marked and expressive from the thin humorous lips to the keen blue eyes gleaming from beneath the shaggy eyebrows. He was brisk and active, with the careless bluntness of a sailor. Open and sincere, he concealed neither his anger nor his pleasure; to his simple frankness all polite duplicity was distasteful. The cynical side of his nature he kept for his writings; in private life his hand was always open. In politics Jerrold was a Liberal, and he gave eager sympathy to Kossuth, Mazzini and Louis Blanc. In social politics especially he took an eager part; he never tired of declaiming against the horrors of war, the luxury of bishops, and the iniquity of capital punishment.

Douglas Jerrold is now perhaps better known from his reputation as a brilliant wit in conversation than from his writings. As a dramatist he was very popular, though his plays have not kept the stage. He dealt with rather humbler forms of social life than had commonly been represented on the boards. He was one of the first and certainly one of the most successful of those

who in defence of the native English drama endeavoured to stem the tide of translation from the French, which threatened early in the 19th century altogether to drown original native talent. His skill in construction and his mastery of epigram and brilliant dialogue are well exemplified in his comedy, *Time Works Wonders* (Haymarket, April 26, 1845). The tales and sketches which form the bulk of Jerrold's collected works vary much in skill and interest; but, although there are evident traces of their having been composed from week to week, they are always marked by keen satirical observation and pungent wit.

Among the best known of his numerous works are: *Men of Character* (1838), including "Job Pippin: The man who couldn't help it," and other sketches of the same kind; *Cakes and Ale* (2 vols., 1842), a collection of short papers and whimsical stories; some more serious novels—*The Story of a Feather* (1844), *The Chronicles of Clovernook* (1846), *A Man made of Money* (1849), and *St Giles and St James* (1851); and various series of papers reprinted from *Punch*—*Punch's Letters to his Son* (1843), *Punch's Complete Letter-writer* (1845), and the famous *Mrs Caudle's Curtain Lectures* (1846).

See W. B. Jerrold, *Life and Remains of Douglas Jerrold* (1859). A collected edition of his writings appeared in 1851–1854, and *The Works of Douglas Jerrold*, with a memoir by his son, W. B. Jerrold, in 1863–1864; but neither is complete. Among the numerous selections from his tales and witticisms are two edited by his grandson, Walter Jerrold, *Boss Mots of Charles Dickens and Douglas Jerrold* (new ed., 1904), and *The Essays of Douglas Jerrold* (1903), illustrated by H. M. Brock. See also *The Wit and Opinions of Douglas Jerrold* (1858), edited by W. B. Jerrold.

His eldest son, WILLIAM BLANCHARD JERROLD (1826–1884), English journalist and author, was born in London on the 23rd of December 1826, and abandoning the artistic career for which he was educated, began newspaper work at an early age there. He was appointed Crystal Palace commissioner to Sweden in 1853, and wrote *A Brage-Beaker with the Swedes* (1854) on his return. In 1855 he was sent to the Paris exhibition as correspondent for several London papers, and from that time he lived much in Paris. In 1857 he succeeded his father as editor of *Lloyd's Weekly Newspaper*, a post which he held for twenty-six years. During the Civil War in America he strongly supported the North, and several of his leading articles were reprinted and placarded in New York by the federal government. He was the founder and president of the English branch of the international literary association for the assimilation of copyright laws. Four of his plays were successfully produced on the London stage, the popular farce *Cool as a Cucumber* (Lyceum, 1851) being the best known. His French experiences resulted in a number of books, most important of which is his *Life of Napoleon III.* (1874). He was occupied in writing the biography of Gustave Doré, who had illustrated several of his books, when he died on the 10th of March 1884.

Among his books are *A Story of Social Distinction* (1848), *Life and Remains of Douglas Jerrold* (1859), *Up and Down in the World* (1863), *The Children of Lutetia* (1864), *Cent per Cent* (1871), *At Home in Paris* (1871), *The Best of all Good Company* (1871–1873), and *The Life of George Cruikshank* (1882).

JERRY, a short form of the name Jeremiah, applied to various common objects, and more particularly to a machine for finishing cloth. The expression "jerry-built" is applied to houses built badly and of inferior materials, and run up by a speculative builder. There seems to be no foundation for the assertion that this expression was occasioned by the work of a firm of Liverpool builders named Jerry.

JERSEY, EARLS OF. Sir Edward Villiers (c. 1656–1711), son of Sir Edward Villiers (1620–1689), of Richmond, Surrey, was created Baron Villiers and Viscount Villiers in 1691 and earl of Jersey in 1697. His grandfather, Sir Edward Villiers (c. 1585–1626), master of the mint and president of Munster, was half-brother of George Villiers, 1st duke of Buckingham, and of Christopher Villiers, 1st earl of Anglesey; his sister was Elizabeth Villiers, the mistress of William III., and afterwards countess of Orkney. Villiers was knight-marshal of the royal household in succession to his father; master of the horse to Queen Mary; and lord chamberlain to William III. and Queen Anne. In 1696 he represented his country at the congress

of Ryswick; he was ambassador at the Hague, and after becoming an earl was ambassador in Paris. In 1699 he was made secretary of state for the southern department, and on three occasions he was one of the lords justices of England. In 1704 he was dismissed from office by Anne, and after this event he was concerned in some of the Jacobite schemes. He died on the 25th of August 1711. The 2nd earl was his son William (c. 1682–1721), an adherent of the exiled house of Stuart, and the 3rd earl was the latter's son William (d. 1769), who succeeded his kinsman John Fitzgerald (c. 1692–1766) as 6th Viscount Grandison. The 3rd earl's son, George Bussy, the 4th earl (1735–1805), held several positions at the court of George III., and on account of his courtly manners was called the "prince of Maccaronies." The 4th earl's son, George, 5th earl of Jersey (1773–1859), one of the most celebrated fox-hunters of his time and a successful owner of racehorses, married Sarah Sophia (1785–1867), daughter of John Fane, 10th earl of Westmorland, and granddaughter of Robert Child, the banker. She inherited her grandfather's great wealth, including his interest in Child's bank, and with her husband took the name of Child-Villiers. Since this time the connexion of the earls of Jersey with Child's bank has been maintained. Victor Albert George Child-Villiers (b. 1845) succeeded his father George Augustus (1808–1859), 6th earl, who had only held the title for three weeks, as 7th earl of Jersey in 1859. This nobleman was governor of New South Wales from 1890 to 1893.

JERSEY, the largest of the Channel Islands, belonging to Great Britain. Its chief town, St Helier, on the south coast of the island, is in 49° 12' N., 2° 7' W., 105 m. S. by E. of Portland Bill on the English coast, and 24 m. from the French coast to the east. Jersey is the southernmost of the more important islands of the group. It is of oblong form with a length of 10 m. from east to west and an extreme breadth of 6½ m. The area is 28,717 acres, or 45 sq. m. Pop. (1901), 52,576.

The island reaches its greatest elevation (nearly 500 ft.) in the north, the land rising sharply from the north coast, and displaying bold and picturesque cliffs towards the sea. The east, south and west coasts consist of a succession of large open bays, shallow and rocky, with marshy or sandy shores separated by rocky headlands. The principal bays are Grève au Lançons, Grève de Lecq, St John's and Bouley Bays on the north coast; St Catherine's and Grouville Bays on the east; St Clement's, St Aubin's and St Brelade's Bays on the south; and St Ouen's Bay, the wide sweep of which occupies nearly the whole of the west coast. The sea in many places has encroached greatly on the land, and sand drifts have been found troublesome, especially on the west coast. The surface of the country is broken by winding valleys having a general direction from north to south, and as they approach the south uniting so as to form small plains. The lofty hedges which bound the small enclosures into which Jersey is divided, the trees and shrubberies which line the roads and cluster round the uplands and in almost every nook of the valleys unutilized for pasturage or tillage, give the island a luxuriant appearance, neutralizing the bare effect of the few sandy plains and sand-covered hills. Fruits and flowers indigenous to warm climates grow freely in the open air. The land, under careful cultivation, is rich and productive, the soil being generally a deep loam, especially in the valleys, but in the west shallow, light and sandy. The subsoil is usually gravel, but in some parts an unfertile clay. Some two-third of the total area is under cultivation, great numbers of cattle being pastured, and much market gardening practised. The potato crop is very large. The peasants take advantage of every bit of wall and every isolated nook of ground for growing fruit trees. Grapes are ripened under glass; oranges can be grown in sheltered situations, but the most common fruits are apples, which are used for cider, and pears. A manure of burnt sea-weed (*vraic*) is generally used. The pasturage is very rich, and is much improved by the application of this manure to the surface. The breed of cattle is kept pure by stringent laws against the importation of foreign animals. The milk is used almost exclusively to manufacture butter. The cattle are always housed in winter, but remain out

at night from May till October. There was formerly a small black breed of horses peculiar to the island, but horses are now chiefly imported from France or England. Pigs are kept principally for local consumption, and only a few sheep are reared. Fish are not so plentiful as round the shores of Guernsey, but mackerel, turbot, cod, mullet and especially the conger eel are abundant at the Minquiers. There is a large oyster bed between Jersey and France, but partly on account of over-dredging the supply is not so abundant as formerly. There is a great variety of other shell fish. The fisheries, ship-building and boat-building employ many of the inhabitants. Kelp and iodine are manufactured from sea-weed. The principal exports are granite, fruit and vegetables (especially potatoes), butter and cattle; and the chief imports coal and articles of human consumption. Communications with England are maintained principally from Southampton and Weymouth, and there are regular steamship services from Granville and St. Malo on the French coast. The Jersey railway runs west from St. Helier round St. Aubin's Bay to St. Aubin, and continues to Corbière at the south-western extremity of the island; and the Jersey eastern railway follows the southern and eastern coasts to Gorey. The island is intersected with a network of good roads.

Jersey is under a distinct and in several respects different form of administrative government from Guernsey and the smaller islands included in the bailiwick of Guernsey. For its peculiar constitution, system of justice, ecclesiastical arrangements and finance, see CHANNEL ISLANDS. There are twelve parishes, namely St. Helier, Grouville, St. Brelade, St. Clement, St. John, St. Laurence, St. Martin, St. Mary, St. Ouen, St. Peter, St. Saviour and Trinity. The population of the island nearly doubled between 1821 and 1901, but decreased from 54,518 to 52,576 between 1891 and 1901.

The history of Jersey is treated under CHANNEL ISLANDS. Among objects of antiquarian interest, a cromlech near Mont Orgueil is the finest of several examples. St. Brelade's church, probably the oldest in the island, dates from the 12th century; among the later churches St. Helier's, of the 14th century, may be mentioned. There are also some very early chapels, considered to date from the 10th century or earlier; among these may be noted the Chapelle-ès-Pêcheurs at St. Brelade's, and the picturesque chapel in the grounds of the manor of Rozel. The castle of Mont Orgueil, of which there are considerable remains, is believed to be founded upon the site of a Roman stronghold, and a "Caesar's fort" still forms a part of it.

JERSEY CITY, a city and the county-seat of Hudson county, New Jersey, U.S.A., on a peninsula between the Hudson and Hackensack rivers at the N. and between New York and Newark bays at the S., opposite lower Manhattan Island. Pop. (1890), 163,003; (1900), 206,433, of whom 58,424 were foreign-born (19,314 Irish, 17,375 German, 4642 English, 3832 Italian, 1694 Russian, 1690 Scottish, 1643 Russian Poles, 1445 Austrian) and 3704 were negroes; (1910, census), 267,779. It is the eastern terminus of the Pennsylvania, the Lehigh Valley, the West Shore, the Central of New Jersey, the Baltimore & Ohio, the Northern of New Jersey (operated by the Erie), the Erie, the New York, Susquehanna & Western, and the New Jersey & New York (controlled by the Erie) railways, the first three using the Pennsylvania station; and of the little-used Morris canal. Jersey City is served by several inter-urban electric railways and by the tunnels of the Hudson & Manhattan railroad company to Dey St. and to 33rd St. and 6th Ave., New York City, and it also has docks of several lines of Transatlantic and coast steamers. The city occupies a land area of 14.3 sq. m. and has a water-front of about 12 m. Bergen Hill, a southerly extension of the Palisades, extends longitudinally through it from north to south. At the north end this hill rises on the east side precipitously to a height of nearly 200 ft.; on the west and south sides the slope is gradual. On the crest of the hill is the fine Hudson County Boulevard, about 19 m. long and 100 ft. wide, extending through the city and county from north to south and passing through West Side Park, a splendid county park containing lakes and a 70-acre playground. The

water-front, especially on the east side, is given up to manufacturing and shipping establishments. In the hill section are the better residences, most of which are wooden and detached.

The principal buildings are the city hall and the court-house. There are nine small city parks with an aggregate area of 39.1 acres. The city has a public library containing (1907) 107,600 volumes and an historical museum. At the corner of Bergen Ave. and Forrest St. is the People's Palace, given in 1904 by Joseph Milbank to the First Congregational church and containing a library and reading-room, a gymnasium, bowling alleys, a billiard-room, a rifle-range, a roof-garden, and an auditorium and theatre; kindergarten classes are held and an employment bureau is maintained. Among the educational institutions are the German American school, Hasbrouck institute, St. Aloysius academy (Roman Catholic) and St. Peter's college (Roman Catholic); and there are good public schools. Grain is shipped to and from Jersey City in large quantities, and in general the city is an important shipping port; being included, however, in the port of New York, no separate statistics are available. There are large slaughtering establishments, and factories for the refining of sugar and for the manufacture of tobacco goods, soap and perfumery, lead pencils, iron and steel, railway cars, chemicals, rubber goods, silk goods, dressed lumber, and malt liquors. The value of the city's manufactured products increased from \$37,376,322 in 1890 to \$77,225,116 in 1900, or 106.6%; in 1905 the factory product alone was valued at \$75,740,934, an increase of only 3.9% over the factory product in 1900, this small rate of increase being due very largely to a decline in the value of the products of the sugar and molasses refining industry. The value of the wholesale slaughtering and meat-packing product decreased from \$18,551,783 in 1880 and \$11,356,511 in 1890 to \$6,243,217 in 1900—of this \$5,708,763 represented wholesale slaughtering alone; in 1905 the wholesale slaughtering product was valued at \$7,568,739.

In 1908 the assessed valuation of the city was \$267,039,754. The city is governed by a board of aldermen and a mayor (elected biennially), who appoints most of the officials, the street and water board being the principal exception.

Jersey City when first incorporated was a small sandy peninsula (an island at high tide) known as Paulus Hook, directly opposite the lower end of Manhattan Island. It had been a part of the Dutch patroonship of Pavonia granted to Michael Pauw in 1630. In 1633 the first buildings were erected and for more than a century the Hook was occupied by a small agricultural and trading community. In 1764 a new post route between New York and Philadelphia passed through what is now the city, and direct ferry communication began with New York. Early in the War of Independence Paulus Hook was fortified by the Americans, but soon after the battle of Long Island they abandoned it, and on the 23rd of September 1776 it was occupied by the British. On the morning of the 19th of August 1779 the British garrison was surprised by Major Henry Lee ("Light Horse Harry"), who with about 500 men took 159 prisoners and lost only 2 killed and 3 wounded, one of the most brilliant exploits during the War of Independence. In 1804 Paulus Hook, containing 117 acres and having about 15 inhabitants, passed into the possession of three enterprising New York lawyers, who laid it out as a town and formed an association for its government, which was incorporated as the "associates of the Jersey company." In 1820 the town was incorporated as the City of Jersey, but it remained a part of the township of Bergen until 1838, when it was reincorporated as a distinct municipality. In 1851 the township of Van Vorst, founded in 1804 between Paulus Hook and Hoboken, was annexed. In 1870 there were two annexations: to the south, the town of Bergen, the county-seat, which was founded in 1660; to the north-west, Hudson City, which had been separated from the township of North Bergen in 1852 and incorporated as a city in 1855. The town of Greenville, to the south, was annexed in 1873.

JERUSALEM (Heb. יְרוּשָׁלַיִם, *Yerushalaim*, pronounced as a dual), the chief city of Palestine. Letters found at Tell el-Amarna in Egypt, written by an early ruler of Jerusalem, show that the name existed under the form *Urusalim*, i.e. "City of Salim" or "City of Peace," many years before the Israelites under Joshua entered Canaan. The emperor Hadrian, when he rebuilt the city, changed the name to *Aelia Capitolina*. The Arabs usually designate Jerusalem by names expressive of

who in defence of the native English drama endeavoured to stem the tide of translation from the French, which threatened early in the 19th century altogether to drown original native talent. His skill in construction and his mastery of epigram and brilliant dialogue are well exemplified in his comedy, *Time Works Wonders* (Haymarket, April 26, 1845). The tales and sketches which form the bulk of Jerrold's collected works vary much in skill and interest; but, although there are evident traces of their having been composed from week to week, they are always marked by keen satirical observation and pungent wit.

Among the best known of his numerous works are: *Men of Character* (1838), including "Job Pippin: The man who couldn't help it," and other sketches of the same kind; *Cakes and Ale* (2 vols., 1842), a collection of short papers and whimsical stories; some more serious novels—*The Story of a Feather* (1844), *The Chronicles of Clovernook* (1846), *A Man made of Money* (1849), and *St Giles and St James* (1851); and various series of papers reprinted from *Punch*—*Punch's Letters to his Son* (1843), *Punch's Complete Letter-writer* (1845), and the famous *Mrs Caudle's Curtain Lectures* (1846).

See W. B. Jerrold, *Life and Remains of Douglas Jerrold* (1859). A collected edition of his writings appeared in 1851–1854, and *The Works of Douglas Jerrold*, with a memoir by his son, W. B. Jerrold, in 1863–1864; but neither is complete. Among the numerous selections from his tales and witticisms are two edited by his grandson, Walter Jerrold, *Boss Mols of Charles Dickens and Douglas Jerrold* (new ed., 1904), and *The Essays of Douglas Jerrold* (1903), illustrated by H. M. Brock. See also *The Wit and Opinions of Douglas Jerrold* (1858), edited by W. B. Jerrold.

His eldest son, WILLIAM BLANCHARD JERROLD (1826–1884), English journalist and author, was born in London on the 23rd of December 1826, and abandoning the artistic career for which he was educated, began newspaper work at an early age there. He was appointed Crystal Palace commissioner to Sweden in 1853, and wrote *A Brage-Beaker with the Swedes* (1854) on his return. In 1855 he was sent to the Paris exhibition as correspondent for several London papers, and from that time he lived much in Paris. In 1857 he succeeded his father as editor of *Lloyd's Weekly Newspaper*, a post which he held for twenty-six years. During the Civil War in America he strongly supported the North, and several of his leading articles were reprinted and placarded in New York by the federal government. He was the founder and president of the English branch of the international literary association for the assimilation of copyright laws. Four of his plays were successfully produced on the London stage, the popular farce *Cool as a Cucumber* (Lyceum, 1851) being the best known. His French experiences resulted in a number of books, most important of which is his *Life of Napoleon III.* (1874). He was occupied in writing the biography of Gustave Doré, who had illustrated several of his books, when he died on the 10th of March 1884.

Among his books are *A Story of Social Distinction* (1848), *Life and Remains of Douglas Jerrold* (1859), *Up and Down in the World* (1863), *The Children of Lutetia* (1864), *Cent per Cent* (1871), *At Home in Paris* (1871), *The Best of all Good Company* (1871–1873), and *The Life of George Cruikshank* (1882).

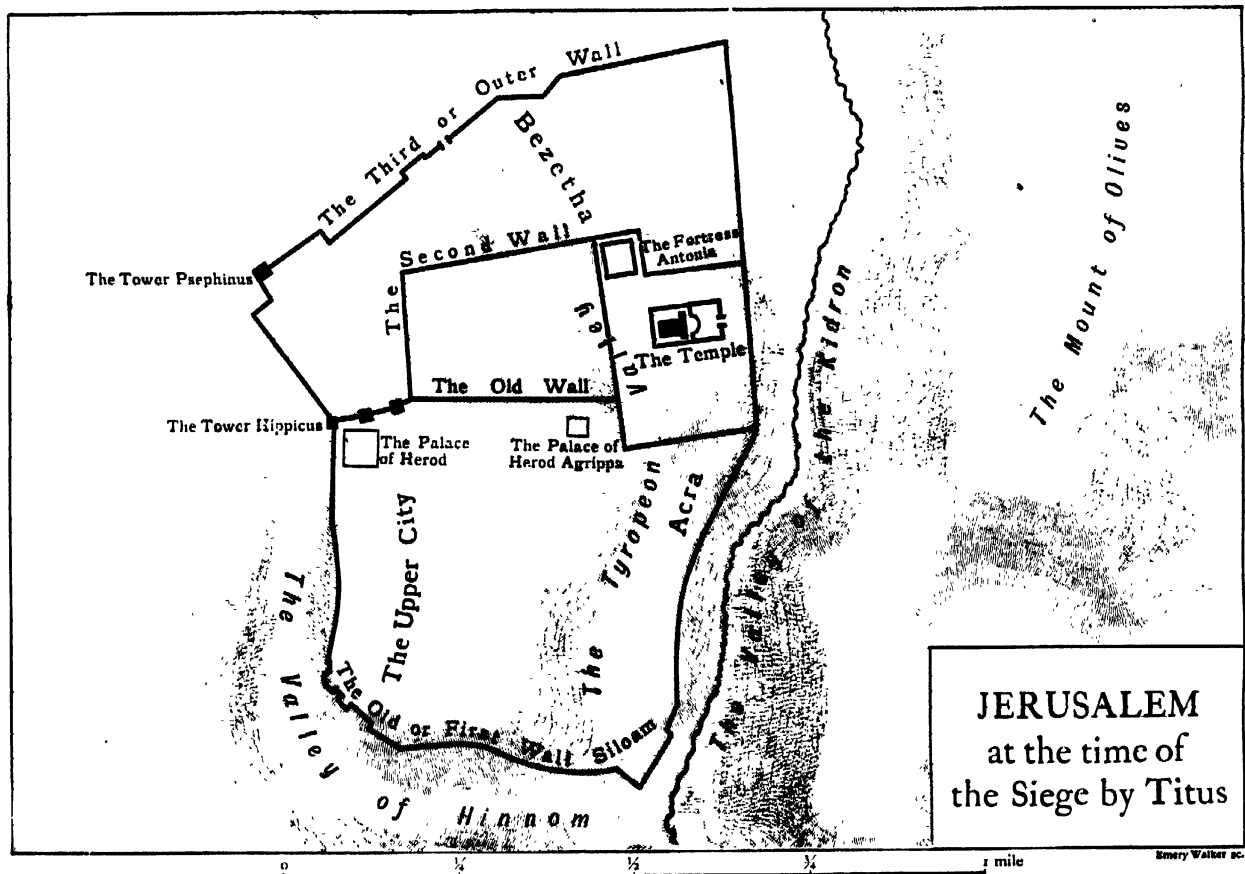

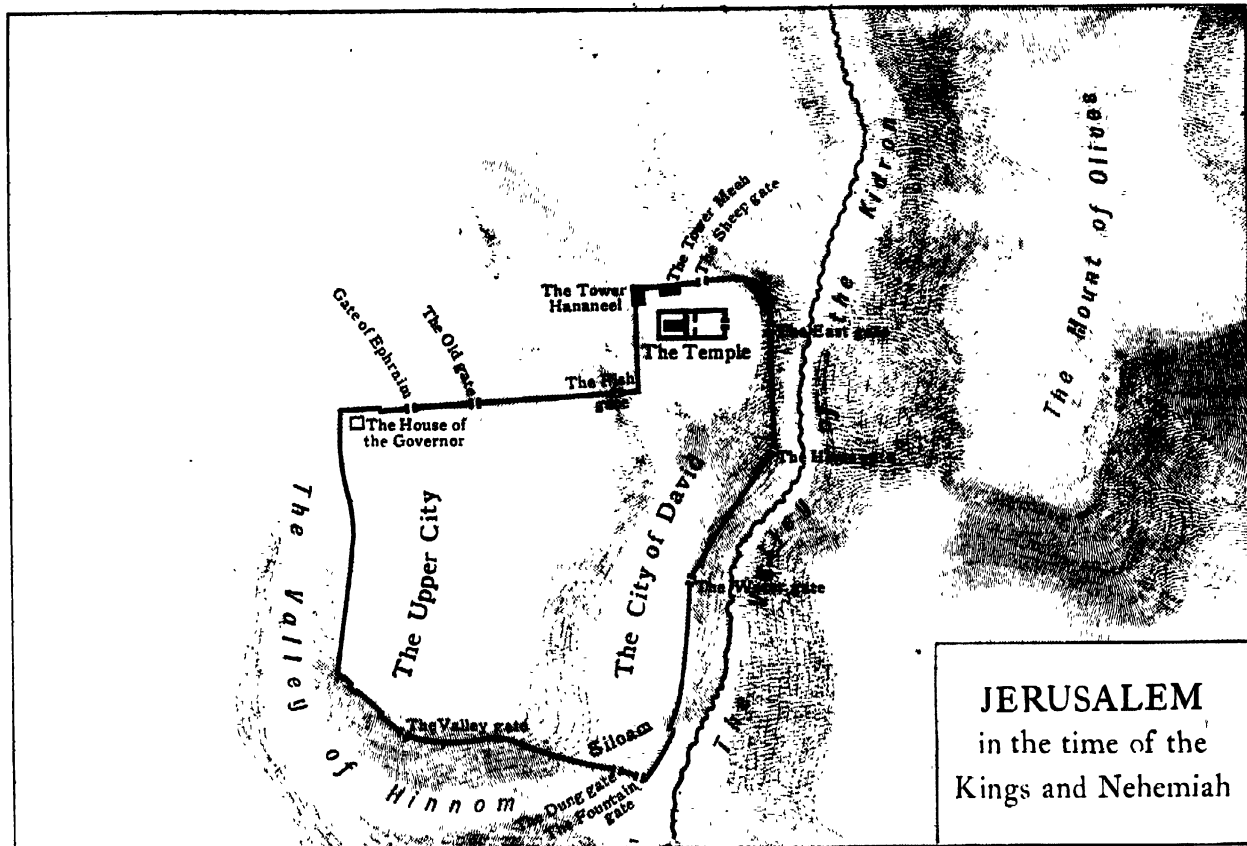

JERRY, a short form of the name Jeremiah, applied to various common objects, and more particularly to a machine for finishing cloth. The expression "jerry-built" is applied to houses built badly and of inferior materials, and run up by a speculative builder. There seems to be no foundation for the assertion that this expression was occasioned by the work of a firm of Liverpool builders named Jerry.

JERSEY, EARLS OF. Sir Edward Villiers (c. 1656–1711), son of Sir Edward Villiers (1620–1689), of Richmond, Surrey, was created Baron Villiers and Viscount Villiers in 1691 and earl of Jersey in 1697. His grandfather, Sir Edward Villiers (c. 1585–1626), master of the mint and president of Munster, was half-brother of George Villiers, 1st duke of Buckingham, and of Christopher Villiers, 1st earl of Anglesey; his sister was Elizabeth Villiers, the mistress of William III., and afterwards countess of Orkney. Villiers was knight-marshal of the royal household in succession to his father; master of the horse to Queen Mary; and lord chamberlain to William III. and Queen Anne. In 1696 he represented his country at the congress

of Ryswick; he was ambassador at the Hague, and after becoming an earl was ambassador in Paris. In 1699 he was made secretary of state for the southern department, and on three occasions he was one of the lords justices of England. In 1704 he was dismissed from office by Anne, and after this event he was concerned in some of the Jacobite schemes. He died on the 25th of August 1711. The 2nd earl was his son William (c. 1682–1721), an adherent of the exiled house of Stuart, and the 3rd earl was the latter's son William (d. 1769), who succeeded his kinsman John Fitzgerald (c. 1692–1766) as 6th Viscount Grandison. The 3rd earl's son, George Bussy, the 4th earl (1735–1805), held several positions at the court of George III., and on account of his courtly manners was called the "prince of Maccaronies." The 4th earl's son, George, 5th earl of Jersey (1773–1859), one of the most celebrated fox-hunters of his time and a successful owner of racehorses, married Sarah Sophia (1785–1867), daughter of John Fane, 10th earl of Westmorland, and granddaughter of Robert Child, the banker. She inherited her grandfather's great wealth, including his interest in Child's bank, and with her husband took the name of Child-Villiers. Since this time the connexion of the earls of Jersey with Child's bank has been maintained. Victor Albert George Child-Villiers (b. 1845) succeeded his father George Augustus (1808–1859), 6th earl, who had only held the title for three weeks, as 7th earl of Jersey in 1859. This nobleman was governor of New South Wales from 1890 to 1893.

JERSEY, the largest of the Channel Islands, belonging to Great Britain. Its chief town, St Helier, on the south coast of the island, is in 49° 12' N., 2° 7' W., 105 m. S. by E. of Portland Bill on the English coast, and 24 m. from the French coast to the east. Jersey is the southernmost of the more important islands of the group. It is of oblong form with a length of 10 m. from east to west and an extreme breadth of 6½ m. The area is 28,717 acres, or 45 sq. m. Pop. (1901), 52,576.

The island reaches its greatest elevation (nearly 500 ft.) in the north, the land rising sharply from the north coast, and displaying bold and picturesque cliffs towards the sea. The east, south and west coasts consist of a succession of large open bays, shallow and rocky, with marshy or sandy shores separated by rocky headlands. The principal bays are Grève au Lançons, Grève de Lecq, St John's and Bouley Bays on the north coast; St Catherine's and Grouville Bays on the east; St Clement's, St Aubin's and St Brelade's Bays on the south; and St Ouen's Bay, the wide sweep of which occupies nearly the whole of the west coast. The sea in many places has encroached greatly on the land, and sand drifts have been found troublesome, especially on the west coast. The surface of the country is broken by winding valleys having a general direction from north to south, and as they approach the south uniting so as to form small plains. The lofty hedges which bound the small enclosures into which Jersey is divided, the trees and shrubberies which line the roads and cluster round the uplands and in almost every nook of the valleys unutilized for pasturage or tillage, give the island a luxuriant appearance, neutralizing the bare effect of the few sandy plains and sand-covered hills. Fruits and flowers indigenous to warm climates grow freely in the open air. The land, under careful cultivation, is rich and productive, the soil being generally a deep loam, especially in the valleys, but in the west shallow, light and sandy. The subsoil is usually gravel, but in some parts an unfertile clay. Some two-third of the total area is under cultivation, great numbers of cattle being pastured, and much market gardening practised. The potato crop is very large. The peasants take advantage of every bit of wall and every isolated nook of ground for growing fruit trees. Grapes are ripened under glass; oranges can be grown in sheltered situations, but the most common fruits are apples, which are used for cider, and pears. A manure of burnt sea-weed (*vraic*) is generally used. The pasturage is very rich, and is much improved by the application of this manure to the surface. The breed of cattle is kept pure by stringent laws against the importation of foreign animals. The milk is used almost exclusively to manufacture butter. The cattle are always housed in winter, but remain out

his narrative describes the portion of wall upon which each of these was employed.¹

It is clear from his account that the lines of fortifications included both the eastern and western hills. North of the Temple enclosure there was a gate, known as the Sheep Gate, which must have opened into the third valley mentioned above, and stood somewhere near what is now the north side of the Haram enclosure, but considerably south of the present north wall of the latter. To the west of the Sheep Gate there were two important towers in the wall, called respectively Meah and Hananeel. The tower Hananeel is specially worthy of notice as it stood N.W. of the Temple and probably formed the basis of the citadel built by Simon Maccabaeus, which again was succeeded by the fortress of Antonia, constructed by Herod the Great, and one of the most important positions at the time of the siege by Titus. At or near the tower Hananeel the wall turned south along the east side of the Tyropoeon valley, and then again westward, crossing the valley at a point probably near the remarkable construction known as Wilson's arch. A gate in the valley, known as the Fish Gate, opened on a road which, leading from the north, went down the Tyropoeon valley to the southern part of the city. Westward of this gate the wall followed the south side of the valley which joined the Tyropoeon from the west as far as the north-western corner of the city at the site of the present Jaffa Gate and the so-called tower of David. In this part of the wall there were apparently two gates facing north, i.e. the Old Gate and the Gate of Ephraim, 400 cubits from the corner.² At the corner stood the residence of the Babylonian governor, near the site upon which King Herod afterwards built his magnificent palace. From the corner at the governor's house, the wall went in a southerly direction and turned south-east to the Valley Gate, remains of which were discovered by F. J. Bliss and fully described in his *Excavations in Jerusalem in 1894-1897*. From the Valley Gate the wall took an easterly course for a distance of 1000 cubits to the Dung Gate, near which on the east was the Fountain Gate, not far from the lower pool of Siloam. Here was the most southerly point of Jerusalem, and the wall turning hence to the north followed the west side of the valley of the Kidron, enclosing the city of David and the Temple enclosure, and finally turning west at some point near the site of the Golden Gate joined the wall, already described, at the Sheep Gate. Nehemiah mentions a number of places on the eastern hill, including the tomb of David, the positions of which cannot with our present knowledge be fixed with any certainty.

After the restoration of the walls of Jerusalem by Nehemiah, a considerable number of Jews returned to the city, but we know practically nothing of its history for more than a century until, in 332 B.C., Alexander the Great conquered Syria. The gates of Jerusalem were opened to him and he left the Jews in peaceful occupation. But his successors did not act with similar leniency; when the city was captured by Ptolemy I., king of Egypt, twelve years later, the fortifications were partially demolished and apparently not again restored until the period of the high priest Simon II., who repaired the defences and also the Temple buildings. In 168 B.C. Antiochus Epiphanes captured Jerusalem, destroyed the walls, and devastated the Temple, reducing the city to a worse position than it had occupied since the time of the captivity. He built a citadel called the Acra to dominate the town and placed in it a strong garrison of Greeks. The position of the Acra is doubtful, but it appears most probable that it stood on the eastern hill between the Temple and the city of David, both of which it commanded. Some writers place it north of the Temple on the site afterwards occupied by the fortress of Antonia, but such a position is not in accord with the descriptions either in Josephus or in the books of the Maccabees, which are quite consistent with each other. Other writers again have placed the Acra on the eastern side of the hill upon which the church of the Holy Sepulchre now stands, but as this point was probably quite outside the city at the time of Antiochus Epiphanes, and is at too great a distance from the Temple, it can hardly be accepted. But the site which has been already indicated at the N.E. corner of the present Mosque el Aksa meets the accounts of the ancient authorities better than any other. At this point in the Haram enclosure there is an enormous underground cistern, known as the Great Sea, and this may possibly have been the source of water supply for the Greek garrison. The oppression of Antiochus led to a revolt of the Jews under the leadership of the Maccabees, and Judas Maccabaeus succeeded in capturing Jerusalem after severe fighting, but could not get

¹ The sites shown on the plan are tentative, and cannot be regarded as certain; see Nehemiah ii. 12-15, iii. 1-32, xii. 37-39.

² See 2 Kings xiv. 13.

possession of the Acra, which caused much trouble to the Jews, who erected a wall between it and the Temple, and another wall to cut it off from the city. The Greeks held out for a considerable time, but had finally to surrender, probably from want of food, to Simon Maccabaeus, who demolished the Acra and cut down the hill upon which it stood so that it might no longer be higher than the Temple, and that there should be no separation between the latter and the city. Simon then constructed a new citadel, north of the Temple, to take the place of the Acra, and established in Judaea the Asmonean dynasty, which lasted for nearly a century, when the Roman republic began to make its influence felt in Syria. In 65 B.C. Jerusalem was captured by Pompey after a difficult siege. The Asmonean dynasty lasted a few years longer, but finally came to an end when Herod the Great, with the aid of the Romans, took possession of Jerusalem and became the first king of the Idumaeen dynasty. Herod again raised the city to the position of an important capital, restoring the fortifications, and rebuilding the Temple from its foundations. He also built the great fortress of Antonia, N.W. of the Temple, on the site of the citadel of the Asmoneans, and constructed a magnificent palace for himself on the western hill, defended by three great towers, which he named Mariamne, Hippicus and Phasaelus. At some period between the time of the Maccabees and of Herod, a second or outer wall had been built outside and north of the first wall, but it is not possible to fix an accurate date to this line of defence, as the references to it in Josephus are obscure. Herod adorned the town with other buildings and constructed a theatre and gymnasium. He doubled the area of the enclosure round the Temple, and there can be little doubt that a great part of the walls of the Haram area date from the time of Herod, while probably the tower of David, which still exists near the Jaffa Gate, is on the same foundation as one of the towers adjoining his palace. Archelaus, Herod's successor, had far less authority than Herod, and the real power of government at Jerusalem was assumed by the Roman procurators, in the time of one of whom, Pontius Pilate, Jesus Christ was condemned to death and crucified outside Jerusalem. The places of his execution and burial are not certainly known (see SEPULCHRE, HOLY).

Herod Agrippa, who succeeded to the kingdom, built a third or outer wall on the north side of Jerusalem in order to enclose and defend the buildings which had gradually been constructed outside the old fortifications. The exact line of this third wall is not known with certainty, but it probably followed approximately the same line as the existing north wall of Jerusalem. Some writers have considered that it extended a considerable distance farther to the north, but of this there is no proof, and no remains have as yet been found which would support the opinion. The wall of Herod Agrippa was planned on a grand scale, but its execution was stopped by the Romans, so that it was not completed at the time of the siege of Jerusalem by Titus. The writings of Josephus give a good idea of the fortifications and buildings of Jerusalem at the time of the siege, and his accurate personal knowledge makes his account worthy of the most careful perusal. He explains clearly how Titus, beginning his attack from the north, captured the third or outer wall, then the second wall, and finally the fortress of Antonia, the Temple, and the upper city. After the capture, Titus ordered the Temple to be demolished and the fortifications to be levelled, with the exception of the three great towers at Herod's palace. It is, however, uncertain how far the order was carried out, and it is probable that the outer walls of the Temple enclosure were left partially standing and that the defences on the west and south of the city were not completely levelled. When Titus and his army withdrew from Jerusalem, the 10th legion was left as a permanent Roman garrison, and a fortified camp for their occupation was established on the western hill. We have no account of the size or position of this camp, but a consideration of the site, and a comparison with other Roman camps in various parts of Europe, make it probable that it occupied an area of about 50 acres, extending over what is now known as the Armenian quarter of the town, and that it was bounded on the north by the

old or first wall, on the west also by the old wall, on the south by a line of defence somewhat in the same position as the present south wall where it passes the Zion Gate, and on the east by an entrenchment running north and south parallel to the existing thoroughfare known as David Street. For sixty years the Roman garrison were left in undisturbed occupation, but in 132 the Jews rose in revolt under the leadership of Bar-Cochebas or Barcochba, and took possession of Jerusalem. After a severe struggle, the revolt was suppressed by the Roman general, Julius Severus, and Jerusalem was recaptured and again destroyed. According to some writers, this devastation was even more complete than after the siege by Titus. About 130 the emperor Hadrian decided to rebuild Jerusalem, and make it a Roman colony. The new city was called Aelia Capitolina. The exact size of the city is not known, but it probably extended as far as the present north wall of Jerusalem and included the northern part of the western hill. A temple dedicated to Jupiter Capitolinus was erected on the site of the Temple, and other buildings were constructed, known as the Theatre, the Demosia, the Tetrastemon, the Dodecapylon and the Codra. The Jews were forbidden to reside in the city, but Christians were freely admitted. The history of Jerusalem during the period between the foundation of the city of Aelia by the emperor Hadrian and the accession of Constantine the Great in 306 is obscure, but no important change appears to have been made in the size or fortifications of the city, which continued as a Roman colony. In 306 Constantine, after his conversion to Christianity, issued orders to the bishop Macarius to recover the site of the crucifixion of Jesus Christ, and the tomb in which his body was laid (see SEPULCHRE, HOLY). After the holy sites had been determined, Constantine gave orders for the construction of two magnificent churches, the one over the tomb and the other over the place where the cross was discovered. The present church of the Holy Sepulchre stands on the site upon which one of the churches of Constantine was built, but the second church, the Basilica of the Cross, has completely disappeared. The next important epoch in building construction at Jerusalem was about 460, when the empress Eudocia visited Palestine and expended large sums on the improvement of the city. The walls were repaired by her orders, and the line of fortifications appears to have been extended on the south so as to include the pool of Siloam. A church was built above the pool, probably at the same time, and, after having completely disappeared for many centuries, it was recovered by F. J. Bliss when making his exploration of Jerusalem. The empress also erected a large church in honour of St Stephen north of the Damascus Gate, and is believed to have been buried therein. The site of this church was discovered in 1874, and it has since been rebuilt. In the 6th century the emperor Justinian erected a magnificent basilica at Jerusalem, in honour of the Virgin Mary, and attached to it two hospitals, one for the reception of pilgrims and one for the accommodation of the sick poor. The description given by Procopius does not indicate clearly where this church was situated. A theory frequently put forward is that it stood within the Haram area near the Mosque of el Aksa, but it is more probable that it was on Zion, near the traditional place of the Coenaculum or last supper, where the Mahommedan building known as the tomb of David now stands. In 614 Chosroes II., the king of Persia, captured Jerusalem, devastated many of the buildings, and massacred a great number of the inhabitants. The churches at the Holy Sepulchre were much damaged, but were partially restored by the monk Modestus, who devoted himself with great energy to the work. After a severe struggle the Persians were defeated by the emperor Heraclius, who entered Jerusalem in triumph in 629 bringing with him the holy cross, which had been carried off by Chosroes. At this period the religion of Mahomet was spreading over the east, and in 637 the caliph Omar marched on Jerusalem, which capitulated after a siege of four months. Omar behaved with great moderation, restraining his troops from pillage and leaving the Christians in possession of their churches. A wooden mosque was erected near the site of the Temple, which was replaced by the Mosque

of Aksa, built by the amir Abdalmalik (Abd el Malek), who also constructed the Dome of the Rock, known as the Mosque of Omar, in 688. The Mahommedans held Jerusalem until 1099, when it was captured by the crusaders under Godfrey of Bouillon, and became the capital of the Latin Kingdom of Jerusalem (see CRUSADES, vol. viii. p. 401) until 1187, when Saladin reconquered it, and rebuilt the walls. Since that time, except from 1229 to 1239, and from 1243 to 1244, the city has been held by the Mahommedans. It was occupied by the Egyptian sultans until 1517, when the Turks under Selim I. occupied Syria. Selim's successor, Suleiman the Magnificent, restored the fortifications, which since that time have been little altered.

Modern Jerusalem.—Jerusalem is the chief town of a sanjak, governed by a *mutessarif*, who reports directly to the Porte. It has the usual executive and town councils, upon which the recognized religious communities, or *millet*s, have representatives; and it is garrisoned by infantry of the V. army corps. The city is connected with its port, Jaffa, by a carriage road, 41 m., and by a metre-gauge railway, 54 m., which was completed in 1892, and is worked by a French company. There are also carriage roads to Bethlehem, Hebron and Jericho, and a road to Nablus was in course of construction in 1909. Prior to 1858, when the modern building period commenced, Jerusalem lay wholly within its 16th-century walls, and even as late as 1875 there were few private residences beyond their limits. At present Jerusalem without the walls covers a larger area than that within them. The growth has been chiefly towards the north and north-west; but there are large suburbs on the west, and on the south-west near the railway station on the plain of Rephaim. The village of Siloam has also increased in size, and the western slopes of Olivet are being covered with churches, monasteries and houses. Amongst the most marked features of the change that has taken place since 1875 are the growth of religious and philanthropic establishments; the settlement of Jewish colonies from Bokhara, Yemen and Europe; the migration of Europeans, old Moslem families, and Jews from the city to the suburbs; the increased vegetation, due to the numerous gardens and improved methods of cultivation; the substitution of timber and red tiles for the vaulted stone roofs which were so characteristic of the old city; the striking want of beauty, grandeur, and harmony with their environment exhibited by most of the new buildings; and the introduction of wheeled transport, which, cutting into the soft limestone, has produced mud and dust to an extent previously unknown. To facilitate communication between the city and its suburbs, the Bab ez Zâhire, or Herod's Gate, and a new gate, near the north-west angle of the walls, have been opened; and a portion of the wall, adjoining the Jaffa Gate, has been thrown down, to allow free access for carriages. Within the city the principal streets have been roughly paved, and iron bars placed across the narrow alleys to prevent the passage of camels. Without the walls carriage roads have been made to the mount of Olives, the railway station, and various parts of the suburbs, but they are kept in bad repair. Little effort has been made to meet the increased sanitary requirements of the larger population and wider inhabited area. There is no municipal water-supply, and the main drain of the city discharges into the lower pool of Siloam, which has become an open cesspit. In several places the debris within the walls is saturated with sewage, and the water of the Fountain of the Virgin, and of many of the old cisterns, is unfit for drinking. Amongst the more important buildings for ecclesiastical and philanthropic purposes erected to the north of the city since 1860 are the Russian cathedral, hospice and hospital; the French hospital of St Louis, and hospice and church of St Augustine; the German schools, orphanages and hospitals; the new hospital and industrial school of the London mission to the Jews; the Abyssinian church; the church and schools of the Church missionary society; the Anglican church, college and bishop's house; the Dominican monastery, seminary and church of St Stephen; the Rothschild hospital and girls' school; and the industrial school and workshops of the Alliance Israélite. On the mount of Olives are the Russian church, tower and hospice, near the chapel of the Ascension; the French Paternoster church; the Carmelite nunnery; and the Russian church of St Mary Magdalene, near Gethsemane. South of the city are the Armenian monastery of Mount Zion and Bishop Gobat's school. On the west side are the institution of the sisters of St Vincent; the Katisbon school; the Montefiore hospice; the British ophthalmic hospital of the knights of St John; the convent and church of the Clarisses; and the Moravian leper hospital. Within the city walls are the Latin Patriarchal church and residence; the school of the Frères de la Doctrine Chrétienne; the schools and printing house of the Franciscans; the Coptic monastery; the German church of the Redeemer, and hospice; the United Armenian church of the Spasm; the convent and school of the Sœurs de Zion; the Austrian hospice; the Turkish school and museum; the monastery and seminary of the Frères de la Mission Algérienne, with the restored church of St Audo, the church, schools and hospital of the London mission to the Jews; the Armenian seminary and Patriarchal buildings; the Rothschild hospital; and Jewish hospices and synagogues.

The climate is naturally good, but continued neglect of sanitary precautions has made the city unhealthy. During the summer months the heat is tempered by a fresh sea-breeze, and there is usually a sharp fall of temperature at night; but in spring and autumn the east and south-east winds, which blow across the heated depression of the Ghor, are enervating and oppressive. A dry season, which lasts from May to October, is followed by a rainy season, divided into the early winter and latter rains. Snow falls two years out of three, but soon melts. The mean annual temperature is 62.5° F., the maximum 112°, and the minimum 25°. The mean monthly temperature is lowest (47.2°) in February, and highest (76.3°) in August. The mean annual rainfall (1861 to 1899) is 26.06 in. The most unhealthy period is from 1st May to 31st October, when there are, from time to time, outbreaks of typhoid, small-pox, diphtheria and other epidemics. The unhealthiness of the city is chiefly due to want of proper drainage, impure drinking-water, miasma from the disturbed rubbish heaps, and contaminated dust from the uncleansed roads and streets. The only industry is the manufacture of olive-wood and mother-of-pearl goods for sale to pilgrims and for export. The imports (see JORRA) are chiefly food, clothing and building material. The population in 1905 was about 60,000 (Moslems 9000, Christians 13,000, Jews 40,000). During the pilgrimage season it is increased by about 15,000 travellers and pilgrims.

JERUSALEM, SYNOD OF (1672). By far the most important of the many synods held at Jerusalem (see Wetzlar and Welte, *Kirchenlexikon*, 2nd ed., vi. 1357 sqq.) is that of 1672; and its confession is the most vital statement of faith made in the Greek Church during the past thousand years. It refutes article by article the confession of Cyril Lucaris, which appeared in Latin at Geneva in 1629, and in Greek, with the addition of four "questions," in 1633. Lucaris, who died in 1638 as patriarch of Constantinople, had corresponded with Western scholars and had imbibed Calvinistic views. The great opposition which arose during his lifetime continued after his death, and found classic expression in the highly venerated confession of Petrus Mogilas, metropolitan of Kiev (1643). Though this was intended as a barrier against Calvinistic influences, certain Reformed writers, as well as Roman Catholics, persisted in claiming the support of the Greek Church for sundry of their own positions. Against the Calvinists the synod of 1672 therefore aimed its rejection of unconditional predestination and of justification by faith alone, also its advocacy of what are substantially the Roman doctrines of transubstantiation and of purgatory; the Oriental hostility to Calvinism had been fanned by the Jesuits. Against the Church of Rome, however, there was directed the affirmation that the Holy Ghost proceeds from the Father and not from both Father and Son; this rejection of the *filioque* was not unwelcome to the Turks. Curiously enough, the synod refused to believe that the heretical confession it refuted was actually by a former patriarch of Constantinople; yet the proofs of its genuineness seem to most scholars overwhelming. In negotiations between Anglican and Russian churchmen the confession of Dositheus¹ usually comes to the front.

JESI (anc. *Aesis*), a town and episcopal see of the Marches, Italy, in the province of Ancona, from which it is 17 m. W. by S. by rail, 318 ft. above sea-level. Pop. (1901), 23,285. The place took its ancient name from the river Aesis (mod. Esino), upon the left bank of which it lies. It still retains its picturesque medieval town walls. The Palazzo del Comune is a fine, simple, early Renaissance building (1487–1503) by Francesco di Giorgio Martini; the walls are of brick and the window and door-frames of stone, with severely restrained ornamentation. The courtyard with its loggia was built by Andrea Sansovino in 1519. The library contains some good pictures by Lorenzo Lotto. The castle was built by Baccio Pontelli (1488), designer of the castle at Ostia (1483–1486). Jesi was the birthplace of the emperor Frederic II. (1194), and also of the musical composer, Giovanni Battista Pergolesi (1710–1736). The river Aesis formed the boundary of Italy proper from about 250 B.C. to the time of Sulla (c. 82 B.C.); and, in Augustus' division of Italy, that between Umbria (the 6th region) and Picenum (the 5th). The town itself was a colony, of little importance, except, apparently, as a recruiting ground for the Roman army.

JESSE, in the Bible, the father of David (q.v.), and as such often regarded as the first in the genealogy of Jesus Christ (cf. Isa. xi. 1, 10). Hence the phrase "tree of Jesse" is applied to a design representing the descent of Jesus from the royal line of David, formerly a favourite ecclesiastical ornament. From a recumbent figure of Jesse springs a tree bearing in its branches the chief figures in the line of descent, and terminating in the figure of Jesus, or of the Virgin and Child. There are remains of such a tree in the church of St Mary at Abergavenny, carved in wood, and supposed to have once stood behind the high altar. Jesse candelabra were also made. At Laon and Amiens there are sculptured Jesses over the central west doorways of the cathedrals. The design was chiefly used in windows. The great east window at Wells and the window at the west end of the nave at Chartres are fine examples. There is a 16th-century Jesse window from Mechlin in St George's, Hanover Square, London. The Jesse window in the choir of Dorchester Abbey, Oxfordshire, is remarkable in that the tree forms the central mullion, and many of the figures are represented as statuettes on the branches of the upper tracery; other figures are in the stained glass; the whole gives a beautiful example of the combination of glass and carved stonework in one design.

JESSE EDWARD (1780–1868), English writer on natural history, was born on the 14th of January 1780, at Hutton Cranswick, Yorkshire, where his father was vicar of the parish. He became clerk in a government office in 1798, and for a time was secretary to Lord Dartmouth, when president of the Board of Control. In 1812 he was appointed commissioner of hackney coaches, and later he became deputy surveyor-general of the royal parks and palaces. On the abolition of this office he retired on a pension, and he died at Brighton on the 28th of March 1868.

The result of his interest in the habits and characteristics of animals was a series of pleasant and popular books on natural history, the principal of which are *Gleanings in Natural History* (1832–1835); *An Angler's Rambles* (1836); *Anecdotes of Dogs* (1846); and *Lectures on Natural History* (1863). He also edited Isaac Walton's *Complete Angler*, Gilbert White's *Selborne*, and L. Ritchie's *Windsor Castle*, and wrote a number of handbooks to places of interest, including Windsor and Hampton Court.

JESSE, JOHN HENEAGE (1815–1874), English historian, son of Edward Jesse was educated at Eton, and afterwards

¹ Patriarch of Jerusalem (1669–1707), who presided over the synod.

became a clerk in the secretary's department of the admiralty. He died in London on the 7th of July 1874. His poem on Mary Queen of Scots was published about 1831, and was followed by a collection of poems entitled *Tales of the Dead*. He also wrote a drama, *Richard III.*, and a fragmentary poem entitled *London*. None of these ventures achieved any success, but his numerous historical works are written with vivacity and interest, and, in their own style, are an important contribution to the history of England. They include *Memoirs of the Court of England during the Reign of the Stuarts* (1840), *Memoirs of the Court of England from the Revolution of 1688 to the Death of George II.* (1843), *George Selwyn and his Contemporaries* (1843, new ed. 1882), *Memoirs of the Pretenders and their Adherents* (1845), *Memoirs of Richard the Third and his Contemporaries* (1861), and *Memoirs of the Life and Reign of King George the Third* (1867). The titles of these works are sufficiently indicative of their character. They are sketches of the principal personages and of the social details of various periods in the history of England rather than complete and comprehensive historical narratives. In addition to these works Jesse wrote *Literary and Historical Memorials of London* (1847), *London and its Celebrities* (1850), and a new edition of this work as *London: its Celebrated Characters and Remarkable Places* (1871). His *Memoirs of Celebrated Etomians* appeared in 1875.

A collected edition containing most of his works in thirty volumes was published in London in 1901.

JESSEL, SIR GEORGE (1824-1883), English judge, was born in London on the 13th of February 1824. He was the son of Zadok Aaron Jessel, a Jewish coral merchant. George Jessel was educated at a school for Jews at Kew, and being prevented by then existing religious disabilities from proceeding to Oxford or Cambridge, went to University College, London. He entered as a student at Lincoln's Inn in 1842, and a year later took his B.A. degree at the university of London, becoming M.A. and gold medallist in mathematics and natural philosophy in 1844. In 1846 he became a fellow of University College, and in 1847 he was called to the bar at Lincoln's Inn. His earnings during his first three years at the bar were 52, 346, and 795 guineas, from which it will be seen that his rise to a tolerably large practice was rapid. His work, however, was mainly conveyancing, and for long his income remained almost stationary. By degrees, however, he got more work, and was called within the bar in 1865, becoming a bencher of his Inn in the same year and practising in the Rolls Court. Jessel entered parliament as Liberal member for Dover in 1868, and although neither his intellect nor his oratory was of a class likely to commend itself to his fellow-members, he attracted Gladstone's attention by two learned speeches on the Bankruptcy Bill which was before the house in 1869, with the result that in 1871 he was appointed solicitor-general. His reputation at this time stood high in the chancery courts; on the common law side he was unknown, and on the first occasion upon which he came into the court of Queen's bench to move on behalf of the Crown, there was very nearly a collision between him and the bench. His forceful and direct method of bringing his arguments home to the bench was not modified in his subsequent practice before it. His great powers were fully recognized; his business in addition to that on behalf of the Crown became very large, and his income for three years before he was raised to the bench amounted to nearly £25,000 per annum. In 1873 Jessel succeeded Lord Romilly as master of the rolls. From 1873 to 1881 Jessel sat as a judge of first instance in the rolls court, being also a member of the court of appeal. In November 1874 the first Judicature Act came into effect, and in 1881 the Judicature Act of that year made the master of the rolls the ordinary president of the first court of appeal, relieving him of his duties as a judge of first instance. In the court of appeal Jessel presided almost to the day of his death. For some time before 1883 he suffered from diabetes with chronic disorder of the heart and liver, but struggled against it; on the 16th of March 1883 he sat in court for the last time, and on the 21st of March he died at his residence in London, the immediate cause of death being cardiac syncope.

As a judge of first instance Jessel was a revelation to those accustomed to the proverbial slowness of the chancery courts

and of the master of the rolls who preceded him. He disposed of the business before him with rapidity combined with correctness of judgment, and he not only had no arrears himself, but was frequently able to help other judges to clear their lists. His knowledge of law and equity was wide and accurate, and his memory for cases and command of the principles laid down in them extraordinary. In the rolls court he never reserved a judgment, not even in the Epping Forest case (*Commissioners of Sewers v. Glasse*, L.R. 19 Eq.; *The Times*, 11th November 1874), in which the evidence and arguments lasted twenty-two days (150 witnesses being examined in court, while the documents went back to the days of King John), and in the court of appeal he did so only twice, and then in deference to the wishes of his colleagues. The second of these two occasions was the case of *Robarts v. The Corporation of London* (49 *Law Times* 455; *The Times*, 10th March 1883), and those who may read Jessel's judgment should remember that, reviewing as it does the law and custom on the subject, and the records of the city with regard to the appointment of a remembrancer from the 16th century, together with the facts of the case before the court, it occupied nearly an hour to deliver, but was nevertheless delivered without notes—this, too, on the 9th of March 1883, when the judge who uttered it was within a fortnight of his death. Never during the 19th century was the business of any court performed so rapidly, punctually, and satisfactorily as it was when Jessel presided. He was master of the rolls at a momentous period of legal history. The Judicature Acts, completing the fusion of law and equity, were passed while he was judge of first instance, and were still new to the courts when he died. His knowledge and power of assimilating knowledge of all subjects, his mastery of every branch of law with which he had to concern himself, as well as of equity, together with his willingness to give effect to the new system, caused it to be said when he died that the success of the Judicature Acts would have been impossible without him. His faults as a judge lay in his disposition to be intolerant of those who, not able to follow the rapidity of his judgment, endeavoured to persist in argument after he had made up his mind; but though he was peremptory with the most eminent counsel, young men had no cause to complain of his treatment of them.

Jessel sat on the royal commission for the amendment of the Medical Acts, taking an active part in the preparation of its report. He actively interested himself in the management of London University, of which he was a fellow from 1861, and of which he was elected vice-chancellor in 1880. He was one of the commissioners of patents, and trustee of the British Museum. He was also chairman of the committee of judges which drafted the new rules rendered necessary by the Judicature Acts. He was treasurer of Lincoln's Inn in 1883, and vice-president of the council of legal education. He was also a fellow of the Royal Society. Jessel's career marks an epoch on the bench, owing to the active part taken by him in rendering the Judicature Acts effective, and also because he was the last judge capable of sitting in the House of Commons, a privilege of which he did not avail himself. He was the first Jew who, as solicitor-general, took a share in the executive government of his country, the first Jew who was sworn a regular member of the privy council, and the first Jew who took a seat on the judicial bench of Great Britain; he was also, for many years after being called to the bar, so situated that any one might have driven him from it, because, being a Jew, he was not qualified to be a member of the bar. In person Jessel was a stoutish, square-built man of middle height, with dark hair, somewhat heavy features, a fresh ruddy complexion, and a large mouth. He married in 1856 Amelia, daughter of Joseph Moses, who survived him together with three daughters and two sons, the elder of whom, Charles James (b. 1860), was made a baronet shortly after the death of his distinguished father and in recognition of his services.

See *The Times*, March 23, 1883; E. Manson, *Builders of our Law* (1904).

JESSORE, a town and district of British India, in the Presidency division of Bengal. The town is on the Bhairab river, with a railway station 75 m. N.E. of Calcutta. Pop. (1901), 8054.

The DISTRICT OF JESSORE has an area of 2925 sq. m. Pop. (1901), 1,813,155, showing a decrease of 4% in the decade. The district forms the central portion of the delta between the Hugli and the united Ganges and Brahmaputra. It is a vast alluvial plain intersected by rivers and watercourses, which in the southern portion spread out into large marshes. The northern part is verdant, with extensive groves of date-palms; villages are numerous and large; and the people are prosperous. In the central portion the population is sparse, the only part suitable for dwellings being the high land on the banks of rivers. The principal rivers are the Madhumati or Haringhata (which forms the eastern boundary of the district), with its tributaries the Nabaganga, Chitra and Bhairab; the Kumar, Kabadak, Katki, Harihar, Bhadra and Atharabanka. Within the last century the rivers in the interior of Jessore have ceased to be true deltaic rivers; and, whereas the northern portion of the district formerly lay under water for several months every year, it is now reached only by unusual inundations. The tide reaches as far north as the latitude of Jessore town. Jessore is the centre of sugar manufacture from date-palms. The exports are sugar, rice, pulse, timber, honey, shells, &c.; the imports are salt, English goods, and cloth. The district is crossed by the Eastern Bengal railway, but the chief means of communication are waterways.

British administration was completely established in the district in 1781, when the governor-general ordered the opening of a court at Murali near Jessore. Before that, however, the fiscal administration had been in the hands of the English, having been transferred to the East India Company with that of the rest of Bengal in 1765. The changes in jurisdiction in Jessore have been very numerous. After many transfers and rectifications, the district was in 1863 finally constituted as it at present stands. The rajahs of Jessore or Chanchra trace their origin to Bhabeswar Rai, a soldier in the army of Khan-i-Azam, an imperial general, who deprived Raja Pratapaditya, the popular hero of the Sundarbans, of several fiscal divisions, and conferred them on Bhabeswar. But Manohar Rai (1649-1705) is regarded as the principal founder of the family. The estate when he inherited it was of moderate size, but he acquired one *pargana* after another, until, at his death, the property was by far the largest in the neighbourhood.

JESTER, a provider of "jests" or amusements, a buffoon, especially a professional fool at a royal court or in a nobleman's household (see FOOL). The word "jest," from which "jester" is formed, is used from the 16th century for the earlier "gest," Lat. *gesta*, or *res gestae*, things done, from *gerere*, to do, hence deeds, exploits, especially as told in history, and so used of the metrical and prose romances and chronicles of the middle ages. The word became applied to satirical writings and to any long-winded empty tale, and thence to a joke or piece of fun, the current meaning of the word.

JESUATI, a religious order founded by Giovanni Colombini of Siena in 1360. Colombini had been a prosperous merchant and a senator in his native city, but, coming under ecstatic religious influences, abandoned secular affairs and his wife and daughter (after making provision for them), and with a friend of like temperament, Francesco Miani, gave himself to a life of apostolic poverty, penitential discipline, hospital service and public preaching. The name Jesuati was given to Colombini and his disciples from the habit of calling loudly on the name of Jesus at the beginning and end of their ecstatic sermons. The senate banished Colombini from Siena for imparting foolish ideas to the young men of the city, and he continued his mission in Arezzo and other places, only to be honourably recalled home on the outbreak of a devastating pestilence. He went out to meet Urban V. on his return from Avignon to Rome in 1367, and craved his sanction for the new order and a distinctive habit. Before this was granted Colombini had to clear the movement of a suspicion that it was connected with the heretical sect of Fraticelli, and he died on the 31st of July 1367, soon after the papal approval had been given. The guidance of the new order, whose members (all lay brothers) gave themselves entirely to works of mercy,

devolved upon Miani. Their rule of life, originally a compound of Benedictine and Franciscan elements, was later modified on Augustinian lines, but traces of the early penitential idea persisted, e.g. the wearing of sandals and a daily flagellation. Paul V. in 1606 arranged for a small proportion of clerical members, and later in the 17th century the Jesuati became so secularized that the members were known as the Aquavivæ Fathers, and the order was dissolved by Clement IX. in 1668. The female branch of the order, the Jesuati sisters, founded by Caterina Colombini (d. 1387) in Siena, and thence widely dispersed, more consistently maintained the primitive strictness of the society and survived the male branch by 200 years, existing until 1872 in small communities in Italy.

JESUITS, the name generally given to the members of the Society of Jesus, a religious order in the Roman Catholic Church, founded in 1539. This Society may be defined, in its original conception and well-avowed object, as a body of highly trained religious men of various degrees, bound by the three personal vows of poverty, chastity and obedience, together with, in some cases, a special vow to the pope's service, with the object of labouring for the spiritual good of themselves and their neighbours. They are declared to be mendicants and enjoy all the privileges of the other mendicant orders. They are governed and live by constitutions and rules, mostly drawn up by their founder, St Ignatius of Loyola, and approved by the popes. Their proper title is "Clerks Regulars of the Society of Jesus," the word *Societas* being taken as synonymous with the original Spanish term, *Compañía*; perhaps the military term *Cohors* might more fully have expressed the original idea of a band of spiritual soldiers living under martial law and discipline. The ordinary term "Jesuit" was given to the Society by its avowed opponents; it is first found in the writings of Calvin and in the registers of the Parlement of Paris as early as 1552.

Constitution and Character.—The formation of the Society was a masterpiece of genius on the part of a man (see LOYOLA) who was quick to realize the necessity of the moment. Just before Ignatius was experiencing the call to conversion, Luther had begun his revolt against the Roman Church by burning the papal bull of excommunication on the 10th of December 1520. But while Luther's most formidable opponent was thus being prepared in Spain, the actual formation of the Society was not to take place for eighteen years. Its conception seems to have developed very slowly in the mind of Ignatius. It introduced a new idea into the Church. Hitherto all regulars made a point of the choral office in choir. But as Ignatius conceived the Church to be in a state of war, what was desirable in days of peace ceased when the life of the cloister had to be exchanged for the discipline of the camp; so in the sketch of the new society which he laid before Paul III., Ignatius laid down the principle that the obligation of the breviary should be fulfilled privately and separately and not in choir. The other orders, too, were bound by the idea of a constitutional monarchy based on the democratic spirit. Not so with the Society. The founder placed the general for life in an almost uncontrolled position of authority, giving him the faculty of dispensing individuals from the decrees of the highest legislative body, the general congregations. Thus the principle of military obedience was exalted to a degree higher than that existing in the older orders, which preserved to their members certain constitutional rights.

The soldier-mind of Ignatius can be seen throughout the constitutions. Even in the spiritual labours which the Society shares with the other orders, its own ways of dealing with persons and things result from the system of training which succeeds in forming men to a type that is considered desirable. But it must not be thought that in practice the rule of the Society and the high degree of obedience demanded result in mere mechanism. By a system of check and counter check devised in the constitutions the power of local superiors is modified, so that in practice the working is smooth. Ignatius knew that while a high ideal was necessary for every society, his followers were flesh and blood, not machines. He made it clear from the first that the Society was everything and the individual nothing, except so far as he might prove a useful instrument for carrying out the Society's objects. Ignatius said to his

secretary Polanco that "in those who offered themselves he looked less to purely natural goodness than to firmness of character and ability for business, for he was of opinion that those who were not fit for public business were not adapted for filling offices in the Society." He further declared that even exceptional qualities and endowments in a candidate were valuable in his eyes only on the condition of their being brought into play, or held in abeyance, strictly at the command of a superior. Hence his teaching on obedience. His letter on this subject, addressed to the Jesuits of Coimbra in 1553, is still one of the standard formularies of the Society, ranking with those other products of his pen, the *Spiritual Exercises* and the *Constitutions*. In this letter Ignatius clothes the general with the powers of a commander-in-chief in time of war, giving him the absolute disposal of all members of the Society in every place and for every purpose. He pushes the claim even further, requiring, besides entire outward submission to command, also the complete identification of the inferior's will with that of the superior. He lays down that the superior is to be obeyed simply as such and as standing in the place of God, without reference to his personal wisdom, piety or discretion; that any obedience which falls short of making the superior's will one's own, in inward affection as well as in outward effect, is lax and imperfect; that going beyond the letter of command, even in things abstractly good and praiseworthy, is disobedience, and that the "sacrifice of the intellect" is the third and highest grade of obedience, well pleasing to God, when the inferior not only wills what the superior wills, but thinks what he thinks, submitting his judgment, so far as it is possible for the will to influence and lead the judgment. This *Letter on Obedience* was written for the guidance and formation of Ignatius's own followers; it was an entirely domestic affair. But when it became known beyond the Society the teaching met with great opposition, especially from members of other orders whose institutes represented the normal days of peace rather than those of war. The letter was condemned by the Inquisitions of Spain and Portugal; and it tasked all the skill and learning of Bellarmine as its apologist; together with the whole influence of the Society, to avert what seemed to be a probable condemnation at Rome.

The teaching of the *Letter* must be understood in the living spirit of the Society. Ignatius himself lays down the rule that an inferior is bound to make all necessary representations to his superior so as to guide him in imposing a precept of obedience. When a superior knows the views of his inferior and still commands, it is because he is aware of other sides of the question which appear of greater importance than those that the inferior has brought forward. Ignatius distinctly excepts the case where obedience in itself would be sinful: "In all things except sin I ought to do the will of my superior and not my own." There may be cases where an inferior judges that what is commanded is sinful. What is to be done? Ignatius says: "When it seems to me that I am commanded by my superior to do a thing against which my conscience revolts as sinful and my superior judges otherwise, it is my duty to yield my doubts to him unless I am otherwise constrained by evident reasons. . . . If submissions do not appease my conscience I must impart my doubts to two or three persons of discretion and abide by their decision." From this it is clear that only in doubtful cases concerning sin should an inferior try to submit his judgment to that of his superior, who *ex officio* is held to be not only one who would not order what is clearly sinful, but also a competent judge who knows and understands, better than the inferior, the nature and aspect of the command. As the Jesuit obedience is based on the law of God, it is clearly impossible that he should be bound to obey in what is directly opposed to the divine service. A Jesuit lives in obedience all his life, though the yoke is not galling nor always felt. He can accept no dignity or office which will make him independent of the Society; and even if ordered by the pope to accept the cardinalate or the episcopate, he is still bound, if not to obey, yet to listen to the advice of those whom the general deputed to counsel him in important matters.

The Jesuits had to find their principal work in the world and in direct and immediate contact with mankind. To seek spiritual perfection in a retired life of contemplation and prayer did not seem to Ignatius to be the best way of reforming the evils which had brought about the revolt from Rome. He withdrew his followers from this sort of retirement, except as a mere temporary preparation for later activity; he made habitual intercourse with the world a prime duty; and to this end he rigidly suppressed all such external peculiarities of dress or rule as tended to put obstacles in the way of his followers acting freely as emissaries, agents or missionaries in the most various places and circumstances. Another change he introduced even more completely than did the founders of the Friars. The Jesuit has no home: the whole world is his parish. Mobility and cosmopolitanism are of the very essence of the Society. As Ignatius said, the ancient monastic communities were the infantry of the Church, whose duty was to stand firmly in one place on the battlefield; the Jesuits were to be her light horse, capable of going anywhere at a moment's notice, but especially apt and designed for scouting and skirmishing. To carry out this view, it was one of his plans to send foreigners as superiors or officers to the Jesuit houses in each country, requiring of these envoys, however, invariably to use the language of their new place of residence and

to study it both in speaking and writing till entire mastery of it had been acquired—thus by degrees making all the parts of his system mutually interchangeable, and so largely increasing the number of persons eligible to fill any given post without reference to locality. But subsequent experience has, in practice, modified this interchange, as far as local government goes, though the central government of the Society is always cosmopolitan.

Next we must consider the machinery by which the Society is constituted and governed so as to make its spirit a living energy and not a mere abstract theory. The Society is distributed into six grades: novices, scholastics, temporal coadjutors (lay brothers), spiritual coadjutors, professed of the three vows, and professed of the four vows. No one can become a postulant for admission to the Society until fourteen years old, unless by special dispensation. The novice is classified according as his destination is the priesthood or lay brotherhood, while a third class of "indifferents" receives such as are reserved for further inquiry before a decision of this kind is made. The novice has first to undergo a strict retreat, practically in solitary confinement, during which he receives from a director the *Spiritual Exercises* and makes a general confession of his whole life; after which the first novitiate of two years' duration begins. In this period of trial the real character of the man is discerned, his weak points are noted and his will is tested. Prayer and the practices of asceticism, as means to an end, are the chief occupations of the novice. He may leave or be dismissed at any time during the two years; but at the end of the period if he is approved and destined for the priesthood, he is advanced to the grade of scholastic and takes the following simple vows in the presence of certain witnesses, but not to any person:—

"Almighty Everlasting God, albeit every way most unworthy in Thy holy sight, yet relying on Thine infinite kindness and mercy and impelled by the desire of serving Thee, before the Most Holy Virgin Mary and all Thy heavenly host, I, N., vow to Thy divine Majesty Poverty, Chastity and Perpetual Obedience to the Society of Jesus, and promise that I will enter the same Society to live in it perpetually, understanding all things according to the Constitutions of the Society. I humbly pray from Thine immense goodness and clemency, through the Blood of Jesus Christ, that Thou wilt deign to accept this sacrifice in the odour of sweetness; and as Thou hast granted me to desire and to offer this, so wilt Thou bestow abundant grace to fulfil it."

The scholastic then follows the ordinary course of an undergraduate at a university. After passing five years in arts he has, while still keeping up his own studies, to devote five or six years more to teaching the junior classes in various Jesuit schools or colleges. About this period he takes his simple vows in the following terms:—

"I, N., promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father M. in place of the General of the Society of Jesus and his successors holding the place of God), Perpetual Poverty, Chastity and Obedience; and according to it a peculiar care in the education of boys, according to the manner expressed in the Apostolic Letter and Constitutions of the said Society."

The lay brothers leave out the clause concerning education. The scholastic does not begin the study of theology until he is twenty-eight or thirty, and then passes through a four or six years' course. Only when he is thirty-four or thirty-six can he be ordained a priest and enter on the grade of a spiritual coadjutor. A lay brother, before he can become a temporal coadjutor for the discharge of domestic duties, must pass ten years before he is admitted to vows. Sometimes after ordination the priest, in the midst of his work, is again called away to a third year's novitiate, called the tertianship, as a preparation for his solemn profession of the three vows. His former vows were simple and the Society was at liberty to dismiss him for any canonical reason. The formula of the famous Jesuit vow is as follows:—

"I, N., promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to all standing by; and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father M. in place of the General of the Society of Jesus and his successors holding the place of God), Perpetual Poverty, Chastity and Obedience; and according to it a peculiar care in the education of boys according to

the form of life contained in the Apostolic Letters of the Society of Jesus and in its Constitutions."

Immediately after the vows the Jesuit adds the following simple vows: (1) that he will never act nor consent that the provisions in the constitutions concerning poverty should be changed; (2) that he will not directly nor indirectly procure election or promotion for himself to any prelacy or dignity in the Society; (3) that he will not accept or consent to his election to any dignity or prelacy outside the Society unless forced thereunto by obedience; (4) that if he knows of others doing these things he will denounce them to the superiors; (5) that if elected to a bishopric he will never refuse to hear such advice as the general may deign to send him and will follow it if he judges it is better than his own opinion. The professed is now eligible to certain offices in the Society, and he may remain as a professed father of the three vows for the rest of his life. The highest class, who constitute the real core of the Society, whence all its chief officers are taken, are the professed of the four vows. This grade can seldom be reached until the candidate is in his forty-fifth year, which involves a probation of thirty-one years in the case of those who have entered on the novitiate at the earliest legal age. The number of these select members is small in comparison with the whole Society; the exact proportion varies from time to time, the present tendency being to increase the number. The vows of this grade are the same as the last formula, with the addition of the following important clause:—

"Moreover I promise the special obedience to the Sovereign Pontiff concerning missions, as is contained in the same Apostolic Letters and Constitutions."

These various members of the Society are distributed in its novitiate houses, its colleges, its professed houses and its mission residences. The question has been hotly debated whether, in addition to these six grades, there be not a seventh answering in some degree to the tertiaries of the Franciscan and Dominican orders, but secretly affiliated to the Society and acting as its emissaries in various lay positions. This class was styled in France "Jesuits of the short robe," and there is some evidence in support of its actual existence under Louis XV. The Jesuits themselves deny the existence of any such body, and are able to adduce the negative disproof that no provision for it is to be found in their constitutions. On the other hand there are clauses therein which make the creation of such a class perfectly feasible if thought expedient. An admitted instance is the case of Francisco Borgia, who in 1548, while still duke of Gandia, was received into the Society. What has given colour to the idea is that certain persons have made vows of obedience to individual Jesuits; as Thomas Worthington, rector of the Douai seminary, to Father Robert Parsons; Ann Vaux to Fr. Henry Garnet, who told her that he was not indeed allowed to receive her vows, but that she might make them if she wished and then receive his direction. The archaeologist George Oliver of Exeter was, according to Foley's *Records of the English Province*, the last of the secular priests of England who vowed obedience to the Society before its suppression.

The general lives permanently at Rome and holds in his hands the right to appoint, not only to the office of provincial over each of the head districts into which the Society is mapped, but to the offices of each house in particular. There is no standard of electoral right in the Society except in the election of the general himself. By a minute and frequent system of official and private reports he is informed of the doings and progress of every member of the Society and of everything that concerns it throughout the world. Every Jesuit has not only the right but the duty in certain cases of communicating, directly and privately, with his general. While the general thus controls everything, he himself is not exempt from supervision on the part of the Society. A consultative council is imposed upon him by the general congregation, consisting of the assistants of the various nations, a *socius*, or adviser, to warn him of mistakes, and a confessor. These he cannot remove nor select; and he is bound, in certain circumstances, to listen to their advice, although

he is not obliged to follow it. Once elected the general may not refuse the office, nor abdicate, nor accept any dignity or office outside of the Society; on the other hand, for certain definite reasons, he may be suspended or even deposed by the authority of the Society, which can thus preserve itself from destruction. No such instance has occurred, although steps were once taken in this direction in the case of a general who had set himself against the current feeling.

It is said that the general of the Jesuits is independent of the pope; and his popular name, "the black pope," has gone to confirm this idea. But it is based on an entirely wrong conception of the two offices. The suppression of the Society by Clement XIV. in 1773 was an object-lesson in the supremacy of the pope. The Society became very numerous and, from time to time, received extraordinary privileges from popes, who were warranted by the necessities of the times in granting them. A great number of influential friends, also, gathered round the fathers who, naturally, sought in every way to retain what had been granted. Popes who thought it well to bring about certain changes, or to withdraw privileges that were found to have passed their intentions or to interfere unduly with the rights of other bodies, often met with loyal resistances against their proposed measures. Resistance up to a certain point is lawful and is not disobedience, for every society has the right of self-preservation. In cases where the popes insisted, in spite of the representations of the Jesuits, their commands were obeyed. Many of the popes were distinctly unfavourable to the Society, while others were as friendly, and often what one pope did against them the next pope withdrew. Whatever was done in times when strong divergence of opinion existed, and whatever may have been the actions of individuals who, even in so highly organized a body as the Society of Jesus, cannot always be successfully controlled by their superiors, yet the ultimate result on the part of the Society has always been obedience to the pope, who authorized, protected and privileged them, and on whom they ultimately depend for their very existence.

Thus constituted, with a skilful union of strictness and freedom, of complex organization with a minimum of friction in working, the Society was admirably devised for its purpose of introducing a new power into the Church and the world. Its immediate services to the Church were great. The Society did much, single-handed, to roll back the tide of Protestant advance when half of Europe, which had not already shaken off its allegiance to the papacy, was threatening to do so. The honours of the reaction belong to the Jesuits, and the reactionary spirit has become their tradition. They had the wisdom to see and to admit, in their correspondence with their superiors, that the real cause of the Reformation was the ignorance, neglect and vicious lives of so many priests. They recognized, as most earnest men did, that the difficulty was in the higher places, and that these could best be touched by indirect methods. At a time when primary or even secondary education had in most places become a mere effete and pedantic adherence to obsolete methods, they were bold enough to innovate, both in system and material. Putting fresh spirit and devotion into the work, they not merely taught and catechized in a new, fresh and attractive manner, besides establishing free schools of good quality, but provided new school books for their pupils which were an enormous advance on those they found in use; so that for nearly three centuries the Jesuits were accounted the best schoolmasters in Europe, as they were, till their forcible suppression in 1801, confessedly the best in France. The Jesuit teachers conciliated the goodwill of their pupils by mingled firmness and gentleness. Although the method of the *Ratio Studiorum* has ceased to be acceptable, yet it played in its time as serious a part in the intellectual development of Europe as did the method of Frederick the Great in modern warfare. Bacon succinctly gives his opinion of the Jesuit teaching in these words: "As for the pedagogical part, the shortest rule would be, Consult the schools of the Jesuits; for nothing better has been put in practice" (*De Augmentis*, vi. 4). In instruction they were excellent; but in education, or formation of character, deficient. Again, when most of the continental clergy had sunk, more or less, into the moral and intellectual slough which is pictured for us in the writings of Erasmus and the *Epistolae obscurorum virorum* (see HUTTEN, ULRICH VON), the Jesuits won back respect for the clerical calling by their personal culture

secretary Polanco that "in those who offered themselves he looked less to purely natural goodness than to firmness of character and ability for business, for he was of opinion that those who were not fit for public business were not adapted for filling offices in the Society." He further declared that even exceptional qualities and endowments in a candidate were valuable in his eyes only on the condition of their being brought into play, or held in abeyance, strictly at the command of a superior. Hence his teaching on obedience. His letter on this subject, addressed to the Jesuits of Coimbra in 1553, is still one of the standard formularies of the Society, ranking with those other products of his pen, the *Spiritual Exercises* and the *Constitutions*. In this letter Ignatius clothes the general with the powers of a commander-in-chief in time of war, giving him the absolute disposal of all members of the Society in every place and for every purpose. He pushes the claim even further, requiring, besides entire outward submission to command, also the complete identification of the inferior's will with that of the superior. He lays down that the superior is to be obeyed simply as such and as standing in the place of God, without reference to his personal wisdom, piety or discretion; that any obedience which falls short of making the superior's will one's own, in inward affection as well as in outward effect, is lax and imperfect; that going beyond the letter of command, even in things abstractly good and praiseworthy, is disobedience, and that the "sacrifice of the intellect" is the third and highest grade of obedience, well pleasing to God, when the inferior not only wills what the superior wills, but thinks what he thinks, submitting his judgment, so far as it is possible for the will to influence and lead the judgment. This *Letter on Obedience* was written for the guidance and formation of Ignatius's own followers; it was an entirely domestic affair. But when it became known beyond the Society the teaching met with great opposition, especially from members of other orders whose institutes represented the normal days of peace rather than those of war. The letter was condemned by the Inquisitions of Spain and Portugal; and it tasked all the skill and learning of Bellarmine as its apologist, together with the whole influence of the Society, to avert what seemed to be a probable condemnation at Rome.

The teaching of the *Letter* must be understood in the living spirit of the Society. Ignatius himself lays down the rule that an inferior is bound to make all necessary representations to his superior so as to guide him in imposing a precept of obedience. When a superior knows the views of his inferior and still commands, it is because he is aware of other sides of the question which appear of greater importance than those that the inferior has brought forward. Ignatius distinctly excepts the case where obedience in itself would be sinful: "In all things except sin I ought to do the will of my superior and not my own." There may be cases where an inferior judges that what is commanded is sinful. What is to be done? Ignatius says: "When it seems to me that I am commanded by my superior to do a thing against which my conscience revolts as sinful and my superior judges otherwise, it is my duty to yield my doubts to him unless I am otherwise constrained by evident reasons. . . . If submissions do not appease my conscience I must impart my doubts to two or three persons of discretion and abide by their decision." From this it is clear that only in doubtful cases concerning sin should an inferior try to submit his judgment to that of his superior, who *ex officio* is held to be not only one who would not order what is clearly sinful, but also a competent judge who knows and understands, better than the inferior, the nature and aspect of the command. As the Jesuit obedience is based on the law of God, it is clearly impossible that he should be bound to obey in what is directly opposed to the divine service. A Jesuit lives in obedience all his life, though the yoke is not galling nor always felt. He can accept no dignity or office which will make him independent of the Society; and even if ordered by the pope to accept the cardinalate or the episcopate, he is still bound, if not to obey, yet to listen to the advice of those whom the general deputed to counsel him in important matters.

The Jesuits had to find their principal work in the world and in direct and immediate contact with mankind. To seek spiritual perfection in a retired life of contemplation and prayer did not seem to Ignatius to be the best way of reforming the evils which had brought about the revolt from Rome. He withdrew his followers from this sort of retirement, except as a mere temporary preparation for later activity; he made habitual intercourse with the world a prime duty; and to this end he rigidly suppressed all such external peculiarities of dress or rule as tended to put obstacles in the way of his followers acting freely as emissaries, agents or missionaries in the most various places and circumstances. Another change he introduced even more completely than did the founders of the Friars. The Jesuit has no home: the whole world is his parish. Mobility and cosmopolitanism are of the very essence of the Society. As Ignatius said, the ancient monastic communities were the infantry of the Church, whose duty was to stand firmly in one place on the battlefield; the Jesuits were to be her light horse, capable of going anywhere at a moment's notice, but especially apt and designed for scouting and skirmishing. To carry out this view, it was one of his plans to send foreigners as superiors or officers to the Jesuit houses in each country, requiring of these envoys, however, invariably to use the language of their new place of residence and

to study it both in speaking and writing till entire mastery of it had been acquired—thus by degrees making all the parts of his system mutually interchangeable, and so largely increasing the number of persons eligible to fill any given post without reference to locality. But subsequent experience has, in practice, modified this interchange, as far as local government goes, though the central government of the Society is always cosmopolitan.

Next we must consider the machinery by which the Society is constituted and governed so as to make its spirit a living energy and not a mere abstract theory. The Society is distributed into six grades: novices, scholastics, temporal coadjutors (lay brothers), spiritual coadjutors, professed of the three vows, and professed of the four vows. No one can become a postulant for admission to the Society until fourteen years old, unless by special dispensation. Jesuit moral theologians have again and again been condemned by the pope and declared untenable. Many of these can be found in Viva's *Condemned Propositions*. As early as 1554 the Jesuits were censured by the Sorbonne, chiefly at the instance of Eustache de Bellay, bishop of Paris, as being dangerous in matters of faith. Melchor Cano, a Dominican, one of the ablest divines of the 16th century, never ceased to lift up his testimony against them, from their first beginnings till his own death in 1560; and, unmollified by the bribe of the bishopric of the Canaries, which their interest procured for him, he succeeded in banishing them from the university of Salamanca. Carlo Borromeo, to whose original advocacy they owed much, especially in the council of Trent, found himself attacked in his own cathedral pulpit and interfered with in his jurisdiction. He withdrew his protection and expelled them from his colleges and churches; and he was followed in 1604 in this policy by his cousin and successor Cardinal Federigo Borromeo. St Theresa learnt, in after years, to mistrust their methods, although she was grateful to them for much assistance in the first years of her work. The credit of the Society was seriously damaged by the publication, at Cracow, in 1612, of the *Monita Secreta*. This book, which is undoubtedly a forgery, professes to contain the authoritative secret instructions drawn up by the general Acquaviva and given by the superiors of the Society to its various officers and members. A bold caricature of Jesuit methods, the book has been ascribed to John Zaorowsky or to Cambilone and Schloss, all ex-Jesuits, and it is stated to have been discovered in manuscript by Christian of Brunswick in the Jesuit college at Prague. It consists of suggestions and methods for extending the influence of the Jesuits in various ways, for securing a footing in fresh places, for acquiring wealth, for creeping into households and leading silly rich widows captive and so forth, all marked with ambition, craft and unscrupulousness. It had a wide success and popularity, passing through several editions, and even to this day it is used by controversialists as unscrupulous as the original writers. It may, perhaps, represent the actions of some individuals who allowed their zeal to outrun their discretion, but surely no society which exists for good and is marked by so many worthy men could systematically have conducted its operations in such a manner. Later on a formidable assault was made on Jesuit moral theology in the famous *Provincial Letters* of Blaise Pascal (*q.v.*), eighteen in number, issued under the pen-name of Louis de Montalte, from January 1656 to March 1657. Their wit, irony, eloquence and finished style have kept them alive as one of the great French classics—a destiny more fortunate than that of the kindred works by Antoine Arnauld, *Théologie morale des Jésuites*, consisting of extracts from writings of members of the Society, and *Morale pratique des Jésuites*, made up of narratives professing to set forth the manner in which they carried out their own maxims. But, like most controversial writers, the authors were not scrupulous in their quotations, and by giving passages divorced from their contexts often entirely misrepresented their opponents. The immediate reply on the part of the Jesuits, *The Discourses of Cleander and Eudoxus* by Père Daniel, could not compete with Pascal's work in brilliancy, wit or style; moreover, it was unfortunate enough to be put upon the Index of prohibited books in 1701. The reply on behalf of the Society to Pascal's charges of lax morality, apart from mere general denials, is broadly as follows:—

(1) St Ignatius himself, the founder of the Society, had a special aversion from untruthfulness in all its forms, from quibbling, equivocation or even studied obscurity of language, and it would be contrary to the spirit of conformity with his example and institutions for his followers to think and act otherwise. Hence, any who practised equivocation were, so far, unfaithful to the Society. (2) Several of the cases cited by Pascal are mere abstract hypotheses, many of them now obsolete, argued simply as intellectual exercises, but having no practical bearing whatever. (3) Even such as do belong to the sphere of actual life are of the nature of counsel to spiritual physicians, how to deal with exceptional maladies; and were never intended to fix the standard of moral obligation for the general public. (4) The theory that they were intended for this latter purpose and do represent the normal teaching of the Society becomes more untenable in exact proportion as this immorality is insisted on, because it is a matter of notoriety that the Jesuits

themselves have been singularly free from personal, as distinguished from corporate, evil repute; and no one pretends that the large number of lay-folk whom they have educated or influenced exhibit greater moral inferiority than others.

The third of these replies is the most cogent as regards Pascal, but the real weakness of his attack lies in that nervous dread of appeal to first principles and their logical result which has been the besetting snare of Gallicanism. Pascal, at his best, has mistaken the part for the whole; he charges to the Society what, at the most, are the doings of individuals; and from these he asserts the degeneration of the body from its original standard; whereas the stronger the life and the more extensive the natural development, side by side will exist marks of degeneration; and a society like the Jesuits has no difficulty in asserting its life independently of such excrescences or, in time, in freeing itself from them.

A charge persistently made against the Society is that it teaches that the end justifies the means. And the words of Busembaum, whose *Medulla theologiae* has gone through more than fifty editions, are quoted in proof. True it is that Busembaum uses these words: *Cui licitum est finis etiam licent media*. But on turning to his work (ed. Paris 1729, p. 584, or Lib. vi. Tract vi. cap. ii., *De sacramentis*, dubium ii.) it will be found that the author is making no universal application of an old legal maxim; but is treating of a particular subject (concerning certain lawful liberties in the marital relation) beyond which his words cannot be forced. The sense in which other Jesuit theologians—e.g. Paul Laymann (1575–1635), in his *Theologia moralis* (Munich, 1625), and Ludwig Wagemann (1713–1792), in his *Synopsis theologiae moralis* (Innsbruck, 1762)—quote the axiom is an equally harmless piece of common sense. For instance, if it is lawful to go on a journey by railway it is lawful to take a ticket. No one who put forth that proposition would be thought to mean that it is lawful to defraud the company by stealing a ticket; for the *proviso* is always to be understood, that the means employed should, in themselves, not be bad but good or at least indifferent. So when Wagemann says tersely *Finis determinat probabilitatem actus* he is clearly referring to acts which in themselves are indifferent, i.e. indeterminate. For instance: shooting is an indifferent act, neither good nor bad in itself. The morality of any specified shooting depends upon what is shot, and the circumstances attending that act: shooting a man in self-defence is, as a moral act, on an entirely different plane to shooting a man in murder. It has never been proved, and never can be proved, although the attempt has frequently been made, that the Jesuits ever taught the nefarious proposition ascribed to them, which would be entirely subversive of all morality. Again, the doctrine of probabilism is utterly misunderstood. It is based on an accurate conception of law. Law to bind must be clear and definite; if it be not so, its obligation ceases and liberty of action remains. No probable opinion can stand against a clear and definite law; but when a law is doubtful in its application, in certain circumstances, so is the obligation of obedience: and as a doubtful law is, for practical purposes, no law at all, so it superinduces no obligation! Hence a probable opinion is one, founded on reason and held on serious grounds, that the law does not apply to certain specified cases; and that the law-giver therefore did not intend to bind. It is the principle of equity applied to law. In moral matters a probable opinion, that is one held on no trivial grounds but by unprejudiced and solid thinkers, has no place where the voice of conscience is clear, distinct and formed.

Two causes have been at work to produce the universal failure of the great Society in all its plans and efforts. First stands its lack of really great intellects. It has had its golden age. No society can keep up to its highest level. Nothing can be wider of the truth than the popular conception of the ordinary Jesuit as a being of almost superhuman abilities and universal knowledge. The Society, numbering as it does so many thousands, and with abundant means of devoting men to special branches of study, has, without doubt, produced men of great intelligence and solid learning. The average member, too, on account of his long and systematic training, is always equal and often superior to the average member of any other equally large body, besides being disciplined by a far more perfect drill. But it takes great men to carry out great plans; and of really great men, as the outside world knows and judges, the Society has been markedly barren from almost the first. Apart from its founder and his early companion, St Francis Xavier, there is none who stands in the very first rank. Laynez and Acquaviva were able administrators and politicians; the Bollandists (*q.v.*) were industrious workers and have developed a critical spirit from which much good can be expected; Francisco Suarez,

Leonhard Lessius and Cardinal Franzelin were some of the leading Jesuit theologians; Cornelius a Lapide (1567-1637) represents their old school of scriptural studies, while their new German writers are the most advanced of all orthodox higher critics; the French Louis Bourdaloue (*q.v.*), the Italian Paolo Segneri (1624-1694), and the Portuguese Antonio Vieira (1608-1697) represent their best pulpit orators; while of the many mathematicians and astronomers produced by the Society Angelo Secchi, Ruggiero Giuseppe Boscovich and G. B. Beccaria are conspicuous, and in modern times Stephen Joseph Perry (1833-1889), director of the Stonyhurst College observatory, took a high rank among men of science. Their boldest and most original thinker, Denis Petau, so many years neglected, is now, by inspiring Cardinal Newman's *Essay on the Development of Christian Doctrine*, producing a permanent influence over the current of human thought. The Jesuits have produced no Aquinas, no Anselm, no Bacon, no Richelieu. Men whom they trained, and who broke loose from their teaching, Pascal, Descartes, Voltaire, have powerfully affected the philosophical and religious beliefs of great masses of mankind; but respectable mediocrity is the brand on the long list of Jesuit names in the catalogues of Alegambe and De Backer. This is doubtless due in great measure to the destructive process of scooping out the will of the Jesuit novice, to replace it with that of his superior (as a watchmaker might fit a new movement into a case), and thereby tending, in most cases, to annihilate those subtle qualities of individuality and originality which are essential to genius. Men of the higher stamp will either refuse to submit to the process and leave the Society, or run the danger of coming forth from the mill with their finest qualities pulverized and useless. In accordance with the spirit of its founder, who wished to secure uniformity in the judgment of his followers even in points left open by the Church ("Let us all think the same way, let us all speak in the same manner if possible"), the Society has shown itself to be impatient of those who think or write in a way different from what is current in its ranks.

Nor is this all. The *Ratio Studiorum*, devised by Acquaviva and still obligatory in the colleges of the Society, lays down rules which are incompatible with all breadth and progress in the higher forms of education. True to the anti-speculative and traditional side of the founder's mind, it prescribes that, even where religious topics are not in question, the teacher is not to permit any novel opinions or discussions to be mooted; nor to cite or allow others to cite the opinions of an author not of known repute; nor to teach or suffer to be taught anything contrary to the prevalent opinions of acknowledged doctors current in the schools. Obsolete and false opinions are not to be mentioned at all, even for refutation, nor are objections to received teaching to be dwelt on at any length. The result is that the Jesuit emerges from his schools without any real knowledge of any other method of thought than that which his professors have instilled into him. The professor of Biblical Literature is always to support and defend the Vulgate and can never prefer the marginal readings from the Hebrew and Greek. The Septuagint, as far as it is incorrupt, is to be held not less authentic than the Vulgate. In philosophy Aristotle is always to be followed, and St Thomas Aquinas generally, care being taken to speak respectfully of him even when abandoning his opinions, though now it is customary for the Jesuit teachers to explain him in their own sense. *De vera mente D. Thomas* is no unfamiliar expression in their books. It is not wonderful, under such a method of training, fixed as it has been in minute detail for more than three hundred years, that highly cultivated commonplaces should be the inevitable average result; and that in proportion as Jesuit power has become dominant in Christendom, especially in ecclesiastical circles, the same doom of intellectual sterility and consequent loss of influence with the higher and thoughtful classes, has separated the part from the whole. The initial mistake in the formation of character is that the Jesuits have aimed at educating lay boys in the same manner as they consider advisable for their own novices, for whom obedience and direction is the one thing necessary; whereas for lay people the right use of liberty and initiative are to be desired.

The second cause which has blighted the efforts of the Society is the lesson, too faithfully learnt and practised, of making its corporate interests the first object at all times and in all places. Men were quick to see that Jesuits did not aim at co-operation with the other members of the Church but directly or indirectly at mastery. The most brilliant exception to this rule is found in some of the missions of the Society and notably in that of St

Francis Xavier (*q.v.*). But he quitted Europe in 1541 before the new society, especially under Laynez, had hardened into its final mould; and he never returned. His work, so far as can be gathered from contemporary accounts, was not done on true Jesuit lines as they afterwards developed, though the Society has reaped all the credit; and it is even possible that, had he succeeded the founder as general, the institute might not have received that political and self-seeking turn which Laynez, as second general, gave at the critical moment.

It would almost seem that careful selection was made of the men of the greatest piety and enthusiasm, whose unworldliness made them less apt for diplomatic intrigues, to break new ground in the various missions where their success would throw lustre on the Society and their scruples need never come into play. But such men are not to be found easily; and, as they died off, the tendency was to fill their places with more ordinary characters, whose aim was to increase the power and resources of the body. Hence the condescension to heathen rites in Hindustan and China, and the attempted subjugation of the English Catholic clergy. The first successes of the Indian mission were entirely among the lower classes; but when in Madura, in 1606, Robert de Nobili, a nephew of Bellarmine, to win the Brahmins, adopted their dress and mode of life—a step sanctioned by Gregory XV. in 1623 and by Clement XI. in 1707—the fathers who followed his example pushed the new caste-feeling so far as absolutely to refuse the ministrations and sacraments to the pariahs, lest the Brahmin converts should take offence—an attempt which was reported to Rome and was vainly censured by the breves of Innocent X. in 1645, Clement IX. in 1669, Clement XII. in 1734 and 1739, and Benedict XIV. in 1745. The Chinese rites, assailed with equal unsuccess by one pope after another, were not finally put down until 1744 by a bull of Benedict XIV. For Japan, where their side of the story is that best known, we have a remarkable letter, printed by Lucas Wadding in the *Annales minorum*, addressed to Paul V. by Soletto, a Franciscan missionary, who was martyred in 1624, in which he complains to the pope that the Jesuits systematically postponed the spiritual welfare of the native Christians to their own convenience and advantage; while as regards the test of martyrdom, no such result had followed on their teaching, but only on that of the other orders who had undertaken missionary work in Japan. Yet soon many Jesuit martyrs in Japan were to shed a new glory on the Society (see JAPAN: *Foreign Intercourse*). Again, even in Paraguay, the most promising of all Jesuit undertakings, the evidence shows that the fathers, though civilizing the Guarani population just sufficiently to make them useful and docile servants, happier no doubt than they were before or after, stopped there. While the mission was begun on the rational principle of governing races still in their childhood by methods adapted to that stage in their mental development, yet for one hundred and fifty years the "reductions" were conducted in the same manner, and when the hour of trial came the Jesuit civilization fell like a house of cards.

These examples are sufficient to explain the final collapse of so many promising efforts. The individual Jesuit might be, and often was, a hero, saint and martyr, but the system which he was obliged to administer was foredoomed to failure; and the suppression which came in 1773 was the natural result of forces and elements they had set in antagonism without the power of controlling.

The influence of the Society since its restoration in 1811 has not been marked with greater success than in its previous history. It was natural after the restoration that an attempt should be made to pick up again the threads that were dropped; but soon they came to realize the truth of the saying of St Ignatius: "The Society shall adapt itself to the times and not the times to the Society." The political conditions of Europe have completely changed, and constitutionalism is unfavourable to that personal influence which, in former times, the Jesuits were able to bring to bear upon the heads of states. In Europe they confine themselves mainly to educational and ecclesiastical politics, although both Germany and France have followed the example of Portugal and refuse, on political grounds, to allow them to be in these countries. It would appear as though some of the Jesuits had not, even yet, learnt the lesson that meddling with politics has always been their ruin. The main cause of any difficulty that may exist to-day with the Society is that the Jesuits are true to the teaching of that remarkable panegyric, the *Imago primi saeculi Societatis* (probably written by John Tollenarius in 1640), by identifying the Church with their own body, and being intolerant of all who will not share this view. Their power is still large in certain sections of the ecclesiastical

world, but in secular affairs it is small. Moreover within the church itself there is a strong and growing feeling that the interests of Catholicism may necessitate a second and final suppression of the Society. Cardinal Manning, a keen observer of times and influences, was wont to say: "The work of 1773 was the work of God: and there is another 1773 coming." But, if this come, it will be due not to the pressure of secular governments, as in the 18th century, but to the action of the Church itself. The very nations which have cast out the Society have shown no disposition to accept its own estimate and identify it with the Church; while the Church itself is not conscious of depending upon the Society. To the Church the Jesuits have been what the Janissaries were to the Ottoman Empire, at first its defenders and its champions, but in the end its taskmasters.

History.—The separate article on Loyola tells of his early years, his conversion, and his first gathering of companions. It was not until November 1537, when all hope of going to the Holy Land was given up, that any outward steps were taken to form these companions into an organized body. It was on the eve of their going to Rome, for the second time, that the fathers met Ignatius at Vicenza and it was determined to adopt a common rule and, at the suggestion of Ignatius, the name of the Company of Jesus. Whatever may have been his private hopes and intentions, it was not until he, Laynez and Faber (Pierre Lefevre), in the name of their companions, were sent to lay their services at the feet of the pope that the history of the Society really begins.

On their arrival at Rome the three Jesuits were favourably received by Paul III., who at once appointed Faber to the chair of scripture and Laynez to that of scholastic theology in the university of the Sapienza. But they encountered much opposition and were even charged with heresy; when this accusation had been disposed of, there were still difficulties in the way of starting any new order. Despite the approval of Cardinal Contarini and the goodwill of the pope (who is said to have exclaimed on perusing the scheme of Ignatius, "The finger of God is here"), there was a strong and general feeling that the regular system had broken down and could not be wisely developed farther. Cardinal Guidicioni, one of the commission of three appointed to examine the draft constitution, was known to advocate the abolition of all existing orders, save four which were to be remodelled and put under strict control. That very year, 1538, a commission of cardinals, including Reginald Pole, Contarini, Sadolet, Caraffa (afterwards Paul IV.), Pregoso and others, had reported that the conventual orders, which they had to deal with, had drifted into such a state that they should all be abolished. Not only so, but, when greater strictness of rule and of enclosure seemed the most needful reforms in communities that had become too secular in tone, the proposal of Ignatius, to make it a first principle that the members of his institute should mix freely in the world and be as little marked off as possible externally from secular clerical life and usages, ran counter to all tradition and prejudice, save that Caraffa's then recent order of Theatines, which had some analogy with the proposed Society, had taken some steps in the same direction.

Ignatius and his companions, however, had but little doubt of ultimate success, and so bound themselves, on the 15th of April 1539, to obey any superior chosen from amongst their body, and added on the 4th of May certain other rules, the most important of which was a vow of special allegiance to the pope for mission purposes to be taken by all the members of the society. But Guidicioni, on a careful study of the papers, changed his mind; it is supposed that the cause of this change was in large measure the strong interest in the new scheme exhibited by John III., king of Portugal, who instructed his ambassador to press it on the pope and to ask Ignatius to send some priests of his Society for mission work in Portugal and its Indian possessions. Francis Xavier and Simon Rodriguez were sent to the king in March 1540. Obstacles being cleared away, Paul III., on the 27th of September 1540, issued his bull *Regimini militantis ecclesiae*, by which he confirmed the new Society (the term "order" does not belong to it), but limited the members to sixty, a restriction which was removed by the same pope in the bull *Injunctum nobis* of the 14th of March 1543. In the former bull, the pope gives the text of the formula submitted by Ignatius as the scheme of the proposed society, and in it we get the founder's own ideas: "... This Society, instituted to this special end, namely, to offer spiritual consolation for the advancement of souls in life and Christian doctrine, for the propagation of the faith by public preaching and the ministry of the word of God, spiritual exercises and works of charity and, especially, by the instruction of children and ignorant people in Christianity, and by the spiritual consolation of the faithful in Christ in hearing confessions. ... " In this original scheme it is clearly marked out "that this entire

Society and all its members fight for God under the faithful obedience of the most sacred lord, the pope, and the other Roman pontiffs his successors; " and Ignatius makes particular mention that each member should "be bound by a special vow," beyond that formal obligation under which all Christians are of obeying the pope, "so that whatsoever the present and other Roman pontiffs for the time being shall ordain, pertaining to the advancement of souls and the propagation of the faith, to whatever provinces he shall resolve to send us, we are straightway bound to obey, as far as in us lies, without any tergiversation or excuse, whether he send us among the Turks or to any other unbelievers in being, even to those parts called India, or to any heretics or schismatics or likewise to any believers." Obedience to the general is enjoined "in all things pertaining to the institute of the Society . . . and in him they shall acknowledge Christ as though present, and as far as is becoming shall venerate him"; poverty is enjoined, and this rule affects not only the individual but the common sustentation or care of the Society, except that in the case of colleges revenues are allowed "to be applied to the wants and necessities of the students"; and the private recitation of the Office is distinctly mentioned. On the other hand, the perpetuity of the general's office during his life was no part of the original scheme.

On the 7th of April 1541, Ignatius was unanimously chosen general. His refusal of this post was overruled, so he entered on his office on the 13th of April; and two days after, the newly constituted Society took its formal corporate vows in the basilica of San Paolo fuori le mura. Scarcely was the Society launched when its members dispersed in various directions to their new tasks. Alfonso Salmeron and Pasquier-Brouet, as papal delegates, were sent on a secret mission to Ireland to encourage the native clergy and people to resist the religious changes introduced by Henry VIII.; Nicholas Bobadilla went to Naples; Faber, first to the diet of Worms and then to Spain; Laynez and Claude le Jay to Germany, while Ignatius busied himself at Rome in good works and in drawing up the constitutions and completing the *Spiritual Exercises*. Success crowned these first efforts; and the Society began to win golden opinions. The first college was founded at Coimbra in 1542 by John III. of Portugal and put under the rectorship of Rodriguez. It was designed as a training school to feed the Indian mission of which Francis Xavier had already taken the oversight, while a seminary at Goa was the second institution founded outside Rome in connexion with the Society. Both from the original scheme and from the foundation at Coimbra it is clear that the original idea of the colleges was to provide for the education of future Jesuits. In Spain, national pride in the founder aided the Society's cause almost as much as royal patronage did in Portugal; and the third house was opened in Gandia under the protection of its duke, Francisco Borgia, a grandson of Alexander VI. In Germany, the Jesuits were eagerly welcomed as the only persons able to meet the Lutherans on equal terms. Only in France, among the countries which still were united with the Roman Church, was their advance checked, owing to political distrust of their Spanish origin, together with the hostility of the Sorbonne and the bishop of Paris. However, after many difficulties, they succeeded in getting a footing through the help of Guillaume du Prat, bishop of Clermont (d. 1560), who founded a college for them in 1545 in the town of Billom, besides making over to them his house at Paris, the hôtel de Clermont, which became the nucleus of the afterwards famous college of Louis-le-Grand, while a formal legalization was granted to them by the states-general at Poissy in 1561. In Rome, Paul III.'s favour did not lessen. He bestowed on them the church of St Andrea and conferred at the same time the valuable privilege of making and altering their own statutes; besides the other points, in 1546, which Ignatius had still more at heart, as touching the very essence of his institute, namely, exemption from ecclesiastical offices and dignities and from the task of acting as directors and confessors to convents of women. The former of these measures effectually stopped any drain of the best members away from the society and limited their hopes within its bounds, by putting them more freely at the general's disposal, especially as it was provided that the final vows could not be annulled, nor could a professed member be dismissed, save by the joint action of the general and the pope. The regulation as to convents seems partly due to a desire to avoid the worry and expenditure of time involved in the discharge of such offices

and partly to a conviction that penitents living in enclosure, as all religious persons then were, would be of no effective use to the Society; whereas the founder, against the wishes of several of his companions, laid much stress on the duty of accepting the post of confessor to kings, queens and women of high rank when opportunity presented itself. And the year 1546 is notable in the annals of the Society as that in which it embarked on its great educational career, especially by the annexation of free day-schools to all its colleges.

The council of Trent, in its first period, seemed to increase the reputation of the Society; for the pope chose Laynez, Faber and Salmeron to act as his theologians in that assembly, and in this capacity they had no little influence in framing its decrees. When the council reassembled under Pius IV., Laynez and Salmeron again attended in the same capacity. It is sometimes said that the council formally approved of the Society. This is impossible; for as the Society had received the papal approval, that of the council would have been impertinent as well as unnecessary. St Charles Borromeo wrote to the presiding cardinals, on the 11th of May 1562, saying that, as France was disaffected to the Jesuits whom the pope wished to see established in every country, Pius IV. desired, when the council was occupying itself about regulars, that it should make some honourable mention of the Society in order to recommend it. This was done in the twenty-fifth session (cap. XVI., d.r.) when the decree was passed that at the end of the time of probation novices should either be professed or dismissed; and the words of the council are: "By these things, however, the Synod does not intend to make any innovation or prohibition, so as to hinder the religious order of Clerks of the Society of Jesus from being able to serve God and His Church, in accordance with their pious institute approved of by the Holy Apostolic See."

In 1548 the Society received a valuable recruit in the person of Francisco Borgia, duke of Gandia, afterwards thrice general, while two important events marked 1550—the foundation of the Collegio Romano and a fresh confirmation of the Society by Julius III. The German college, for the children of poor nobles, was founded in 1552; and in the same year Ignatius firmly settled the discipline of the Society by putting down, with promptness and severity, some attempts at independent action on the part of Rodriguez at Coimbra—this being the occasion of the famous letter on obedience; while 1553 saw the despatch of a mission to Abyssinia with one of the fathers as patriarch, and the first rift within the lute when the pope thought that the Spanish Jesuits were taking part with the emperor against the Holy See. Paul IV. (whose election alarmed the Jesuits, for they had not found him very friendly as cardinal) was for a time managed with supreme tact by Ignatius, whom he respected personally. In 1556, the founder died and left the Society consisting of forty-five professed fathers and two thousand ordinary members, distributed over twelve provinces, with more than a hundred colleges and houses.

After the death of the first general there was an interregnum of two years, with Laynez as vicar. During this long period he occupied himself with completing the constitutions by incorporating certain declarations, said to be Ignatian, which explained and sometimes completely altered the meaning of the original text. Laynez was an astute politician and saw the vast capabilities of the Society over a far wider field than the founder contemplated; and he prepared to give it the direction that it has since followed. In some senses, this learned and consummately clever man may be looked upon as the real founder of the Society as history knows it. Having carefully prepared the way, he summoned the general congregation from which he emerged as second general in 1556. As soon as Ignatius had died Paul IV. announced his intention of instituting reforms in the Society, especially in two points: the public recitation of the office in choir and the limitation of the general's office to a term of three years. Despite all the protests and negotiations of Laynez, the pope remained obstinate; and there was nothing but to submit. On the 8th of September 1558, two points were added to the constitutions: that the generalship should be triennial and not perpetual, although after the three years the general might be confirmed; and that the canonical hours should be observed in choir after the manner of the other orders, but with that moderation which should seem expedient to the general. Taking advantage of this last clause, Laynez applied the new law to two houses only, namely, Rome and Lisbon, the other houses contenting themselves with singing vespers on feast days; and as soon as Paul IV. died, Laynez, acting on advice, quietly ignored for the future the orders of the late pope. He also succeeded in increasing further the already enormous powers of the general. Laynez took a leading part in the colloquy of Poissy in 1561 between the Catholics and Huguenots;

and obtained a legal footing from the states-general for colleges of the Society in France. He died in 1564, leaving the Society increased to eighteen provinces with a hundred and thirty colleges, and was succeeded by Francisco Borgia. During the third generalate, Pius V. confirmed all the former privileges, and in the amplest form extended to the Society, as being a mendicant institute, all favours that had been or might afterwards be granted to such mendicant bodies. It was a trifling set-off that in 1567 the pope again enjoined the fathers to keep choir and to admit only the professed to priests' orders, especially as Gregory XIII. rescinded both these injunctions in 1573; and indeed, as regards the hours, all that Pius V. was able to obtain was the nominal concession that the breviary should be recited in choir in the professed houses only, and that not of necessity by more than two persons at a time. Everard Mercurian, a Fleming, and a subject of Spain, succeeded Borgia in 1573, being forced on the Society by the pope, in preference to Polanco, Ignatius's secretary and the vicar-general, who was rejected partly as a Spaniard and still more because he was a "New Christian" of Jewish origin and therefore objected to in Spain itself. During his term of office there took place the troubles in Rome concerning the English college and the subsequent Jesuit rule over that institution; and in 1580 the first Jesuit mission, headed by the redoubtable Robert Parsons and the saintly Edmund Campion, set out for England. This mission, on one side, carried on an active propaganda against Elizabeth in favour of Spain; and on the other, among the true missionaries, was marked with devoted zeal and heroism even to the ghastly death of traitors. Claude Acquaviva, the fifth general, held office from 1581 to 1615, a time almost coinciding with the high tide of the successful reaction, chiefly due to the Jesuits. He was an able, strong-willed man, and crushed what was tantamount to a rebellion in Spain. It was during this struggle that Mariana, the historian and the author of the famous *De rege* in which he defends tyrannicide, wrote his treatise *On the Defects in the Government of the Society*. He confessed freely that the Society had faults and that there was a great deal of unrest among the members; and he mentioned among the various points calling for reform the education of the novices and students; the state of the lay brother and the possessions of the Society; the spying system, which he declared to be carried so far that, if the general's archives at Rome should be searched, not one Jesuit's character would be found to escape; the monopoly of the higher offices by a small clique; and the absence of all encouragement and recompense for the best men of the Society.

It was chiefly during the generalship of Acquaviva that the Society began to gain an evil reputation which eclipsed its good report. In France the Jesuits joined, if they did not originate, the league against Henry of Navarre. Absolution was refused by them to those who would not join in the Guise rebellion, and Acquaviva is said to have tried to stop them, but in vain. The assassination of Henry III. in the interests of the league and the wounding of Henry IV. in 1594 by Chastel, a pupil of theirs, revealed the danger that the whole Society was running by the intrigues of a few men. The Jesuits were banished from France in 1594, but were allowed to return by Henry IV. under conditions; as Sully has recorded, the king declared his only motive to be the expediency of not driving them into a corner with possible disastrous results to his life, and because his only hope of tranquillity lay in appeasing them and their powerful friends. In England the political schemings of Parsons were no small factors in the odium which fell on the Society at large; and his determination to capture the English Catholics as an apannage of the Society, to the exclusion of all else, was an object-lesson to the rest of Europe of a restless ambition and lust of domination which were to find many imitators. The political turn which was being given by some to the Society, to the detriment of its real spiritual work, evoked the fears of the wiser heads of the body; and in the fifth general congregation held in 1593-1594 it was decreed: "Whereas in these times of difficulty and danger it has happened through the fault of certain individuals, through ambition and intemperate zeal, that our institute has been ill spoken of in divers places and before divers sovereigns . . . it is severely and strictly forbidden to all members of the Society to interfere in any manner whatever in public affairs even though they be thereto invited; or to deviate from the institute through entreaty, persuasion or any other motive whatever." It would have been well had Acquaviva enforced this decree; but Parsons was allowed to keep on with his work, and other Jesuits in France for many years after directed, to the loss of religion, affairs of state. In 1605 took place in England the Gunpowder Plot, in which Henry Garnet, the superior of the Society in

England, was implicated. That the Jesuits were the instigators of the plot there is no evidence, but they were in close touch with the conspirators, of whose designs Garnet had a general knowledge. There is now no reasonable doubt that he and other Jesuits were legally accessories, and that the condemnation of Garnet as a traitor was substantially just (see GARNET, HENRY).

It was during Acquaviva's generalship that Philip II. of Spain complained bitterly of the Society to Sixtus V., and encouraged him in those plans of reform (even to changing the name) which were only cut short by the pope's death in 1590, and also that the long protracted discussions on grace, wherein the Dominicans contended against the Jesuits, were carried on at Rome with little practical result, by the Congregation *de auxiliis*, which sat from 1598 till 1607. The *Ratio Studiorum* took its shape during this time. The Jesuit influence at Rome was supported by the Spanish ambassador; but when Henry IV. "went to Mass," the balance inclined to the side of France, and the Spanish monopoly became a thing of the past. Acquaviva saw the expulsion of the Jesuits from Venice in 1606 for siding with Paul V. when he placed the republic under interdict, but did not live to see their recall, which took place at the intercession of Louis XIV. in 1657. He also had to banish Parsons from Rome, by order of Clement VIII., who was wearied with the perpetual complaints made against that intriguer. Gregory XIV., by the bull *Ecclesiae Christi* (July 28, 1591), again confirmed the Society, and granted that Jesuits might, for true cause, be expelled from the body without any form of trial or even documentary procedure, besides denouncing excommunications against every one, save the pope or his legates, who directly or indirectly infringed the constitutions of the Society or attempted to bring about any change therein.

Under Vitelleschi, the next general, the Society celebrated its first centenary on the 25th of September 1639, the hundredth anniversary of the verbal approbation given to the scheme by Paul III. During this hundred years the Society had grown to thirty-six provinces, with eight hundred houses containing some fifteen thousand members. In 1640 broke out the great Jansenist controversy, in which the Society took the leading part on one side and finally secured the victory. In this same year, considering themselves ill-used by Olivarez, prime minister of Philip IV. of Spain, the Jesuits powerfully aided the revolution which placed the duke of Braganza on the throne of Portugal; and their services were rewarded for nearly one hundred years with the practical control of ecclesiastical and almost of civil affairs in that kingdom.

The Society also gained ground steadily in France; for, though held in check by Richelieu and little more favoured by Mazarin, yet from the moment that Louis XIV. took the reins, their star was in the ascendant, and Jesuit confessors, the most celebrated of whom were François de La Chaise (*q.v.*) and Michel Le Tellier (1643-1719), guided the policy of the king, not hesitating to take his side in his quarrel with the Holy See, which nearly resulted in a schism, nor to sign the Gallican articles. Their hostility to the Huguenots forced on the revocation of the Edict of Nantes in 1685, and their war against their Jansenist opponents did not cease till the very walls of Port Royal were demolished in 1710, even to the very abbey church itself, and the bodies of the dead taken with every mark of insult from their graves and literally flung to the dogs to devour. But while thus gaining power in one direction, the Society was losing it in another. The Japanese mission had vanished in blood in 1651; and though many Jesuits died with their converts bravely as martyrs for the faith, yet it is impossible to acquit them of a large share in the causes of that overthrow. It was also about this same period that the grave scandal of the Chinese and Malabar rites began to attract attention in Europe, and to make thinking men ask seriously whether the Jesuit missionaries in those parts taught anything which could fairly be called Christianity at all. When it was remembered, too, that they had decided, at a council held at Lima, that it was inexpedient to impose any act of Christian devotion except baptism on the South American converts, without the greatest precautions, on the ground of intellectual difficulties, it is not wonderful that this doubt was not satisfactorily cleared up, notably in face of the charges brought against the Society by Bernardin de Cardenas, bishop of Paraguay, and the saintly Juan de Palafox (*q.v.*), bishop of Angelopolis in Mexico.

But "the terrible power in the universal church, the great riches and the extraordinary prestige" of the Society, which Palafox complained had raised it "above all dignities, laws, councils and apostolic constitutions," carried with them the seeds of rapid and inevitable decay. A succession of devout but incapable generals, after the death of Acquaviva, saw the gradual secularization of tone by the flocking in of recruits of rank and wealth desirous to share in the glories and influence of the Society, but not well adapted to increase them. The general's supremacy received a shock when the eleventh general congregation appointed Oliva as vicar, with the right of succession and powers that practically superseded those of the general Goswin Nickel, whose infirmities, it is said, did not permit him to govern with the necessary application and vigour; and an attempt was made to depose Tirso Gonzalez, the thirteenth general, whose views on probabilism diverged from those favoured by the rest

of the Jesuits. Though the political weight of the Society continued to increase in the cabinets of Europe, it was being steadily weakened internally. The Jesuits abandoned the system of free education which had won them so much influence and honour; by attaching themselves exclusively to the interests of courts, they lost favour with the middle and lower classes; and above all, their monopoly of power and patronage in France, with the fatal use they had made of it, drew down the bitterest hostility upon them. It was to their credit, indeed, that the encyclopaedists attacked them as the foremost representatives of Christianity, but they are accountable in no small degree in France, as in England, for alienating the minds of men from the religion for which they professed to work.

But the most fatal part of the policy of the Society was its activity, wealth and importance as a great trading firm with branch houses scattered over the richest countries of the world. Its founder, with a wise instinct, had forbidden the accumulation of wealth; its own constitutions, as revised in the 84th decree of the sixth general congregation, had forbidden all pursuits of a commercial nature, as also had various popes; but nevertheless the trade went on unceasingly, necessarily with the full knowledge of the general, unless it be pleaded that the system of obligatory espionage had completely broken down. The first muttering of the storm which was soon to break was heard in a breve issued in 1741 by Benedict XIV., wherein he denounced the Jesuit offenders as "disobedient, contumacious, captious and reprobate persons," and enacted many stringent regulations for their better government. The first serious attack came from a country where they had been long dominant. In 1753 Spain and Portugal exchanged certain American provinces with each other, which involved a transfer of sovereign rights over Paraguay; but it was also provided that the populations should severally migrate also, that the subjects of each crown might remain the same as before. The inhabitants of the "reductions," whom the Jesuits had trained in the use of European arms and discipline, naturally rose in defence of their homes, and attacked the troops and authorities. Their previous docility and their entire submission to the Jesuits left no possible doubt as to the source of the rebellion, and gave the enemies of the Jesuits a handle against them that was not forgotten. In 1757 Carvalho, marquis of Pombal, prime minister of Joseph I. of Portugal, and an old pupil of the Jesuits at Coimbra, dismissed the three Jesuit chaplains of the king and named three secular priests in their stead. He next complained to Benedict XIV. that the trading operations of the Society hampered the commercial prosperity of the nation, and asked for remedial measures. The pope, who knew the situation, committed a visitation of the Society to Cardinal Saldanha, an intimate friend of Pombal, who issued a severe decree against the Jesuits and ordered the confiscation of all their merchandise. But at this juncture Benedict XIV., the most learned and able pope of the period, was succeeded by a pope strongly in favour of the Jesuits, Clement XIII. Pombal, finding no help from Rome, adopted other means. The king was fired at and wounded on returning from a visit to his mistress on the 3rd of September 1758. The duke of Aveiro and other high personages were tried and executed for conspiracy; while some of the Jesuits, who had undoubtedly been in communication with them, were charged, on doubtful evidence, with complicity in the attempted assassination. Pombal charged the whole Society with the possible guilt of a few, and, unwilling to wait the dubious issue of an application to the pope for licence to try them in the civil courts, whence they were exempt, issued on the 1st of September 1759 a decree ordering the immediate deportation of every Jesuit from Portugal and all its dependencies and their suppression by the bishops in the schools and universities. Those in Portugal were at once shipped, in great misery, to the papal states, and were soon followed by those in the colonies. In France, Madame de Pompadour was their enemy because they had refused her absolution while she remained the king's mistress; but the immediate cause of their ruin was the bankruptcy of Father Lavalette, the Jesuit superior in Martinique, a daring speculator, who failed, after trading for some years, for 2,400,000 francs and brought ruin upon some French commercial houses of note. Lorenzo Ricci, then general of the Society, repudiated the debt, alleging lack of authority on Lavalette's part to pledge

the credit of the Society, and he was sued by the creditors. Losing his cause, he appealed to the parlement of Paris, and it, to decide the issue raised by Ricci, required the constitutions of the Jesuits to be produced in evidence, and affirmed the judgment of the courts below. But the publicity given to a document scarcely known till then raised the utmost indignation against the Society. A royal commission, appointed by the duc de Choiseul to examine the constitutions, convoked a private assembly of fifty-one archbishops and bishops under the presidency of Cardinal de Luynes, all of whom except six voted that the unlimited authority of the general was incompatible with the laws of France, and that the appointment of a resident vicar, subject to those laws, was the only solution of the question fair on all sides. Ricci replied with the historical answer, *Sunt ut sunt, aut non sunt*; and after some further delay, during which much interest was exerted in their favour, the Jesuits were suppressed by an edict in November 1764, but suffered to remain on the footing of secular priests, a grace withdrawn in 1767, when they were expelled from the kingdom. In the very same year, Charles III. of Spain, a monarch known for personal devoutness, convinced, on evidence not now forthcoming, that the Jesuits were plotting against his authority, prepared, through his minister D'Aranda, a decree suppressing the Society in every part of his dominions. Sealed despatches were sent to every Spanish colony, to be opened on the same day, the 2nd of April 1767, when the measure was to take effect in Spain itself, and the expulsion was relentlessly carried out, nearly six thousand priests being deported from Spain alone, and sent to the Italian coast, whence, however, they were repelled by the orders of the pope and Ricci himself, finding a refuge at Corte in Corsica, after some months' suffering in overcrowded vessels at sea. The general's object may probably have been to accentuate the harshness with which the fathers had been treated, and so to increase public sympathy, but the actual result of his policy was blame for the cruelty with which he enhanced their misfortunes, for the poverty of Corsica made even a bare subsistence scarcely procurable for them there. The Bourbon courts of Naples and Parma followed the example of France and Spain; Clement XIII. retorted with a bull launched at the weakest adversary, and declaring the rank and title of the duke of Parma forfeit. The Bourbon sovereigns threatened to make war on the pope in return (France, indeed, seizing on the county of Avignon), and a joint note demanding a retraction, and the abolition of the Jesuits, was presented by the French ambassador at Rome on the 10th of December 1768 in the name of France, Spain and the two Sicilies. The pope, a man of eighty-two, died of apoplexy, brought on by the shock, early in 1769. Cardinal Lorenzo Ganganelli, a conventual Franciscan, was chosen to succeed him, and took the name of Clement XIV. He endeavoured to avert the decision forced upon him, but, as Portugal joined the Bourbon league, and Maria Theresa with her son the emperor Joseph II. ceased to protect the Jesuits, there remained only the petty kingdom of Sardinia in their favour, though the fall of Choiseul in France raised the hopes of the Society for a time. The pope began with some preliminary measures, permitting first the renewal of lawsuits against the Society, which had been suspended by papal authority, and which, indeed, had in no case been ever successful at Rome. He then closed the Collegio Romano, on the plea of its insolvency, seized the houses at Frascati and Tivoli, and broke up the establishments in Bologna and the Legations. Finally on the 21st of July 1773 the famous *breve Dominus ac Redemptor* appeared, suppressing the Society of Jesus. This remarkable document opens by citing a long series of precedents for the suppression of religious orders by the Holy See, amongst which occurs the ill-omened instance of the Templars. It then briefly sketches the objects and history of the Jesuits themselves. It speaks of their defiance of their own constitution, expressly revived by Paul V., forbidding them to meddle in politics; of the great ruin to souls caused by their quarrels with local ordinaries and the other religious orders, their condescension to heathen usages in the East, and the disturbances, resulting in persecutions of the Church, which they had stirred up even in Catholic countries, so that several popes had been

obliged to punish them. Seeing then that the Catholic sovereigns had been forced to expel them, that many bishops and other eminent persons demanded their extinction, and that the Society had ceased to fulfil the intention of its institute, the pope declares it necessary for the peace of the Church that it should be suppressed, extinguished, abolished and abrogated for ever, with all its houses, colleges, schools and hospitals; transfers all the authority of its general or officers to the local ordinaries; forbids the reception of any more novices, directing that such as were actually in probation should be dismissed, and declaring that profession in the Society should not serve as a title to holy orders. Priests of the Society are given the option of either joining other orders or remaining as secular clergy, under obedience to the ordinaries, who are empowered to grant or withhold from them licences to hear confessions. Such of the fathers as are engaged in the work of education are permitted to continue, on condition of abstaining from lax and questionable doctrines apt to cause strife and trouble. The question of missions is reserved, and the relaxations granted to the Society in such matters as fasting, reciting the hours and reading heretical books, are withdrawn; while the *breve* ends with clauses carefully drawn to bar any legal exceptions that might be taken against its full validity and obligation. It has been necessary to cite these heads of the *breve* because the apologists of the Society allege that no motive influenced the pope save the desire of peace at any price, and that he did not believe in the culpability of the fathers. The categorical charges made in the document rebut this plea. The pope followed up this *breve* by appointing a congregation of cardinals to take possession of the temporalities of the Society, and armed it with summary powers against all who should attempt to retain or conceal any of the property. He also threw Lorenzo Ricci, the general, into prison, first in the English college and then in the castle of St Angelo, where he died in 1775, under the pontificate of Pius VI., who, though not unfavourable to the Society, and owing his own advancement to it, dared not release him, probably because his continued imprisonment was made a condition by the powers who enjoyed a right of veto in papal elections. In September 1774 Clement XIV. died after much suffering, and the question has been hotly debated ever since whether poison was the cause of his death. But the latest researches have shown that there is no evidence to support the theory of poison. Salicetti, the pope's physician, denied that the body showed signs of poisoning, and Tanucci, Neapolitan ambassador at Rome, who had a large share in procuring the *breve* of suppression, entirely acquits the Jesuits, while F. Theiner, no friend to the Society, does the like.

At the date of this suppression, the Society had 41 provinces and 22,589 members, of whom 11,295 were priests. Far from submitting to the papal *breve*, the ex-Jesuits, after some ineffectual attempts at direct resistance, withdrew into the territories of the free-thinking sovereigns of Russia and Prussia, Frederick II. and Catherine II., who became their active friends and protectors; and the fathers alleged as a principle, in so far as their theology is concerned, that no papal bull is binding in a state whose sovereign has not approved and authorized its publication and execution. Russia formed the headquarters of the Society, and two forged *breves* were speedily circulated, being dated June 9 and June 29, 1774, approving their establishment in Russia, and implying the repeal of the *breve* of suppression. But these are contradicted by the tenor of five genuine *breves* issued in September 1774 to the archbishop of Gnesen, and making certain assurances to the ex-Jesuits, on condition of their complete obedience to the injunctions already laid on them. The Jesuits also pleaded a verbal approbation by Pius VI., technically known as an *Oraculum vivae vocis*, but this is invalid for purposes of law unless reduced to writing and duly authenticated.

They elected three Poles successively as generals, taking, however, only the title of vicars, till on the 7th of March 1801 Pius VII. granted them liberty to reconstitute themselves in north Russia, and permitted Kareu, then vicar, to exercise full authority as general. On the 30th of July 1804 a similar *breve* restored the Jesuits in the Two Sicilies, at the express desire of Ferdinand IV.,

the pope thus anticipating the further action of 1814, when, by the constitution *Sollicitudo omnium Ecclesiarum*, he revoked the action of Clement XIV., and formally restored the Society to corporate legal existence, yet not only omitted any censure of his predecessor's conduct, but all vindication of the Jesuits from the heavy charges in the breve *Dominus ac Redemptor*. In France, even after their expulsion in 1765, they had maintained a precarious footing in the country under the partial disguise and names of "Fathers of the Faith" or "Clerks of the Sacred Heart," but were obliged by Napoleon I. to retire in 1804. They reappeared under their true name in 1814, and obtained formal licence in 1822, but became the objects of so much hostility that Charles X. deprived them by ordinance of the right of instruction, and obliged all applicants for licences as teachers to make oath that they did not belong to any community unrecognized by the laws. They were dispersed again by the revolution of July 1830, but soon reappeared and, though put to much inconvenience during the latter years of Louis Philippe's reign, notably in 1845, maintained their footing, recovered the right to teach freely after the revolution of 1848, and gradually became the leading educational and ecclesiastical power in France, notably under the Second Empire, till they were once more expelled by the Ferry laws of 1880, though they quietly returned since the execution of those measures. They were again expelled by the Law of Associations of 1901. In Spain they came back with Ferdinand VII., but were expelled at the constitutional rising in 1820, returning in 1823, when the duke of Angoulême's army replaced Ferdinand on his throne; they were driven out once more by Espartero in 1835, and have had no legal position since, though their presence is openly tolerated. In Portugal, ranging themselves on the side of Dom Miguel, they fell with his cause, and were exiled in 1834. There are some to this day in Lisbon under the name of "Fathers of the Faith." Russia, which had been their warmest patron, drove them from St Petersburg and Moscow in 1813, and from the whole empire in 1820, mainly on the plea of attempted proselytizing in the imperial army. Holland drove them out in 1816, and, by giving them thus a valid excuse for aiding the Belgian revolution of 1830, secured them the strong position they have ever since held in Belgium; but they have succeeded in returning to Holland. They were expelled from Switzerland in 1847-1848 for the part they were charged with in exciting the war of the Sonderbund. In south Germany, inclusive of Austria and Bavaria, their annals since their restoration have been uneventful; but in north Germany, owing to the footing Frederick II. had given them in Prussia, they became very powerful, especially in the Rhine provinces, and, gradually moulding the younger generation of clergy after the close of the War of Liberation, succeeded in spreading Ultramontane views amongst them, and so leading up to the difficulties with the civil government which issued in the Falk laws, and their own expulsion by decree of the German parliament (June 19, 1872). Since then many attempts have been made to procure the recall of the Society to the German Empire, but without success, although as individuals they are now allowed in the country. In Great Britain, whither they began to straggle over during the revolutionary troubles at the close of the 18th century, and where, practically unaffected by the clause directed against them in the Emancipation Act of 1829, their chief settlement has been at Stonyhurst in Lancashire, an estate conferred on them by Thomas Weld in 1795, they have been unmolested; but there has been little affinity to the order in the British temperament, and the English province has consequently never risen to numerical or intellectual importance in the Society. In Rome itself, its progress after the restoration was at first slow, and it was not till the reign of Leo XII. (1823-1829) that it recovered its place as the chief educational body there. It advanced steadily under Gregory XVI., and, though it was at first shunned by Pius IX., it secured his entire confidence after his return from Gaeta in 1849, and obtained from him a special breve erecting the staff of its literary journal, the *Civiltà Cattolica*, into a perpetual college under the general of the Jesuits, for the purpose of teaching and propagating the faith in its pages. How, with

this pope's support throughout his long reign, the gradual filling of nearly all the sees of Latin Christendom with bishops of their own selection, and their practical capture, directly or indirectly, of the education of the clergy in seminaries, they contrived to stamp out the last remains of independence everywhere, and to crown the Ultramontane triumph with the Vatican Decrees, is matter of familiar knowledge. Leo XIII., while favouring them somewhat, never gave them his full confidence; and by his adhesion to the Thomist philosophy and theology, and his active work for the regeneration and progress of the older orders, he made another suppression possible by destroying much of their prestige. But the usual sequence has been observed under Pius X., who appeared to be greatly in favour of the Society and to rely upon them for many of the measures of his pontificate.

The Society has been ruled by twenty-five generals and four vicars from its foundation to the present day (1910). Of all the various nationalities represented in the Society, neither France, its original cradle, nor England, has ever given it a head, while Spain, Italy, Holland, Belgium, Germany and Poland, were all represented. The numbers of the Society are not accurately known, but are estimated at about 20,000 in all parts of the world; and of these the English, Irish and American Jesuits are under 3000.

The generals of the Jesuits have been as follow:—

1. Ignatius de Loyola (Spaniard)	1541-1556
2. Diego Laynez (Spaniard)	1558-1565
3. Francisco Borgia (Spaniard)	1565-1572
4. Everard Mercurian (Belgian)	1573-1580
5. Claudio Acquaviva (Neapolitan)	1581-1615
6. Mutio Vitelleschi (Roman)	1615-1645
7. Vincenzo Caraffa (Neapolitan)	1646-1649
8. Francesco Piccolomini (Florentine)	1649-1651
9. Alessandro Gottofredi (Roman)	1652
10. Goswin Nickel (German)	1652-1664
11. Giovanni Paolo Oliva (Genoese) vicar-general and coadjutor, 1661; general	1664-1681
12. Charles de Noyelle (Belgian)	1682-1686
13. Tirso Gonzalez (Spaniard)	1687-1705
14. Michele Angelo Tamburini (Modenese)	1706-1730
15. Franz Retz (Bohemian)	1730-1750
16. Ignazio Visconti (Milanese)	1751-1755
17. Alessandro Centurioni (Genoese)	1755-1757
18. Lorenzo Ricci (Florentine)	1758-1775
a. Stanislaus Czerniewicz (Pole), vicar-general	1782-1785
b. Gabriel Lienkiewicz (Pole), c. Francis Xavier Kareu (Pole), "general in Russia, 7th March 1801)	1785-1798
d. Gabriel Gruber (German)	1799-1802
19. Thaddæus Brzozowski (Pole)	1802-1805
20. Aloysius Fortis (Veronese)	1805-1820
21. Johannes Roothaan (Dutchman)	1820-1829
22. Peter Johannes Beckx (Belgian)	1829-1853
23. Antoine Anderledy (Swiss)	1853-1884
24. Luis Martin (Spanish)	1884-1892
25. Francis Xavier Wernz (German)	1892-1906
	1906-

The bibliography of Jesuitism is of enormous extent, and it is impracticable to cite more than a few of the most important works. They are as follow: *Institutum Societatis Jesu* (7 vols., Avignon, 1830-1838); Orlandini, *Historia Societatis Jesu* (Antwerp, 1620); *Imago primi sæculi Societatis Jesu* (Antwerp, 1640); Nieremberg, *Vida de San Ignacio de Loyola* (9 vols., fol., Madrid, 1645-1736); Genelli, *Life of St Ignatius of Loyola* (London, 1872); Backer, *Bibliothèque des écrivains de la Compagnie de Jésus* (7 vols., Paris, 1853-1861); Crétineau Joly, *Histoire de la Compagnie de Jésus* (6 vols., Paris, 1844); Guettée, *Histoire des Jésuites* (3 vols., Paris, 1858-1859); Wolff, *Allgemeine Geschichte der Jesuiten* (4 vols., Zurich, 1789-1792); Gioberti, *Il Gesuita moderno* (Lausanne, 1845); F. Parkman, *Pioneers of France in the New World and The Jesuits in North America* (Boston, 1868); *Lettres édifiantes et curieuses, écrites des missions étrangères, avec les Annales de la propagation de la foi* (40 vols., Lyons, 1819-1854); Saint-Priest, *Histoire de la chute des Jésuites au XVIII^e Siècle* (Paris, 1844); Ranke, *Römische Päpste* (3 vols., Berlin, 1838); E. Taunton, *History of the Jesuits in England* (London, 1901); Thomas Hughes, S.J., *History of the Society of Jesus in North America* (London and New York, 1907); R. G. Thwaites, *Jesuit Relations and Allied Documents* (73 vols., Cleveland, 1896-1901).

(R. F. L.; E. T.N.)

JESUP, MORRIS KETCHUM (1830-1908), American banker and philanthropist, was born at Westport, Connecticut, on the 21st of June 1830. In 1842 he went to New York City, where after some experience in business he established a banking house

in 1852. In 1856 he organized the banking firm of M. K. Jesup & Company, which after two reorganizations became Cuyler, Morgan & Jesup. He became widely known as a financier, retiring from active business in 1884. He was best known, however, as a munificent patron of scientific research, a large contributor to the needs of education, and a public-spirited citizen of wide interests, who did much for the betterment of social conditions in New York. He contributed largely to the funds for the Arctic expeditions of Commander Robert E. Peary, becoming president of the Peary Arctic Club in 1899. To the American museum of natural history, in New York City, he gave large sums in his lifetime and bequeathed \$1,000,000. He was president of the New York chamber of commerce from 1899 until 1907, and was the largest subscriber to its new building. To his native town he gave a fine public library. He died in New York City on the 22nd of January 1908.

JESUS CHRIST. To write a summary account of the life of Christ, though always involving a grave responsibility, was until recent years a comparatively straightforward task; for it was assumed that all that was needed, or could be offered, was a chronological outline based on a harmony of the four canonical Gospels. But to-day history is not satisfied by this simple procedure. Literary criticism has analysed the documents, and has already established some important results; and many questions are still in debate, the answers to which must affect our judgment of the historical value of the existing narratives. It seems therefore consonant alike with prudence and reverence to refrain from attempting to combine afresh into a single picture the materials derivable from the various documents, and to endeavour instead to describe the main contents of the sources from which our knowledge of the Lord Jesus Christ as an historical personage is ultimately drawn, and to observe the picture of Him which each writer in turn has offered to us.

The chief elements of the evidence with which we shall deal are the following:—

1. First, because earliest in point of time, the references to the Lord Jesus Christ in the earliest Epistles of St Paul.
2. The Gospel according to St Mark.
3. A document, no longer extant, which was partially incorporated into the Gospels of St Matthew and St Luke.
4. Further information added by St Matthew's Gospel.
5. Further information added by St Luke's Gospel.
6. The Gospel according to St John.

With regard to traditional sayings or doings of our Lord, which were only written down at a later period, it will suffice to say that those which have any claim to be genuine are very scanty, and that their genuineness has to be tested by their correspondence with the great bulk of information which is derived from the sources already enumerated. The fictitious literature of the second and third centuries, known as the Apocryphal Gospels, offers no direct evidence of any historical value at all: it is chiefly valuable for the contrast which it presents to the grave simplicity of the canonical Gospels, and as showing how incapable a later age was of adding anything to the Gospel history which was not palpably absurd.

1. *Letters of St Paul.*—In the order of chronology we must give the first place to the earliest letters of St Paul. The first piece of Christian literature which has an independent existence and to which we can fix a date is St Paul's first Epistle to the Thessalonians. Lightfoot dates it in 52 or 53; Harnack places it five years earlier. We may say, then, that it was written some twenty years after the Crucifixion. St Paul is not an historian; he is not attempting to describe what Jesus Christ said or did. He is writing a letter to encourage a little Christian society which he, a Jew, had founded in a distant Greek city; and he reminds his readers of many things which he had told them when he was with them. The evidence to be collected from his epistles generally must not detain us here, but we may glance for a moment at this one letter, because it contains what appears to be the first mention of Jesus Christ in the literature of the world. Those who would get a true history cannot afford to neglect their earliest documents. Now the opening sentence of this letter is as follows: "Paul and Silvanus and Timothy to the Church of the Thessalonians in God the Father and the Lord Jesus Christ: Grace to you, and peace." Three men with Greek or Latin names are writing to some kind of assembly in a city of Macedonia.

The writers are Jews, to judge by their salutation of "peace," and by their mention of "God the Father," and of the assembly or society as being "in" Him. But what is this new name which is placed side by side with the Divine Name—"in God the Father and the Lord Jesus Christ"? An educated Greek, who knew something (as many at that time did) of the Greek translation of the ancient Hebrew Scriptures, if he had picked up this letter before he had ever heard the name of Jesus Christ, would have been deeply interested in these opening words. He would have known that "Jesus" was the Greek form of Joshua; that "Christ" was the Greek rendering of Messiah, or Anointed, the title of the great King for whom the Jews were looking; he might further have remembered that "the Lord" is the expression which the Greek Old Testament constantly uses instead of the ineffable name of God, which we now call "Jehovah" (*q.v.*). Who, then, he might well ask, is this Jesus Christ who is lifted to this unexampled height? For it is plain that Jesus Christ stands in some close relation to "God the Father," and that on the ground of that relation a society has been built up, apparently by Jews, in a Greek city far distant from Palestine. He would learn something as he read on; for the letter makes a passing reference to the foundation of the society, and to the expansion of its influence in other parts of Greece; to the conversion of its members from heathenism, and to the consequent sufferings at the hands of their heathen neighbours. The writers speak of themselves as "apostles," or messengers, of Christ; they refer to similar societies "in Christ Jesus," which they call "churches of God," in Judaea, and they say that these also suffer from the Jews there, who had "killed the Lord Jesus" some time before. But they further speak of Jesus as "raised from the dead," and they refer to the belief which they had led the society to entertain, that He would come again "from heaven to deliver them from the coming wrath." Moreover, they urge them not to grieve for certain members of the society who have already died, saying that, "if we believe that Jesus died and rose again," we may also be assured that "the dead in Christ will rise" and will live for ever with Him. Thus the letter assumes that its readers already have considerable knowledge as to "the Lord Jesus Christ," and as to His relation to "God the Father," a knowledge derived from teaching given in person on a former visit. The purpose of the letter is not to give information as to the past, but to stimulate its readers to perseverance by giving fresh teaching as to the future. Historically it is of great value as showing how widely within twenty or twenty-five years of the Crucifixion a religion which proclaimed developed theological teaching as to "the Lord Jesus Christ" had spread in the Roman Empire. We may draw a further conclusion from this and other letters of St Paul before we go on. St Paul's missionary work must have created a demand. Those who had heard him and read his letters would want to know more than he had told them of the earthly life of the Lord Jesus. They would wish to be able to picture Him to their minds; and especially to understand what could have led to His being put to death by the Romans at the requisition of the Jews. St Paul had not been one of his personal disciples in Galilee or Jerusalem; he had no memories to relate of His miracles and teaching. Some written account of these was an obvious need. And we may be sure that any such narrative concerning One who was so deeply revered would be most carefully scrutinized at a time when many were still living whose memories went back to the period of Our Lord's public ministry. One such narrative we now proceed to describe.

2. *St Mark's Gospel.*—The Gospel according to St Mark was written within fifteen years of the first letter of St Paul to the Thessalonians—i.e. about 65. It seems designed to meet the requirements of Christians living far away from Palestine. The author was not an eyewitness of what he relates, but he writes with the firm security of a man who has the best authority behind him. The characteristics of his work confirm the early belief that St Mark wrote this Gospel for the Christians of Rome under the guidance of St Peter. It is of the first importance that

we should endeavour to see this book as a whole; to gain the total impression which it makes on the mind; to look at the picture of Jesus Christ which it offers. That picture must inevitably be an incomplete representation of Him; it will need to be supplemented by other pictures which other writers have drawn. But it is important to consider it by itself, as showing us what impress the Master had made on the memory of one disciple who had been almost constantly by His side.

The book opens thus: "The beginning of the Gospel of Jesus Christ." This "beginning" is shown to be itself rooted in the past. Hebrew prophets had foretold that *Beginning of Christ's Mission.* God would send a "messenger"; that a voice would be heard saying, "Prepare the way of the Lord." And so, in fact, John came, baptizing in the wilderness and turning the heart of the nation back to God. But John was only a forerunner. He was himself a prophet, and his prophecy was this, "He that is stronger than I am is coming after me." Then, we read, "Jesus came." St Mark introduces Him quite abruptly, just as he had introduced John; for he is writing for those who already know the outlines of the story. "Jesus came from Nazareth of Galilee." He was baptized by John, and as He came out of the water He had a vision of the opened heavens and the Holy Spirit, like a dove, descending upon Him; and He heard a Voice saying, "Thou art My Son, the Beloved: in Thee I am well pleased." He then passed away into the wilderness, where He was tempted by Satan and fed by angels. Then He begins His work; and from the very first we feel that He fulfils John's sign: He is strong. His first words are words of strength; "the time is fulfilled"—that is to say, all the past has been leading up to this great moment; "the kingdom of God is at hand"—that is to say, all your best hopes are on the point of being fulfilled; "repent, and believe the Gospel"—that is to say, turn from your sins and accept the tidings which I bring you. It is but a brief summary of what He must have said; but we feel its strength. He does not hesitate to fix all eyes upon Himself. Then we see Him call two brothers who are fishermen. "Come after Me," He says, "and I will make you fishers of men." They dropped their nets and went after Him, and so did two other brothers, their partners; for they all felt the power of this Master of men: He was strong. He began to teach in the synagogue; they were astonished at His teaching, for he spoke with authority. He was interrupted by a demoniac, but He quelled the evil spirit by a word; He was stronger than the power of evil. When the sun set the Sabbath was at an end, and the people could carry out their sick into the street where He was; and He came forth and healed them all. The demoniacs showed a strange faculty of recognition, and cried that He was "the holy one of God," and "the Christ," but He silenced them at once. The next morning He was gone. He had sought a quiet spot for prayer. Peter, one of those fishermen whom He had called, whose wife's mother had been healed the day before, found Him and tried to bring Him back. "All men are seeking Thee," he pleaded. "Let us go elsewhere" was the quiet reply of one who could not be moved by popular enthusiasm. Once again, we observe, He fulfils John's sign: He is strong. This is our first sight of Jesus Christ. The next shows us that this great strength is united to a most tender sympathy. To touch a leper was forbidden, and the offence involved ceremonial defilement. Yet when a leper declared that Jesus could heal him, if only He would, "He put forth His hand and touched him." The act perfected the leper's faith, and he was healed immediately. But he disobeyed the command to be silent about the matter, and the result was that Jesus could not openly enter into the town, but remained outside in the country. It is the first shadow that falls across His path; His power finds a check in human willfulness. Presently He is in Capernaum again. He heals a paralysed man, but not until He has come into touch, as we say, with him also, by reaching his deepest need and declaring the forgiveness of his sins. This declaration disturbs the rabbis, who regard it as a blasphemous usurpation of Divine authority. But He claims that "the Son of Man hath authority on earth to

forgive sins." The title which He thus adopts must be considered later.

We may note, as we pass on, that He has again, in the exercise of His power and His sympathy, come into conflict with the established religious tradition. This freedom from the trammels of convention appears yet again when He claims as a new disciple a publican, a man whose calling as a tax-gatherer for the Roman government made him odious to every patriotic Jew. Publicans were classed with open sinners; and when Jesus went to this man's house and met a company of his fellows the rabbis were scandalized: "Why eateth your Master with publicans and sinners?" The gentle answer of Jesus showed His sympathy even with those who opposed Him: "The doctor," He said, "must go to the sick." And again, when they challenged His disciples for not observing the regular fasts, He gently reminded them that they themselves relaxed the discipline of fasting for a bridegroom's friends. And He added, in picturesque and pregnant sayings, that an old garment could not bear a new patch, and that old wine-skins could not take new wine. Such language was at once gentle and strong; without condemning the old, it claimed liberty for the new. To what lengths would this liberty go? The sacred badge of the Jews' religion, which marked them off from other men all the world over, was their observance of the Sabbath. It was a national emblem, the test of religion and patriotism. The rabbis had fenced the Sabbath round with minute commands, lest any Jew should even seem to work on the Sabbath day. Thus, plucking and rubbing the ears of corn was counted a form of reaping and threshing. The hungry disciples had so transgressed as they walked through the fields of ripe corn. Jesus defended them by the example of David, who had eaten the shewbread, which only priests might eat, and had given it to his hungry men. Necessity absolves from ritual restrictions. And he went farther, and proclaimed a principle: "The Sabbath was made for man, and not man for the Sabbath, so that the Son of Man is lord even of the Sabbath." For a second time, in justifying His position, He used the expression "the Son of Man." The words might sound to Jewish ears merely as a synonym for "man." For Himself, and possibly for some others, they involved a reference, as appears later, to the "one like to a son of man" in Daniel's prophecy of the coming kingdom. They emphasized His relation to humanity as a whole, in contrast to such narrower titles as "Son of Abraham" or "Son of David." They were fitted to express a wider mission than that of a merely Jewish Messiah: He stood and spoke for mankind. The controversy was renewed when a man with a withered hand appeared in the synagogue on the Sabbath, and the rabbis watched to see whether Jesus would heal him. For the first time, we read that Jesus was angry. They were wilfully blind, and they would rather not see good done than see it done in a way that contradicted their teachings and undermined their influence. After a sharp remonstrance, He healed the man by a mere word. And they went out to make a compact with the followers of the worldly Herod to kill Him, and so to stave off a religious revolution which might easily have been followed by political trouble.

Up to this point what have we seen? On the stage of Palestine, an outlying district of the Roman Empire, the home of the Jewish nation, now subject but still fired with the hope of freedom and even of universal domination under the leadership of a divinely anointed King, a new figure has appeared. His appearance has been announced by a reforming prophet, who has summoned the nation to return to its God, and promised that a stronger than himself is to follow. In fulfilment of this promise, who is it that has come? Not a rough prophet in the desert like John, not a leader striking for political freedom, not a pretender aiming at the petty throne of the Herods, not even a great rabbi, building on the patriotic foundation of the Pharisees who had secured the national life by a new devotion to the ancient law. None of these, but, on the contrary, an unknown figure from the remote hills of Galilee, standing on the populous shores of its lake, proclaiming as

Attitude towards Religious Tradition.

Recapitulation.

in 1852. In 1856 he organized the banking firm of M. K. Jesup & Company, which after two reorganizations became Cuyler, Morgan & Jesup. He became widely known as a financier, retiring from active business in 1884. He was best known, however, as a munificent patron of scientific research, a large contributor to the needs of education, and a public-spirited citizen of wide interests, who did much for the betterment of social conditions in New York. He contributed largely to the funds for the Arctic expeditions of Commander Robert E. Peary, becoming president of the Peary Arctic Club in 1899. To the American museum of natural history, in New York City, he gave large sums in his lifetime and bequeathed \$1,000,000. He was president of the New York chamber of commerce from 1899 until 1907, and was the largest subscriber to its new building. To his native town he gave a fine public library. He died in New York City on the 22nd of January 1908.

JESUS CHRIST. To write a summary account of the life of Christ, though always involving a grave responsibility, was until recent years a comparatively straightforward task; for it was assumed that all that was needed, or could be offered, was a chronological outline based on a harmony of the four canonical Gospels. But to-day history is not satisfied by this simple procedure. Literary criticism has analysed the documents, and has already established some important results; and many questions are still in debate, the answers to which must affect our judgment of the historical value of the existing narratives. It seems therefore consonant alike with prudence and reverence to refrain from attempting to combine afresh into a single picture the materials derivable from the various documents, and to endeavour instead to describe the main contents of the sources from which our knowledge of the Lord Jesus Christ as an historical personage is ultimately drawn, and to observe the picture of Him which each writer in turn has offered to us.

The chief elements of the evidence with which we shall deal are the following:—

1. First, because earliest in point of time, the references to the Lord Jesus Christ in the earliest Epistles of St Paul.
2. The Gospel according to St Mark.
3. A document, no longer extant, which was partially incorporated into the Gospels of St Matthew and St Luke.
4. Further information added by St Matthew's Gospel.
5. Further information added by St Luke's Gospel.
6. The Gospel according to St John.

With regard to traditional sayings or doings of our Lord, which were only written down at a later period, it will suffice to say that those which have any claim to be genuine are very scanty, and that their genuineness has to be tested by their correspondence with the great bulk of information which is derived from the sources already enumerated. The fictitious literature of the second and third centuries, known as the Apocryphal Gospels, offers no direct evidence of any historical value at all: it is chiefly valuable for the contrast which it presents to the grave simplicity of the canonical Gospels, and as showing how incapable a later age was of adding anything to the Gospel history which was not palpably absurd.

1. *Letters of St Paul.*—In the order of chronology we must give the first place to the earliest letters of St Paul. The first piece of Christian literature which has an independent existence and to which we can fix a date is St Paul's first Epistle to the Thessalonians. Lightfoot dates it in 52 or 53; Harnack places it five years earlier. We may say, then, that it was written some twenty years after the Crucifixion. St Paul is not an historian; he is not attempting to describe what Jesus Christ said or did. He is writing a letter to encourage a little Christian society which he, a Jew, had founded in a distant Greek city; and he reminds his readers of many things which he had told them when he was with them. The evidence to be collected from his epistles generally must not detain us here, but we may glance for a moment at this one letter, because it contains what appears to be the first mention of Jesus Christ in the literature of the world. Those who would get a true history cannot afford to neglect their earliest documents. Now the opening sentence of this letter is as follows: "Paul and Silvanus and Timothy to the Church of the Thessalonians in God the Father and the Lord Jesus Christ: Grace to you, and peace." Three men with Greek or Latin names are writing to some kind of assembly in a city of Macedonia.

The writers are Jews, to judge by their salutation of "peace," and by their mention of "God the Father," and of the assembly or society as being "in" Him. But what is this new name which is placed side by side with the Divine Name—"in God the Father and the Lord Jesus Christ"? An educated Greek, who knew something (as many at that time did) of the Greek translation of the ancient Hebrew Scriptures, if he had picked up this letter before he had ever heard the name of Jesus Christ, would have been deeply interested in these opening words. He would have known that "Jesus" was the Greek form of Joshua; that "Christ" was the Greek rendering of Messiah, or Anointed, the title of the great King for whom the Jews were looking; he might further have remembered that "the Lord" is the expression which the Greek Old Testament constantly uses instead of the ineffable name of God, which we now call "Jehovah" (*q.v.*). Who, then, he might well ask, is this Jesus Christ who is lifted to this unexampled height? For it is plain that Jesus Christ stands in some close relation to "God the Father," and that on the ground of that relation a society has been built up, apparently by Jews, in a Greek city far distant from Palestine. He would learn something as he read on; for the letter makes a passing reference to the foundation of the society, and to the expansion of its influence in other parts of Greece; to the conversion of its members from heathenism, and to the consequent sufferings at the hands of their heathen neighbours. The writers speak of themselves as "apostles," or messengers, of Christ; they refer to similar societies "in Christ Jesus," which they call "churches of God," in Judaea, and they say that these also suffer from the Jews there, who had "killed the Lord Jesus" some time before. But they further speak of Jesus as "raised from the dead," and they refer to the belief which they had led the society to entertain, that He would come again "from heaven to deliver them from the coming wrath." Moreover, they urge them not to grieve for certain members of the society who have already died, saying that, "if we believe that Jesus died and rose again," we may also be assured that "the dead in Christ will rise" and will live for ever with Him. Thus the letter assumes that its readers already have considerable knowledge as to "the Lord Jesus Christ," and as to His relation to "God the Father," a knowledge derived from teaching given in person on a former visit. The purpose of the letter is not to give information as to the past, but to stimulate its readers to perseverance by giving fresh teaching as to the future. Historically it is of great value as showing how widely within twenty or twenty-five years of the Crucifixion a religion which proclaimed developed theological teaching as to "the Lord Jesus Christ" had spread in the Roman Empire. We may draw a further conclusion from this and other letters of St Paul before we go on. St Paul's missionary work must have created a demand. Those who had heard him and read his letters would want to know more than he had told them of the earthly life of the Lord Jesus. They would wish to be able to picture Him to their minds; and especially to understand what could have led to His being put to death by the Romans at the requisition of the Jews. St Paul had not been one of his personal disciples in Galilee or Jerusalem; he had no memories to relate of His miracles and teaching. Some written account of these was an obvious need. And we may be sure that any such narrative concerning One who was so deeply revered would be most carefully scrutinized at a time when many were still living whose memories went back to the period of Our Lord's public ministry. One such narrative we now proceed to describe.

2. *St Mark's Gospel.*—The Gospel according to St Mark was written within fifteen years of the first letter of St Paul to the Thessalonians—i.e. about 65. It seems designed to meet the requirements of Christians living far away from Palestine. The author was not an eyewitness of what he relates, but he writes with the firm security of a man who has the best authority behind him. The characteristics of his work confirm the early belief that St Mark wrote this Gospel for the Christians of Rome under the guidance of St Peter. It is of the first importance that

thought him Elijah or one of the ancient prophets returned to earth—a suggestion based on popular tradition; others said He was John the Baptist risen from the dead—the superstition of Herod who had put him to death. When the disciples returned, Jesus took them apart for rest; but the crowds re-assembled when they found Him again near the lake, and His yearning compassion for these shepherdless sheep led Him to give them an impressive sign that He had indeed come to supply all human needs. Hitherto His power had gone forth to individuals, but now He fed five thousand men from the scanty stock of five loaves and two fishes. That night He came to His disciples walking upon the waters, and in the period which immediately followed there was once more a great manifestation of healing power.

We have heard nothing for some time of any opposition; but now a fresh conflict arose with certain scribes who had come down from Jerusalem, and who complained that the disciples neglected the ceremonial washing of their hands before meals. **Opposition of the Scribes.** Jesus replied with a stern rebuke, addressing the questioners as hypocrites, and exposing the falsity of a system which allowed the breach of fundamental commandments in order that traditional regulations might be observed. He then turned from them to the multitude, and uttered a saying which in effect annulled the Jewish distinction between clean and unclean meats. This was a direct attack on the whole Pharisaic position. The controversy was plainly irreconcilable, and Jesus withdrew to the north, actually passing outside the limits of the Holy Land. He desired to remain unknown, and not to extend His mission to the heathen population, but the extraordinary faith and the modest importunity of a Syrophenician woman induced Him to heal her daughter. Then He returned by a circuitous route to the Sea of Galilee. His return was marked by another miraculous feeding of the multitude, and also by two healing miracles which present unusual features. In both the patient was withdrawn from the multitude and the cure was wrought with the accompaniment of symbolic actions. Moreover, in one case Jesus is described as groaning before He spoke; in the other the cure was at first incomplete; and both of the men were strictly charged to observe silence afterwards. It cannot be a mere coincidence that these are the last cures which St Mark records as performed in Galilee.

In fact the Galilean ministry is now closed. Jesus retires northwards to Caesarea Philippi, and appears henceforth to devote Himself entirely to the instruction of his disciples, who needed to be prepared for the fatal issue which could not long be delayed. He begins by asking them the popular opinion as to His Person. The suggestions are still the same—John the Baptist, or Elijah, or some other of the prophets. But, when He asked their own belief, Peter replied, "Thou art the Christ." He warned them not to make this known; and He proceeded to give them the wholly new teaching that the Son of Man must suffer and be killed, adding that after three days He must rise again. Peter took Him aside and urged Him not to speak so. But He turned to the other disciples and openly rebuked Peter. And then, addressing a yet wider circle, He demanded of those who should follow Him a self-sacrifice like His own. He even used the metaphor of the cross which was carried by the sufferer to the place of execution. Life, he declared, could only be saved by voluntary death. He went on to demand an unswerving loyalty to Himself and His teaching in the face of a threatening world; and then He promised that some of those who were present should not die before they had seen the coming of the kingdom of God. We have had no hint of such teaching as this in the whole of the Galilean ministry. Jesus had stood forth as the strong healer and helper of men; it was bewildering to hear Him speak of dying. He had promised to fulfil men's highest expectations, if only they would not doubt His willingness and power. He had been enthusiastically revered by the common people, though suspected and attacked by the religious leaders. He had spoken of "the will of God" as supreme, and had set aside ceremonial traditions. He had announced the nearness of the kingdom of God, but had

described it only in parables from nature. He had adopted the vague title of the "Son of Man," but had refrained from proclaiming Himself as the expected Messiah. At last the disciples had expressed their conviction that He was the Christ, and immediately He tells them that He goes to meet humiliation and death as the necessary steps to a resurrection and a coming of the Son of Man in the glory of His Father. It was an amazing announcement, and He plainly added that their path like His own lay through death to life. The dark shadows of this picture of the future alone could impress their minds, but a week later three of them were allowed a momentary vision of the light which should overcome the darkness. They saw Jesus transfigured in a radiance of glory: Elijah appeared with Moses, and they talked with Jesus. A cloud came over them, and a Voice, like that of the Baptism, proclaimed "This is My Son, the Beloved: hear ye Him." They were bidden to keep the vision secret till the Son of Man should have risen from the dead. It was in itself a foretaste of resurrection, and the puzzled disciples remembered that the scribes declared that before the resurrection Elijah would appear. Their minds were confused as to what resurrection was meant. Jesus told them that Elijah had in fact come; and He also said that the Scriptures foretold the sufferings of the Son of Man. But the situation was wholly beyond their grasp, and the very language of St Mark at this point seems to reflect the confusion of their minds.

The other disciples, in the meantime, had been vainly endeavouring to cure a peculiarly violent case of demoniacal possession. Jesus Himself cast out the demon, but not before the suffering child had been rendered seemingly lifeless by a final assault. Then they journeyed secretly through Galilee towards Judaea and the eastern side of the Jordan. On the way Jesus reinforced the new lesson of self-renunciation. He offered the little children as the type of those to whom the kingdom of God belonged; and He disappointed a young and wealthy aspirant to His favour, amazing His disciples by saying that the kingdom of God could hardly be entered by the rich; he who forsook all should have all, and more than all; the world's estimates were to be reversed—the first should be last and the last first. They were now journeying towards Jerusalem, and the prediction of the Passion was repeated. James and John, who had witnessed the Transfiguration, and who were confident of the coming glory, asked for the places nearest to their Master, and professed their readiness to share His sufferings. When the other ten were aggrieved Jesus declared that greatness was measured by service, not by rank; and that the Son of Man had come not to be served, but to serve, and to give His life to ransom many other lives. As they came up from the Jordan valley and passed through Jericho, an incident occurred which signalized the beginning of the final period. A blind man appealed to Jesus as "the Son of David," and was answered by the restoration of his sight; and when, a little later, Jesus fulfilled an ancient prophecy by mounting an ass and riding into Jerusalem, the multitudes shouted their welcome to the returning "kingdom of David." Hitherto He had not permitted any public recognition of His Messiahship, but now He entered David's city in lowly but significant pomp as David's promised heir.

Two incidents illustrate the spirit of judgment with which He approached the splendid but apostate city. On His arrival He had carefully observed the condition of the Temple, **Entry into and had retired to sleep outside the city.** On the following morning, finding no fruit on a fig-tree in full leaf, He said, "Let no man eat fruit of thee henceforth for ever." It was a parable of impending doom. Then, when He entered the Temple, He swept away with a fiery zeal the merchants and merchandise which had turned God's House into "a robbers' den." The act was at once an assertion of commanding authority and an open condemnation of the religious rulers who had permitted the desecration. Its immediate effect was to make new and powerful enemies; for the chief priests, as well as their rivals the scribes, were now inflamed against Him. At the moment they could do nothing, but the next day they formally

demanded whence He derived His right so to act. When they refused to answer His question as to the authority of John the Baptist He in turn refused to tell them His own. But He uttered a parable which more than answered them. The owner of the vineyard, who had sent his servants and last of all his only son, would visit their rejection and murder on the wicked husbandmen. He added a reminder that the stone which the builders refused was, after all, the Divine choice. They were restrained from arresting Him by fear of the people, to whom the meaning of the parable was plain. They therefore sent a joint deputation of Pharisees and Herodians to entrap Him with a question as to the Roman tribute, in answering which He must either lose His influence with the people or else lay Himself open to a charge of treason. When they were baffled, the Sadducees, to whose party the chief priests belonged, sought in vain to pose Him with a problem as to the resurrection of the dead; and after that a more honest scribe confessed the truth of His teaching as to the supremacy of love to God and man over all the sacrificial worship of the Temple, and was told in reply that he was not far from the kingdom of God. Jesus Himself now put a question as to the teaching of the scribes which identified the Messiah with "the Son of David"; and then He denounced those scribes whose pride and extortion and hypocrisy were preparing for them a terrible doom. Before He left the Temple, never to return, one incident gave Him pure satisfaction. His own teaching that all must be given for God was illustrated by the devotion of a poor widow who cast into the treasury the two tiny coins which were all that she had. As He passed out He foretold, in words which corresponded to the doom of the fig-tree, the utter demolition of the imposing but profitless Temple; and presently He opened up to four of His disciples a vision of the future, warning them against false Christs, bidding them expect great sorrows, national and personal, declaring that the gospel must be proclaimed to all the nations, and that after a great tribulation the Son of Man should appear, "coming with the clouds of heaven." The day and the hour none knew, neither the angels nor the Son, but only the Father: it was the duty of all to watch.

We now come to the final scenes. The Passover was approaching, and plots were being laid for His destruction. He Himself spoke mysteriously of His burial, when a woman poured a vase of costly ointment upon His head. To some this seemed a wasteful act; but He accepted it as a token of the love which gave all that was in its power, and He promised that it should never cease to illustrate His Gospel. Two of the disciples were sent into Jerusalem to prepare the Passover meal. During the meal Jesus declared that He should be betrayed by one of their number. Later in the evening He gave them bread and wine, proclaiming that these were His body and His blood—the tokens of His giving Himself to them, and of a new covenant with God through His death. As they withdrew to the Mount of Olives He foretold their general flight, but promised that when He was risen He would go before them into Galilee. Peter protested faithfulness unto death, but was told that he would deny his Master three times that very night. Then coming to a place called Gethsemane, He bade the disciples wait while He should pray; and taking the three who had been with Him at the Transfiguration He told them to tarry near Him and to watch. He went forward, and fell on the ground, praying that "the cup might be taken away" from Him, but resigning Himself to His Father's will. Presently Judas arrived with a band of armed men, and greeted his Master with a kiss—the signal for His arrest. The disciples fled in panic, after one of them had wounded the high priest's servant. Only a nameless young man tried to follow, but he too fled when hands were laid upon him. Before the high priest Jesus was charged, among other accusations, with threatening to destroy the Temple; but the matter was brought to an issue when He was plainly asked if He were "the Christ, the Son of the Blessed One." He answered that He was, and He predicted that they should see the fulfilment of Daniel's vision of the Son of Man sitting on the right hand of power. Thereupon he was condemned to death

for manifest blasphemy, and a scene of cruel mockery followed. Meanwhile Peter in the court below had been sitting with the servants, and in his anxiety to escape recognition had thrice declared that he did not know Jesus. Thus the night passed, and in the morning Jesus was taken to Pilate, for the Jewish council had no power to execute their decree of death. Pilate's question, "Art Thou the King of the Jews?" shows the nature of the accusation which was thought likely to tell with the Roman governor. He had already in bonds one leader of revolution, whose hands were stained with blood—a striking contrast to the calm and silent figure who stood before him. At this moment a crowd came up to ask the fulfilment of his annual act of grace, the pardon of a prisoner at the Passover. Pilate, discerning that it was the envy of the rulers which sought to destroy an inconvenient rival, offered "the King of the Jews" as the prisoner to be released. But the chief priests succeeded in making the people ask for Barabbas and demand the crucifixion of Jesus. Pilate fulfilled his pledge by giving them the man of their choice, and Jesus, whom he had vainly hoped to release on a satisfactory pretext, he now condemned to the shameful punishments of scourging and crucifixion; for the cross, as Jesus had foreseen, was the inevitable fate of a Jewish pretender to sovereignty. The Roman soldiers mocked "the King of the Jews" with a purple robe and a crown of thorns. As they led Him out they forced the cross, which the sufferer commonly carried, upon the shoulders of one Simon of Cyrene, whose sons Alexander and Rufus are here mentioned—probably as being known to St Mark's readers; at any rate, it is interesting to note that, in writing to the Christians at Rome, St Paul a few years earlier had sent a greeting to "Rufus and his mother." Over the cross, which stood between two others, was the condemnatory inscription, "The King of the Jews." This was the Roman designation of Him whom the Jewish rulers tauntingly addressed as "the King of Israel." The same revilers, with a deeper truth than they knew, summed up the mystery of His life and death when they said, "He saved others, Himself He cannot save."

A great darkness shrouded the scene for three hours, and then, in His native Aramaic, Jesus cried in the words of the Psalm, "My God, My God, why hast Thou forsaken Me?" One other cry He uttered, and the end came, and at that moment the veil of the Temple was rent from top to bottom—an omen of fearful import to those who had mocked Him, even on the cross, as the destroyer of the Temple, who in three days should build it anew. The disciples of Jesus do not appear as spectators of the end, but only a group of women who had ministered to His needs in Galilee, and had followed Him up to Jerusalem. These women watched His burial, which was performed by a Jewish councillor, to whom Pilate had granted the body after the centurion had certified the reality of the unexpectedly early death. The body was placed in a rock-hewn tomb, and a great stone was rolled against the entrance. Sunset brought on the Jewish sabbath, but the next evening the women brought spices to anoint the body, and at sunrise on the third day they arrived at the tomb, and saw that the stone was rolled away. They entered and found a young man in a white robe, who said, "He is risen, He is not here," and bade them say to His disciples and Peter, "He goeth before you into Galilee; there ye shall see Him, as He said unto you." In terror they fled from the tomb, "and they said nothing to any man, for they feared . . ."

So with a broken sentence the narrative ends. The document is imperfect, owing probably to the accidental loss of its last leaf. In very early times attempts were made to furnish it with a fitting close; but neither of the supplements which we find in manuscripts can be regarded as coming from the original writer. If we ask what must, on grounds of literary probability, have been added before the record was closed, we may content ourselves here with saying that some incident must certainly have been narrated which should have realized the twice-repeated promise that Jesus would be seen by His disciples in Galilee.

3. *Document used by St Matthew and St Luke.*—We pass on now to compare with this narrative of St Mark another very early

document which no longer exists in an independent form, but which can be partially reconstructed from the portions of it which have been embodied in the Gospels of St Matthew and St Luke.

When we review St Mark's narrative as a whole we are struck, first of all, with its directness and simplicity. It moves straightforward upon a well-defined path. It shows us the Lord Jesus entering on the mission predicted by the Baptist without declaring Himself to be the Messiah; attracting the multitudes in Galilee by His healing power and His unbounded sympathy, and at the same time awakening the envy and suspicion of the leaders of religion; training a few disciples till they reach the conviction that He is the Christ, and then, but not till then, admitting them into the secret of His coming sufferings, and preparing them for a mission in which they also must sacrifice themselves; then journeying to Jerusalem to fulfil the destiny which He foresaw, accepting the responsibility of the Messianic title, only to be condemned by the religious authorities as a blasphemer and handed over to the Roman power as a pretender to the Jewish throne. That is the story in its barest outline. It is adequate to its presumed purpose of offering to distant Gentile converts a clear account of their Master's earthly work, and of the causes which led to His rejection by His own people and to His death by Roman crucifixion. The writer makes no comment on the wonderful story which he tells. Allusions to Jewish customs are, indeed, explained as they occur, but apart from this the narrative appears to be a mere transcript of remembered facts. The actors are never characterized; their actions are simply noted down; there is no praise and no blame. To this simplicity and directness of narrative we may in large measure attribute the fact that when two later evangelists desired to give fuller accounts of our Lord's life they both made this early book the basis of their work. In those days there was no sense of unfairness in using up existing materials in order to make a more complete treatise. Accordingly so much of St Mark's Gospel has been taken over word for word in the Gospels of St Luke and St Matthew that, if every copy of it had perished, we could still reconstruct large portions of it by carefully comparing their narratives. They did not hesitate, however, to alter St Mark's language where it seemed to them rough or obscure, for each of them had a distinctive style of his own, and St Luke was a literary artist of a high order. Moreover, though they both accepted the general scheme of St Mark's narrative, each of them was obliged to omit many incidents in order to find room for other material which was at their disposal, by which they were able to supplement the deficiencies of the earlier book. The most conspicuous deficiency was in regard to our Lord's teaching, of which, as we have seen, St Mark had given surprisingly little. Here they were happily in a position to make a very important contribution.

For side by side with St Mark's Gospel there was current in the earliest times another account of the doings and sayings of Jesus Christ. Our knowledge of it to-day is entirely derived from a comparison of the two later evangelists who embodied large portions of it, working it in and out of the general scheme which they derived from St Mark, according as each of them thought most appropriate. St Luke appears to have taken it over in sections for the most part without much modification; but in St Matthew's Gospel its incidents seldom find an independent place; the sayings to which they gave rise are often detached from their context and grouped with sayings of a similar character so as to form considerable discourses, or else they are linked on to sayings which were uttered on other occasions recorded by St Mark. It is probable that many passages of St Luke's Gospel which have no parallel in St Matthew were also derived from this early source; but this is not easily capable of distinct proof; and, therefore, in order to gain a secure conception of the document we must confine ourselves at first to those parts of it which were borrowed by both writers. We shall, however, look to St Luke in the main as preserving for us the more nearly its original form.

We proceed now to give an outline of the contents of this

document. To begin with, it contained a fuller account of the teaching of John the Baptist. St Mark tells us only his message of hope; but here we read the severer language with which he called men to repentance. We hear his warning of "the coming wrath": his mighty Successor will baptize with fire; the fruitless tree will be cast into the fire; the chaff will be separated from the wheat and burned with unquenchable fire; the claim to be children of Abraham will not avail, for God can raise up other children to Abraham, if it be from the stones of the desert. Next, we have a narrative of the Temptation, of which St Mark had but recorded the bare fact. It was grounded on the Divine sonship, which we already know was proclaimed at the Baptism. In a threefold vision Jesus is invited to enter upon His inheritance at once; to satisfy His own needs, to accept of earthly dominion, to presume on the Divine protection. The passage stands almost alone as a revelation of inner conflict in a life which outwardly was marked by unusual calm.

Not far from the beginning of the document there stood a remarkable discourse delivered among the hills above the lake. It opens with a startling reversal of the common estimates of happiness and misery. In the light of the coming kingdom it proclaims the blessedness of the poor, the hungry, the sad and the maligned; and the wofulness of the rich, the full, the merry and the popular. It goes on to reverse the ordinary maxims of conduct. Enemies are to be loved, helped, blessed, prayed for. No blow is to be returned; every demand, just or unjust, is to be granted: in short, "as ye desire that men should do to you, do in like manner to them." Then the motive and the model of this conduct are adduced: "Love your enemies . . . and ye shall be sons of the Highest; for He is kind to the thankless and wicked. Be merciful, as your Father is merciful; and judge not, and ye shall not be judged." We note in passing that this is the first introduction of our Lord's teaching of the fatherhood of God. God is your Father, He says in effect; you will be His sons if like Him you will refuse to make distinctions, loving without looking for a return, sure that in the end love will not be wholly lost. Then follow grave warnings—generous towards others, you must be strict with yourselves; only the good can truly do good; hearers of these words must be doers also, if they would build on the rock and not on the sand. So, with the parable of the two builders, the discourse reached its formal close.

It was followed by the entry of Jesus into Capernaum, where He was asked to heal the servant of a Roman officer. This man's unusual faith, based on his soldierly sense of discipline, surprised the Lord, who declared that it had no equal in Israel itself. Somewhat later messengers arrived from the imprisoned Baptist, who asked if Jesus were indeed "the coming One" of whom he had spoken. Jesus pointed to His acts of healing the sick, raising the dead and proclaiming good news for the poor; thereby suggesting to those who could understand that He fulfilled the ancient prophecy of the Messiah. He then declared the greatness of John in exalted terms, adding, however, that the least in the kingdom of God was John's superior. Then He complained of the unreasonableness of an age which refused John as too austere and Himself as too lax and as being "the friend of publicans and sinners." This narrative clearly presupposes a series of miracles already performed, and also such a conflict with the Pharisees as we have seen recorded by St Mark. Presently we find an offer of discipleship met by the warning that "the Son of Man" is a homeless wanderer; and then the stern refusal of a request for leave to perform a father's funeral rites.

Close upon these incidents follows a special mission of disciples, introduced by the saying: "The harvest is great, but the labourers are few." The disciples as they journey are to take no provisions, but to throw themselves on the bounty of their hearers; they are to heal the sick and to proclaim the nearness of the kingdom of God. The city that rejects them shall have a less lenient judgment than Sodom; Tyre and Sidon shall be better off than cities like Chorazin and Bethsaida which have seen His miracles;

demanding whence He derived His right so to act. When they refused to answer His question as to the authority of John the Baptist He in turn refused to tell them His own. But He uttered a parable which more than answered them. The owner of the vineyard, who had sent his servants and last of all his only son, would visit their rejection and murder on the wicked husbandmen. He added a reminder that the stone which the builders refused was, after all, the Divine choice. They were restrained from arresting Him by fear of the people, to whom the meaning of the parable was plain. They therefore sent a joint deputation of Pharisees and Herodians to entrap Him with a question as to the Roman tribute, in answering which He must either lose His influence with the people or else lay Himself open to a charge of treason. When they were baffled, the Sadducees, to whose party the chief priests belonged, sought in vain to pose Him with a problem as to the resurrection of the dead; and after that a more honest scribe confessed the truth of His teaching as to the supremacy of love to God and man over all the sacrificial worship of the Temple, and was told in reply that he was not far from the kingdom of God. Jesus Himself now put a question as to the teaching of the scribes which identified the Messiah with "the Son of David"; and then He denounced those scribes whose pride and extortion and hypocrisy were preparing for them a terrible doom. Before He left the Temple, never to return, one incident gave Him pure satisfaction. His own teaching that all must be given for God was illustrated by the devotion of a poor widow who cast into the treasury the two tiny coins which were all that she had. As He passed out He foretold, in words which corresponded to the doom of the fig-tree, the utter demolition of the imposing but profitless Temple; and presently He opened up to four of His disciples a vision of the future, warning them against false Christs, bidding them expect great sorrows, national and personal, declaring that the gospel must be proclaimed to all the nations, and that after a great tribulation the Son of Man should appear, "coming with the clouds of heaven." The day and the hour none knew, neither the angels nor the Son, but only the Father: it was the duty of all to watch.

We now come to the final scenes. The Passover was approaching, and plots were being laid for His destruction. He Himself spoke mysteriously of His burial, when a woman poured a vase of costly ointment upon His head. To some this seemed a wasteful act; but He accepted it as a token of the love which gave all that was in its power, and He promised that it should never cease to illustrate His Gospel. Two of the disciples were sent into Jerusalem to prepare the Passover meal. During the meal Jesus declared that He should be betrayed by one of their number. Later in the evening He gave them bread and wine, proclaiming that these were His body and His blood—the tokens of His giving Himself to them, and of a new covenant with God through His death. As they withdrew to the Mount of Olives He foretold their general flight, but promised that when He was risen He would go before them into Galilee. Peter protested faithfulness unto death, but was told that he would deny his Master three times that very night. Then coming to a place called Gethsemane, He bade the disciples wait while He should pray; and taking the three who had been with Him at the Transfiguration He told them to tarry near Him and to watch. He went forward, and fell on the ground, praying that "the cup might be taken away" from Him, but resigning Himself to His Father's will. Presently Judas arrived with a band of armed men, and greeted his Master with a kiss—the signal for His arrest. The disciples fled in panic, after one of them had wounded the high priest's servant. Only a nameless young man tried to follow, but he too fled when hands were laid upon him. Before the high priest Jesus was charged, among other accusations, with threatening to destroy the Temple; but the matter was brought to an issue when He was plainly asked if He were "the Christ, the Son of the Blessed One." He answered that He was, and He predicted that they should see the fulfilment of Daniel's vision of the Son of Man sitting on the right hand of power. Thereupon he was condemned to death

for manifest blasphemy, and a scene of cruel mockery followed. Meanwhile Peter in the court below had been sitting with the servants, and in his anxiety to escape recognition had thrice declared that he did not know Jesus. Thus the night passed, and in the morning Jesus was taken to Pilate, for the Jewish council had no power to execute their decree of death. Pilate's question, "Art Thou the King of the Jews?" shows the nature of the accusation which was thought likely to tell with the Roman governor. He had already in bonds one leader of revolution, whose hands were stained with blood—a striking contrast to the calm and silent figure who stood before him. At this moment a crowd came up to ask the fulfilment of his annual act of grace, the pardon of a prisoner at the Passover. Pilate, discerning that it was the envy of the rulers which sought to destroy an inconvenient rival, offered "the King of the Jews" as the prisoner to be released. But the chief priests succeeded in making the people ask for Barabbas and demand the crucifixion of Jesus. Pilate fulfilled his pledge by giving them the man of their choice, and Jesus, whom he had vainly hoped to release on a satisfactory pretext, he now condemned to the shameful punishments of scourging and crucifixion; for the cross, as Jesus had foreseen, was the inevitable fate of a Jewish pretender to sovereignty. The Roman soldiers mocked "the King of the Jews" with a purple robe and a crown of thorns. As they led Him out they forced the cross, which the sufferer commonly carried, upon the shoulders of one Simon of Cyrene, whose sons Alexander and Rufus are here mentioned—probably as being known to St Mark's readers; at any rate, it is interesting to note that, in writing to the Christians at Rome, St Paul a few years earlier had sent a greeting to "Rufus and his mother." Over the cross, which stood between two others, was the condemnatory inscription, "The King of the Jews." This was the Roman designation of Him whom the Jewish rulers tauntingly addressed as "the King of Israel." The same revilers, with a deeper truth than they knew, summed up the mystery of His life and death when they said, "He saved others, Himself He cannot save."

A great darkness shrouded the scene for three hours, and then, in His native Aramaic, Jesus cried in the words of the Psalm, "My God, My God, why hast Thou forsaken Me?" One other cry He uttered, and the end came, and at that moment the veil of the Temple was rent from top to bottom—an omen of fearful import to those who had mocked Him, even on the cross, as the destroyer of the Temple, who in three days should build it anew. The disciples of Jesus do not appear as spectators of the end, but only a group of women who had ministered to His needs in Galilee, and had followed Him up to Jerusalem. These women watched His burial, which was performed by a Jewish councillor, to whom Pilate had granted the body after the centurion had certified the reality of the unexpectedly early death. The body was placed in a rock-hewn tomb, and a great stone was rolled against the entrance. Sunset brought on the Jewish sabbath, but the next evening the women brought spices to anoint the body, and at sunrise on the third day they arrived at the tomb, and saw that the stone was rolled away. They entered and found a young man in a white robe, who said, "He is risen, He is not here," and bade them say to His disciples and Peter, "He goeth before you into Galilee; there ye shall see Him, as He said unto you." In terror they fled from the tomb, "and they said nothing to any man, for they feared . . ."

So with a broken sentence the narrative ends. The document is imperfect, owing probably to the accidental loss of its last leaf. In very early times attempts were made to furnish it with a fitting close; but neither of the supplements which we find in manuscripts can be regarded as coming from the original writer. If we ask what must, on grounds of literary probability, have been added before the record was closed, we may content ourselves here with saying that some incident must certainly have been narrated which should have realized the twice-repeated promise that Jesus would be seen by His disciples in Galilee.

3. *Document used by St Matthew and St Luke.*—We pass on now to compare with this narrative of St Mark another very early

somewhat different forms. There is the same use of parables from nature, the same incisiveness of speech and employment of paradox, the same demand to sacrifice all to Him and for His cause, the same importunate claim made by Him on the human soul.

But the contrast between the two writers is even more important for our purpose. No one can read through the passages to which we have pointed without feeling the solemn sternness of the great Teacher, a sternness which can indeed be traced here and there in St Mark, but which does not give its tone to the whole of his picture. Here we see Christ standing forth in solitary grandeur, looking with the eyes of another world on a society which is blindly hastening to its dissolution. It may be that if this document had come down to us in its entirety, we should have gathered from it an exaggerated idea of the severity of our Lord's character. Certain it is that as we read over these fragments we are somewhat startled by the predominance of the element of warning, and by the assertion of rules of conduct which seem almost inconsistent with a normal condition of settled social life. The warning to the nation sounded by the Baptist, that God could raise up a new family for Abraham, is heard again and again in our Lord's teaching. Gentile faith puts Israel to shame. The sons of the kingdom will be left outside, while strangers feast with Abraham. Capernaum shall go to perdition; Jerusalem shall be a desolate ruin. The doom of the nation is pronounced; its fate is imminent; there is no ray of hope for the existing constitution of religion and society. As to individuals within the nation, the despised publicans and sinners will find God's favour before the self-satisfied representatives of the national religion. In such a condition of affairs it is hardly surprising to find that the great and stern Teacher congratulates the poor and has nothing but pity for the rich; that He has no interest at all in comfort or property. If a man asks you for anything, give it him; if he takes it without asking, do not seek to recover it. Nothing material is worth a thought; anxiety is folly; your Father, who feeds His birds and clothes His flowers, will feed and clothe you. Rise to the height of your sonship to God; love your enemies even as God loves His; and if they kill you, God will care for you still; fear them not, fear only Him who loves you all.

Here is a new philosophy of life, offering solid consolation amid the ruin of a world. We have no idea who the disciple may have been who thus seized upon the sadder elements of the teaching of Jesus; but we may well think of him as one of those who were living in Palestine in the dark and threatening years of internecine strife, when the Roman eagles were gathering round their prey, and the first thunder was muttering of the storm which was to leave Jerusalem a heap of stones. At such a moment the warnings of our Lord would claim a large place in a record of His teaching, and the strange comfort which He had offered would be the only hope which it would seem possible to entertain.

4. *Additions by the Gospel according to St Matthew.*—We have now examined in turn the two earliest pictures which have been preserved to us of the life of Jesus Christ. The first portrays Him chiefly by a record of His actions, and illustrates His strength, His sympathy, and His freedom from conventional restraints. It shows the disturbing forces of these characteristics, which aroused the envy and apprehension of the leaders of religion. The first bright days of welcome and popularity are soon clouded: the storm begins to lower. More and more the Master devotes Himself to the little circle of His disciples, who are taught that they, as well as He, can only triumph through defeat, succeed by failure, and find their life in giving it away. At length, in fear of religious innovations and pretending that He is a political usurper, the Jews deliver Him up to die on a Roman cross. The last page of the story is torn away, just at the point when it has been declared that He is alive again and about to show Himself to His disciples. The second picture has a somewhat different tone. It is mainly a record of teaching, and the teaching is for the most part stern and paradoxical. It might be described as revolutionary. It is

good tidings to the poor: it sets no store on property and material comfort: it pities the wealthy and congratulates the needy. It reverses ordinary judgments and conventional maxims of conduct. It proclaims the downfall of institutions, and compares the present blind security to the days of Noah and of Lot: a few only shall escape the coming overthrow. Yet even in this sterner setting the figure portrayed is unmistakably the same. There is the same strength, the same tender sympathy, the same freedom from convention: there is the same promise to fulfil the highest hopes, the same surrender of life, and the same imperious demand on the lives of others. No thoughtful man who examines and compares these pictures can doubt that they are genuine historical portraits of a figure wholly different from any which had hitherto appeared on the world's stage. They are beyond the power of human invention. They are drawn with a simplicity which is their own guarantee. If we had these, and these only, we should have an adequate explanation of the beginnings of Christianity. There would still be a great gap to be filled before we reached the earliest letters of St Paul; but yet we should know what the Apostle meant when he wrote to "the Church of the Thessalonians in God the Father and the Lord Jesus Christ," and reminded them how they had "turned from idols to serve the living and true God, and to wait for His Son from heaven, whom He raised from the dead, even Jesus who delivereth us from the wrath to come."

If these two narratives served the first needs of Christian believers, it is easy to see that they would presently stimulate further activity in the same direction. For, to begin with, they were obviously incomplete: many incidents and teachings known to the earliest disciples found no place in them; and they contained no account of the life of Jesus Christ before His public ministry, no record of His pedigree, His birth or His childhood. Secondly, their form left much to be desired; for one of them at least was rude in style, sometimes needlessly repetitive and sometimes brief to obscurity. Moreover, the very fact that there were two challenged a new and combined work which perhaps should supersede both.

Accordingly, some years after the fall of Jerusalem—we cannot tell the exact date or the author's name—the book which we call the Gospel according to St Matthew *The Gospel of St Matthew* was written to give the Palestinian Christians a full account of Jesus Christ, which should present Him as the promised Messiah, fulfilling the ancient Hebrew prophecies, proclaiming the kingdom of heaven, and founding the Christian society. The writer, takes St Mark as his basis, but he incorporates into the story large portions of the teaching which he has found in the other document. He groups his materials with small regard to chronological order; and he fashions out of the many scattered sayings of our Lord continuous discourses, everywhere bringing like to like, with considerable literary art. A wide knowledge of the Old Testament supplies him with a text to illustrate one incident after another; and so deeply is he impressed with the correspondence between the life of Christ and the words of ancient prophecy, that he does not hesitate to introduce his quotations by the formula "that it might be fulfilled which was spoken by the prophet."

His Hebrew instinct leads him to begin with a table of genealogy, artificially constructed in groups of fourteen generations—from Abraham to David, from David to the Captivity, and from the Captivity to the Christ. The royal descent of the Messiah is thus declared, and from the outset His figure is set against the background of the Old Testament. He then proceeds to show that, though His lineage is traced through Joseph's ancestors, He was but the adopted son of Joseph, and he tells the story of the Virgin-birth. The coming of the Child draws Eastern sages to his cradle and fills the court of Herod with suspicious fears. The cruel tyrant kills the babes of Bethlehem, but the Child has been withdrawn by a secret flight into Egypt, whence he presently returns to the family home at Nazareth in Galilee. All this is necessarily fresh material, for the other records had dealt only with the period of public ministry. We have no knowledge of the source from which it was drawn. From the historical standpoint

its value must be appraised by the estimate which is formed of the writer's general trustworthiness as a narrator, and by the extent to which the incidents receive confirmation from other quarters. The central fact of the Virgin-birth, as we shall presently see, has high attestation from another early writer.

The next addition which St Matthew's Gospel makes to our knowledge is of a different kind. It consists of various important sayings of our Lord, which are combined with discourses found in the second document and are worked up into the great utterance which we call the Sermon on the Mount. Such grouping of materials is a feature of this Gospel, and was possibly designed for purposes of public instruction; so that continuous passages might be read aloud in the services of the Church, just as passages from the Old Testament were read in the Jewish synagogues. This motive would account not only for the arrangement of the material, but also for certain changes in the language which seem intended to remove difficulties, and to interpret what is ambiguous or obscure. An example of such interpretation meets us at the outset. The startling saying, "Blessed are ye poor," followed by the woe pronounced upon the rich, might seem like a condemnation of the very principle of property; and when the Christian Church had come to be organized as a society containing rich and poor, the heart of the saying was felt to be more truly and clearly expressed in the words, "Blessed are the poor in spirit." This interpretative process may be traced again and again in this Gospel, which frequently seems to reflect the definite tradition of a settled Church.

Apart from the important parables of the tares, the pearl and the net, the writer adds little to his sources until we come to the remarkable passage in ch. xvi., in which Peter the Rock is declared to be the foundation of the future Church, and is entrusted with the keys of the kingdom of heaven. The function of "binding and loosing," here assigned to him, is in identical terms assigned to the disciples generally in a passage in ch. xviii. in which for the second time we meet with the word "Church"—a word not found elsewhere in the Gospels. There is no sufficient ground for denying that these sayings were uttered by our Lord, but the fact that they were now first placed upon record harmonizes with what has been said already as to the more settled condition of the Christian society which this Gospel appears to reflect.

The parables of the two debtors, the labourers in the vineyard, the two sons, the ten virgins, the sheep and goats, are recorded only by this evangelist. But by way of incident he has almost nothing to add till we come to the closing scenes. The earthquake at the moment of our Lord's death and the subsequent appearance of departed saints are strange traditions unattested by other writers. The same is to be said of the soldiers placed to guard the tomb, and of the story that they had been bribed to say that the sacred body had been stolen while they slept. On the other hand, the appearance of the risen Christ to the women may have been taken from the lost pages of St Mark, being the sequel to the narrative which is broken off abruptly in his Gospel: and it is not improbable that St Mark's Gospel was the source of the great commission to preach and baptize with which St Matthew closes, though the wording of it has probably been modified in accordance with a settled tradition.

The work which the writer of this Gospel thus performed received the immediate sanction of a wide acceptance. It met a definite spiritual need. It presented the Gospel in a suitable form for the edification of the Church; and it confirmed its truth by constant appeals to the Old Testament scriptures, thus manifesting its intimate relation with the past as the outcome of a long preparation and as the fulfilment of a Divine purpose. No Gospel is so frequently quoted by the early post-apostolic writers: none has exercised a greater influence upon Christianity, and consequently upon the history of the world.

Yet from the purely historical point of view its evidential value is not the same as that of St Mark. Its facts for the most part are simply taken over from the earlier evangelist, and the historian must obviously prefer the primary source. Its true importance lies in its attestation of the genuineness of the earlier

portraits to which it has so little to add, in its recognition of the relation of Christ to the whole purpose of God as revealed in the Old Testament, and in its interpretation of the Gospel message in its bearing on the living Church of the primitive days.

5. *Additions by St Luke.*—While the needs of Jewish believers were amply met by St Matthew's Gospel, a like service was rendered to Gentile converts by a very different writer. St Luke was a physician who had accompanied St Paul on his missionary journeys. He undertook a history of the beginnings of Christianity, two volumes of which have come down to us, entitled the Gospel and the Acts of the Apostles. His Gospel, like St Matthew's, is founded on St Mark, with the incorporation of large portions of the second document of which we have spoken above. But the way in which the two writers have used the same materials is strikingly different. In St Matthew's Gospel the original sources are frequently blended: the incidents of St Mark are rearranged and often grouped afresh according to subject matter: harsh and ambiguous sentences of both documents are toned down or interpreted. St Luke, on the contrary, chooses between parallel stories of his two sources, preferring neither to duplicate nor to combine: he incorporates St Mark in continuous sections, following him alone for a time, then leaving him entirely, and then returning to introduce a new block of his narrative. He modifies St Mark's style very freely, but he makes less change in the recorded words of our Lord, and he adheres more closely to the original language of the second document.

In his first two chapters he gives an account of the birth and childhood of St John the Baptist and of our Lord Himself, gathered perhaps directly from the traditions of the Holy Family, and written in close imitation of the sacred stories of the Old Testament which were familiar to him in their Greek translation. The whole series of incidents differ from that which we find in St Matthew's Gospel, but there is no direct variance between them. The two narratives are in agreement as to the central fact of the Virgin-birth. St Luke gives a table of genealogy which is irreconcilable with the artificial table of St Matthew's Gospel, and which traces our Lord's ancestry up to Adam, "which was the son of God."

The opening scene of the Galilean ministry is the discourse at Nazareth, in which our Lord claims to fulfil Isaiah's prophecy of the proclamation of good tidings to the poor. The same prophecy is alluded to in His reply to the Baptist's messengers which is incorporated subsequently from the second document. The scene ends with the rejection of Christ by His own townsfolk, as in the parallel story of St Mark which St Luke does not give. It is probable that St Luke found this narrative in the second document, and chose it after his manner in preference to the less instructive story in St Mark. He similarly omits the Marcan account of the call of the fishermen, substituting the story of the miraculous draught. After that he follows St Mark alone, until he introduces after the call of the twelve apostles the sermon which begins with the beatitudes and woes. This is from the second document, which he continues to use, and that without interruption (if we may venture to assign to it the raising of the widow's son at Nain and the anointing by the sinful woman in the Pharisee's house), until he returns to incorporate another section from St Mark.

This in turn is followed by the most characteristic section of his Gospel (ix. 51–xviii. 14), a long series of incidents wholly independent of St Mark, and introduced as belonging to the period of the final journey from Galilee to Jerusalem. Much of this material is demonstrably derived from the second document; and it is quite possible that the whole of it may come from that source. There are special reasons for thinking so in regard to certain passages, as for example the mission of the seventy disciples and the parable of the good Samaritan, although they are not contained in St Matthew's Gospel.

For the closing scenes at Jerusalem St Luke makes considerable additions to St Mark's narrative: he gives a different account of the Last Supper, and he adds the trial before Herod and the

*Character-
istic Section
of St Luke's
Gospel.*

incident of the penitent robber. He appears to have had no information as to the appearance of the risen Lord in Galilee, and he accordingly omits from his reproduction of St Mark's narrative the twice-repeated promise of a meeting with the disciples there. He supplies, however, an account of the appearance to the two disciples at Emmaus and to the whole body of the apostles in Jerusalem.

St Luke's use of his two main sources has preserved the characteristics of both of them. The sternness of certain passages, which has led some critics to imagine that he was an Ebionite, is mainly, if not entirely, due to his faithful reproduction of the language of the second document. The key-note of his Gospel is universality: the mission of the Christ embraces the poor, the weak, the despised, the heretic and the sinful: it is good tidings to all mankind. He tells of the devotion of Mary and Martha, and of the band of women who ministered to our Lord's needs and followed Him to Jerusalem: he tells also of His kindness to more than one sinful woman. Zacchaeus the publican and the grateful Samaritan leper further illustrate this characteristic. Writing as he does for Gentile believers he omits many details which from their strongly Jewish cast might be unintelligible or uninteresting. He also modifies the harshness of St Mark's style, and frequently recasts his language in reference to diseases. From an historical point of view his Gospel is of high value. The proved accuracy of detail elsewhere, as in his narration of events which he witnessed in company with St Paul, enhances our general estimation of his work. A trustworthy observer and a literary artist, the one non-Jewish evangelist has given us—to use M. Renan's words—"the most beautiful book in the world."

6. *Additions by St John.*—We come lastly to consider what addition to our knowledge of Christ's life and work is made by the Fourth Gospel. St Mark's narrative of our Lord's ministry and passion is so simple and straightforward that it satisfies our historical sense. We trace a natural development in it: we seem to see why with such power and such sympathy He necessarily came into conflict with the religious leaders of the people, who were jealous of the influence which He gained and were scandalized by His refusal to be hindered in His mission of mercy by rules and conventions to which they attached the highest importance. The issue is fought out in Galilee, and when our Lord finally journeys to Jerusalem He knows that He goes there to die. The story is so plain and convincing in itself that it gives at first sight an impression of completeness. This impression is confirmed by the Gospels of St Matthew and St Luke, which though they add much fresh material do not disturb the general scheme presented by St Mark. But on reflection we are led to question the sufficiency of the account thus offered to us. Is it probable, we ask, that our Lord should have neglected the sacred custom in accordance with which the pious Jew visited Jerusalem several times each year for the observance of the divinely appointed feasts? It is true that St Mark does not break his narrative of the Galilean ministry to record such visits: but this does not prove that such visits were not made. Again, is it probable that He should have so far neglected Jerusalem as to give it no opportunity of seeing Him and hearing His message until the last week of His life? If the writers of the other two Gospels had no means at their disposal for enlarging the narrow framework of St Mark's narrative by recording definite visits to Jerusalem, at least they preserve to us words from the second document which seem to imply such visits: for how else are we to explain the pathetic complaint, "Jerusalem, Jerusalem, how often would I have gathered thee, as a hen gathereth her chickens under her wings; but ye would not"?

St John's Gospel meets our questionings by a wholly new series of incidents and by an account of a ministry which is concerned mainly not with Galileans but with Judaeans, and which centres in Jerusalem. It is carried on to a large extent concurrently with the Galilean ministry: it is not continuous, but is taken up from feast to feast as our Lord visits the sacred city at the times of its greatest religious activity. It differs in character from the Galilean ministry: for among the simple, unsophisticated folk of Galilee Jesus presents Himself as a healer

and helper and teacher, keeping in the background as far as possible His claim to be the Messiah; whereas in Jerusalem His authority is challenged at His first appearance, the element of controversy is never absent, His relation to God is from the outset the vital issue, and consequently His Divine claim is of necessity made explicit. Time after time His life is threatened before the feast is ended, and when the last passover has come we can well understand, what was not made sufficiently clear in the brief Marcan narrative, why Jerusalem proved so fatally hostile to His Messianic claim.

The Fourth Gospel thus offers us a most important supplement to the limited sketch of our Lord's life which we find in the Synoptic Gospels. Yet this was not the purpose which *The Purpose* led to its composition. That purpose is plainly stated of *St John's Gospel* by the author himself: "These things have been written that ye may believe that Jesus Christ is the Son of God, and that believing ye may have life in His name." His avowed aim is, not to write history, but to produce conviction. He desires to interpret the coming of Jesus Christ into the world, to declare whence and why He came, and to explain how His coming, as light in the midst of darkness, brought a crisis into the lives of all with whom He came in contact. The issue of this crisis in His rejection by the Jews at Jerusalem is the main theme of the book.

St John's prologue prepares us to find that he is not writing for persons who require a succinct narrative of facts, but for those who having such already in familiar use are asking deep questions as to our Lord's mission. It goes back far behind human birth or lines of ancestry. It begins, like the sacred story of creation, "In the beginning." The Book of Genesis had told how all things were called into existence by a Divine utterance: "God said, Let there be . . . and there was." The creative Word had been long personified by Jewish thought, especially in connexion with the prophets to whom "the Word of the Lord" came. "In the beginning," then, St John tells us, the Word was—was with God—yea, was God. He was the medium of creation, the source of its light and its life—especially of that higher life which finds its manifestation in men. So He was in the world, and the world was made by Him, and yet the world knew Him not. At length He came, came to the home which had been prepared for Him, but His own people rejected Him. But such as did receive Him found a new birth, beyond their birth of flesh and blood: they became children of God, were born of God. In order thus to manifest Himself He had undergone a human birth: "the Word was made flesh, and dwelt among us, and we beheld His glory"—the glory, as the evangelist has learned to see, of the Father's only-begotten Son, who has come into the world to reveal to men that God whom "no man hath ever seen." In these opening words we are invited to study the life of Christ from a new point of view, to observe His self-manifestation and its issue. The evangelist looks back across a period of half a century, and writes of Christ not merely as he saw Him in those far-off days, but as he has come by long experience to think and speak of Him. The past is now filled with a glory which could not be so fully perceived at the time, but which, as St John tells, it was the function of the Holy Spirit to reveal to Christ's disciples.

The first name which occurs in this Gospel is that of John the Baptist. He is even introduced into the prologue which sketches in general terms the manifestation of the Divine Word: "There was a man sent from God, whose name was John: he came for witness, to witness to the Light, that through him all might believe." This witness of John holds a position of high importance in this Gospel. His mission is described as running on for a while concurrently with that of our Lord, whereas in the other Gospels we have no record of our Lord's work until John is cast into prison. It is among the disciples of the Baptist on the banks of the Jordan that Jesus finds His first disciples. The Baptist has pointed Him out to them in striking language, which recalls at once the symbolic ritual of the law and the spiritual lessons of the prophets: "Behold, the Lamb of God, which taketh away the sin of the world."

Soon afterwards at Cana of Galilee Jesus gives His first "sign," as the evangelist calls it, in the change of water into wine to supply the deficiency at a marriage feast. This scene has all the happy brightness of the early Galilean ministry which St Mark records. It stands in sharp contrast with the subsequent appearance of Jesus in Jerusalem at the Passover, when his first act is to drive the traders from the Temple courts. In this He seems to be carrying the Baptist's stern mission of purification from the desert into the heart of the sacred city, and so fulfilling, perhaps consciously, the solemn prophecy of Malachi which opens with the words: "Behold, I will send My Messenger, and He shall prepare the way before Me; and the Lord whom ye seek shall suddenly come to His Temple" (Mal. iii. 1-5). This significant action provokes a challenge of His authority, which is answered by a mysterious saying, not understood at the time, but interpreted afterwards as referring to the Resurrection. After this our Lord was visited secretly by a Pharisee named Nicodemus, whose advances were severely met by the words, "Except a man be born again, he cannot see the kingdom of God." When Nicodemus objected that this was to demand a physical impossibility, he was answered that the new birth was "of water and spirit"—words which doubtless contained a reference to the mission of the Baptist and to his prophecy of One who should baptize with the Holy Spirit. Towards the end of this conversation the evangelist passes imperceptibly from reporting the words of the Lord into an interpretation or amplification of them, and in language which recalls the prologue he unfolds the meaning of Christ's mission and indicates the crisis of self-judgment which necessarily accompanies the manifestation of the Light to each individual. When he resumes his narrative the Lord has left Jerusalem, and is found baptizing disciples, in even greater numbers than the Baptist himself. Though Jesus did not personally perform the rite, it is plain once again that in this early period He closely linked His own mission with that of John the Baptist. When men hinted at a rivalry between them, John plainly declared "He must increase, and I must decrease": and the reply of Jesus was to leave Judaea for Galilee.

Away from the atmosphere of contention we find Him manifesting the same broad sympathy and freedom from convention which we have noted in the other Gospels, especially in that of St Luke. He converses with a woman, with a woman moreover who is a Samaritan, and who is of unchaste life. He offers her the "living water" which shall supply all her needs: she readily accepts Him as the expected Messiah, and He receives a welcome from the Samaritans. He passes on to Galilee, where also He is welcomed, and where He performs His second "sign," healing the son of one of Herod's courtiers.

But St John's interest does not lie in Galilee, and he soon brings our Lord back to Jerusalem on the occasion of a feast. The Baptist's work is now ended; and, though Jesus still appeals to the testimony of John, the new conflict with the Jewish authorities shows that He is moving now on His own independent and characteristic lines. In cleansing the Temple He had given offence by what might seem an excess of rigour: now, by healing a sick man and bidding him carry his bed on the Sabbath, He offended by His laxity. He answered His accusers by the brief but pregnant sentence: "My Father worketh even until now, and I work." They at once understood that He thus claimed a unique relation to God, and their antagonism became the more intense: "the Jews therefore sought the more to kill Him, because He had not only broken the Sabbath, but had also said that God was His own Father, making Himself equal to God." His first reply is then expanded to cover the whole region of life. The Son beholds the Father at work, and works concurrently, doing nothing of Himself. He does the Father's will. The very principle of life is entrusted to Him. He quickens, and He judges. As Son of Man He judges man.

The next incident is the feeding of the five thousand, which belongs to the Galilean ministry and is recorded by the three other evangelists. St John's purpose in introducing it is not historical but didactic. It is made the occasion of instruction as to

the heavenly food, the flesh and blood of Him who came down from heaven. This teaching leads to a conflict with certain Judaeans who seem to have come from Jerusalem, and it proves a severe test even to the faith of disciples.

The feast of tabernacles brings fresh disputes in Jerusalem, and an attempt is made to arrest Jesus. A climax of indignation is reached when a blind man is healed at the pool of Siloam on the sabbath day. At the feast of the dedication a fresh effort at arrest was made, and Jesus then withdrew beyond the Jordan. Here He learned of the sickness of Lazarus, and presently He returned and came to Bethany to raise him from the dead. The excitement produced by this miracle led to yet another attack, destined this time to be successful, on the life of Jesus. The Passover was at hand, and the last supper of our Lord with His disciples on the evening before the Passover lamb was killed is made the occasion of the most inspiring consolations. Our Lord interprets His relation to the disciples by the figure of a tree and its branches—He is the whole of which they are the parts; He promises the mission of the Holy Spirit to continue His work in the world; and He solemnly commends to His Father the disciples whom He is about to leave.

The account of the trial and the crucifixion differs considerably from the accounts given in the other Gospels. St John's narratives are in large part personal memories, and in more than one incident he himself figures as the unnamed disciple "whom Jesus loved." In the Resurrection scenes he also gives incidents in which he has played a part; and the appearances of the risen Lord are not confined either to Jerusalem or to Galilee, but occur in both localities.

If we ask what is the special contribution to history, apart from theology, which St John's Gospel makes, the answer would seem to be this—that beside the Galilean ministry reported by St Mark there was a ministry to "Jews" (Judaeans) in Jerusalem, not continuous, but occasional, taken up from time to time as the great feasts came round; that its teaching was widely different from that which was given to Galileans, and that the situation created was wholly unlike that which arose out of the Galilean ministry. The Galilean ministry opens with enthusiasm, ripening into a popularity which even endangers a satisfactory result. Where opposition manifests itself, it is not native opposition, but comes from religious teachers who are parts of a system which centres in Jerusalem, and who are sometimes expressly noted as having come from Jerusalem. The Jerusalem ministry on the contrary is never welcomed with enthusiasm. It has to do with those who challenge it from the first. There is no atmosphere of simplicity and teachableness which rejoices in the manifestation of power and sympathy and liberty. It is a witness delivered to a hostile audience, whether they will hear or no. Ultimate issues are quickly raised: keen critics see at once the claims which underlie deeds and words, and the claims in consequence become explicit: the relation of the teacher to God Himself is the vital interest. The conflict which thus arose explains what St Mark's succinct narrative had left unexplained—the fatal hostility of Jerusalem. It may have been a part of St John's purpose to give this explanation, and to make other supplements or corrections where earlier narratives appeared to him incomplete or misleading. But he says nothing to indicate this, while on the other hand he distinctly proclaims that his purpose is to produce and confirm conviction of the divine claims of Jesus Christ.

For bibliography see BIBLE; CHRISTIANITY; CHURCH HISTORY; and the articles on the separate Gospels. (J. A. R.)

JET (Fr. *jais*, Ger. *Gagat*), a substance which seems to be a peculiar kind of lignite or anthracite; often cut and polished for ornaments. The word "jet" probably comes, through O. Fr. *jaiet*, from the classical *gagates*, a word which was derived, according to Pliny, from Gagae, in Lycia, where jet, or a similar substance, was originally found. Jet was used in Britain in prehistoric times; many round barrows of the Bronze age have yielded jet beads, buttons, rings, armlets and other ornaments. The abundance of jet in Britain is alluded to by Caius Julius

Solinus (*N.* 3rd century) and jet ornaments are found with Roman relics in Britain. Probably the supply was obtained from the coast of Yorkshire, especially near Whitby, where nodules of jet were formerly picked up on the shore. Caedmon refers to this jet, and at a later date it was used for rosary beads by the monks of Whitby Abbey.

The Whitby jet occurs in irregular masses, often of lenticular shape, embedded in hard shales known as jet-rock. The jet-rock series belongs to that division of the Upper Lias which is termed the zone of *Ammonites serpentinus*. Microscopic examination of jet occasionally reveals the structure of coniferous wood, which A. C. Seward has shown to be araucarian. Probably masses of wood were brought down by a river, and drifted out to sea, where becoming water-logged they sank, and became gradually buried in a deposit of fine mud, which eventually hardened into shale. Under pressure, perhaps assisted by heat, and with exclusion of air, the wood suffered a peculiar kind of decomposition, probably modified by the presence of salt water, as suggested by Percy E. Spielmann. Scales of fish and other fossils of the jet-rock are frequently impregnated with bituminous products, which may replace the original tissues. Drops of liquid bitumen occur in the cavities of some fossils, whilst inflammable gas is not uncommon in the jet-workings, and petroleum may be detected by its smell. Iron pyrites is often associated with the jet.

Formerly sufficient jet was found in loose pieces on the shore, set free by the disintegration of the cliffs, or washed up from a submarine source. When this supply became insufficient, the rock was attacked by the jet-workers; ultimately the workings took the form of true mines, levels being driven into the shales, not only at their outcrop in the cliffs but in some of the inland dales of the Yorkshire moorlands, such as Eskdale. The best jet has a uniform black colour, and is hard, compact and homogeneous in texture, breaking with a conchoidal fracture. It must be tough enough to be readily carved or turned on the lathe, and sufficiently compact in texture to receive a high polish. The final polish was formerly given by means of rouge, which produces a beautiful velvety surface, but rotten-stone and lampblack are often employed instead. The softer kinds, not capable of being freely worked, are known as bastard jet. A soft jet is obtained from the estuarine series of the Lower Oolites of Yorkshire.

Much jet is imported from Spain, but it is generally less hard and lustrous than true Whitby jet. In Spain the chief locality is Villaviciosa, in the province of Asturias. France furnishes jet, especially in the department of the Aude. Much jet, too, occurs in the Lias of Wurttemberg, and works have been established for its utilization. In the United States jet is known at many localities but is not systematically worked. Pennsylvanian anthracite, however, has been occasionally employed as a substitute. In like manner Scotch cannel coal has been sometimes used at Whitby. Imitations of jet, or substitutes for it, are furnished by vulcanite, glass, black obsidian and black onyx, or stained chalcedony. Jet is sometimes improperly termed black amber, because like amber, though in less degree, it becomes electric by friction.

See P. E. Spielmann, "On the Origin of Jet," *Chemical News* (Dec. 14, 1906); C. Fox-Strangways, "The Jurassic Rocks of Britain, Vol. 1. Yorkshire," *Mem. Geol. Surv.* (1892); J. A. Bower, "Whitby Jet and its Manufacture," *Journ. Soc. Arts* (1874, vol. xxii. p. 80).

JETHRO (or **JETHER**, Exod. iv. 18), the priest of Midian, in the Bible, whose daughter Zipporah became the wife of Moses. He is known as Hobab the son of Reuel the Kenite (Num. x. 29; Judg. iv. 11), and once as Reuel (Exod. ii. 18); and if Zipporah is the wife of Moses referred to in Num. xii. 1, the family could be regarded as Cushite (see **CUSH**). Jethro was the priest of Yahweh, and resided at the sacred mountain where the deity commissioned Moses to deliver the Israelites from Egypt. Subsequently Jethro came to Moses (probably at Kadesh), a great sacrificial feast was held, and the priest instructed Moses in legislative procedure; Exod. xviii. 27 (see **EXODUS**) and Num. x. 30 imply that the scene was not Sinai. Jethro was invited to accompany the people into the promised land, and later, we find his clan settling in the south of Judah (Judg. i. 16); see **KENITES**. The traditions agree in representing the kin of Moses as related to the mixed tribes of the south of Palestine (see **EDOM**) and in ascribing to the family an important share in the early development of the worship of Yahweh. Cheyne suggests that the names of Hobab and of Jonadab the father of the Rechabites (*q.v.*) were originally identical (*Ency. Bib.* ii. col. 2101).

JETTY. The term jetty, derived from Fr. *jetée*, and therefore signifying something "thrown out," is applied to a variety of structures employed in river, dock and maritime works, which

are generally carried out in pairs from river banks, or in continuation of river channels at their outlets into deep water; or out into docks, and outside their entrances; or for forming basins along the sea-coast for ports in tideless seas. The forms and construction of these jetties are as varied as their uses; for though they invariably extend out into water, and serve either for directing a current or for accommodating vessels, they are sometimes formed of high open timber-work, sometimes of low solid projections, and occasionally only differ from breakwaters in their object.

Jetties for regulating Rivers.—Formerly jetties of timber-work were very commonly extended out, opposite one another, from each bank of a river, at intervals, to contract a wide channel, and by concentration of the current to produce a deepening of the central channel; or sometimes mounds of rubble stone, stretching down the foreshore from each bank, served the same purpose. As, however, this system occasioned a greater scour between the ends of the jetties than in the intervening channels, and consequently produced an irregular depth, it has to a great extent been superseded by longitudinal training works, or by dipping cross dikes pointing somewhat upstream (see **RIVER ENGINEERING**).

Jetties at Docks.—Where docks are given sloping sides, openwork timber jetties are generally carried across the slope, at the ends of which vessels can lie in deep water (fig. 1); or more solid structures

FIG. 1.—Timber Jetty across Dock Slope.

are erected over the slope for supporting coal-tips. Pilework jetties are also constructed in the water outside the entrances to docks on each side, so as to form an enlarging trumpet-shaped channel between the entrance, lock or tidal basin and the approach channel, in order to guide vessels in entering or leaving the docks. Solid jetties, moreover, lined with quay walls, are sometimes carried out into a wide dock, at right angles to the line of quays at the side, to enlarge the accommodation; and they also serve, when extended on a large scale from the coast of a tideless sea under shelter of an outlying breakwater, to form the basins in which vessels lie when discharging and taking in cargoes in such a port as Marseilles (see **DOCK**).

Jetties at Entrances to Jetty Harbours.—The approach channel to some ports situated on sandy coasts is guided and protected across the beach by parallel jetties, made solid up to a little above low water of neap tides, on which open timber-work is erected, provided with a planked platform at the top raised above the highest tides. The channel between the jetties was originally maintained by tidal scour from low-lying areas close to the coast, and subsequently by the current from sluicing basins; but it is now often considerably deepened by sand-pump dredging. It is protected to some extent by the solid portion of the jetties from the inroad of sand from the adjacent beach, and from the levelling action of the waves; whilst the upper open portion serves to indicate the channel, and to guide the vessels if necessary (see **HARBOUR**). The bottom part of the older jetties, in such long-established jetty ports as Calais, Dunkirk and Ostend, was composed of clay or rubble stone, covered on the top by fascine-work or pitching; but the deepening of the jetty channel by dredging, and the need which arose for its enlargement, led to the reconstruction of the jetties at these ports. The new jetties at Dunkirk were founded in the sandy beach, by the aid of compressed air, at a depth of 22½ ft. below low water of spring tides; and their solid masonry portion, on a concrete foundation, was raised 5½ ft. above low water of neap tides (fig. 2).

Jetties at Lagoon Outlets.—A small tidal rise spreading tidal water over a large expanse of lagoon or inland back-water causes the influx and efflux of the tide to maintain a deep channel through a narrow outlet; but the issuing current on emerging from the outlet, being

no longer confined by a bank on each side, becomes dispersed, and owing to the reduction of its scouring force, is no longer able at a moderate distance from the shore effectually to resist the action of the waves and littoral currents tending to form a continuous beach in front of the outlet. Hence a bar is produced which diminishes the available depth in the approach channel. By carrying out a solid jetty over the bar, however, on each side of the outlet, the tidal currents are concentrated in the channel across the bar, and lower it by scour. Thus the available depth of the approach channels to Venice through the Malamocco and Lido outlets from the Venetian lagoon have been deepened several feet over their bars by jetties of rubble stone surmounted by a small superstructure (fig. 3), carried out across the foreshore into deep water on both sides of the channel. Other examples are provided by the long jetties extend'd into the sea in front of the entrance to Charleston harbour, formerly constructed of fascines, weighted with stone and

SCALE 400.

both sides of the channel. Other examples are provided by the long jetties extend'd into the sea in front of the entrance to Charleston harbour, formerly constructed of fascines, weighted with stone and

SCALE 400.

FIG. 3.—Lido Outlet Jetty, Venice.

logs, but subsequently of rubble stone, and by the two converging rubble jetties carried out from each shore of Dublin bay for deepening the approach to Dublin harbour.

Jetties at the Outlet of Tideless Rivers. Jetties have been constructed on each side of the outlet of some of the rivers flowing into the Baltic, with the objects of prolonging the scour of the river and protecting the channel from being shoaled by the littoral drift along the shore. The most interesting application of parallel jetties is in lowering the bar in front of one of the mouths of a deltaic river flowing into a tideless sea, by extending the scour of the river out to the bar by a virtual prolongation of its banks. Jetties prolonging the Sulina branch of the Danube into the Black Sea, and the south pass of the Mississippi into the Gulf of Mexico (fig. 4),

SCALE 400.

FIG. 4.—Mississippi South Pass Outlet Jetty.

formed of rubble stone and concrete blocks, and fascine mattresses weighted with stone and surmounted with large concrete blocks respectively, have enabled the discharge of these rivers to scour away the bars obstructing the access to them; and they have also carried the sediment-bearing waters sufficiently far out to come under the influence of littoral

currents, which, by conveying away some of the sediment, postpone the eventual formation of a fresh bar farther out (see RIVER ENGINEERING). **Jetties at the Mouth of Tidal Rivers.**—Where a river is narrow near its mouth, and its discharge is generally feeble, the sea is liable on an exposed coast, when the tidal range is small, to block up its outlet during severe storms. The river is thus forced to seek another exit at a weak spot of the beach, which along a low coast may be at some distance off; and this new outlet in its turn may be blocked up, so that the river from time to time shifts the position of its mouth. This inconvenient cycle of changes may be stopped by fixing the outlet of the river at a suitable site, by carrying a jetty on each side of this outlet across the beach, thereby concentrating its discharge in a definite channel and protecting the mouth from being blocked up by littoral drift. This system was long ago applied to the

shifting outlet of the river Yare to the south of Yarmouth, and has also been successfully employed for fixing the wandering mouth of the Adur near Shoreham, and of the Adour flowing into the Bay of Biscay below Bayonne. When a new channel was cut across the Hook of Holland to provide a straighter and deeper outlet channel for the river Maas, forming the approach channel to Rotterdam, low, broad, parallel jetties, composed of fascine mattresses weighted with stone (fig. 5), were carried across the foreshore into the sea on either side of the new mouth of the river, to protect the jetty channel from littoral drift, and cause the discharge of the river to maintain it out to deep water (see RIVER ENGINEERING). The channel, also, beyond the outlet of the river Nervion into the Bay of Biscay has

SCALE 400.

FIG. 5.—River Maas Outlet, North Jetty

been regulated by jetties; and by extending the south-west jetty out for nearly half a mile with a curve concave towards the channel the outlet has not only been protected to some extent from the easterly drift, but the bar in front has been lowered by the scour produced by the discharge of the river following the concave bend of the south-west jetty. As the outer portion of this jetty was exposed to westerly storms from the Bay of Biscay before the outer harbour was constructed, it has been given the form and strength of a breakwater situated in shallow water (fig. 6). (L. F. V.-H.)

JEVER, a town of Germany, in the grand-duchy of Oldenburg, 13 m. by rail N.W. of Wilhelmshaven, and connected with the North Sea by a navigable canal. Pop. (1901), 5486. The chief industries are weaving, spinning, dyeing, brewing and milling; there is also a trade in horses and cattle. The fathers (*Die Getreuen*) of the town used to send an annual birthday present of 101 plovers' eggs to Bismarck, with a dedication in verse.

The castle of Jever was built by Prince Edo Wiemken (d. 1410), the ruler of Jeverland, a populous district which in 1575 came under the rule of the dukes of Oldenburg. In 1603 it passed to the house of Anhalt and was later the property of the empress Catherine II. of Russia, a member of this family. In 1814 it came again into the possession of Oldenburg.

See D. Hohnholz, *Aus Jever's Vorgangenhait* (Jever, 1886); Hagena, *Jeverland bis zum Jahr 1500* (Oldenburg, 1902); and F. W. Riemann, *Geschichte des Jeverlandes* (Jever, 1890).

JEVEROS (JEBEROS, JIBAROS, JIVAROS or GIVAROS), a tribe of South American Indians on the upper Marañon, Peru, where they wander in the forests. The tribe has many branches and there are frequent tribal wars, but they have always united against a common enemy. Juan de Velasco declares them to be faithful, noble and amiable. They are brave and warlike, and

though upon the conquest of Peru they temporarily submitted, a general insurrection in 1599 won them back their liberty. Curious dried human heads, supposed to have been objects of worship, have been found among the Jeveros (see *Ethnol. Soc. Trans.*, 1862, W. Bollaert).

JEVONS, WILLIAM STANLEY (1835-1882), English economist and logician, was born at Liverpool on the 1st of September 1835. His father, Thomas Jevons, a man of strong scientific tastes and a writer on legal and economic subjects, was an iron merchant. His mother was the daughter of William Roscoe. At the age of fifteen he was sent to London to attend University College school. He appears at this time to have already formed the belief that important achievements as a thinker were possible to him, and at more than one critical period in his career this belief was the decisive factor in determining his conduct. Towards the end of 1853, after having spent two years at University College, where his favourite subjects were chemistry and botany, he unexpectedly received the offer of the assayership to the new mint in Australia. The idea of leaving England was distasteful, but pecuniary considerations had, in consequence of the failure of his father's firm in 1847, become of vital importance, and he accepted the post. He left England for Sydney in June 1854, and remained there for five years. At the end of that period he resigned his appointment, and in the autumn of 1859 entered again as a student at University College, London, proceeding in due course to the B.A. and M.A. degrees of the university of London. He now gave his principal attention to the moral sciences, but his interest in natural science was by no means exhausted: throughout his life he continued to write occasional papers on scientific subjects, and his intimate knowledge of the physical sciences greatly contributed to the success of his chief logical work, *The Principles of Science*. Not long after taking his M.A. degree Jevons obtained a post as tutor at Owens College, Manchester. In 1866 he was elected professor of logic and mental and moral philosophy and Cobden professor of political economy in Owens college. Next year he married Harriet Ann Taylor, whose father had been the founder and proprietor of the *Manchester Guardian*. Jevons suffered a good deal from ill health and sleeplessness, and found the delivery of lectures covering so wide a range of subjects very burdensome. In 1876 he was glad to exchange the Owens professorship for the professorship of political economy in University College, London. Travelling and music were the principal recreations of his life; but his health continued bad, and he suffered from depression. He found his professorial duties increasingly irksome, and feeling that the pressure of literary work left him no spare energy, he decided in 1880 to resign the post. On the 13th of August 1882 he was drowned whilst bathing near Hastings. Throughout his life he had pursued with devotion and industry the ideals with which he had set out, and his journal and letters display a noble simplicity of disposition and an unswerving honesty of purpose. He was a prolific writer, and at the time of his death he occupied the foremost position in England both as a logician and as an economist. Professor Marshall has said of his work in economics that it "will probably be found to have more constructive force than any, save that of Ricardo, that has been done during the last hundred years." At the time of his death he was engaged upon an economic work that promised to be at least as important as any that he had previously undertaken. It would be difficult to exaggerate the loss which logic and political economy sustained through the accident by which his life was prematurely cut short.

Jevons arrived quite early in his career at the doctrines that constituted his most characteristic and original contributions to economics and logic. The theory of utility, which became the key-note of his general theory of political economy, was practically formulated in a letter written in 1860; and the germ of his logical principle of the substitution of similars may be found in the view which he propounded in another letter written in 1861, that "philosophy would be found to consist solely in pointing out the likeness of things." The theory of utility above referred to, namely, that the degree of utility of a commodity is some continuous mathematical function of the quantity of the com-

modity available, together with the implied doctrine that economics is essentially a mathematical science, took more definite form in a paper on "A General Mathematical Theory of Political Economy," written for the British Association in 1862. This paper does not appear to have attracted much attention either in 1862 or on its publication four years later in the *Journal of the Statistical Society*; and it was not till 1871, when the *Theory of Political Economy* appeared, that Jevons set forth his doctrines in a fully developed form. It was not till after the publication of this work that Jevons became acquainted with the applications of mathematics to political economy made by earlier writers, notably Antoine Augustin Cournot and H. H. Gossen. The theory of utility was about 1870 being independently developed on somewhat similar lines by Carl Menger in Austria and M. E. L. Walras in Switzerland. As regards the discovery of the connexion between value in exchange and final (or marginal) utility, the priority belongs to Gossen, but this in no way detracts from the great importance of the service which Jevons rendered to English economics by his fresh discovery of the principle, and by the way in which he ultimately forced it into notice. In his reaction from the prevailing view he sometimes expressed himself without due qualification: the declaration, for instance, made at the commencement of the *Theory of Political Economy*, that "value depends entirely upon utility," lent itself to misinterpretation. But a certain exaggeration of emphasis may be pardoned in a writer seeking to attract the attention of an indifferent public. It was not, however, as a theorist dealing with the fundamental data of economic science, but as a brilliant writer on practical economic questions, that Jevons first received general recognition. *A Serious Fall in the Value of Gold* (1863) and *The Coal Question* (1865) placed him in the front rank as a writer on applied economics and statistics; and he would be remembered as one of the leading economists of the 19th century even had his *Theory of Political Economy* never been written. Amongst his economic works may be mentioned *Money and the Mechanism of Exchange* (1875), written in a popular style, and descriptive rather than theoretical, but wonderfully fresh and original in treatment and full of suggestiveness, a *Primer on Political Economy* (1878), *The State in Relation to Labour* (1882), and two works published after his death, namely, *Methods of Social Reform* and *Investigations in Currency and Finance*, containing papers that had appeared separately during his lifetime. The last-named volume contains Jevons's interesting speculations on the connexion between commercial crises and sun-spots. He was engaged at the time of his death upon the preparation of a large treatise on economics and had drawn up a table of contents and completed some chapters and parts of chapters. This fragment was published in 1905 under the title of *The Principles of Economics: a Fragment of a Treatise on the Industrial Mechanism of Society, and other Papers*.

Jevons's work in logic went on *pari passu* with his work in political economy. In 1864 he published a small volume, entitled *Pure Logic: or, the Logic of Quality apart from Quantity*, which was based on Boole's system of logic, but freed from what he considered the false mathematical dress of that system. In the years immediately following he devoted considerable attention to the construction of a logical machine, exhibited before the Royal Society in 1870, by means of which the conclusion derivable from any given set of premisses could be mechanically obtained. In 1866 what he regarded as the great and universal principle of all reasoning dawned upon him; and in 1869 he published a sketch of this fundamental doctrine under the title of *The Substitution of Similars*. He expressed the principle in its simplest form as follows: "Whatever is true of a thing is true of its like," and he worked out in detail its various applications. In the following year appeared the *Elementary Lessons on Logic*, which soon became the most widely read elementary textbook on logic in the English language. In the meantime he was engaged upon a much more important logical treatise, which appeared in 1874 under the title of *The Principles of Science*. In this work Jevons embodied the substance of his earlier works on pure logic and the substitution of similars; he also enunciated

and developed the view that induction is simply an inverse employment of deduction; he treated in a luminous manner the general theory of probability, and the relation between probability and induction; and his knowledge of the various natural sciences enabled him throughout to relieve the abstract character of logical doctrine by concrete scientific illustrations, often worked out in great detail. Jevons's general theory of induction was a revival of the theory laid down by Whewell and criticized by Mill; but it was put in a new form, and was free from some of the non-essential adjuncts which rendered Whewell's exposition open to attack. The work as a whole was one of the most notable contributions to logical doctrine that appeared in Great Britain in the 19th century. His *Studies in Deductive Logic*, consisting mainly of exercises and problems for the use of students, was published in 1880. In 1877 and the following years Jevons contributed to the *Contemporary Review* some articles on J. S. Mill, which he had intended to supplement by further articles, and eventually publish in a volume as a criticism of Mill's philosophy. These articles and one other were republished after Jevons's death, together with his earlier logical treatises, in a volume, entitled *Pure Logic, and other Minor Works*. The criticisms on Mill contain much that is ingenious and much that is forcible, but on the whole they cannot be regarded as taking rank with Jevons's other work. His strength lay in his power as an original thinker rather than as a critic; and he will be remembered by his constructive work as logician, economist and statistician.

See *Letters and Journal of W. Stanley Jevons*, edited by his wife (1886). This work contains a bibliography of Jevons's writings. See also *Logic: History*. (J. N. K.)

JEW, THE WANDERING, a legendary Jew (see *Jews*) doomed to wander till the second coming of Christ because he had taunted Jesus as he passed bearing the cross, saying, "Go on quicker." Jesus is said to have replied, "I go, but thou shalt wait till I return." The legend in this form first appeared in a pamphlet of four leaves alleged to have been printed at Leiden in 1602. This pamphlet relates that Paulus von Eizen (d. 1598), bishop of Schleswig, had met at Hamburg in 1542 a Jew named Ahasuerus (Ahasverus), who declared he was "eternal" and was the same who had been punished in the above-mentioned manner by Jesus at the time of the crucifixion. The pamphlet is supposed to have been written by Chrysostomus Dudulaeus of Westphalia and printed by one Christoff Crutzer, but as no such author or printer is known at this time—the latter name indeed refers directly to the legend—it has been conjectured that the whole story is a myth invented to support the Protestant contention of a continuous witness to the truth of Holy Writ in the person of this "eternal" Jew; he was to form, in his way, a counterpart to the apostolic tradition of the Catholic Church.

The story met with ready acceptance and popularity. Eight editions of the pamphlet appeared in 1602, and the fortieth edition before the end of the following century. It was translated into Dutch and Flemish with almost equal success. The first French edition appeared in 1609, and the story was known in England before 1625, when a parody was produced. Denmark and Sweden followed suit with translations, and the expression "eternal Jew" passed as a current term into Czech. In other words, the story in its usual form spread wherever there was a tincture of Protestantism. In southern Europe little is heard of it in this version, though Rudolph Botoreus, parliamentary advocate of Paris (*Comm. histor.*, 1604), writing in Paris two years after its first appearance, speaks contemptuously of the popular belief in the Wandering Jew in Germany, Spain and Italy.

The popularity of the pamphlet and its translations soon led to reports of the appearance of this mysterious being in almost all parts of the civilized world. Besides the original meeting of the bishop and Ahasuerus in 1542 and others referred back to 1575 in Spain and 1599 at Vienna, the Wandering Jew was stated to have appeared at Prague (1602), at Lübeck (1603), in Bavaria (1604), at Ypres (1623), Brussels (1640), Leipzig (1642), Paris (1644, by the "Turkish Spy"), Stamford (1658), Astrakhan (1672), and Frankenstein (1678). In the next century the

Wandering Jew was seen at Munich (1721), Altbach (1766), Brussels (1774), Newcastle (1790, see Brand, *Pop. Antiquities*, s.v.), and on the streets of London between 1818 and 1830 (see *Athenaeum*, 1866, ii. 561). So far as can be ascertained, the latest report of his appearance was in the neighbourhood of Salt Lake City in 1868, when he is said to have made himself known to a Mormon named O'Grady. It is difficult to tell in any one of these cases how far the story is an entire fiction and how far some ingenious impostor took advantage of the existence of the myth.

The reiterated reports of the actual existence of a wandering being, who retained in his memory the details of the crucifixion, show how the idea had fixed itself in popular imagination and found its way into the 19th-century collections of German legends. The two ideas combined in the story of the restless fugitive akin to Cain and wandering for ever are separately represented in the current names given to this figure in different countries. In most Teutonic languages the stress is laid on the perpetual character of his punishment and he is known as the "everlasting" or "eternal" Jew (Ger. "Ewige Jude"). In the lands speaking a Romance tongue, the usual form has reference to the wanderings (Fr. "le Juif errant"). The English form follows the Romance analogy, possibly because derived directly from France. The actual name given to the mysterious Jew varies in the different versions: the original pamphlet calls him Ahasver, and this has been followed in most of the literary versions, though it is difficult to imagine any Jew being called by the name of the typical anti-Semitic king of the Book of Esther. In one of his appearances at Brussels his name is given as Isaac Laquedem, implying an imperfect knowledge of Hebrew in an attempt to represent Isaac "from of old." Alexandre Dumas also made use of this title. In the *Turkish Spy* the Wandering Jew is called Paul Marrane and is supposed to have suffered persecution at the hands of the Inquisition, which was mainly occupied in dealing with the Marranos, i.e. the secret Jews of the Iberian peninsula. In the few references to the legend in Spanish writings the Wandering Jew is called Juan Espera en Dios, which gives a more hopeful turn to the legend.

Under other names, a story very similar to that given in the pamphlet of 1602 occurs nearly 400 years earlier on English soil. According to Roger of Wendover in his *Flores historiarum* under the year 1228, an Armenian archbishop, then visiting England, was asked by the monks of St Albans about the well-known Joseph of Arimathea, who had spoken to Jesus and was said to be still alive. The archbishop claimed to have seen him in Armenia under the name of Carthaphilus or Cartaphilus, who had confessed that he had taunted Jesus in the manner above related. This Carthaphilus had afterwards been baptized by the name of Joseph. Matthew Paris, in repeating the passage from Roger of Wendover, reported that other Armenians had confirmed the story on visiting St Albans in 1252, and regarded it as a great proof of the Christian religion. A similar account is given in the chronicles of Philippe Mouskès (d. 1243). A variant of the same story was known to Guido Bonati, an astronomer quoted by Dante, who calls his hero or villain Butta Deus because he struck Jesus. Under this name he is said to have appeared at Mugello in 1413 and at Bologna in 1415 (in the garb of a Franciscan of the third order).

The source of all these reports of an ever-living witness of the crucifixion is probably Matthew xvi. 28: "There be some of them that stand here which shall in no wise taste of death till they see the Son of Man coming in his kingdom." As the kingdom had not come, it was assumed that there must be persons living who had been present at the crucifixion; the same reasoning is at the root of the Anglo-Israel belief. These words are indeed quoted in the pamphlet of 1602. Again, a legend was based on John xxi. 20 that the beloved disciple would not die before the second coming; while another legend (current in the 16th century) condemned Malchus, whose ear Peter cut off in the garden of Gethsemane (John xvii. 10), to wander perpetually till the second coming. The legend alleges that he had been so condemned for having scoffed at Jesus. These legends and the

utterance of Matt. xvi. 28 became "contaminated" by the legend of St Joseph of Arimathea and the Holy Grail, and took the form given in Roger of Wendover and Matthew Paris. But there is nothing to show the spread of this story among the people before the pamphlet of 1602, and it is difficult to see how this Carthaphilus could have given rise to the legend of the Wandering Jew, since he is not a Jew nor does he wander. The author of 1602 was probably acquainted either directly or indirectly with the story as given by Matthew Paris, since he gives almost the same account. But he gives a new name to his hero and directly connects his fate with Matt. xvi. 28.

Moncure D. Conway (*Ency. Brit.*, 9th ed., xiii. 673) attempted to connect the legend of the Wandering Jew with a whole series of myths relating to never-dying heroes like King Arthur, Frederick Barbarossa, the Seven Sleepers, and Thomas the Rhymer, not to speak of Rip Van Winkle. He goes even farther and connects our legend with mortals visiting earth, as the Yima in Parsism, and the "Ancient of Days" in the Books of Daniel and Enoch, and further connects the legend with the whole medieval tendency to regard the Jew as something uncanny and mysterious. But all these mythological explanations are supererogatory, since the actual legend in question can be definitely traced to the pamphlet of 1602. The same remark applies to the identification with the Mahomedan legend of the "eternal" Chahdir proposed by M. Lidzbarski (*Zeit. f. Assyriol.* vii. 116) and I. Friedländer (*Arch. f. Religionswiss.* xiii. 110).

This combination of eternal punishment with restless wandering has attracted the imagination of innumerable writers in almost all European tongues. The Wandering Jew has been regarded as a symbolic figure representing the wanderings and sufferings of his race. The Germans have been especially attracted by the legend, which has been made the subject of poems by Schubart, Schreiber, W. Müller, Lenau, Chamisso, Schlegel, Moser and Koehler, from which enumeration it will be seen that it was a particularly favourite subject with the Romantic school. They were perhaps influenced by the example of Goethe, who in his *Autobiography* describes, at considerable length, the plan of a poem he had designed on the Wandering Jew. More recently poems have been composed on the subject in German by Adolf Willbrandt, Fritz Lienhard and others; in English by Robert Buchanan, and in Dutch by H. Heijermans. German novels also exist on the subject, by Franz Horn, Oeklers, Laun and Schucking, tragedies by Klinemann, Haushofer and Zedlitz. Sigismund Heller wrote three cantos on the wanderings of Ahasuerus, while Hans Andersen made of him an "Angel of Doubt." Robert Hamerling even identifies Nero with the Wandering Jew. In France, E. Quinet published a prose epic on the subject in 1833, and Eugène Sue, in his best-known work, *Le Juif errant* (1844), introduces the Wandering Jew in the prologues of its different sections and associates him with the legend of Herodias. In modern times the subject has been made still more popular by Gustave Doré's elaborate designs (1856), containing some of his most striking and imaginative work. Thus, probably, he suggested Grenier's poem on the subject (1857).

In England, besides the ballads in Percy's *Reliques*, William Godwin introduced the idea of an eternal witness of the course of civilization in his *St Leon* (1799), and his son-in-law Shelley introduces Ahasuerus in his *Queen Mab*. It is doubtful how far Swift derived his idea of the immortal Struldbrugs from the notion of the Wandering Jew. George Croly's *Salathiel*, which appeared anonymously in 1828, gave a highly elaborate turn to the legend; this has been re-published under the title *Tarry Thou Till I Come*.

JEWEL, JOHN (1522-1571), bishop of Salisbury, son of John Jewel of Buden, Devonshire, was born on the 24th of May 1522, and educated under his uncle John Bellamy, rector of Hampton,

and other private tutors until his matriculation at Merton College, Oxford, in July 1535. There he was taught by John Parkhurst, afterwards bishop of Norwich; but on the 19th of August 1539 he was elected scholar of Corpus Christi College. He graduated B.A. in 1540, and M.A. in 1545, having been elected fellow of his college in 1542. He made some mark as a teacher at Oxford, and became after 1547 one of the chief disciples of Peter Martyr. He graduated B.D. in 1552, and was made vicar of Sunningwell, and public orator of the university, in which capacity he had to compose a congratulatory epistle to Mary on her accession. In April 1554 he acted as notary to Cranmer and Ridley at their disputation, but in the autumn he signed a series of Catholic articles. He was, nevertheless, suspected, fled to London, and thence to Frankfurt, which he reached in March 1555. There he sided with Coxe against Knox, but soon joined Martyr at Strassburg, accompanied him to Zurich, and then paid a visit to Padua.

Upon Elizabeth's succession he returned to England, and made earnest efforts to secure what would now be called a low-church settlement of religion. Indeed, his attitude was hardly distinguishable from that of the Elizabethan Puritans, but he gradually modified it under the stress of office and responsibility. He was one of the disputants selected to confute the Romanists at the conference of Westminster after Easter 1559; he was select preacher at St Paul's cross on the 15th of June; and in the autumn was engaged as one of the royal visitors of the western counties. His *congé d'élire* as bishop of Salisbury had been made out on the 27th of July, but he was not consecrated until the 21st of January 1560. He now constituted himself the literary apologist of the Elizabethan settlement. He had on the 26th of November 1559, in a sermon at St Paul's Cross, challenged all comers to prove the Roman case out of the Scriptures, or the councils or Fathers for the first six hundred years after Christ. He repeated his challenge in 1560, and Dr Henry Cole took it up. The chief result was Jewel's *Apologia ecclesiae Anglicanae*, published in 1562, which in Bishop Creighton's words is "the first methodical statement of the position of the Church of England against the Church of Rome, and forms the groundwork of all subsequent controversy." A more formidable antagonist than Cole now entered the lists in the person of Thomas Harding, an Oxford contemporary whom Jewel had deprived of his prebend in Salisbury Cathedral for recusancy. He published an elaborate and bitter *Answer* in 1564, to which Jewel issued a *Reply* in 1565. Harding followed with a *Confutation*, and Jewel with a *Defence*, of the *Apology* in 1566 and 1567; the combatants ranged over the whole field of the Anglo-Roman controversy, and Jewel's theology was officially enjoined upon the Church by Archbishop Bancroft in the reign of James I. Latterly Jewel had been confronted with criticism from a different quarter. The arguments that had weaned him from his Zwinglian simplicity did not satisfy his unpromoted brethren, and Jewel had to refuse admission to a benefice to his friend Laurence Humphrey (*q.v.*), who would not wear a surplice. He was consulted a good deal by the government on such questions as England's attitude towards the council of Trent, and political considerations made him more and more hostile to Puritan demands with which he had previously sympathized. He wrote an attack on Cartwright, which was published after his death by Whitgift. He died on the 23rd of September 1571, and was buried in Salisbury Cathedral, where he had built a library. Hooker, who speaks of Jewel as "the worthiest divine that Christendom hath bred for some hundreds of years," was one of the boys whom Jewel prepared in his house for the university; and his *Ecclesiastical Policy* owes much to Jewel's training.

Jewel's works were published in a folio in 1609 under the direction of Bancroft, who ordered the *Apology* to be placed in churches, in some of which it may still be seen chained to the lectern; other editions appeared at Oxford (1848, 8 vols.) and Cambridge (Parker Soc., 4 vols.). See also Gough's *Index to Parker Soc. Publ.*; Strype's *Works* (General Index); *Acts of the Privy Council*; *Calendar of Domestic and Spanish State Papers*; Dixon's and Freer's *Church Histories*; and *Dictionary of National Biography* (art. by Bishop Creighton). (A. F. P.)

JEWELRY (O. Fr. *jewel*, Fr. *joyau*, perhaps from *joie*, joy; Lat. *gaudium*; retranslated into Low Lat. *jocale*, a toy, from *jocus*, by misapprehension of the origin of the word), a collective term for jewels, or the art connected with them—jewels being personal ornaments, usually made of gems, precious stones, &c., with a setting of precious metal; in a restricted sense it is also common to speak of a gem-stone itself as a jewel, when utilized in this way. Personal ornaments appear to have been among the very first objects on which the invention and ingenuity of man were exercised; and there is no record of any people so rude as not to employ some kind of personal decoration. Natural objects, such as small shells, dried berries, small perforated stones, feathers of variegated colours, were combined by stringing or tying together to ornament the head, neck, arms and legs, the fingers, and even the toes, whilst the cartilages of the nose and ears were frequently perforated for the more ready suspension of suitable ornaments.

Amongst modern Oriental nations we find almost every kind of personal decoration, from the simple caste mark on the forehead of the Hindu to the gorgeous examples of beaten gold and silver work of the various cities and provinces of India. Nor are such decorations mere ornaments without use or meaning. The hook with its corresponding perforation or eye, the clasp, the buckle, the button, grew step by step into a special ornament, according to the rank, means, taste and wants of the wearer, or became an evidence of the dignity of office. Nor was the jewel deemed to have served its purpose with the death of its owner, for it is to the tombs of ancient peoples that we must look for evidence of the early existence of the jeweller's art.

The jewelry of the ancient Egyptians has been preserved for us in their tombs, sometimes in, and sometimes near the sarcophagi which contained the embalmed bodies of the wearers. An amazing series of finds of the intact jewels of five princesses of the XIIth Dynasty (c. 2400 B.C.) was the result of the excavations of J. de Morgan at Dâhshur in 1894-1895. The treasure of Princess Hathor-Set contained jewels with the names of Senwosri (Useratesen) II. and III., one of whom was probably her father. The treasure of Princess Merit contained the names of the same two monarchs, and also that of Amenemhê III., to whose family Princess Nebhotp may have belonged. The two remaining princesses were Ita and Khnumit.

FIG. 1.

The art of the nameless Memphite jewellers of the XIIth Dynasty is marked by perfect accuracy of execution, by sureness of intention, by decorative instinct and sobriety in design, and by the serviceable nature of the jewels for actual wear. All forms of work are

represented—including chiselling, soldering, inlaying with coloured stones, moulding and working with twisted wires and filigree. Here also occurs the earliest instance of granulated work, with small grains of gold, soldered on a flat surface (fig. 1). The principal items in this dazzling group are the following: Three gold pectorals (fig. 2 and Plate I. figs. 35, 36) worked *à jour* (with the interstices left open); on the front side they are inlaid with coloured stones, the fine *cloisons* being the only portion of the gold that is visible, on the back, the gold surfaces are most delicately carved, in low relief. Two gold crowns (Plate I. figs. 32, 34), found together, are curiously contrasted in character. The one (fig. 32) is of a formal design, of gold, inlaid (the plume, Plate I. fig. 33, was attached to it); the other (fig. 34) has a multitude of star-like flowers, embodied in a filigree of daintily twisted wires. A dagger with inlaid patterns on the handle shows extraordinary perfection of finish.

FIG. 2.

Nearly a thousand years later we have another remarkable collection of Egyptian art in the jewelry taken from the coffin of Queen Aah-hotp, discovered in 1859 by Mariette in the entrance to the valley of the tombs of the kings and now preserved in the Cairo museum. Compared with the Dâhshur treasure the jewelry of Aah-hotp is in parts rough and coarse, but none the less it is marked by the ingenuity and mastery of the materials that characterize all the work of the Egyptians. Hammered work, incised and chased work, the evidence of soldering, the combinations of layers of gold plates, together with coloured stones, are all present, and the handicraft is complete in every respect.

A diadem of gold and enamel, found at the back of the head of the mummy of the queen (fig. 3), was fixed in the back hair, showing the cartouche in front. The box holding this cartouche has on the upper surface the titles of the king, "the son of the sun, Aahmes, living for ever and ever," in gold on a ground of lapis lazuli, with a chequered ornament in blue and red pastes, and a sphinx couchant on each side. A necklace with three pendant flies (fig. 4) is entirely of gold, having a hook and loop to fasten it round the neck. Fig. 5 is a gold drop, inlaid with turquoise or blue paste, in the shape of a fig. A gold

JEWEL, JOHN (1522-1571), bishop of Salisbury, son of John Jewel of Buden, Devonshire, was born on the 24th of May 1522, and educated under his uncle John Bellamy, rector of Hampton,

and other private tutors until his matriculation at Merton College, Oxford, in July 1535. There he was taught by John Parkhurst, afterwards bishop of Norwich; but on the 19th of August 1539 he was elected scholar of Corpus Christi College. He graduated B.A. in 1540, and M.A. in 1545, having been elected fellow of his college in 1542. He made some mark as a teacher at Oxford, and became after 1547 one of the chief disciples of Peter Martyr. He graduated B.D. in 1552, and was made vicar of Sunningwell, and public orator of the university, in which capacity he had to compose a congratulatory epistle to Mary on her accession. In April 1554 he acted as notary to Cranmer and Ridley at their disputation, but in the autumn he signed a series of Catholic articles. He was, nevertheless, suspected, fled to London, and thence to Frankfurt, which he reached in March 1555. There he sided with Coxie against Knox, but soon joined Martyr at Strassburg, accompanied him to Zurich, and then paid a visit to Padua.

Upon Elizabeth's succession he returned to England, and made earnest efforts to secure what would now be called a low-church settlement of religion. Indeed, his attitude was hardly distinguishable from that of the Elizabethan Puritans, but he gradually modified it under the stress of office and responsibility. He was one of the disputants selected to confute the Romanists at the conference of Westminster after Easter 1559; he was select preacher at St Paul's cross on the 15th of June; and in the autumn was engaged as one of the royal visitors of the western counties. His *congé d'élire* as bishop of Salisbury had been made out on the 27th of July, but he was not consecrated until the 21st of January 1560. He now constituted himself the literary apologist of the Elizabethan settlement. He had on the 26th of November 1559, in a sermon at St Paul's Cross, challenged all comers to prove the Roman case out of the Scriptures, or the councils or Fathers for the first six hundred years after Christ. He repeated his challenge in 1560, and Dr Henry Cole took it up. The chief result was Jewel's *Apologia ecclesiae Anglicanae*, published in 1562, which in Bishop Creighton's words is "the first methodical statement of the position of the Church of England against the Church of Rome, and forms the groundwork of all subsequent controversy." A more formidable antagonist than Cole now entered the lists in the person of Thomas Harding, an Oxford contemporary whom Jewel had deprived of his prebend in Salisbury Cathedral for recusancy. He published an elaborate and bitter *Answer* in 1564, to which Jewel issued a *Reply* in 1565. Harding followed with a *Confutation*, and Jewel with a *Defence*, of the *Apology* in 1566 and 1567; the combatants ranged over the whole field of the Anglo-Roman controversy, and Jewel's theology was officially enjoined upon the Church by Archbishop Bancroft in the reign of James I. Latterly Jewel had been confronted with criticism from a different quarter. The arguments that had weaned him from his Zwinglian simplicity did not satisfy his unpromoted brethren, and Jewel had to refuse admission to a benefice to his friend Laurence Humphrey (*q.v.*), who would not wear a surplice. He was consulted a good deal by the government on such questions as England's attitude towards the council of Trent, and political considerations made him more and more hostile to Puritan demands with which he had previously sympathized. He wrote an attack on Cartwright, which was published after his death by Whitgift. He died on the 23rd of September 1571, and was buried in Salisbury Cathedral, where he had built a library. Hooker, who speaks of Jewel as "the worthiest divine that Christendom hath bred for some hundreds of years," was one of the boys whom Jewel prepared in his house for the university; and his *Ecclesiastical Policy* owes much to Jewel's training.

Jewel's works were published in a folio in 1609 under the direction of Bancroft, who ordered the *Apology* to be placed in churches, in some of which it may still be seen chained to the lectern; other editions appeared at Oxford (1848, 8 vols.) and Cambridge (Parker Soc., 4 vols.). See also Gough's *Index to Parker Soc. Publ.*; Strype's *Works* (General Index); *Acts of the Privy Council*; *Calendar of Domestic and Spanish State Papers*; Dixon's and Freer's *Church Histories*; and *Dictionary of National Biography* (art. by Bishop Creighton). (A. F. P.)

Mycenaean affinities (fig. 15) includes necklaces, brooches, bracelets (g), hair-pins (a), ear-rings (c, d, e, f), with and without pendants, beads and twisted wire drops. The majority of these are ornamented with spirals of twisted wire, or small rosettes, with fragments of stones in the centres. The twisted wire ornaments were evidently portions of necklaces. A circular plaque decorated with a rosette

FIG. 15.

(h) is very similar to those found at Mycenae, and a conventionalized eagle (k) is characteristic of much of the detail found at that place as well as at Hisarlik. They were all of pure gold, and the wire must have been drawn through a plate of harder metal—probably bronze. The principal ornaments differing from those found at Mycenae are diadems or head fillets of pure hammered gold (b) cut into thin plates, attached to rings by double gold wires, and fastened together at the back with thin twisted wire. To these pendants (of which those at the two ends are nearly three times the length of those forming the central portions) are attached small figures, probably of idols. It has been assumed that these were worn across the forehead by women, the long pendants falling on each side of the face.

The jewelry of the close of the Mycenaean period is best represented by the rich finds of the cemetery of Enkomi near Salamis, in Cyprus. This field was excavated by the British Museum in 1896, and a considerable portion of the finds is now at Bloomsbury. It was rich in all forms of jewelry, but especially in pins, rings and diadems with patterns in relief. In its geometric patterns the art of Enkomi is entirely Mycenaean, but special stress is laid on the mythical forms that were inherited by Greek art, such as the sphinx and the gryphon.

Figs. 37-48 (Plate I.) are examples of the late Mycenaean treasures from Enkomi.

- | | |
|----------------|--|
| " 37, 38 " | Ear-rings. |
| " 39 " | Diadem, to be tied on the forehead. The impressed figure of a sphinx is repeated twelve times. |
| " 40, 41, 46 " | Ear-rings, originally in bull's head form (fig. 40). Later, the same general form is retained, but decorative patterns (figs. 41, 46) take the place of the bull's head. |
| " 42 " | Pin, probably connected by a chain with a fellow, to be used as a cloak fastening. |
| " 43 " | Pomegranate pendant, with fine granulated work. |
| " 44, 45 " | Pins as No. 42. The heads are of vitreous paste. (See above.) |
| " 46 " | Pendant ornament, in lotus-form, of a pectoral, inlaid with coloured pastes. |
| " 47 " | |
| " 48 " | Small slate cylinder, set in filigree. |

Another find of importance was that of a collection of gold ornaments from one of the Greek islands (said to be Aegina) which also found its way to the British Museum. Here we find the themes of archaic Greek art, such as a figure holding up two water-birds, in immediate connexion with Mycenaean gold patterns.

Figs. 49-53 (Plate I.) are specimens from this treasure.

- | | |
|--------|--|
| " 49 " | Plate with repoussé ornament for sewing on a dress. |
| " 50 " | Pendant. Figure with two water-birds, on a lotus base, and having serpents issuing from near his middle, modified from Egyptian forms. |

- | | |
|--------------------|---|
| Fig. 51 (Plate I.) | Ring, with cut blue glass-pastes in the grooves. |
| " 52 " | Pendant ornament, repoussé, and originally inlaid with pieces of cut glass-paste. |
| " 53 " | Pendant ornament, with dogs and apes, modified from Egyptian forms. |

For the beginnings of Greek art proper, the most striking series of personal jewels is the great deposit of ornaments which was found in 1905 by D. G. Hogarth in the soil beneath the central basis of the archaic temple of Artemis at Ephesus. The gold ornaments in question (amounting in all to about 1000 pieces) were mingled with the closely packed earth, and must necessarily, it would seem, have been in the nature of votive offerings, made at the end of the 7th or the beginning of the 6th century B.C. The hoard was rich in pins, brooches, beads and stamped disks of gold. The greater part of the find is at Constantinople, but a portion was assigned to the British Museum, which had undertaken the excavations.

Figs. 54-58 (Plate II.) Examples of the Ephesus hoard.

| " 54 " | Electrum pin, with pomegranate head. |
| " 55 " | Hawk ornament. |
| " 56 " | Electrum pin. |
| " 57, 58 " | Electrum ornaments for sewing on drapery. |

The cemeteries of Cyprus have yielded a rich harvest of jewelry of Graeco-Phoenician style of the 7th and following centuries B.C. Figs. 16 and 17 are typical examples of a ring and ear-ring from Cyprus.

FIG. 16.

FIG. 17.

Greek, Etruscan and Roman ornaments partake of very similar characteristics. Of course there is variety in design and sometimes in treatment, but it does not rise to any special individuality. Fretwork is a distinguishing feature of all, together with the wave ornament, the guilloche, and the occasional use of the human figure. The workmanship is often of a character which modern gold-workers can only rival with their best skill, and can never surpass.

LATE MYCENAEAN.

JEWELRY

GREEK.

ETRUSCAN.

ROMAN.

The Greek jewelry of the best period is of extraordinary delicacy and beauty. Fine examples are shown in the British Museum from Melos and elsewhere. Undoubtedly, however, the most brilliant collection of such ornaments is that of the Hermitage, which was derived from the tombs of Kerch and the Crimea. It contains examples of the purest Greek work, together with objects which must have been of local origin, as is shown by the themes which the artist has chosen for his reliefs. Fig. 18 illustrates the jewelry of the Hermitage (see also EAR-RING).

As further examples of Greek jewelry see the pendant oblong ornament for containing a scroll (fig. 19).

FIG. 19.

FIG. 20.

FIG. 21.

The ear-rings (figs. 20, 21) are also characteristic.

Figs. 59-70 (Plate II.) Examples of fine Greek jewelry, in the British Museum.

| " 59-60 | " | Pair of ear-rings, from a grave at Cyme in Aeolis, with filigree work and pendant Eroses. |
| " 61 | " | Small bracelet. |
| " 62-63 | " | Small gold reel with repoussé figures of Nereid with helmet of Achilles, and Eros. From Cameiros (Rhodes). |
| " 64 | " | Filigree ornament (ear-ring?) with Eros in centre. From Syria. |
| " 65 | " | Medallion ornament with repoussé head of Dionysos and filigree work. (Blacas coll.) |
| " 66 | " | Stud, with filigree work. |
| " 67-68 | " | Pair of ear-rings, of gold, with filigree and enamel, from Eretria. |
| " 69 | " | Diadem, with filigree, and enamel scales, from Tarquinii. |
| " 70 | " | Necklace pendants. |

Etruscan jewelry at its best is not easily distinguished from the Greek, but it tends in its later forms to become florid and diffuse, without precision of design. The granulation of surfaces practised with the highest degree of refinement by the Etruscans was long a puzzle and a problem to the modern jeweller, until Castellani of Rome discovered gold-workers in the Abruzzi to whom the method had descended through many generations. He induced some of these men to go to Naples, and so revived the art, of which he contributed examples to the London Exhibition of 1872 (see FILIGREE).

Figs. 71-77 (Plate II.) are well-marked examples of Etruscan work, in the British Museum.

- | | | |
|----------|---|---|
| " 71 | " | Pair of sirens, repoussé, forming a hook and eye fastening. From Chiusi (?). |
| " 72 | " | Early fibula. Horse and chimæra. (Blacas coll.) |
| " 74 | " | Medallion-shaped fibula, of fine granulated work, with figures of sirens in relief, and set with dark blue pastes. (Bale coll.) |
| " 73, 75 | " | Pair of late Etruscan ear-rings. |
| " 76, 77 | " | Pair of late Etruscan ear-rings, in the florid style. |

The jewels of the Roman empire are marked by a greater use of large cut stones in combination with the gold, and by larger surfaces of plain and undecorated metal. The adaptation of imperial gold coins to the purposes of the jeweller is also not uncommon.

Figs. 78-82 (Plate II.) Late Roman imperial jewelry, in the British Museum.

| " 79 | " | Pierced-work pendant, set with a coin of the emperor Philip. |
| " 80 | " | Ear-ring, roughly set with garnets. |
| " 81 | " | Bracelet, with a winged cornucopia as central ornament, set with plaques, and with filigree and leaf work. |
| " 82 | " | Bracelet, roughly set with pearls and stones. From Tunis, 4th century. |

With the decay of the Roman empire, and the approach of the barbarian tribes, a new Teutonic style was developed. An important example of this style is the remarkable gold treasure, discovered at Petrossa in the Transylvanian Alps in 1837, and now preserved, as far as it survives, in the museum of Bucharest. A runic inscription shows that it belonged to the Goths. Its style is in part the classical tradition, debased and modified; in part it is a singularly rude and vigorous form of barbaric art. Its chief characteristics are a free use of strongly conventionalized animal forms, such as great bird-shaped fibulae, and an ornamentation consisting of pierced gold work, combined with a free use of stones cut to special shapes, and inlaid either cloisonné-fashion or in a perforated gold plate. This part of the hoard has its affinities in objects found over a wide field from Siberia to Spain. Its rudest and most naturalistic forms occur in the East in uncouth objects from Siberian tombs, whose lineage however has been traced to Persepolis, Assyria and Egypt. In its later and more refined forms the style is known by the name, now somewhat out of favour (except as applied to a limited number of finds), of Merovingian.

The so-called Merovingian jewelry of the 5th century, and the Anglo-Saxon of a later date, have as their distinctive feature thin plates of gold, decorated with thin slabs of garnet, set in walls of gold soldered vertically like the lines of cloisonné enamel, with the addition of very decorative details of filigree work, beading and twisted gold. The typical group are the contents of the tomb of King Childeric (A.D. 481) now in the Bibliothèque Nationale at Paris. In Figs. 22 and 23 we have examples of Anglo-Saxon fibulae, the first being decorated with a species

FIG. 22.

FIG. 23.

FIG. 24.

of cloisonné, in which garnets are inserted, while the other is in hammered work in relief. A pendant (fig. 24) is also set with garnets. The buckles (figs. 25, 26, 27) are remarkably charac-

FIG. 25.

FIG. 26.

FIG. 27.

teristic examples, and very elegant in design. A girdle ornament in gold, set with garnets (fig. 28), is an example of Carolingian design of a high class. Another remarkable group of barbaric jewelry, dated by coins as of the beginning of the 7th-century, was excavated at Castel Trosino near the Picenian Ascoli, and is attributed to the Lombards. See *Monumenti antichi* (Accademia dei Lincei), xii. 145.

We turn now to the Celtic group of jewelled ornaments, which has an equally long and independent line of descent. The characteristic Celtic ornaments are of hammered work with details in repoussé, having fillings-in of vitreous paste, coloured enamels, amber, and in the later examples rock crystal with a smooth rounded surface cut *en cabochon*. The

FIG. 28.

whole group is a special development within the British Isles of the art of the mid-European Early Iron age, which in its turn had been considerably influenced by early Mediterranean culture. In its early stages its special marks are combinations of curves, with peculiar central thickenings which give a quasi-naturalistic effect; a skilful use of inlaid enamels, and the chased line. After the introduction of Christianity, a continuous tradition combined the old system with the interlaced winding scrolls and other new forms of decoration, and so led up to the extreme complexity of early Irish illumination and metal work.

A remarkable group of gold ornaments of the pre-Christian time (probably of the 1st century) was discovered about 1896, in the north-west of Ireland, and acquired by the British Museum. It was subsequently claimed by the Crown as treasure trove, and after litigation was transferred to Dublin (see *Archæologia*, lv., pl. 22).

Figs. 29 and 30 are illustrations of two brooches of the latest

FIG. 29.

period in this class of work. The first is 13th century; the latter is probably 12th century, and is set with paste, amber and blue.

Rings are the chief specimens now seen of medieval jewelry from the 10th to the 13th century. They are generally massive and simple. Through the 16th century a variety of changes arose; in the traditions and designs of the *cinquecento* we have plenty of evidence that the workmen used their own designs, and the results culminated in the triumphs of Albert Dürer, Benvenuto Cellini and Hans Holbein. The goldsmiths of the

FIG. 30.

Italian republics must have produced works of surpassing excellence in workmanship, and reaching the highest point in design as applied to handicrafts of any kind. The use of enamels, precious stones, niello work and engraving, in combination with skilful execution of the human figure and animal life, produced effects which modern art in this direction is not likely to approach, still less to rival.

In fig. 31 illustrations are given of various characteristic specimens of the Renaissance and later forms of jewelry. A crystal cross set in enamelled gold (a) is German work of the 16th century. The pendant reliquary (b), enamelled and jewelled, is of 16th century Italian work, and so probably is the jewel (c) of gold set with diamonds and rubies. The Darnley or Lennox jewel (d), now in the possession of the king, was made about 1576-1577 for Lady Margaret

Douglas, countess of Lennox, the mother of Henry Darnley. It is a pendant golden heart set with a heart-shaped sapphire, richly jewelled and enamelled with emblematic figures and devices. It also has Scottish mottoes around and within it. The ear-ring (e) of gold, enamelled, hung with small pearls, is an example of 17th century Russian work, and another (f) is Italian of the same period, being of gold and filigree with enamel, also with pendant pearls. A Spanish ear-ring, of 18th century work (g), is a combination of ribbon, cord and filigree in gold; and another (h) is Flemish, of probably the same period; it is of gold open work set with diamonds in projecting collets. The old French-Normandy pendant cross and locket (i) presents a characteristic example of peasant jewelry; it is of branched open work set with bosses and ridged ornaments of crystal. The ear-ring (j) is French of 17th century, also of gold open work set with crystals. A small pendant locket (k) is of rock crystal, with the cross of Santiago in gold and translucent crimson enamel; it is 16th or 17th century Spanish work. A pretty ear-ring of gold open scroll work (m), set with minute diamonds and three pendant pearls, is Portuguese of 17th century, and another ear-ring (n) of gold circular open work, set also with minute diamonds, is Portuguese work of 18th century. These examples fairly illustrate the general features of the most characteristic jewelry of the dates quoted.

During the 17th and 18th centuries we see only a mechanical kind of excellence, the results of the mere tradition of the workshop—the lingering of the power which when wisely directed had done so much and so well, but now simply living on traditional forms, often combined in a most incongruous fashion. Gorgeous effects were aimed at by massing the gold, and introducing stones elaborately cut in themselves or clustered in groups. Thus diamonds were clustered in rosettes and bouquets; rubies, pearls, emeralds and other coloured special stones were brought together for little other purpose than to get them into a given space in conjunction with a certain quantity of gold. The question was not of design in its relation to use as personal decoration, but of the value which could be got into a given space to produce the most striking effect.

The traditions of Oriental design as they had come down through the various periods quoted, were comparatively lost in the wretched results of the *rococo* of Louis XIV. and the inanities of what modern revivalists of the Anglo-Dutch call "Queen Anne." In the London exhibition of 1851, the extravagances of modern jewelry had to stand comparison with the Oriental examples contributed from India. Since then we have learnt more about these works, and have been compelled to acknowledge, in spite of what is sometimes called inferiority of workmanship, how completely the Oriental jeweller understood his work, and with what singular simplicity of method he carried it out. The combinations are always harmonious, the result aimed at is always achieved; and if in attempting to work to European ideas the jeweller failed, this was rather the fault of the forms he had to follow, than due to any want of skill in making the most of a subject in which half the thought and the intended use were foreign to his experience.

A collection of peasant jewelry got together by Castellani for the Paris exhibition of 1867, and now in the Victoria and Albert Museum, illustrates in an admirable manner the traditional jewelry and personal ornaments of a wide range of peoples in Europe. This collection, and the additions made to it since its acquisition by the nation, show the forms in which these objects existed over several generations among the peasantry of France (chiefly Normandy), Spain, Portugal, Holland, Denmark, Germany and Switzerland, and also show how the forms popular in one country are followed and adopted in another, almost invariably because of their perfect adaptation to the purpose for which they were designed.

Apart from these humbler branches of the subject, in the middle of the 19th century the production of jewelry, regarded as a personal art, and not as a commercial and anonymous industry, was almost extinct. Its revival must be associated with the artistic movement which marked the close of that century, and which found emphatic expression in the Paris international exhibition of 1900. For many years before 1895 this industry, though prosperous from the commercial point of view, and always remarkable from that of technical finish, remained stationary as an art. French jewelry rested on its

reputation. The traditions were maintained of either the 17th and 18th centuries or the style affected at the close of the second empire—light pierced work and design borrowed from natural flowers. The last type, introduced by Massin, had exercised, indeed, a revolutionary influence on the treatment of jewelry. This clever artist, not less skilful as a craftsman, produced a new *genre* by copying the grace and lightness of living blossoms, thus introducing a perfectly fresh element into the limited variety of traditional style, and by the use of filigree gold work altering its character and giving it greater elegance. Massin still held the first rank in the exhibition of 1878; he had a marked influence on his contemporaries, and his name will be remembered in the history of the goldsmith's art to designate a style

further confirmed in his remarkable position by the exhibition of 1900. What specially stamps the works of Lalique is their striking originality. His work may be considered from the point of view of design and from that of execution. As an artist he has completely reconstructed from the foundation the scheme of design which had fed the poverty-stricken imagination of the last generation of goldsmiths. He had recourse to the art of the past, but to the spirit rather than the letter, and to nature for many new elements of design—free double curves, suave or soft; opalescent harmonies of colouring; reminiscences, with quite a new feeling, of Egypt, Chaldea, Greece and the East, or of the art of the Renaissance; and infinite variety of floral forms even of the humblest. He introduces also the female nude in the

FIG. 31.

and a period. Throughout these years the craft was exclusively devoted to perfection of workmanship. The utmost finish was aimed at in the mounting and setting of gems; jewelry was, in fact, not so much an art as a high-class industry; individual effort and purpose were absent.

Up to that time precious stones had been of such intrinsic value that the jeweller's chief skill lay in displaying these costly stones to the best advantage; the mounting was a secondary consideration. The settings were seldom long preserved in their original condition, but in the case of family jewels were renewed with each generation and each change of fashion, a state of things which could not be favourable to any truly artistic development of taste, since the work was doomed, sooner or later, to destruction. However, the evil led to its own remedy. As soon as diamonds fell in value they lost at the same time their overwhelming prestige, and refined taste could give a preference to trinkets which derived their value and character from artistic design. This revolutionized the jeweller's craft, and revived the simple ornament of gold or silver, which came forward but timidly at first, till, in the Salon of 1895, it burst upon the world in the exhibits of René Lalique, an artist who was

form of sirens and sphinxes. As a craftsman he has effected a radical change, breaking through old routine, combining all the processes of the goldsmith, the chaser, the enameller and the gem-setter, and freeing himself from the narrow lines in which the art had been confined. He ignores the hierarchy of gems, caring no more on occasion for a diamond than for a flint, since, in his view, no stone, whatever its original estimation, has any value beyond the characteristic expression he lends it as a means to his end. Thus, while he sometimes uses diamonds, rubies, sapphires or emeralds as a background, he will, on the other hand, give a conspicuous position to common stones—carnelian, agate, malachite, jasper, coral, and even materials of no intrinsic value, such as horn. One of his favourite stones is the opal, which lends itself to his arrangements of colour, and which has in consequence become a fashionable stone in French jewelry.

In criticism of the art of Lalique and his school it should be observed that the works of the school are apt to be unsuited to the wear and tear of actual use, and inconveniently eccentric in their details. Moreover, the preciousness of the material is an almost inevitable consideration in the jeweller's craft, and cannot be set at naught by the artist without violating the canons of his art.

The movement which took its rise in France spread in due course to other countries. In England the movement conveniently described as the "arts and crafts movement" affected the design of jewelry. A group of designers has aimed at purging the jeweller's craft of its character of mere gem-mounting in conventional forms (of which the more unimaginative, representing stars, bows, flowers and the like, are varied by such absurdities as insects, birds, animals, figures of men and objects made up simply of stones clustered together). Their work is often excellently and fancifully designed, but it lacks that exquisite perfection of execution achieved by the incomparable craftsmen of France. At the same time English sculptor-decorators—such as Alfred Gilbert, R.A., and George J. Frampton, A.R.A.—have produced objects of a still higher class, but it is usually the work of the goldsmith rather than of the jeweller. Examples may be seen in the badge executed by Gilbert for the president of the Institute of Painters in Water Colours and in the mayoral chain for Preston. Symbolism here enters into the design, which has not only an ornamental but a didactic purpose.

The movement was represented in other countries also. In the United States it was led by L. C. Tiffany, in Belgium by Philippe Wolfers, who occupies in Belgium the position which in France is held by René Lalique. If his design is a little heavier, it is not less beautiful in imagination or less masterly in execution. Graceful, ingenious, fanciful, elegant, fantastic by turns, his objects of jewelry and goldsmithery have a solid claim to be considered *créations d'art*. It has also been felt in Germany, Austria, Russia and Switzerland. It must be admitted that many of the best artists who have devoted themselves to jewelry have been more successful in design than in securing the lightness and strength which are required by the wearer, and which were a characteristic in the works of the Italian craftsmen of the Renaissance. For this reason many of their masterpieces are more beautiful in the case than upon the person.

Modern Jewelry.—So far we have gone over the progress and results of the jeweller's art. We have now to speak of the production of jewelry as a modern art industry, in which large numbers of men and women are employed in the larger cities of Europe. Paris, Vienna, London and Birmingham are the most important centres. An illustration of the manufacture as carried on in London and Birmingham will be sufficient to give an insight into the technique and artistic manipulation of this branch of art industry; but, by way of contrast, it may be interesting to give in the first place a description of the native working jeweller of Hindustan.

He travels very much after the fashion of a tinker in England; his budget contains tools, materials, fire pots, and all the requisites of his handicraft. The gold to be used is generally supplied by the patron or employer, and is frequently in gold coin, which the travelling jeweller undertakes to convert into the ornaments required. He squats down in the corner of a courtyard, or under cover of a veranda, lights his fire, cuts up the gold pieces entrusted to him, hammers, cuts, shapes, drills, solders with the blow-pipe, files, scrapes and burnishes until he has produced the desired effect. If he has stones to set or coloured enamels to introduce, he never seems to make a mistake; his instinct for harmony of colour, like that of his brother craftsman the weaver, is as unerring as that of the bird in the construction of its nest. Whether the materials are common or rich and rare, he invariably does the very best possible with them, according to native ideas of beauty in design and combination. It is only when he is interfered with by European dictation that he ever vulgarizes his art or makes a mistake. The result may appear rude in its finish, but the design and the thought are invariably right. We thus see how a trade in the working of which the "plant" is so simple and wants are so readily met could spread itself, as it years past it did at Clerkenwell and at Birmingham before gigantic factories were invented for producing everything under the sun.

It is impossible to find any date at which the systematic production of jewelry was introduced into England. Probably the Clerkenwell trade dates its origin from the revocation of the edict of Nantes, as the skilled artisans in the jewelry, clock and watch, and trinket trades appear to have been descendants of the emigrant Huguenots. The Birmingham trade would appear to have had its origin in the skill to which the workers in fine steel had attained towards the middle and end of the 18th

century, a branch of industry which collapsed after the French Revolution.

Modern jewelry may be classified under three heads: (1) objects in which gems and stones form the principal portions, and in which the work in silver, platinum or gold is really only a means for carrying out the design by fixing the gems or stones in the position arranged by the designer, the metal employed being visible only as a setting; (2) when gold work plays an important part in the development of the design, being itself ornamented by engraving (now rarely used) or enamelling or both, the stones and gems being arranged in subordination to the gold work in such positions as to give a decorative effect to the whole; (3) when gold or other metal is alone used, the design being wrought out by hammering in repoussé, casting, engraving, chasing or by the addition of filigree work (see FILIGREE), or when the surfaces are left absolutely plain but polished and highly finished.

Of course the most ancient and primitive methods are those wholly dependent upon the craft of the workman; but gradually various ingenious processes were invented, by which greater accuracy in the portions to be repeated in a design could be produced with certainty and economy: hence the various methods of stamping used in the production of hand-made jewelry, which are in themselves as much mechanical in relation to the end in view as if the whole object were stamped out at a blow, twisted into its proper position as regards the detail, or the various stamped portions fitted into each other for the mechanical completion of the work. It is therefore rather difficult to draw an absolute line between hand-made and machine-made jewelry, except in extreme cases of hand-made, when everything is worked, so to speak, from the solid, or of machine-made, when the hand has only to give the ornament a few touches of a tool, or fit the parts together if of more than one piece.

The best and most costly hand-made jewelry produced in England, whether as regards gold work, gems, enamelling or engraving, is made in London, and chiefly at Clerkenwell. A design is first made with pencil, sepia or water colour, and when needful with separate enlargement of details, everything in short to make the drawing thoroughly intelligible to the working jeweller. According to the nature and purpose of the design, he cuts out, hammers, files and brings into shape the constructive portions of the work as a basis. Upon this, as each detail is wrought out, he solders, or (more rarely) fixes by rivets, &c., the ornamentation necessary to the effect. The human figure, representations of animal life, leaves, fruit, &c., are modelled in wax, moulded and cast in gold, to be chased up and finished. As the hammering goes on the metal becomes brittle and hard, and then it is passed through the fire to anneal or soften it. In the case of elaborate examples of repoussé, after the general forms are beaten up, the interior is filled with a resinous compound, pitch mixed with fire-brick dust; and this, forming a solid but pliable body underneath the metal, allows of the finished details being wrought out on the front of the design, and being finally completed by chasing. When stones are to be set, or when they form the principal portions of the design, the gold or other metal has to be wrought by hand so as to receive them in little cup-like orifices, these walls of gold enclosing the stone and allowing the edges to be bent over to secure it. Setting is never effected by cement in well-made jewelry. Machine-made settings have in recent years been made, but these are simply cheap imitations of the true hand-made setting. Even strips of gold have been used, serrated at the edges to allow of being easily bent over, for the retention of the stones, true or false.

Great skill and experience are necessary in the proper setting of stones and gems of high value, in order to bring out the greatest amount of brilliancy and colour, and the angle at which a diamond (say) shall be set, in order that the light shall penetrate at the proper point to bring out the "spark" or "flash," is a subject of grave consideration to the setter. Stones set in a haphazard, slovenly manner, however brilliant in themselves, will look commonplace by the side of skilfully set gems of much less fine quality and water. Enamelling (see ENAMEL) has of late years largely taken the place of "paste" or false stones.

Engraving is a simple process in itself, and diversity of effect can be produced by skilful manipulation. An interesting variety in the effect of a single ornament may be produced by the combination of coloured gold of various tints. This colouring is a process requiring skill and experience in the manipulation of the materials according to the quality of the gold and the amount of silver alloy in it. The objects to be coloured are dipped in a boiling mixture of salt, alum and saltpetre. Of general colouring it may be said that the object aimed at is to enhance the appearance of the gold by removing the particles of alloy on the surface, and thus allowing the pure gold only to remain visible to the eye. The process has, however, gone much out of fashion. It is apt to rot the solder, and repairs to gold work can be better finished by electro-gilding.

The application of machinery to the economical production of certain classes of jewelry, not necessarily imitations, but as much "real gold" work, to use a trade phrase, as the best hand-made, has been on the increase for many years. Nearly every kind of gold chain now made is manufactured by machinery, and nothing like

the beauty of design or perfection of workmanship could be obtained by hand at, probably, any cost. The question therefore in relation to chains is not the mode of manufacture, but the quality of the metal. Eighteen carat gold is of course preferred by those who wear chains, but this is only gold in the proportion of 18 to 24, pure gold being represented by 24. The gold coin of the realm is 22 carat; that is, it contains one-twelfth of alloy to harden it to stand wear and tear. Thus 18 carat gold has one-fourth of alloy, and so on with lower qualities down to 12, which is in reality only gold by courtesy. It must be remembered that the alloys are made by weight, and as gold is nearly twice as heavy as the metal it is mixed with, it only forms a third of the bulk of a 12 carat mixture.

The application of machinery to the production of personal ornaments in gold and silver can only be economically and successfully carried on when there is a large demand for similar objects, that is to say, objects of precisely the same design and decoration throughout. In machine-made jewelry everything is stereotyped, so to speak, and the only work required for the hand is to fit the parts together—in some instances scarcely that. A design is made, and from it steel dies are sunk for stamping out as rapidly as possible from a plate of rolled metal the portion represented by each die. It is in these steel dies that the skill of the artist die-sinker is manifested. Brooches, ear-rings, pinheads, bracelets, lockets, pendants, &c., are struck out by the gross. This is more especially the case in silver and in plated work—that is, imitation jewelry—the base of which is an alloy, afterwards gilt by electro-plating. With these ornaments imitation stones in paste and glass, pearls, &c., are used, and it is remarkable that of late years some of the best designs, the most simple, appropriate and artistic, have appeared in imitation jewelry. It is only just to those engaged in this manufacture to state distinctly that their work is never sold wholesale for anything else than what it is. The worker in gold only makes gold or real jewelry, and he only makes of a quality well known to his customers. The producer of silver work only manufactures silver ornaments, and so on throughout the whole class of plated goods.

It is the retailer who, if he is unprincipled, takes advantage of the ignorance of the buyer and sells for gold that which is in reality an imitation, and which he bought as such. The imitations of old styles of jewelry which are largely sold in curiosity shops at foreign places of fashionable resort are said to be made in Germany, especially at Munich.

JEWETT, SARAH ORNE (1849-1909), American novelist, was born in South Berwick, Maine, on the 3rd of September 1849. She was a daughter of the physician Theodore H. Jewett (1815-1878), by whom she was greatly influenced, and whom she has drawn in *A Country Doctor* (1884). She studied at the Berwick Academy, and began her literary career in 1869, when she contributed her first story to the *Atlantic Monthly*. Her best work consists of short stories and sketches, such as those in *The Country of the Pointed Firs* (1896). The people of Maine, with their characteristic speech, manners and traditions, she describes with peculiar charm and realism, often recalling the work of Hawthorne. She died at South Berwick, Maine, on the 24th of June 1909.

Among her publications are: *Deephaven* (1877), a series of sketches; *Old Friends and New* (1879); *Country By-ways* (1881); *A Country Doctor* (1884), a novel; *A Marsh Island* (1885), a novel; *A White Haven and other Stories* (1886); *The King of Folly Island and other People* (1888); *Strangers and Wayfarers* (1890); *A Native of Winby and other Tales* (1893); *The Queen's Twin and other Stories* (1899), and *The Tory Lover* (1901), an historical novel.

JEWS (Heb. *Y'hūdi*, man of Judah; Gr. *Ἰουδαῖος*; Lat. *Judæi*), the general name for the Semitic people which inhabited Palestine from early times, and is known in various connexions as "the Hebrews," "the Jews," and "Israel" (see §5 below). Their history may be divided into three great periods: (1) That covered by the Old Testament to the foundation of Judaism in the Persian age, (2) that of the Greek and Roman domination to the destruction of Jerusalem, and (3) that of the Diaspora or Dispersion to the present day.

I.—OLD TESTAMENT HISTORY

1. *The Land and the People.*—For the first two periods the history of the Jews is mainly that of Palestine. It begins among those peoples which occupied the area lying between the Nile on the one side and the Tigris and the Euphrates on the other. Surrounded by ancient seats of culture in Egypt and Babylonia, by the mysterious deserts of Arabia, and by the highlands of Asia Minor, Palestine, with Syria on the north, was the high road of civilization, trade and warlike enterprise, and the meeting-place of religions. Its small principalities were entirely dominated by the great Powers, whose weakness or acquiescence alone enabled them to rise above dependence or vassalage. The land was traversed by old-established trade routes and possessed important harbours on the Gulf of Akaba and on the Mediterranean coast, the latter exposing it to the influence of the Levantine culture. It was "the physical centre of those movements of history from which the world has grown." The portion of this district abutting upon the Mediterranean may be divided into two main parts: Syria (from the Taurus to Hermon) and Palestine (southward to the desert bordering upon Egypt). The latter is about 150 m. from north to south (the proverbial "Dan to Beersheba"), with a breadth varying from 25 to 80 m., i.e. about 6040 sq. m. This excludes the land east of the Jordan, on which see PALESTINE.

From time to time streams of migration swept into Palestine and Syria. Semitic tribes wandered northwards from their home in Arabia to seek sustenance in its more fertile fields, to plunder, or to escape the pressure of tribes in the rear. The course leads naturally into either Palestine or Babylonia, and, following the Euphrates, northern Syria is eventually reached. Tribes also moved down from the north: nomads, or offshoots from the powerful states which stretch into Asia Minor. Such frequently recurring movements introduced new blood. Tribes, chiefly of pastoral habits, settled down among others who were so nearly of their own type that a complete amalgamation could be effected, and this without any marked modification of the general characteristics of the earlier inhabitants. It is from such a fusion as this that the ancestors of the Jews were descended, and both the history and the genius of this people can be properly understood only by taking into account the physical features of their land and the characteristics of the Semitic races in general (see PALESTINE, SEMITIC LANGUAGES).

2. *Society and Religion.*—The similarity uniting the peoples of the East in respect of racial and social characteristics is accompanied by a striking similarity of mental outlook which has survived to modern times. Palestine, in spite of the numerous vicissitudes to which it has been subjected, has not lost its fundamental characteristics. The political changes involved in the Babylonian, Assyrian, Egyptian or Persian conquests surely affected it as little as the subsequent waves of Greek, Roman and other European invasions. Even during the temporary Hellenization in the second great period the character of the people as a whole was untouched by the various external influences which produced so great an effect on the upper classes. When the foreign civilization perished, the old culture once more came to the surface. Hence it is possible, by a comprehensive comparative study of Eastern peoples, in both ancient and modern times, to supplement and illustrate within certain limits our direct knowledge of the early Jewish people, and thus to understand more clearly those characteristics which were

peculiar to them, in relation to those which they shared with other Oriental peoples.

Even before authentic history begins, the elements of religion and society had already crystallized into a solid coherent structure which was to persist without essential modification. Religion was inseparable from ordinary life, and, like that of all peoples who are dependent on the fruits of the earth, was a nature-worship. The tie between deities and worshippers was regarded as physical and entailed mutual obligations. The study of the clan-group as an organization is as instructive here as in other fields. The members of each group lived on terms of equality, the families forming a society of worship the rites of which were conducted by the head. Such groups (each with its local deity) would combine for definite purposes under the impulse of external needs, but owing to inevitable internal jealousies and the incessant feuds among a people averse from discipline and authority, the unions were not necessarily lasting. The elders of these groups possessed some influence, and tended to form an aristocracy, which took the lead in social life, although their authority generally depended merely upon custom. Individual leaders in times of stress acquired a recognized supremacy, and, once a tribe outstripped the rest, the opportunities for continued advance gave further scope to their authority. "The interminable feuds of tribes, conducted on the theory of blood-revenge, . . . can seldom be durably healed without the intervention of a third party who is called in as arbiter, and in this way an impartial and wise power acquires of necessity a great and beneficent influence over all around it" (W. R. Smith). In time, notwithstanding a certain inherent individualism and impatience of control, veritable despotisms arose in the Semitic world, although such organizations were invariably liable to sudden collapse as the old forms of life broke down with changing conditions.¹

3. *Early History*.²—Already in the 15th century B.C. Palestine was inhabited by a settled people whose language, thought and religion were not radically different several hundred years later. Small native princes ruled as vassals of Egypt which, after expelling the Hyksos from its borders, had entered upon a series of conquests as far as the Euphrates. Some centuries previously, however, Babylonia had laid claim to the western states, and the Babylonian (*i.e.* Assyrian) script and language were now used, not merely in the diplomatic correspondence between Egypt and Asia, but also for matters of private and everyday life among the Palestinian princes themselves. To what extent specific Babylonian influence showed itself in other directions is not completely known. Canaan (Palestine and the south Phœnician coast-land) and Amor (Lebanon district and beyond) were under the constant supervision of Egypt, and Egyptian officials journeyed round to collect tribute, to attend to complaints, and to assure themselves of the allegiance of the vassals. The Amarna tablets and those more recently found at Taanek (bibl. Taanach), together with the contemporary archaeological evidence (from Lachish, Gezer, Megiddo, Jericho, &c.), represent advanced conditions of life and culture, the precise chronological limits of which cannot be determined with certainty. This age, with its regular maritime intercourse between the Aegean settlements, Phœnicia and the Delta, and with lines of caravans connecting Babylonia, North Syria, Arabia and Egypt, presents a remarkable picture of life and activity, in the centre of which lies Palestine, with here and there Egyptian colonies and some traces of Egyptian cults. The history of this, the "Amarna" age, reveals a state of anarchy in Palestine for which the weakness of Egypt and the downward pressure of north Syrian

peoples were responsible. Subdivided into a number of little local principalities, Palestine was suffering both from internal intrigues and from the designs of this northern power. It is now that we find the restless Habiru, a name which is commonly identified with that of the "Hebrews" (*ibrim*). They offer themselves where necessary to either party, and some at least perhaps belonged to the settled population. The growing prominence of the new northern group of "Hittite" states continued to occupy the energies of Egypt, and when again we have more external light upon Palestinian history, the Hittites (*q.v.*) are found strongly entrenched in the land. But by the end of the first quarter of the 13th century B.C. Egypt had recovered its province (precise boundary uncertain), leaving its rivals in possession of Syria. Towards the close of the 13th century the Egyptian king Merneptah (Mineptah) records a successful campaign in Palestine, and alludes to the defeat of Canaan, Ascalon, Gezer, Yenuam (in Lebanon) and (the people or tribe) Israel.³ Bodies of aliens from the Levantine coast had previously threatened Egypt and Syria, and at the beginning of the 12th century they formed a coalition on land and sea which taxed all the resources of Rameses III. In the Purasati, apparently the most influential of these peoples, may be recognized the origin of the name "Philistine." The Hittite power became weaker, and the invaders, in spite of defeat, appear to have succeeded in maintaining themselves on the sea coast. External history, however, is very fragmentary just at the age when its evidence would be most welcome. For a time the fate of Syria and Palestine seems to have been no longer controlled by the great powers. When the curtain rises again we enter upon the historical traditions of the Old Testament.

4. *Biblical History*.—For the rest of the first period the Old Testament forms the main source. It contains in fact the history itself in two forms: (a) from the creation of man to the fall of Judah (Genesis–2 Kings), which is supplemented and continued further—(b) to the foundation of Judaism in the 5th century B.C. (Chronicles—Ezra–Nehemiah). In the light of contemporary monuments, archaeological evidence, the progress of scientific knowledge and the recognized methods of modern historical criticism, the representation of the origin of mankind and of the history of the Jews in the Old Testament can no longer be implicitly accepted. Written by an Oriental people and clothed in an Oriental dress, the Old Testament does not contain objective records, but subjective history written and incorporated for specific purposes. Like many Oriental works it is a compilation, as may be illustrated from a comparison of Chronicles with Samuel–Kings, and the representation of the past in the light of the present (as exemplified in Chronicles) is a frequently recurring phenomenon. The critical examination of the nature and growth of this compilation has removed much that had formerly caused insuperable difficulties and had quite unnecessarily been made an integral or a relevant part of practical religion. On the other hand, criticism has given a deeper meaning to the Old Testament history, and has brought into relief the central truths which really are vital; it may be said to have replaced a divine account of man by man's account of the divine. Scholars are now almost unanimously agreed that the internal features are best explained by the Graf-Wellhausen hypothesis. This involves the view that the historical traditions are mainly due to two characteristic though very complicated recensions, one under the influence of the teaching of Deuteronomy (Joshua to Kings, see § 20), the other, of a more priestly character (akin to Leviticus), of somewhat later date (Genesis to Joshua, with traces in Judges to Kings, see § 23). There are, of course, numerous problems relating to the nature, limits and dates of the two recensions, of the incorporated sources, and of other sources (whether early or late) of independent origin; and here there is naturally room for much divergence of opinion. Older material (often of composite origin) has been used, not so much for the purpose of providing historical information, as with the object of showing the religious significance of past history;

¹ On the homogeneity of the population, see further, W. R. Smith, *Religion of the Semites* (2nd ed., chaps. i.–iii.); T. Nöldeke, *Sketches from Eastern History*, pp. 1–20 (on "Some Characteristics of the Semitic Race"); and especially E. Meyer, *Gesch. d. Altertums* (2nd ed., i. §§ 330, sqq.). For the relation between the geographical characteristics and the political history, see G. A. Smith, *Historical Geography of the Holy Land*.

² For fuller information on this section see PALESTINE: History, and the related portions of BABYLONIA AND ASSYRIA, EGYPT, HITTITES, SYRIA.

³ Or *land Israel*, W. Spiegelberg, *Oriental Lit. Zeit.* xi. (1908), cols. 403–405.

and the series Joshua-Kings is actually included among the "prophets" in Jewish reckoning (see MIDRASH). In general, one may often observe that freedom which is characteristic of early and unscientific historians. Thus one may note the reshaping of older material to agree with later thought, the building up of past periods from the records of other periods, and a frequent loss of perspective. The historical traditions are to be supplemented by the great body of prophetic, legal and poetic literature which reveal contemporary conditions in various internal literary, theological or sociological features. The investigation of their true historical background and of the trustworthiness of their external setting (e.g. titles of psalms, dates and headings of prophecies) involves a criticism of the historical traditions themselves, and thus the two major classes of material must be constantly examined both separately and in their bearing on one another. In a word, the study of biblical history, which is dependent in the first instance upon the written sources, demands constant attention to the text (which has had an interesting history) and to the literary features; and it requires a sympathetic acquaintance with Oriental life and thought, both ancient and modern, an appreciation of the necessity of employing the methods of scientific research, and (from the theological side) a reasoned estimate of the dependence of individual religious convictions upon the letter of the Old Testament.¹

In view of the numerous articles in this work dealing with biblical subjects,² the present sketch is limited to the outlines of the traditional history; the religious aspect in its bearing upon biblical theology (which is closely bound up with the traditions) is handled separately under HEBREW RELIGION. The related literature is enormous (see the bibliographies to the special articles); it is indexed annually in *Orientalische Bibliographie* (Berlin), and is usefully summarized in the *Theologische Jahresberichte* (Berlin). On the development of the study of biblical history see C. A. Briggs, *Study of Holy Scripture* (1890), especially ch. xx. The first scientific historical work was by H. Ewald, *Gesch. d. Volkes Israel* (1843; 3rd ed., 1864-1868; Eng. trans., 1869-1883), popularized by Arthur Penrhyn Stanley in his *Hist. of the Jewish Church* (1863-1879). The works of J. Wellhausen (especially *Prolegomena to the Hist. of Israel*, Eng. trans., 1885, also the brilliant article "Israel" in the 6th ed. of the *Ency. Brit.*, 1879) were epoch-making; his position was interpreted to English readers by W. Robertson Smith (*Old Test. in Jewish Church*, 1881, 2nd ed., 1892; *Prophets of Israel*, 1882, 2nd ed. by T. K. Cheyne, 1902). The historical (and related) works of T. K. Cheyne, H. Graetz, H. Guthe, F. C. Kent, A. Kittel, W. H. Koster, A. Kuenen, C. Piepenbring, and especially B. Stade, although varying greatly in standpoint, are among the most valuable by recent scholars; H. P. Smith's *Old Test. Hist.* ("International Theological Library," Edinburgh, 1903) is in many respects the most serviceable and complete study; a modern and more critical "Ewald" is a desideratum. For the works of numerous other scholars who have furthered Old Testament research in the past it must suffice to refer to the annotated list by J. M. P. Smith, *Books for O.T. Study* (Chicago, 1908).

For the external history, E. Schrader, *Cuneiform Inscr. and the Old Testament* (Eng. trans. by O. C. Whitehouse, 1885-1888) is still helpful; among the less technical works are J. F. McCurdy, *History, Prophecy and the Monuments*; B. Paton, *Syria and Palestine* (1902); G. Maspero, *Hist. ancienne* (6th ed., 1904); A. Jeremias, *Alt. Test. im Lichte d. Alten Orients* (2nd ed., 1906); and especially *Alloriental. Texte u. Bilder zum Alten Test.*, ed. by H. Gressman, with A. Ungnad and H. Ranke (1909). The most complete is that of Ed. Meyer, *Gesch. d. Alterthums* (2nd ed., 1907 sqq.). That of Jeremias follows upon the lines of H. Winckler, whose works depart from the somewhat narrow limits of purely "Israelite" histories, emphasize the necessity of observing the characteristics of Oriental thought and policy, and are invaluable for discriminating students. Winckler's own views are condensed in the 3rd edition—a re-writing—of Schrader's work (*Keilschr. u. d. Alte Testament*, 1903), and, with an instructive account of the history of "ancient nearer Asia," in H. F. Helmolt's *World's History*, iii. 1-252 (1903). All modern

histories of any value are necessarily compromises between the biblical traditions and the results of recent investigation, and those studies which appear to depart most widely from the biblical or canonical representation often do greater justice to the evidence as a whole than the slighter or more conservative and apologetic reconstructions.³ Scientific biblical historical study, nevertheless, is still in a relatively backward condition; and although the labours of scholars since Ewald constitute a distinct epoch, the trend of research points to the recognition of the fact that the purely subjective literary material requires a more historical treatment in the light of our increasing knowledge of external and internal conditions in the old Oriental world. But an inductive and deductive treatment, both comprehensive and in due proportion, does not as yet (1910) exist, and awaits fuller external evidence.⁴

5. *Traditions of Origin.*—The Old Testament preserves the remains of an extensive literature, representing different standpoints, which passed through several hands before it reached its present form. Surrounded by ancient civilizations where writing had long been known, and enjoying, as excavation has proved, a considerable amount of material culture, Palestine could look back upon a lengthy and stirring history which, however, has rarely left its mark upon our records. Whatever ancient sources may have been accessible, whatever trustworthy traditions were in circulation, and whatever a knowledge of the ancient Oriental world might lead one to expect, one is naturally restricted in the first instance to those undated records which have survived in the form which the last editors gave to them. The critical investigation of these records is the indispensable prelude to all serious biblical study, and hasty or sweeping deductions from monumental or archaeological evidence, or versions compiled promiscuously from materials of distinct origin, are alike hazardous. A glimpse at Palestine in the latter half of the second millennium B.C. (§ 3) prepares us for busy scenes and active intercourse, but it is not a history of this kind which the biblical historians themselves transmit. At an age when—on literary-critical grounds—the Old Testament writings were assuming their present form, it was possible to divide the immediately preceding centuries into three distinct periods. (a) The first, that of the two rival kingdoms: Israel (Ephraim or Samaria) in the northern half of Palestine, and Judah in the south. Then (b) the former lost its independence towards the close of the 8th century B.C., when a number of its inhabitants were carried away; and the latter shared the fate of exile at the beginning of the 6th, but succeeded in making a fresh reconstruction some fifty or sixty years later. Finally (c), in the so-called "post-exilic" period, religion and life were reorganized under the influence of a new spirit; relations with Samaria were broken off, and Judaism took its definite character, perhaps about the middle or close of the 5th century. Throughout these vicissitudes there were important political and religious changes which render the study of the composite sources a work of unique difficulty. In addition to this it should be noticed that the term "Jew" (originally *Yehudi*), in spite of its wider application, means properly "man of Judah," i.e. of that small district which, with Jerusalem as its capital, became the centre of Judaism. The favourite name "Israel" with all its religious and national associations is somewhat ambiguous in an historical sketch, since, although it is used as opposed to Judah (a), it ultimately came to designate the true nucleus of the worshippers of the national god Yahweh as opposed to the Samaritans, the later inhabitants of Israelite territory (c). A more general term is "Hebrew" (see HEBREW LANGUAGE), which, whether originally identical with the *Habiru* or not (§ 3), is used in contrast to foreigners, and this non-committal ethnic

¹ It is useful to compare the critical study of the Koran (*q.v.*), where, however, the investigation of its various "revelations" is simpler than that of the biblical "prophecies" on account of the greater wealth of independent historical tradition. See also G. B. Gray, *Contemporary Review* (July 1907); A. A. Bevan, *Cambridge Biblical Essays* (ed. Swete, 1909), pp. 1-19.

² See primarily BIRLE: *Old Testament*; the articles on the contents and literary structure of the several books; the various biographical, topographical and ethnical articles, and the separate treatment of the more important subjects (e.g. LEVITES, PROPHET, SACRIFICE).

³ On the bearing of external evidence upon the internal biblical records, see especially S. R. Driver's essay in Hogarth's *Authority and Archaeology*; cf. also A. A. Bevan, *Critical Review* (1897), p. 406 sqq., 1898, pp. 131 sqq.; G. B. Gray, *Expositor*, May 1898; W. G. Jordan, *Bib. Crit. and Modern Thought* (1909), pp. 42 sqq.

⁴ For the sections which follow the present writer may be permitted to refer to his introductory contributions in the *Expositor* (June, 1906; "The Criticism of the O.T."); the *Jewish Quarterly Review* (July 1905-January 1907 = *Critical Notes on O.T. History*, especially sections vii.-ix.); July and October 1907, April 1908; *Amer. Journ. Theol.* (July 1909, "Simeon and Levi: the Problem of the Old Testament"); and Swete's *Cambridge Bib. Essays*, pp. 54-89 ("The Present Stage of O.T. Research").

deserves preference where precise distinction is unnecessary or impossible.

The traditions which prevailed among the Hebrews concerning their origin belong to a time when Judah and Israel were regarded as a unit. Twelve divisions or tribes, of which Judah was one, held together by a traditional sentiment, were traced back to the sons of Jacob (otherwise known as Israel), the son of Isaac and grandson of Abraham. Their names vary in origin and probably also in point of age, and where they represent fixed territorial limits, the districts so described were in some cases certainly peopled by groups of non-Israelite ancestry. But as tribal names they invited explanation, and of the many characteristic traditions which were doubtless current a number have been preserved, though not in any very early dress. Close relationship was recognized with the Aramaeans, with Edom, Moab and Ammon. This is characteristically expressed when Esau, the ancestor of Edom, is represented as the brother of Jacob, or when Moab and Ammon are the children of Lot, Abraham's nephew (see *GENEALOGY: Biblical*). Abraham, it was believed, came from Harran (Carrhae), primarily from Babylonia, and Jacob re-enters from Gilead in the north-east with his Aramaean wives and concubines and their families (Benjamin excepted). It is on this occasion that Jacob's name is changed to Israel. These traditions of migration and kinship are in themselves entirely credible, but the detailed accounts of the ancestors Abraham, Isaac and Jacob, as given in Genesis, are inherently doubtful as regards both the internal conditions, which the (late) chronological scheme ascribes to the first half of the second millennium B.C., and the general circumstances of the life of these strangers in a foreign land. From a variety of independent reasons one is forced to conclude that, whatever historical elements they may contain, the stories of this remote past represent the form which tradition had taken in a very much later age.

Opinion is at variance regarding the patriarchal narratives as a whole. To deny their historical character is to reject them as trustworthy accounts of the age to which they are ascribed, and even those scholars who claim that they are essentially historical already go so far as to concede idealization and the possibility or probability of later revision. The failure to apprehend historical method has often led to the fallacious argument that the trustworthiness of individual features justifies our accepting the whole, or that the elimination of unhistorical elements will leave an historical residuum. Here and frequently elsewhere in biblical history it is necessary to allow that a genuine historical tradition may be clothed in unhistorical dress, but since many diverse motives are often concentrated upon one narrative (e.g. Gen. xxxii. 22-32, xxxiv., xxxviii.), the work of internal historical criticism (in view of the scantiness of the evidence) can rarely claim finality. The patriarchal narratives themselves belong to the popular stock of tradition of which only a portion has been preserved. Many of the elements lie outside questions of time and place and are almost immemorial. Some appear written for the first time in the book of Jubilees, in "the Testament of the Twelve Patriarchs" (both perhaps 2nd century B.C.) and in later sources; and although in Genesis the stories are now in a post-exilic setting (a stage earlier than Jubilees), the older portions may well belong to the 7th or 6th cent. This question, however, will rest upon those criteria alone which are of true chronological validity (see further *GENESIS*).

The story of the settlement of the national and tribal ancestors in Palestine is interrupted by an account of the southward movement of Jacob (or Israel) and his sons into a district under the immediate influence of the kings of Egypt. After an interval of uncertain duration we find in Exodus a numerous people subjected to rigorous oppression. No longer individual sons of Jacob or Israel, united tribes were led out by Moses and Aaron; and, after a series of incidents extending over forty years, the "children of Israel" invaded the land in which their ancestors had lived. The traditions embodied in the books Exodus-Joshua are considerably later than the apparent date of the events themselves, and amid the diverse and often conflicting data it is possible to recognize distinct groups due to some extent to distinct historical conditions. The story of the "exodus" is that of the religious birth of "Israel," joined by covenant with the national god Yahweh¹ whose aid in times of peril and need

¹ On the name see *JEHOVAH, TETRAGRAMMATON*.

proved his supremacy. In Moses (*q.v.*) was seen the founder of Israel's religion and laws; in Aaron (*q.v.*) the prototype of the Israelite priesthood. Although it is difficult to determine the true historical kernel, two features are most prominent in the narratives which the post-exilic compiler has incorporated: the revelation of Yahweh, and the movement into Palestine. Yahweh had admittedly been the God of Israel's ancestors, but his name was only now made known (Exod. iii. 13 sqq., vi. 2 seq.), and this conception of a new era in Yahweh's relations with the people is associated with the family of Moses and with small groups from the south of Palestine which reappear in religious movements in later history (see *KENITES*). Amid a great variety of motives the prominence of Kadesh in south Palestine is to be recognized, but it is uncertain what clans or tribes were at Kadesh, and it is possible that traditions, originally confined to those with whom the new conception of Yahweh is connected, were subsequently adopted by others who came to regard themselves as the worshippers of the only true Yahweh. At all events, two quite distinct views seem to underlie the opening books of the Old Testament. The one associates itself with the ancestors of the Hebrews and has an ethnic character. The other, part of the religious history of "Israel," is essentially bound up with the religious genius of the people, and is partly connected with clans from the south of Palestine whose influence appears in later times. Other factors in the literary growth of the present narratives are not excluded (see further § 8, and *EXODUS, THE*).²

6. *The Monarchy of Israel*.—The book of Joshua continues the fortunes of the "children of Israel" and describes a successful occupation of Palestine by the united tribes. This stands in striking contrast to other records of the partial successes of individual groups (Judg. i.). The former, however, is based upon the account of victories by the Ephraimite Joshua over confederations of petty kings to the south and north of central Palestine, apparently the specific traditions of the people of Ephraim describing from their standpoint the entire conquest of Palestine.³ The book of Judges represents a period of unrest after the settlement of the people. External oppression and internal rivalries rent the Israelites, and in the religious philosophy of a later (Deuteronomic) age the period is represented as one of alternate apostasy from and of penitent return to the Yahweh of the "exodus." Some vague recollection of known historical events (§ 3 end) might be claimed among the traditions ascribed to the closing centuries of the second millennium, but the view that the prelude to the monarchy was an era when individual leaders "judged" all Israel finds no support in the older narratives, where the heroes of the age (whose correct sequence is uncertain) enjoy only a local fame. The best historical narratives belong to Israel and Gilead; Judah scarcely appears, and in a relatively old poetical account of a great fight of the united tribes against a northern adversary lies outside the writer's horizon or interest (Judg. v., see *DEBORAH*). Stories of successful warfare and of temporary leaders (see *ABIMELECH*; *EHUD*; *GIDEON*; *JEPHTHAH*) form an introduction to the institution of the Israelite monarchy, an epoch of supreme importance in biblical history. The heroic figure who stands at the head is Saul ("asked"), and two accounts of his rise are recorded. (1) The Philistines, a foreign people whose presence in Palestine

² The story of Joseph has distinctive internal features of its own, and appears to be from an independent cycle, which has been used to form a connecting link between the Settlement and the Exodus; see also Ed. Meyer, *Die Israeliten u. ihre Nachbarvölker* (1906), pp. 228, 433; B. Luther, *ibid.* pp. 108 seq., 142 seq. Neither of the poems in Deut. xxxii. seq. alludes to an escape from Egypt; Israel is merely a desert tribe inspired to settle in Palestine. Apparently even the older accounts of the exodus are not of very great antiquity; according to Jeremiah ii. 2, 7 (cf. Hos. ii. 15) some traditions of the wilderness must have represented Israel in a very favourable light; for the "canonical" view, see Ezekiel xvi., xx., xxiii.

³ The capture of central Palestine itself is not recorded; according to its own traditions the district had been seized by Jacob (Gen. xlviii. 22; cf. the late form of the tradition in Jubilees xxxiv.). This conception of a conquering hero is entirely distinct from the narratives of the descent of Jacob into Egypt, &c. (see Meyer and Luther, *op. cit.* pp. 110, 227 seq., 415-433).

has already been noticed, had oppressed Israel (cf. SAMSON) until a brilliant victory was gained by the prophet Samuel, some account of whose early history is recorded. He himself held supreme sway over all Israel as the last of the "judges" until compelled to accede to the popular demand for a king. The young Saul was chosen by lot and gained unanimous recognition by delivering Jabesh in Gilead from the Ammonites. (2) But other traditions represent the people scattered and in hiding; Israel is groaning under the Philistine yoke, and the unknown Saul is raised up by Yahweh to save his people. This he accomplishes with the help of his son Jonathan. The first account, although now essential to the canonical history, clearly gives a less authentic account of the change from the "judges" to the monarchy, while the second is fragmentary and can hardly be fitted into the present historical thread (see SAUL). At all events the first of a series of annalistic notices of the kings of Israel ascribes to Saul conquests over the surrounding peoples to an extent which implies that the district of Judah formed part of his kingdom (1 Sam. xiv. 47 seq.). His might is attested also by the fine elegy (2 Sam. i. 19 sqq.) over the death of two great Israelite heroes, Saul and Jonathan, knit together by mutual love, inseparable in life and death, whose unhappy end after a career of success was a national misfortune. Disaster had come upon the north, and the plain of Jezreel saw the total defeat of the king and the rout of his army. The court was hastily removed across the Jordan to Mahanaim, where Saul's son Ishbaal (Ish-bosheth), thanks to his general Abner, recovered some of the lost prestige. In circumstances which are not detailed, the kingdom seems to have regained its strength, and Ishbaal is credited with a reign of two years over Israel and Gilead (2 Sam. ii. 8-10; contrast v. 11). But at this point the scanty annals are suspended and the history of the age is given in more popular sources. Both Israel and Judah had their own annals, brief excerpts from which appear in the books of Samuel, Kings and Chronicles, and they are supplemented by fuller narratives of distinct and more popular origin. The writings are the result of a continued literary process, and the Israelite national history has come down to us through Judæan hands, with the result that much of it has been coloured by late Judæan feeling. It is precisely in Saul's time that the account of the Judæan monarchy, or perhaps of the monarchy from the Judæan standpoint, now begins.

7. *The Monarchy of Judah.*—Certain traditions of Judah and Jerusalem appear to have looked back upon a movement from the south, traces of which underlie the present account of the "exodus." The land was full of "sons of Anak," giants who had terrified the scouts sent from Kadesh. Caleb (*q.v.*) alone had distinguished himself by his fearlessness, and the clan Caleb drove them out from Hebron in south Judah (Josh. xv. 14 sqq.; cf. also xi. 21 seq.). David and his followers are found in the south of Hebron, and as they advanced northwards they encountered wondrous heroes between Gath and Jerusalem (2 Sam. xxi. 15 sqq.; xxiii. 8 sqq.). After strenuous fighting the district was cleared, and Jerusalem, taken by the sword, became the capital. History saw in David the head of a lengthy line of kings, the founder of the Judæan monarchy, the psalmist and the priest-king who inaugurated religious institutions now recognized to be of a distinctly later character. As a result of this backward projection of later conceptions, the recovery of the true historical nucleus is difficult. The prominence of Jerusalem, the centre of post-exilic Judaism, necessarily invited reflection. Israelite tradition had ascribed the conquest of Jerusalem, Hebron and other cities of Judah to the Ephraimite Joshua; Judæan tradition, on the other hand, relates the capture of the sacred city from a strange and hostile people (2 Sam. v.). The famous city, within easy reach of the southern desert and central Palestine (to Hebron and to Samaria the distances are about 18 and 35 miles respectively), had already entered into Palestinian history in the "Amarna" age (§ 3). Anathoth, a few miles to the north-east, points to the cult of the goddess Anath, the near-lying Nob has suggested the name of the Babylonian Nebo, and the neighbouring, though unidentified, Beth-Ninib of the

Amarna tablets may indicate the worship of a Babylonian war and astral god (cf. the solar name Beth-Shemesh). Such was the religious environment of the ancient city which was destined to become the centre of Judaism. Judæan tradition dated the sanctity of Jerusalem from the installation of the ark, a sacred movable object which symbolized the presence of Yahweh. It is associated with the half-nomad clans in the south of Palestine, or with the wanderings of David and his own priest Abiathar; it is ultimately placed within the newly captured city. Quite another body of tradition associates it with the invasion of all the tribes of Israel from beyond the Jordan (see ARK). To combine the heterogeneous narratives and isolated statements into a consecutive account is impossible; to ignore those which conflict with the now predominating views would be unmethodical. When the narratives describe the life of the young David at the court of the first king of the northern kingdom, when the scenes cover the district which he took with the sword, and when the brave Saul is represented in an unfavourable light, one must allow for the popular tendency to idealize great figures, and for the Judæan origin of the compilation. To David is ascribed the sovereignty over a united people. But the stages in his progress are not clear. After being the popular favourite of Israel in the little district of Benjamin, he was driven away by the jealousy and animosity of Saul. Gradually strengthening his position by alliance with Judæan clans, he became king at Hebron at the time when Israel suffered defeat in the north. His subsequent advance to the kingship over Judah and Israel at Jerusalem is represented as due to the weak condition of Israel, facilitated by the compliance of Abner; partly, also, to the long-expressed wish of the Israelites that their old hero should reign over them. Yet again, Saul had been chosen by Yahweh to free his people from the Philistines; he had been rejected for his sins, and had suffered continuously from this enemy; Israel at his death was left in the unhappy state in which he had found it; it was the Judæan David, the faithful servant of Yahweh, who was now chosen to deliver Israel, and to the last the people gratefully remembered their debt. David accomplished the conquests of Saul but on a grander scale; "Saul hath slain his thousands and David his tens of thousands" is the popular couplet comparing the relative merits of the rival dynasts. A series of campaigns against Edom, Moab, Ammon and the Aramaean states, friendly relations with Hiram of Tyre, and the recognition of his sovereignty by the king of Hamath on the Orontes, combine to portray a monarchy which was the ideal.

But in passing from the books of Samuel, with their many rich and vivid narratives, to the books of Kings, we enter upon another phase of literature; it is a different atmosphere, due to the character of the material and the aims of other compilers (see § 9 beginning). David, the conqueror, was followed by his son Solomon, famous for his wealth, wisdom and piety, above all for the magnificent Temple which he built at Jerusalem. Phœnician artificers were enlisted for the purpose, and with Phœnician sailors successful trading-journeys were regularly undertaken. Commercial intercourse with Asia Minor, Arabia, Tarshish (probably in Spain) and Ophir (*q.v.*) filled his coffers, and his realm extended from the Euphrates to the border of Egypt. Tradition depicts him as a worthy successor to his father, and represents a state of luxury and riches impressive to all who were familiar with the great Oriental courts. The commercial activity of the king and the picture of intercourse and wealth are quite in accordance with what is known of the ancient monarchies, and could already be illustrated from the Amarna age. Judah and Israel dwelt at ease, or held the superior position of military officials, while the earlier inhabitants of the land were put to forced labour. But another side of the picture shows the domestic intrigues which darkened the last days of David. The accession of Solomon had not been without bloodshed, and Judah, together with David's old general Joab and his faithful priest Abiathar, were opposed to the son of a woman who had been the wife of a Hittite warrior. The era of the Temple of Jerusalem starts with a new régime, another captain of the army

and another priest. Nevertheless, the enmity of Judah is passed over, and when the kingdom is divided for administrative purposes into twelve districts, which ignore the tribal divisions, the centre of David's early power is exempt from the duty of providing supplies (1 Kings iv.). Yet again, the approach of the divided monarchy is foreshadowed. The employment of Judaeans and Israelites for Solomon's palatial buildings, and the heavy taxation for the upkeep of a court which was the wonder of the world, caused grave internal discontent. External relations, too, were unsatisfactory. The Edomites, who had been almost extirpated by David in the valley of Salt, south of the Dead Sea, were now strong enough to seek revenge; and the powerful kingdom of Damascus, whose foundation is ascribed to this period, began to threaten Israel on the north and north-east. These troubles, we learn, had affected all Solomon's reign, and even Hiram appears to have acquired a portion of Galilee. In the approaching disruption writers saw the punishment for the king's apostasy, and they condemn the sanctuaries in Jerusalem which he erected to the gods of his heathen wives. Nevertheless, these places of cult remained some 300 years until almost the close of the monarchy, when their destruction is attributed to Josiah (§ 16). When at length Solomon died the opportunity was at once seized to request from his son Rehoboam a more generous treatment. The reply is memorable: "My little finger is thicker than my father's loins; my father chastised you with whips, but I will chastise you with scorpions." These words were calculated to inflame a people whom history proves to have been haughty and high-spirited, and the great Israel renounced its union with the small district of Judah. Jeroboam (*q.v.*), once one of Solomon's officers, became king over the north, and thus the history of the divided monarchy begins (about 930 B.C.) with the Israelite power on both sides of the Jordan and with Judah extending southwards from a point a few miles north of Jerusalem.

8. *Problems of the Earliest History.*—Biblical history previous to the separation of Judah and Israel holds a prominent place in current ideas, since over two-fifths of the entire Old Testament deals with these early ages. The historical sources for the crucial period, from the separation to the fall of Jerusalem (586 B.C.), occupy only about one-twelfth, and even of this about one-third is spread over some fifteen years (see below, § 11). From the flourishing days of the later monarchy and onwards, different writers handled the early history of their land from different standpoints. The feeling of national unity between north and south would require historical treatment, the existence of rival monarchies would demand an explanation. But the surviving material is extremely uneven; vital events in these centuries are treated with a slowness in striking contrast to the relatively detailed evidence for the preceding period—evidence, however, which is far from being contemporary. Where the material is fuller, serious discrepancies are found; and where external evidence is fortunately available, the independent character of the biblical history is vividly illustrated. The varied traditions up to this stage cannot be regarded as objective history. It is naturally impossible to treat them from any modern standpoint as fiction; they are honest even where they are most untrustworthy. But the recovery of successive historical nuclei does not furnish a continuous thread, and if one is to be guided by the historical context of events the true background to each nucleus must be sought. The northern kingdom cherished the institution of a monarchy, and in this, as in all great political events, the prophets took part. The precise part these figures play is often idealized and expresses the later views of their prominence. It was only after a bitter experience that the kingship was no longer regarded as a divine gift, and traditions have been revised in order to illustrate the opposition to secular authority. In this and in many other respects the records of the first monarchy have been elaborated and now reveal traces of differing conceptions of the events (see DAN; DAVID; ELI; SAMUEL; SAUL; SOLOMON). The oldest narratives are not in their original contexts, and they contain features which render it questionable whether a very trustworthy recollection of the period was retained. Although the rise of the Hebrew state, at an age when the great powers were quiescent and when such a people as the Philistines is known to have appeared upon the scene, is entirely intelligible, it is not improbable that legends of Saul and David, the heroic founders of the two kingdoms, have been put in a historical setting with the help of later historical tradition. It is at least necessary to distinguish provisionally between a possibly historical framework and narratives which may be of later growth—between the general outlines which only external evidence can test and details which cannot be tested and appear isolated without any cause or devoid of any effect.

Many attempts have been made to present a satisfactory sketch of the early history and to do justice to (a) the patriarchal narratives,

(b) the exodus from Egypt and the Israelite invasion, and (c) the rise of the monarchy. As regards (b), external evidence has already suggested to scholars that there were Israelites in Palestine before the invasion; internal historical criticism is against the view that all the tribes entered under Joshua; and in (a) there are traces of an actual settlement in the land, entirely distinct from the cycle of narratives which prepare the way for (b). The various reconstructions and compromises by modern apologetic and critical writers alike involve without exception an extremely free treatment of the biblical sources and the rejection of many important and circumstantial data.¹ On the one hand, a sweeping invasion of all the tribes of Israel moved by a common zeal may, like the conquests of Islam, have produced permanent results. According to this view the enervating luxury of Palestinian culture almost destroyed the lofty ideal monotheism inculcated in the desert, and after the fall of the northern tribes (latter part of the 8th cent.) Judah is naturally regarded as the sole heir. But such a conquest, and all that it signifies, conflict both with external evidence (e.g. the results of excavation), and with any careful inspection of the narratives themselves. On the other hand, the reconstructions which allow a gradual settlement (perhaps of distinct groups), and an intermingling with the earlier inhabitants, certainly find support in biblical evidence, and they have been ingeniously built up with the help of tribal and other data (e.g. Gen. xxxiv., xxxviii.; Judg. i. ix.). But they imply political, sociological and religious developments which do not do justice either to the biblical evidence as a whole or to a comprehensive survey of contemporary conditions.² Thus, one of the important questions is the relation between those who had taken part in the exodus and the invasion and those who had not. This inquiry is further complicated by (c), where the history of Israel and Judah, as related in Judges and 1 Samuel, has caused endless perplexity. The traditions of the Ephraimite Joshua and of Saul the first king of (north) Israel virtually treat Judah as part of Israel and are related to the underlying representations in (a). But the specific independent Judaeans standpoint treats the unification of the two divisions as the work of David who leaves the heritage to Solomon. The varied narratives, now due to Judaeans editors, preserve distinct points of view, and it is extremely difficult to unravel the threads and to determine their relative position in the history. Finally, the consciousness that the people as a religious body owed everything to the desert clans (b) (see § 5) subsequently leaves its mark upon (north) Israelite history (§ 14), but has not the profound significance which it has in the records of Judah and Jerusalem. Without sufficient external and independent evidence wherewith to interpret in the light of history the internal features of the intricate narratives, any reconstruction would naturally be hazardous, and all attempts must invariably be considered in the light of the biblical evidence itself, the date of the Israelite exodus, and the external conditions. Biblical criticism is concerned with a composite (Judaeans) history based upon other histories (partly of non-Judaeans origin), and the relation between native written sources and external contemporary evidence (monumental and archaeological) distinctly forbids any haphazard selection from accessible sources. The true nature of this relation can be readily observed in other fields (ancient Britain, Greece, Egypt, &c.), where, however, the native documents and sources have not that complexity which characterizes the composite biblical history. (For the period under review, as it appears in the light of existing external evidence, see PALESTINE: History.)

9. *The Rival Kingdoms.*—The Palestine of the Hebrews was but part of a great area breathing the same atmosphere, and there was little to distinguish Judah from Israel except when they were distinct political entities. The history of the two kingdoms is contained in Kings and the later and relatively less trustworthy Chronicles, which deals with Judah alone. In the former a separate history of the northern kingdom has been combined with Judaeans history by means of synchronisms in accordance with a definite scheme. The 480 years from the foundation of the temple of Jerusalem back to the date of the exodus (1 Kings vi. 1) corresponds to the period forward to the return from the exile (§ 20). This falls into three equal divisions, of which the first ends with Jehoash's temple-reforms and the second with Hezekiah's death. The kingdom of Israel lasts exactly half the time.

¹ This is especially true of the various ingenious attempts to combine the invasion of the Israelites with the movements of the Habiru in the Amarna period (§ 3).

² Cf. Winckler, *Keil: u. das Alte Test.* p. 212 seq.; also his "Der alte Orient und die Geschichtsforschung" in *Mitteilungen der Vorderasiat. Gesellschaft* (Berlin, 1906) and *Religionsgeschichtlicher u. gesch. Orient* (Leipzig, 1906); A. Jeremias, *Alte Test.* (p. 464 seq.); B. Baentsch, *Altorient. u. israel. Monotheismus* (pp. 53, 79, 105, &c.); also *Theolog. Lit. Blatt* (1907), No. 19. On the reconstructions of the tribal history, see especially T. K. Cheyne, *Ency. Bib.* art. "Tribes." The most suggestive study of the pre-monarchical narratives is that of E. Meyer and B. Luther (above); see the former's criticisms on the reconstructions, pp. 50, 251 sqq., 422, n. 1 and *passim*.

Of the 240 years from Jeroboam (1), 80 elapse before the Syrian wars in Ahab's reign, these cover another 80; the famous king Jeroboam (2) reigns 40 years, and 40 years of decline bring the kingdom to an end. These figures speak for themselves, and the present chronology can be accepted only where it is independently proved to be trustworthy (see further W. R. Smith, *Prophets of Israel*, pp. 144-149). Next, the Judæan compiler regularly finds in Israel's troubles the punishment for its schismatic idolatry; nor does he spare Judah, but judges its kings by a standard which agrees with the standpoint of Deuteronomy and is scarcely earlier than the end of the 7th century B.C. (§§ 16, 20). But the history of (north) Israel had naturally its own independent political backgrounds and the literary sources contain the same internal features as the annals and prophetic narratives which are already met with in 1 Samuel. Similarly the thread of the Judæan annals in Kings is also found in 2 Samuel, although the supplementary narratives in Kings are not so rich or varied as the more popular records in the preceding books. The striking differences between Samuel and Kings are due to differences in the writing of the history; independent Israelite records having been incorporated with those of Judah and supplemented (with revision) from the Judæan standpoint (see CHRONICLES; KINGS; SAMUEL).

The Judæan compiler, with his history of the two kingdoms, looks back upon the time when each laid the foundation of its subsequent fortunes. His small kingdom of Judah enjoyed an unbroken dynasty which survived the most serious crises, a temple which grew in splendour and wealth under royal patronage, and a legitimate priesthood which owed its origin to Zadok, the successful rival of David's priest Abiathar. Israel, on the other hand, had signed its death-warrant by the institution of calf-cult, a cult which, however, was scarcely recognized as contrary to the worship of Yahweh before the denunciations of Hosea. The scantiness of political information and the distinctive arrangement of material preclude the attempt to trace the relative position of the two rivals. Judah had natural connexions with Edom and southern Palestine; Israel was more closely associated with Gilead and the Aramaeans of the north. That Israel was the stronger may be suggested by the acquiescence of Judah in the new situation. A diversion was caused by Shishak's invasion, but of this reappearance of Egypt after nearly three centuries of inactivity little is preserved in biblical history. Only the Temple records recall the spoliation of the sanctuary of Jerusalem, and traditions of Jeroboam (1) show that Shishak's prominence was well known.¹ Although both kingdoms suffered, common misfortune did not throw them together. On the contrary, the statement that there was continual warfare is supplemented in Chronicles by the story of a victory over Israel by Abijah the son of Rehoboam. Jeroboam's son Nadab perished in a conspiracy whilst besieging the Philistine city of Gibbethon, and Baasha of (north) Israel seized the throne. His reign is noteworthy for the entrance of Damascus into Palestinian politics. Its natural fertility and its commanding position at the meeting-place of trade-routes from every quarter made it a dominant factor until its overthrow. In the absence of its native records its relations with Palestine are not always clear, but it may be supposed that amid varying political changes it was able to play a double game. According to the annals, incessant war prevailed between Baasha and Abijah's successor, Asa. It is understood that the former was in league with Damascus, which had once been hostile to Solomon (1 Kings xi. 24 seq.)—it is not stated upon whom Asa could rely. However, Baasha at length seized Ramah about five miles north of Jerusalem, and the very existence of Judah was threatened. Asa utilized the treasure of the Temple and palace to induce the Syrians to break off their relations with Baasha. These sent troops to harry north Israel, and Baasha was compelled to retire. Asa, it is evident, was too weak to achieve the remarkable victory ascribed to him in 2 Chron. xiv. (see Asa). As for Baasha, his

short-lived dynasty resembles that of his predecessors. His son Zebiah had reigned only two years (like Ishbaal and Nadab) when he was slain in the midst of a drunken carousal by his captain Zimri. Meanwhile the Israelite army was again besieging the Philistines at Gibbethon, and the recurrence of these conflicts points to a critical situation in a Danite locality in which Judah itself (although ignored by the writers) must have been vitally concerned. The army preferred their general Omri, and marching upon Zimri at Tirzah burnt the palace over his head. A fresh rival immediately appeared, the otherwise unknown Tibni, son of Ginath. Israel was divided into two camps, until, on the death of Tibni and his brother Joram, Omri became sole king (c. 887 B.C.). The scanty details of these important events must naturally be contrasted with the comparatively full accounts of earlier Philistine wars and internal conflicts in narratives which date from this or even a later age.

10. *The Dynasty of Omri*.—Omri (q.v.), the founder of one of the greatest dynasties of Israel, was contemporary with the revival of Tyre under Ithobaal, and the relationship between the states is seen in the marriage of Omri's son Ahab to Jezebel, the priest-king's daughter. His most notable recorded achievement was the subjugation of Moab and the seizure of part of its territory. The discovery of the inscription of a later king of Moab (q.v.) has proved that the east-Jordanic tribes were no uncivilized or barbaric folk; material wealth, a considerable religious and political organization, and the cultivation of letters (as exemplified in the style of the inscription) portray conditions which allow us to form some conception of life in Israel itself. Moreover, Judah (now under Jehoshaphat) enjoyed intimate relations with Israel during Omri's dynasty, and the traditions of intermarriage, and of co-operation in commerce and war, imply what was practically a united Palestine. Alliance with Phœnicia gave the impulse to extended intercourse; trading expeditions were undertaken from the Gulf of Akaba, and Ahab built himself a palace decorated with ivory. The cult of the Baal of Tyre followed Jezebel to the royal city Samaria and even found its way into Jerusalem. This, the natural result of matrimonial and political alliance, already met with under Solomon, receives its usual denunciation. The conflict between Yahweh and Baal and the defeat of the latter are the characteristic notes of the religious history of the period, and they leave their impression upon the records, which are now more abundant. Although little is preserved of Omri's history, the fact that the northern kingdom long continued to be called by the Assyrians after his name is a significant indication of his great reputation. Assyria² was now making itself felt in the west for the first time since the days of Tiglath-Pileser I. (c. 1100 B.C.), and external sources come to our aid. Assur-nazir-pal III. had exacted tribute from north Syria (c. 870 B.C.), and his successor Shalmaneser II., in the course of a series of expeditions, succeeded in gaining the greater part of that land. A defensive coalition was formed in which the kings of Cilicia, Hamath, the Phœnician coast, Damascus and Ammon, the Arabs of the Syrian desert, and "Ahabbu Sirlai" were concerned. In the last, we must recognize the Israelite Ahab. His own contribution of 10,000 men and 12,000 chariots perhaps included levies from Judah and Moab (cf. for the number 1 Kings x. 26). In 854 the allies at least maintained themselves at the battle of Karkar (perhaps Apamea to the north of Hamath). In 849 and 846 other indecisive battles were fought, but the precise constitution of the coalition is not recorded. In 842 Shalmaneser records a campaign against Hazael of Damascus; no coalition is mentioned, although a battle was fought at Sanir (Hermon, Deut. iii. 9), and the cities of Hauran to the south of Damascus were spoiled. Tribute was received from Tyre and Sidon; and Jehu, who was now king of Israel, sent his gifts of gold, silver, &c., to the conqueror. The Assyrian inscription (the so-called "Black Obelisk" now in the British Museum), which records the submission of the petty kings, gives an interesting representation of the humble Israelite emissaries with their long fringed robes and strongly marked physiognomy (see COSTUME, fig. 9). Yet another expedition in 839 would seem to

¹ 2 Chron. xii. 8, which is independent of the chronicler's artificial treatment of his material, apparently points to some tradition of Egyptian suzerainty.

² See for chronology, BABYLONIA AND ASSYRIA, §§ v. and viii.

and another priest. Nevertheless, the enmity of Judah is passed over, and when the kingdom is divided for administrative purposes into twelve districts, which ignore the tribal divisions, the centre of David's early power is exempt from the duty of providing supplies (1 Kings iv.). Yet again, the approach of the divided monarchy is foreshadowed. The employment of Judaeans and Israelites for Solomon's palatial buildings, and the heavy taxation for the upkeep of a court which was the wonder of the world, caused grave internal discontent. External relations, too, were unsatisfactory. The Edomites, who had been almost extirpated by David in the valley of Salt, south of the Dead Sea, were now strong enough to seek revenge; and the powerful kingdom of Damascus, whose foundation is ascribed to this period, began to threaten Israel on the north and north-east. These troubles, we learn, had affected all Solomon's reign, and even Hiram appears to have acquired a portion of Galilee. In the approaching disruption writers saw the punishment for the king's apostasy, and they condemn the sanctuaries in Jerusalem which he erected to the gods of his heathen wives. Nevertheless, these places of cult remained some 300 years until almost the close of the monarchy, when their destruction is attributed to Josiah (§ 16). When at length Solomon died the opportunity was at once seized to request from his son Rehoboam a more generous treatment. The reply is memorable: "My little finger is thicker than my father's loins; my father chastised you with whips, but I will chastise you with scorpions." These words were calculated to inflame a people whom history proves to have been haughty and high-spirited, and the great Israel renounced its union with the small district of Judah. Jeroboam (*q.v.*), once one of Solomon's officers, became king over the north, and thus the history of the divided monarchy begins (about 930 B.C.) with the Israelite power on both sides of the Jordan and with Judah extending southwards from a point a few miles north of Jerusalem.

8. *Problems of the Earliest History.*—Biblical history previous to the separation of Judah and Israel holds a prominent place in current ideas, since over two-fifths of the entire Old Testament deals with these early ages. The historical sources for the crucial period, from the separation to the fall of Jerusalem (586 B.C.), occupy only about one-twelfth, and even of this about one-third is spread over some fifteen years (see below, § 11). From the flourishing days of the later monarchy and onwards, different writers handled the early history of their land from different standpoints. The feeling of national unity between north and south would require historical treatment, the existence of rival monarchies would demand an explanation. But the surviving material is extremely uneven; vital events in these centuries are treated with a slowness in striking contrast to the relatively detailed evidence for the preceding period—evidence, however, which is far from being contemporary. Where the material is fuller, serious discrepancies are found; and where external evidence is fortunately available, the independent character of the biblical history is vividly illustrated. The varied traditions up to this stage cannot be regarded as objective history. It is naturally impossible to treat them from any modern standpoint as fiction; they are honest even where they are most untrustworthy. But the recovery of successive historical nuclei does not furnish a continuous thread, and if one is to be guided by the historical context of events the true background to each nucleus must be sought. The northern kingdom cherished the institution of a monarchy, and in this, as in all great political events, the prophets took part. The precise part these figures play is often idealized and expresses the later views of their prominence. It was only after a bitter experience that the kingship was no longer regarded as a divine gift, and traditions have been revised in order to illustrate the opposition to secular authority. In this and in many other respects the records of the first monarchy have been elaborated and now reveal traces of differing conceptions of the events (see DAN; DAVID; ELI; SAMUEL; SAUL; SOLOMON). The oldest narratives are not in their original contexts, and they contain features which render it questionable whether a very trustworthy recollection of the period was retained. Although the rise of the Hebrew state, at an age when the great powers were quiescent and when such a people as the Philistines is known to have appeared upon the scene, is entirely intelligible, it is not improbable that legends of Saul and David, the heroic founders of the two kingdoms, have been put in a historical setting with the help of later historical tradition. It is at least necessary to distinguish provisionally between a possibly historical framework and narratives which may be of later growth—between the general outlines which only external evidence can test and details which cannot be tested and appear isolated without any cause or devoid of any effect.

Many attempts have been made to present a satisfactory sketch of the early history and to do justice to (a) the patriarchal narratives,

(b) the exodus from Egypt and the Israelite invasion, and (c) the rise of the monarchy. As regards (b), external evidence has already suggested to scholars that there were Israelites in Palestine before the invasion; internal historical criticism is against the view that all the tribes entered under Joshua; and in (a) there are traces of an actual settlement in the land, entirely distinct from the cycle of narratives which prepare the way for (b). The various reconstructions and compromises by modern apologetic and critical writers alike involve without exception an extremely free treatment of the biblical sources and the rejection of many important and circumstantial data.¹ On the one hand, a sweeping invasion of all the tribes of Israel moved by a common zeal may, like the conquests of Islam, have produced permanent results. According to this view the enervating luxury of Palestinian culture almost destroyed the lofty ideal monotheism inculcated in the desert, and after the fall of the northern tribes (latter part of the 8th cent.) Judah is naturally regarded as the sole heir. But such a conquest, and all that it signifies, conflict both with external evidence (*e.g.* the results of excavation), and with any careful inspection of the narratives themselves. On the other hand, the reconstructions which allow a gradual settlement (perhaps of distinct groups), and an intermingling with the earlier inhabitants, certainly find support in biblical evidence, and they have been ingeniously built up with the help of tribal and other data (*e.g.* Gen. xxxiv., xxxviii.; Judg. i. ix.). But they imply political, sociological and religious developments which do not do justice either to the biblical evidence as a whole or to a comprehensive survey of contemporary conditions.² Thus, one of the important questions is the relation between those who had taken part in the exodus and the invasion and those who had not. This inquiry is further complicated by (c), where the history of Israel and Judah, as related in Judges and 1 Samuel, has caused endless perplexity. The traditions of the Ephraimite Joshua and of Saul the first king of (north) Israel virtually treat Judah as part of Israel and are related to the underlying representations in (a). But the specific independent Judaeans standpoint treats the unification of the two divisions as the work of David who leaves the heritage to Solomon. The varied narratives, now due to Judaeans editors, preserve distinct points of view, and it is extremely difficult to unravel the threads and to determine their relative position in the history. Finally, the consciousness that the people as a religious body owed everything to the desert clans (b) (see § 5) subsequently leaves its mark upon (north) Israelite history (§ 14), but has not the profound significance which it has in the records of Judah and Jerusalem. Without sufficient external and independent evidence wherewith to interpret in the light of history the internal features of the intricate narratives, any reconstruction would naturally be hazardous, and all attempts must invariably be considered in the light of the biblical evidence itself, the date of the Israelite exodus, and the external conditions. Biblical criticism is concerned with a composite (Judaeans) history based upon other histories (partly of non-Judaeans origin), and the relation between native written sources and external contemporary evidence (monumental and archaeological) distinctly forbids any haphazard selection from accessible sources. The true nature of this relation can be readily observed in other fields (ancient Britain, Greece, Egypt, &c.), where, however, the native documents and sources have not that complexity which characterizes the composite biblical history. (For the period under review, as it appears in the light of existing external evidence, see PALESTINE: History.)

9. *The Rival Kingdoms.*—The Palestine of the Hebrews was but part of a great area breathing the same atmosphere, and there was little to distinguish Judah from Israel except when they were distinct political entities. The history of the two kingdoms is contained in Kings and the later and relatively less trustworthy Chronicles, which deals with Judah alone. In the former a separate history of the northern kingdom has been combined with Judaeans history by means of synchronisms in accordance with a definite scheme. The 480 years from the foundation of the temple of Jerusalem back to the date of the exodus (1 Kings vi. 1) corresponds to the period forward to the return from the exile (§ 20). This falls into three equal divisions, of which the first ends with Jehoash's temple-reforms and the second with Hezekiah's death. The kingdom of Israel lasts exactly half the time.

¹ This is especially true of the various ingenious attempts to combine the invasion of the Israelites with the movements of the Habiru in the Amarna period (§ 3).

² Cf. Winckler, *Keil: u. das Alte Test.* p. 212 seq.; also his "Der alte Orient und die Geschichtsforschung" in *Mitteilungen der Vorderasiat. Gesellschaft* (Berlin, 1906) and *Religionsgeschichtlicher u. gesch. Orient* (Leipzig, 1906); A. Jeremias, *Alte Test.* (p. 464 seq.); B. Baentsch, *Altorient. u. israel. Monotheismus* (pp. 53, 79, 105, &c.); also *Theolog. Lit. Blatt* (1907), No. 19. On the reconstructions of the tribal history, see especially T. K. Cheyne, *Ency. Bib.* art. "Tribes." The most suggestive study of the pre-monarchical narratives is that of E. Meyer and B. Luther (above); see the former's criticisms on the reconstructions, pp. 50, 251 sqq., 422, n. 1 and *passim*.

as trustworthy as those in Kings.¹ In the present instance the novel details cannot be lightly brushed aside. The position of Judah at this period must be estimated (a) from the preceding years of intimate relationship with Israel to the accession of Jehu, and (b) from the calamity about half a century later when Jerusalem was sacked by Israel. The Judæan narratives do not allow us to fill the gap or to determine whether Judæan policy under the regent Jehoiada would be friendly or hostile to Israel, or whether Judæan nobles may have severed the earlier bond of union. If the latter actually occurred, the hostility of the Israelite prophets is only to be expected. But it is to be presumed that the punishment came from Israel—the use of Syrian mercenaries not excluded—and if, instead of using his treasure to ward off the invasion of Syria, Jehoash bribed Damascus to break off relations with Israel, an alternative explanation of the origin of the Aramaean wars may be found.²

12. *The Aramaean Wars.*—If the records leave it uncertain (a) whether Jehu (like Tyre and Sidon) sent tribute to Shalmaneser as a sign of submission or, while severing relations with Hazael, sought the favour of Assyria, and (b) whether Judah only escaped Hazael's vengeance by a timely bribe or, in freeing itself from Israel, had bribed Hazael to create a diversion, it appears that the southern kingdom suffered little in the disastrous wars between Damascus and Israel. There were, indeed, internal troubles, and Jehoash perished in a conspiracy. His son Amaziah had some difficulty in gaining the kingdom and showed unwonted leniency in sparing the children of his father's murderers. This was a departure from the customs of the age, and was perhaps influenced less by generosity than by expediency. Israel, on the other hand, was almost annihilated. The Syrians seized Gilead, crossed over into Palestine, and occupied the land. Jehu's son Jehoahaz saw his army made "like the dust in threshing," and the desperate condition of the country recalls the straits in the time of Saul (1 Sam. xiii. 6, 7, 19–22), and the days before the great overthrow of the northern power as described in Judges v. 6–8. The impression left by the horrors of the age is clear from the allusions to the barbarities committed by Damascus and its Ammonite allies upon Gilead (Amos i. 3, 13), and in the account of the interview between Elisha and Hazael (2 Kings viii. 12). Several of the situations can be more vividly realized from the narratives of Syrian wars ascribed to the time of Omri's dynasty, even if these did not originally refer to the later period. Under Joash, son of Jehoahaz, the tide turned. Elisha was apparently the champion, and posterity told of his exploits when Samaria was visited with the sword. Thrice Joash smote the Syrians—in accordance with the last words of the dying prophet—and Aphek in the Sharon plain, famous in history for Israel's disasters, now witnessed three victories. The enemy under Hazael's son Ben-hadad (properly Bar-hadad) was driven out and Joash regained the territory which his father had lost (2 Kings xiii. 25); it may reasonably be supposed that a treaty was concluded (cf. 1 Kings xx. 34). But the peace does not seem to have been popular. The story of the last scene in Elisha's life implies in Joash an easily contented disposition which hindered him from completing his successes. Syria had not been crushed, and the failure to utilize the opportunity was an act of impolitic leniency for which Israel was bound to suffer (2 Kings xiii. 19). Elisha's indignation can be illustrated by the denunciation passed upon an anonymous king by the prophetic party on a similar occasion (1 Kings xx. 35–43).

At this stage it is necessary to notice the fresh invasion of Syria by Hadad (Adad)-nirari, who besieged Mari, king of Damascus, and exacted a heavy tribute (c. 800 B.C.). A diversion of this kind may explain the Israelite victories; the subsequent withdrawal of Assyria may have afforded the occasion for retaliation. Those in Israel who remembered the previous war between

¹ Careful examination shows that no a priori distinction can be drawn between "trustworthy" books of Kings and "untrustworthy books" of Chronicles. Although the latter have special late and unreliable features, they agree with the former in presenting the same general trend of past history. The "canonical" history in Kings is further embellished in Chronicles, but the gulf between them is not so profound as that between the former and the underlying and half-suppressed historical traditions which can still be recognised. (See also PALESTINE: History.)

² For the former (2 Kings xii. 17 seq.) cf. Hezekiah and Sennacherib (xviii. 13–15), and for the latter, cf. Asa and Baasha (1 Kings xv. 18–20; above).

Assyria and Damascus would realize the recuperative power of the latter, and would perceive the danger of the short-sighted policy of Joash. It is interesting to find that Hadad-nirari claims tribute from Tyre, Sidon and Beth-omri (Israel), also from Edom and Palaštu (Philistia). There are no signs of an extensive coalition as in the days of Shalmaneser; Ammon is probably included under Damascus; the position of Moab—which had freed itself from Jehoram of Israel—can hardly be calculated. But the absence of Judah is surprising. Both Jehoash (of Judah) and his son Amaziah left behind them a great name; and the latter was comparable only to David (2 Kings xiv. 3). He defeated Edom in the Valley of Salt, and hence it is conceivable that Amaziah's kingdom extended over both Edom and Philistia. A vaunting challenge to Joash (of Israel) gave rise to one of the two fables that are preserved in the Old Testament (Judg. ix. 8 sqq.; see ABIMELECH). It was followed by a battle at Beth-shemesh; the scene would suggest that Philistia also was involved. The result was the rout of Judah, the capture of Amaziah, the destruction of the northern wall of Jerusalem, the sacking of the Temple and palace, and the removal of hostages to Samaria (2 Kings xiv. 12 sqq.). Only a few words are preserved, but the details, when carefully weighed, are extremely significant. This momentous event for the southern kingdom was scarcely the outcome of a challenge to a trial of strength; it was rather the sequel to a period of smouldering jealousy and hostility.

The Judæan records have obscured the history since the days of Omri's dynasty, when Israel and Judah were as one, when they were moved by common aims and by a single reforming zeal, and only Israel's vengeance gives the measure of the injuries she had received. That the Judæan compiler has not given fuller information is not surprising; the wonder is that he should have given so much. It is one of those epoch-making facts in the light of which the course of the history of the preceding and following years must be estimated. It is taken, strangely enough, from an Israelite source, but the tone of the whole is quite dispassionate and objective. It needs little reflection to perceive that the position of Jerusalem and Judah was now hardly one of independence, and the conflicting chronological notices betray the attempt to maintain intact the thread of Judæan history. So, on the one hand, the year of the disaster sees the death of the Israelite king, and Amaziah survives for fifteen years, while, on the other, twenty-seven years elapse between the battle and the accession of Uzziah, the next king of Judah.³

The importance of the historical questions regarding relations between Damascus, Israel and Judah is clear. The defeat of Syria by Joash (of Israel) was not final. The decisive victories were gained by Jeroboam (2). He saved Israel from being blotted out, and through his successes "the children of Israel dwelt in their tents as of old" (2 Kings xiii. 5, xiv. 26 seq.). Syria must have resumed warfare with redoubled energy, and a state of affairs is presupposed which can be pictured with the help of narratives that deal with similar historical situations. In particular, the overthrow of Israel as foreshadowed in 1 Kings xxii. implies an Aramaean invasion (cf. vv. 17, 25), after a treaty (xx. 35 sqq.), although this can scarcely be justified by the events which followed the death of Ahab, in whose time they are now placed.

For the understanding of these great wars between Syria and Israel (which the traditional chronology spreads over eighty years), for the significance of the crushing defeats and inspiring victories, and for the alternations of despair and hope, a careful study of all the records of relations between Israel and the north is at least instructive, and it is important to remember that, although the present historical outlines are scanty and incomplete, some—if not all—of the analogous descriptions in their present form are certainly later than the second half of the 9th century B.C., the period in which these great events fall.⁴

13. *Political Development.*—Under Jeroboam (2) the borders of Israel were restored, and in this political revival the prophets again took part.⁵ The defeat of Ben-hadad by the king of

³ It is possible that Hadad-nirari's inscription refers to conditions in the latter part of his reign (812–783 B.C.), when Judah apparently was no longer independent and when Jeroboam II. was king of Israel. The accession of the latter has been placed between 785 and 782. It is now known, also, that Ben-hadad and a small coalition were defeated by the king of Hamath; but the bearing of this upon Israelite history is uncertain.

⁴ Cf. generally, 1 Sam. iv., xxxi.; 2 Sam. ii. 8; 1 Kings xx., xxii.; 2 Kings vi. 8–vii. 20; also Judges v. (see DEBORAH).

⁵ Special mention is made of Jonah, a prophet of Zebulun in (north) Israel (2 Kings xiv. 25). Nothing is known of him, unless the very late prophetic writing with the account of his visit to Nineveh rests upon some old tradition, which, however, can scarcely be recovered (see JONAH).

Hamath and the quiescence of Assyria may have encouraged Israelite ambitions, but until more is known of the campaigns of Hadad-nirari and of Shalmaneser III. (against Damascus, 773 B.C.) the situation cannot be safely gauged. Moab was probably tributary; the position of Judah and Edom is involved with the chronological problems. According to the Judæan annals, the "people of Judah" set Azariah (Uzziah) upon his father's throne; and to his long reign of fifty-two years are ascribed conquests over Philistia and Edom, the fortification of Jerusalem and the reorganization of the army. As the relations with Israel are not specified, the sequel to Amaziah's defeat is a matter for conjecture; although, when at the death of Jeroboam Israel hastened to its end amid anarchy and dissension, it is hardly likely that the southern kingdom was unmoved. All that can be recognized from the biblical records, however, is the period of internal prosperity which Israel and Judah enjoyed under Jeroboam and Uzziah (*qq.v.*) respectively.

It is difficult to trace the biblical history century by century as it reaches these last years of bitter conflict and of renewed prosperity. The northern kingdom at the height of its power included Judah, it extended its territory east of the Jordan towards the north and the south, and maintained close relations with Phœnicia and the Aramaean states. It had a national history which left its impress upon the popular imagination, and sundry fragments of tradition reveal the pride which the patriot felt in the past. An original close connexion is felt with the east of the Jordan and with Gilead; stories of invasion and conquest express themselves in varied forms. In so far as internal wealth and luxury presuppose the control of the trade-routes, periodical alliances are implied in which Judah, willingly or unwillingly, was included. But the Judæan records do not allow us to trace its independent history with confidence, and our estimate can scarcely base itself solely upon the accidental fulness or scantiness of political details. In the subsequent disasters of Israel (§ 15) we may perceive the growing supremacy of Judah, and the Assyrian inscriptions clearly indicate the dependence of Judæan politics upon its relations with Edom and Arab tribes on the south-east and with Philistia on the west. Whatever had been the effect of the movement of the Purasati some centuries previously, the Philistines (*i.e.* the people of Philistia) are now found in possession of a mature organization, and the Assyrian evidence is of considerable value for an estimate of the stories of conflict and covenant, of hostility and friendship, which were current in south Palestine. The extension of the term "Judah" (*cf.* that of "Israel" and "Samaria") is involved with the incorporation of non-Judæan elements. The country for ten miles north of Jerusalem was the exposed and highly debateable district ascribed to the young tribe of Benjamin (the favourite "brother" of both Judah and Joseph; Gen. xxxvii., xxxix. sqq.); the border-line between the rival kingdoms oscillated, and consequently the political position of the smaller and half-desert Judæan state depended upon the attitude of its neighbours. It is possible that tradition is right in supposing that "Judah went down from his brethren" (Gen. xxxviii. 1; *cf.* Judg. i. 3). Its monarchy traced its origin to Hebron in the south, and its growth is contemporary with a decline in Israel (§ 7). It is at least probable that when Israel was supreme an independent Judah would centre around a more southerly site than Jerusalem. It is naturally uncertain how far the traditions of David can be utilized; but they illustrate Judæan situations when they depict intrigues with Israelite officials, vassalage under Philistia, and friendly relations with Moab, or when they suggest how enmity between Israel and Ammon could be turned to useful account. Tradition, in fact, is concentrated upon the rise of the Judæan dynasty under David, but there are significant periods before the rise of both Jehoash and Uzziah upon which the historical records maintain a perplexing silence.

The Hebrews of Israel and Judah were, political history apart, men of the same general stamp, with the same cult and custom; for the study of religion and social usages, therefore, they can be treated as a single people. The institution of the monarchy

was opposed to the simpler local forms of government, and a military régime had distinct disadvantages (*cf.* 1 Sam. viii. 11-18). The king stood at the head, as the court of final appeal, and upon him and his officers depended the people's welfare. A more intricate social organization caused internal weakness, and Eastern history shows with what rapidity peoples who have become strong by discipline and moderation pass from the height of their glory into extreme corruption and disintegration.¹ This was Israel's fate. Opposition to social abuses and enmity towards religious innovations are regarded as the factors which led to the overthrow of Omri's dynasty by Jehu, and when Israel seemed to be at the height of its glory under Jeroboam (2) warning voices again made themselves heard. The two factors are inseparable, for in ancient times no sharp dividing-line was drawn between religious and civic duties: righteousness and equity, religious duty and national custom were one.

Elaborate legal enactments codified in Babylonia by the 20th century B.C. find striking parallels in Hebrew, late Jewish (Talmudic), Syrian and Mahomedan law, or in the unwritten usages of all ages; for even where there were neither written laws nor duly instituted lawgivers, there was no lawlessness, since custom and belief were, and still are, almost inflexible. Various collections are preserved in the Old Testament; they are attributed to the time of Moses the lawgiver, who stands at the beginning of Israelite national and religious history. But many of the laws were quite unsuitable for the circumstances of his age, and the belief that a body of intricate and even contradictory legislation was imposed suddenly upon a people newly emerged from bondage in Egypt raises insurmountable objections, and under estimates the fact that legal usage existed in the earliest stages of society, and therefore in pre-Mosaic times. The more important question is the date of the laws in their present form and content. Collections of laws are found in Deuteronomy and in exilic and post-exilic writings; groups of a relatively earlier type are preserved in Exod. xxxiv. 14-26, xx. 23-xxiii., and (of another stamp) in Lev. xvii.-xxvi. (now in post-exilic form). For a useful conspectus of details, see J. E. Carpenter and G. Harford-Battersby, *The Hexateuch* (vol. i., appendix); C. F. Kent, *Israel's Laws and Legal Enactments* (1907); and in general I. Henzinger, articles "Government," "Family" and "Law and Justice," *Ency. Bib.*, and G. B. Gray, "Law Literature," *ib.* (the literary growth of legislation). Reference may also be made, for illustrative material, to W. R. Smith, *Kinship and Marriage, Religion of the Semites*; to E. Day, *Social Life of the Hebrews*; and, for some comparison of customary usage in the Semitic field, to S. A. Cook, *Laws of Moses and Code of Hammurabi*.

14. *Religion and the Prophets.*—The elements of the thought and religion of the Hebrews do not sever them from their neighbours; similar features of cult are met with elsewhere under different names. Hebrew religious institutions can be understood from the biblical evidence studied in the light of comparative religion; and without going afield to Babylonia, Assyria or Egypt, valuable data are furnished by the cults of Phœnicia, Syria and Arabia, and these in turn can be illustrated from excavation and from modern custom. Every religion has its customary cult and ritual, its recognized times, places and persons for the observance. Worship is simpler at the smaller shrines than at the more famous temples; and, as the rulers are the patrons of the religion and are brought into contact with the religious personnel, the character of the social organization leaves its mark upon those who hold religious and judicial functions alike. The Hebrews shared the paradoxes of Orientals, and religious enthusiasm and ecstasy were prominent features. Seers and prophets of all kinds ranged from those who were consulted for daily mundane affairs to those who revealed the oracles in times of stress, from those who haunted local holy sites to those high in royal favour, from the quiet domestic communities to the austere mountain recluse. Among these were to be found the most sordid opportunism and the most heroic self-effacement, the crassest supernaturalism and—the loftiest conceptions of practical morality. A development of ideals and a growth of spirituality can be traced which render the biblical writings with their series of prophecies a unique

¹ This is philosophically handled by the Arabian historian Ibn Khaldūn, whose *Prolegomena* is well worthy of attention; see De Slane, *Not. et extraits*, vols. xix.-xxi., with Von Kremer's criticisms in the *Sitz. d. Kais. Akad.* of Vienna. (vol. xciii., 1879); *cf.* also R. Flint, *History of the Philosophy of History*, i. 157 sqq.

phenomenon.¹ The prophets taught that the national existence of the people was bound up with religious and social conditions; they were in a sense the politicians of the age, and to regard them simply as foretellers of the future is to limit their sphere unduly. They took a keen interest in all the political vicissitudes of the Oriental world. Men of all standards of integrity, they were exposed to external influences, but whether divided among themselves in their adherence to conflicting parties, or isolated in their fierce denunciation of contemporary abuses, they shared alike in the worship of Yahweh whose inspiration they claimed. A recollection of the manifold forms which religious life and thought have taken in Christendom or in Islam, and the passions which are so easily engendered among opposing sects, will prevent a one-sided estimate of the religious standpoints which the writings betray; and to the recognition that they represent lofty ideals it must be added that the great prophets, like all great thinkers, were in advance of their age.

The prophets are thoroughly Oriental figures, and the interpretation of their profound religious experiences requires a particular sympathy which is not inherent in Western minds. Their writings are to be understood in the light of their age and of the conditions which gave birth to them. With few exceptions they are preserved in fragmentary form, with additions and adjustments which were necessary in order to make them applicable to later conditions. When, as often, the great figures have been made the spokesmen of the thought of subsequent generations, the historical criticism of the prophecies becomes one of peculiar difficulty.² According to the historical traditions it is precisely in the age of Jeroboam (2) and Uzziah that the first of the extant prophecies begin (see AMOS and HOSEA). Here it is enough to observe that the highly advanced doctrines of the distinctive character of Yahweh, as ascribed to the 8th century B.C., presuppose a foundation and development. But the evidence does not allow us to trace the earlier progress of the ideas. Yahwism presents itself under a variety of aspects, and the history of Israel's relations to the God Yahweh (whose name is not necessarily of Israelite origin) can hardly be disentangled amid the complicated threads of the earlier history. The view that the seeds of Yahwism were planted in the young Israelite nation in the days of the "exodus" conflicts with the belief that the worship of Yahweh began in the pre-Mosaic age. Nevertheless, it implies that religion passed into a new stage through the influence of Moses, and to this we find a relatively less complete analogy in the specific north Israelite traditions of the age of Jehu. The change from the dynasty of Omri to that of Jehu has been treated by several hands, and the writers, in their recognition of the introduction of a new tendency, have obscured the fact that the cult of Yahweh had flourished even under such a king as Ahab. While the influence of the great prophets Elijah and Elisha is clearly visible, it is instructive to find that the south, too, has its share in the inauguration of the new era. At Horeb, the mount of God, was located the dramatic theophany which heralded to Elijah the advent of the sword, and Jehu's supporter in his sanguinary measures belongs to the Rechabites, a sect which felt itself to be the true worshipping community of Yahweh and is closely associated with the Kenites, the kin of Moses. It was at the holy well of Kadesh, in the sacred mounts of Sinai and Horeb, and in the field of Edom that the

¹ Cf. J. G. Frazer, *Adonis, Attis, Osiris* (1907), p. 67: "Prophecy of the Hebrew type has not been limited to Israel; it is indeed a phenomenon of almost world-wide occurrence; in many lands and in many ages the wild, whirling words of frenzied men and women have been accepted as the utterances of an in-dwelling deity. What does distinguish Hebrew prophecy from all others is that the genius of a few members of the profession wrested this vulgar but powerful instrument from baser uses, and by wielding it in the interest of a high morality rendered a service of incalculable value to humanity. That is indeed the glory of Israel."

² The use which was made in Apocalyptic literature of the traditions of Moses, Isaiah and others finds its analogy within the Old Testament itself; cf. the relation between the present late prophecies of Jonah and the unknown prophet of the time of Jeroboam (2) (see § 13, note 5). To condemn re-shaping or adaptation of this nature from a modern Western standpoint is to misunderstand entirely the Oriental mind and Oriental usage.

Yahweh of Moses was found, and scattered traces survive of a definite belief in the entrance into Palestine of a movement uncompromisingly devoted to the purer worship of Yahweh. The course of the dynasty of Jehu—the reforms, the disastrous Aramaean wars, and, at length, Yahweh's "arrow of victory"—constituted an epoch in the Israelite history, and it is regarded as such.³

The problem of the history of Yahwism depends essentially upon the view adopted as to the date and origin of the biblical details and their validity for the various historical and religious conditions they presuppose. Yahwism is a religion which appears upon a soil saturated with ideas and usages which find their parallel in extra-biblical sources and in neighbouring lands. The problem cannot be approached from modern preconceptions because there was much associated with the worship of Yahweh which only gradually came to be recognized as repugnant, and there was much in earlier ages and in other lands which reflects an elevated and even complex religious philosophy. In the south of the Sinaitic peninsula, remains have been found of an elaborate half-Egyptian, half-Semitic cultus (Petrie, *Researches in Sinai*, xlii.), and not only does Edom possess some reputation for "wisdom," but, where this district is concerned, the old Arabian religion (whose historical connexion with Palestine is still imperfectly known) claims some attention. The characteristic denunciations of corruption and lifeless ritual in the writings of the prophets and the emphasis which is laid upon purity and simplicity of religious life are suggestive of the influence of the nomadic spirit rather than of an internal evolution on Palestinian soil. Desert pastoral life does not necessarily imply any intellectual inferiority, and its religious conceptions, though susceptible of modification, are not artificially moulded through the influence of other civilizations. Nomadic life is recognized by Arabian writers themselves as possessing a relative superiority, and its characteristic purity of manner and its reaction against corruption and luxury are not incompatible with a warlike spirit. If nomadism may be recognized as one of the factors in the growth of Yahwism, there is something to be said for the hypothesis which associates it with the clans connected with the Levites (see E. Meyer, *Israeliten*, pp. 82 sqq.; B. Luther, *ib.* 138). It is, however, obvious that the influence due to immigrants could be, and doubtless was, exerted at more than one period (see §§ 18, 20; also HEBREW RELIGION; PRIEST).

15. *The Fall of the Israelite Monarchy.*—The prosperity of Israel was its undoing. The disorders that hastened its end find an analogy in the events of the more obscure period after the death of the earlier Jeroboam. Only the briefest details are given. Zechariah was slain after six months by Shallum ben Jabesh in Ibleam; but the usurper fell a month later to Menahem (q.v.), who only after much bloodshed established his position. Assyria again appeared upon the scene under Tiglath-pileser IV. (745-728 B.C.).⁴ His approach was the signal for the formation of a coalition, which was overthrown in 738. Among those who paid tribute were Raṣun (the biblical Rezin) of Damascus, Menahem of Samaria, the kings of Tyre, Byblos and Hamath, and the queen of Arîbi (Arabia, the Syrian desert). Israel was once more in league with Damascus and Phoenicia, and the biblical records must be read in the light of political history. Judah was probably holding aloof. Its king, Uzziah, was a leper in his latter days, and his son and regent, Jotham, claims notice for the circumstantial reference (2 Chron. xxvii.; cf. xxvi. 8) to his subjugation of Ammon—the natural allies of Damascus—for three years. Scarcely had Assyria withdrawn before Menahem lost his life in a conspiracy, and Pekah with the help of Gilead made himself king. The new movement was evidently anti-Assyrian, and strenuous endeavours were made to present a united front. It is suggestive to find Judah the centre of attack.⁵ Raṣun and Pekah directed their blows from the north. Philistia threatened the west flank, and the Edomites who drove out the Judaeans from Elath (on the Gulf of 'Akaba) were no doubt only taking their part in the concerted action. A more critical situation could scarcely be imagined. The throne of David was then occupied by the young Ahaz, Jotham's son.

³ The condemnation passed upon the impetuous and fiery zeal of the adherents of the new movement (cf. Hos. i. 4), like the remarkable vicissitudes in the traditions of Moses, Aaron and the Levites (q.v.), represents changing situations of real significance, whose true place in the history can with difficulty be recovered.

⁴ Formerly thought to be the third of the name.

⁵ Perhaps Judah had come to an understanding with Tiglath-pileser (H. M. Haydn, *Journ. Bib. Lit.* xxviii. 1909, pp. 182-199); see UZZIAH.

In this crisis we meet with Isaiah (*q.v.*), one of the finest of Hebrew prophets. The disorganized state of Egypt and the uncertain allegiance of the desert tribes left Judah without direct aid; on the other hand, opposition to Assyria among the conflicting interests of Palestine and Syria was rarely unanimous. Either in the natural course of events—to preserve the unity of his empire—or influenced by the rich presents of gold and silver with which Ahaz accompanied his appeal for help, Tiglath-pileser intervened with campaigns against Philistia (734 B.C.) and Damascus (733–732). Israel was punished by the ravaging of the northern districts, and the king claims to have carried away the people of “the house of Omri.” Pekah was slain and one Hoshea (*q.v.*) was recognized as his successor. Assyrian officers were placed in the land and Judah thus gained its deliverance at the expense of Israel. But the proud Israelites did not remain submissive for long; Damascus had indeed fallen, but neither Philistia nor Edom had yet been crushed.

At this stage a new problem becomes urgent. A number of petty peoples, of whom little definite is known, fringed Palestine from the south of Judah and the Delta to the Syrian desert. They belong to an area which merges itself in the west into Egypt, and Egypt in fact had a hereditary claim upon it. Continued intercourse between Egypt, Gaza and north Arabia is natural in view of the trade-routes which connected them, and on several occasions joint action on the part of Edomites (with allied tribes) and the Philistines is recorded, or may be inferred. The part played by Egypt proper in the ensuing anti-Assyrian combinations is not clearly known; with a number of petty dynasts fomenting discontent and revolt, there was an absence of cohesion in that ancient empire previous to the rise of the Ethiopian dynasty. Consequently the references to “Egypt” (Heb. *Misrayim*, Ass. *Muṣri*) sometimes suggest that the geographical term was really extended beyond the bounds of Egypt proper towards those districts where Egyptian influence or domination was or had been recognized (see further MIZRAIM).

When Israel began to recover its prosperity and regained confidence, its policy halted between obedience to Assyria and reliance upon this ambiguous “Egypt.” The situation is illustrated in the writings of Hosea (*q.v.*). When at length Tiglath-pileser died, in 727, the slumbering revolt became general; Israel refused the usual tribute to its overlord, and definitely threw in its lot with “Egypt.” In due course Samaria was besieged for three years by Shalmaneser IV. The alliance with So (Senn, Sibi) of “Egypt,” upon whom hopes had been placed, proved futile, and the forebodings of keen-sighted prophets were justified. Although no evidence is at hand, it is probable that Ahaz of Judah rendered service to Assyria by keeping the allies in check; possible, also, that the former enemies of Jerusalem had now been induced to turn against Samaria. The actual capture of the Israelite capital is claimed by Sargon (722), who removed 27,290 of its inhabitants and fifty chariots. Other peoples were introduced, officers were placed in charge, and the usual tribute re-imposed. Another revolt was planned in 720 in which the province of Samaria joined with Hamath and Damascus, with the Phœnician Arpad and Šimura, and with Gaza and “Egypt.” Two battles, one at Karkar in the north, another at Rapih (Raphia) on the border of Egypt, sufficed to quell the disturbance. The desert peoples who paid tribute on this occasion still continued restless, and in 715 Sargon removed men of Tamūd, Ibādīd, Marsīman, Hayāpa, “the remote Arabs of the desert,” and placed them in the land of Beth-Omri. Sargon’s statement is significant for the internal history; but unfortunately the biblical historians take no further interest in the fortunes of the northern kingdom after the fall of Samaria, and see in Judah the sole survivor of the Israelite tribes (see 2 Kings xvii. 7–23). Yet the situation in this neglected district must continue to provoke inquiry.

16. *Judah and Assyria.*—Amid these changes Judah was intimately connected with the south Palestinian peoples (see further PHILISTINES). Ahaz had recognized the sovereignty of Assyria and visited Tiglath-pileser at Damascus. The Temple records describe the innovations he introduced on his return. Under his

son Hezekiah there were fresh disturbances in the southern states, and anti-Assyrian intrigues began to take a more definite shape among the Philistine cities. Ashdod openly revolted and found support in Moab, Edom, Judah, and the still ambiguous “Egypt.” This step may possibly be connected with the attempt of Marduk (Merodach)-baladan in south Babylonia to form a league against Assyria (cf. 2 Kings xx. 12); at all events Ashdod fell after a three years’ siege (711) and for a time there was peace. But with the death of Sargon in 705 there was another great outburst; practically the whole of Palestine and Syria was in arms, and the integrity of Sennacherib’s empire was threatened. In both Judah and Philistia the anti-Assyrian party was not without opposition, and those who adhered or favoured adherence to the great power were justified by the result. The inevitable lack of cohesion among the petty states weakened the national cause. At Sennacherib’s approach, Ashdod, Ammon, Moab and Edom submitted; Ekron, Ascalon, Lachish and Jerusalem held out strenuously. The southern allies (with “Egypt”) were defeated at Eltekeh (Josh. xix. 44). Hezekiah was besieged and compelled to submit (701). The small kings who had remained faithful were rewarded by an extension of their territories, and Ashdod, Ekron and Gaza were enriched at Judah’s expense. These events are related in Sennacherib’s inscription; the biblical records preserve their own traditions (see HEZEKIAH). If the impression left upon current thought can be estimated from certain of the utterances of the court-prophet Isaiah and the Judæan countryman Micah (*q.v.*), the light which these throw upon internal conditions must also be used to gauge the real extent of the religious changes ascribed to Hezekiah. A brazen serpent, whose institution was attributed to Moses, had not hitherto been considered out of place in the cult; its destruction was perhaps the king’s most notable reform.

In the long reign of his son Manasseh later writers saw the death-blow to the Judæan kingdom. Much is related of his wickedness and enmity to the followers of Yahweh, but few political details have come down. It is uncertain whether Sennacherib invaded Judah again shortly before his death, nevertheless the land was practically under the control of Assyria. Both Esar-haddon (681–668) and Assur-bani-pal (668–c. 626) number among their tributaries Tyre, Ammon, Moab, Edom, Ascalon, Gaza and Manasseh himself,¹ and cuneiform dockets unearthed at Gezer suggest the presence of Assyrian garrisons there (and no doubt also elsewhere) to ensure allegiance. The situation was conducive to the spread of foreign customs, and the condemnation passed upon Manasseh thus perhaps becomes more significant. Precisely what form his worship took is a matter of conjecture; but it is possible that the religion must not be judged too strictly from the standpoint of the late compiler, and that Manasseh merely assimilated the older Yahweh-worship to new Assyrian forms.² Politics and religion, however, were inseparable, and the supremacy of Assyria meant the supremacy of the Assyrian pantheon.

If Judah was compelled to take part in the Assyrian campaigns against Egypt, Arabia (the Syrian desert) and Tyre, this would only be in accordance with a vassal’s duty. But when tradition preserves some recollection of an offence for which Manasseh was taken to Babylon to explain his conduct (2 Chron. xxxiii.), also of the settling of foreign colonists in Samaria by Esar-haddon (Ezra iv. 2), there is just a possibility that Judah made some attempt to gain independence. According to Assur-bani-pal all the western lands were inflamed by the revolt of his brother Samas-sum-ukin. What part Judah took in the Transjordanic disturbances, in which Moab fought invading Arabian tribes on behalf of Assyria, is unknown (see MOAB). Manasseh’s son Amon fell in a court intrigue and “the people of the land,” after avenging the murder, set up in his place the infant Josiah (637). The circumstances imply a regency, but the records are silent upon

¹ The fact that these lists are of the kings of the “land Hatti” would suggest that the term “Hittite” had been extended to Palestine.

² So K. Budde, *Rel. of Israel to Exile*, pp. 165–167. For an attempt to recover the character of the cults, see W. Erbt, *Hebräer* (Leipzig, 1906), pp. 150 sqq.

the outlook. The assumption that the decay of Assyria awoke the national feeling of independence is perhaps justified by those events which made the greatest impression upon the compiler, and an account is given of Josiah's religious reforms, based upon a source apparently identical with that which described the work of Jehoash. In an age when the oppression and corruption of the ruling classes had been such that those who cherished the old worship of Yahweh dared not confide in their most intimate companions (Mic. vii. 5, 6), no social reform was possible; but now the young Josiah, the popular choice, was upon the throne. A roll, it is said, was found in the Temple, its contents struck terror into the hearts of the priests and king, and it led to a solemn covenant before Yahweh to observe the provisions of the law-book which had been so opportunely recovered.

That the writer (2 Kings xxii. seq.) meant to describe the discovery of Deuteronomy is evident from the events which followed; and this identification of the roll, already made by Jerome, Chrysostom and others, has been substantiated by modern literary criticism since De Wette (1805). (See DEUTERONOMY; JOSIAH.) Some very interesting parallels have been cited from Egyptian and Assyrian records where religious texts, said to have been found in temples, or oracles from the distant past, have come to light at the very time when "the days were full."¹ There is, however, no real proof for the traditional antiquity of Deuteronomy. The book forms a very distinctive landmark in the religious history by reason of its attitude to cult and ritual (see HEBREW RELIGION, § 7). In particular it is aimed against the worship at the numerous minor sanctuaries and inculcates the sole pre-eminence of the one great sanctuary—the Temple of Jerusalem. This centralization involved the removal of the local priests and a modification of ritual and legal observance. The fall of Samaria, Sennacherib's devastation of Judah, and the growth of Jerusalem as the capital, had tended to raise the position of the Temple, although Israel itself, as also Judah, had famous sanctuaries of its own. From the standpoint of the popular religion, the removal of the local altars, like Hezekiah's destruction of the brazen serpent, would be an act of desecration, an iconoclasm which can be partly appreciated from the sentiments of 2 Kings xviii. 22, and partly also from the modern Wahhabite reformation (of the 19th century). But the details and success of the reforms, when viewed in the light of the testimony of contemporary prophets, are uncertain. The book of Deuteronomy crystallizes a doctrine; it is the codification of teaching which presupposes a carefully prepared soil. The account of Josiah's work, like that of Hezekiah, is written by one of the Deuteronomistic school: that is to say, the writer describes the promulgation of the teaching under which he lives. It is part of the scheme which runs through the book of Kings, and its apparent object is to show that the Temple planned by David and founded by Solomon ultimately gained its true position as the only sanctuary of Yahweh to which his worshippers should repair. Accordingly, in handling Josiah's successors the writer no longer refers to the high places. But if Josiah carried out the reforms ascribed to him they were of no lasting effect. This is conclusively shown by the writings of Jeremiah (xxv. 3-7; xxxvi. 2 seq.) and Ezekiel. Josiah himself is praised for his justice, but faithless Judah is insincere (Jer. iii. 10), and those who claim to possess Yahweh's law are denounced (viii. 8). If Israel could appear to be better than Judah (iii. 11; Ezek. xvi., xxiii.), the religious revival was a practical failure, and it was not until a century later that the opportunity again came to put any new teaching into effect (§ 20). On the other hand, the book of Deuteronomy has a characteristic social-religious side; its humanity, philanthropy and charity are the distinctive features of its laws, and Josiah's reputation (Jer. xxii. 15 seq.) and the circumstances in which he was chosen king may suggest that he, like Jehoash (2 Kings xi. 17; cf. xxiii. 3), had entered into a reciprocal covenant with a people who, as Micah's writings would indicate, had suffered grievous oppression and misery.²

17. *The Fall of the Judæan Monarchy.*—In Josiah's reign a new era was beginning in the history of the world. Assyria was rapidly decaying and Egypt had recovered from the blows of Assur-bani-pal (to which the Hebrew prophet Nahum alludes, iii. 8-10). Psammetichus (Psamtek) I., one of the ablest of Egyptian rulers for many centuries, threw off the Assyrian yoke

¹ See G. Maspero, *Gesch. d. morgenl. Völker* (1877), p. 446; E. Naville, *Proc. Soc. Bibl. Archaeol.* (1907), pp. 232 sqq., and T. K. Cheyne, *Decline and Fall of Judah* (1908), p. 13, with references. (The genuineness of such discoveries is naturally a matter for historical criticism to decide. Thus the discovery of Numa's laws in Rome (Livy xl. 20), upon which undue weight has sometimes been laid (see Klosternann, *Der Pentateuch*, 1906, pp. 155 sqq.), was not accepted as genuine by the senate (who had the laws destroyed), and probably not by Pliny himself. Only the later antiquaries clung to the belief in their trustworthiness.—(Communicated).)

² Both kings came to the throne after a conspiracy aimed at existing abuses, and other parallels can be found (see KINGS).

with the help of troops from Asia Minor and employed these to guard his eastern frontiers at Defneh. He also revived the old trading-connexions between Egypt and Phœnicia. A Chaldean prince, Nabopolassar, set himself up in Babylonia, and Assyria was compelled to invoke the aid of the Aškuza. It was perhaps after this that an inroad of Scythians (q.v.) occurred (c. 626 B.C.); if it did not actually touch Judah, the advent of the people of the north appears to have caused great alarm (Jer. iv.-vi.: Zephaniah). Bethshean in Samaria has perhaps preserved in its later (though temporary) name Scythopolis an echo of the invasion.³ Later, Necho, son of Psammetichus, proposed to add to Egypt some of the Assyrian provinces, and marched through Palestine. Josiah at once interposed; it is uncertain whether, in spite of the power of Egypt, he had hopes of extending his kingdom, or whether the famous reformer was, like Manasseh, a vassal of Assyria. The book of Kings gives the standpoint of a later Judæan writer, but Josiah's authority over a much larger area than Judah alone is suggested by xxiii. 19 (part of an addition), and by the references to the border at Riblah in Ezek. vi. 14, xi. 10 seq. He was slain at Megiddo in 608, and Egypt, as in the long-distant past, again held Palestine and Syria. The Judæans made Jehoahaz (or Shallum) their king, but the Pharaoh banished him to Egypt three months later and appointed his brother Jehoiakim. Shortly afterwards Nineveh fell, and with it the empire which had dominated the fortunes of Palestine for over two centuries (see § 10). Nabonidus (Nabunaid) king of Babylonia (556 B.C.) saw in the disaster the vengeance of the gods for the sacrilege of Sennacherib; the Hebrew prophets, for their part, exulted over Yahweh's far-reaching judgment. The newly formed Chaldean power at once recognized in Necho a dangerous rival and Nabopolassar sent his son Nebuchadrezzar, who overthrew the Egyptian forces at Carchemish (605). The battle was the turning-point of the age, and with it the succession of the new Chaldean or Babylonian kingdom was assured. But the relations between Egypt and Judah were not broken off. The course of events is not clear, but Jehoiakim (q.v.) at all events was inclined to rely upon Egypt. He died just as Nebuchadrezzar, seeing his warnings disregarded, was preparing to lay siege to Jerusalem. His young son Jehoiachin surrendered after a three months' reign, with his mother and the court; they were taken away to Babylonia, together with a number of the artisan class (596). Jehoiakim's brother, Mattaniah or Zedekiah, was set in his place under an oath of allegiance, which he broke, preferring Hophra the new king of Egypt. A few years later the second siege took place. It began on the tenth day of the tenth month, January 587. The looked-for intervention of Egypt was unavailing, although a temporary raising of the siege inspired wild hopes. Desertion, pestilence and famine added to the usual horrors of a siege, and at length on the ninth day of the fourth month 586, a breach was made in the walls. Zedekiah fled towards the Jordan valley but was seized and taken to Nebuchadrezzar at Riblah (45 m. south of Hamath). His sons were slain before his eyes, and he himself was blinded and carried off to Babylon after a reign of eleven years. The Babylonian Nebuzar-adan was sent to take vengeance upon the rebellious city, and on the seventh day of the fifth month 586 B.C. Jerusalem was destroyed. The Temple, palace and city buildings were burned, the walls broken down, the chief priest Seraiah, the second priest Zephaniah, and other leaders were put to death, and a large body of people was again carried away. The disaster became the great epoch-making event for Jewish history and literature.

Throughout these stormy years the prophet Jeremiah (q.v.) had realized that Judah's only hope lay in submission to Babylonia. Stigmatized as a traitor, scorned and even imprisoned, he had not ceased to utter his warnings to deaf ears, although Zedekiah himself was perhaps open to persuasion. Now the penalty had been paid, and the Babylonians, whose policy was less destructive than that of Assyria, contented themselves with appointing as governor a certain Gedaliah. The new centre was Mizpah, a commanding eminence and sanctuary, about 5 m. N.W. of Jerusalem; and here Gedaliah issued an appeal to the people to

³ But see N. Schmidt, *Enzy. Bibl.*, "Scythians," § 1.

be loyal to Babylonia and to resume their former peaceful occupations. The land had not been devastated, and many gladly returned from their hiding-places in Moab, Edom and Ammon. But discontented survivors of the royal family under Ishmael intrigued with Baalis, king of Ammon. The plot resulted in the murder of Gedaliah and an unsuccessful attempt to carry off various princesses and officials who had been left in the governor's care. This new confusion and a natural fear of Babylonia's vengeance led many to feel that their only safety lay in flight to Egypt, and, although warned by Jeremiah that even there the sword would find them, they fled south and took refuge in Tahpanhes (Daphnae, *q.v.*), afterwards forming small settlements in other parts of Egypt. But the thread of the history is broken, and apart from an allusion to the favour shown to the captive Jehoiachin (with which the books of Jeremiah and Kings conclude), there is a gap in the records, and subsequent events are viewed from a new standpoint (§ 20).

The last few years of the Judaean kingdom present several difficult problems.

(a) That there was some fluctuation of tradition is evident in the case of Jehoiakim, with whose quiet end (2 Kings xxiv. 6 [see also LUCIAN]; 2 Chron. xxxvi. 8 [Septuagint]) contrast the fate foreshadowed in Jer. xxii. 18 seq., xxxvi. 30 (cf. *Jos. Ant.* x. 6, 2 seq.). The tradition of his captivity (2 Chron. xxxvi. 6; Dan. i. 2) has apparently confused him with Jehoiachin, and the latter's reign is so brief that some overlapping is conceivable. Moreover, the prophecy in Jer. xxxiv. 5 that Zedekiah would die in peace is not borne out by the history, nor does Josiah's fate agree with the promise in 2 Kings xxii. 20. There is also an evident relation between the pairs: Jehoahaz and Jehoiakim, Jehoiachin and Zedekiah (*e.g.* length of reigns), and the difficulty felt in regard to the second and third is obvious in the attempts of the Jewish historian Josephus to provide a compromise. The contemporary prophecies ascribed to Jeremiah and Ezekiel require careful examination in this connexion, partly as regards their traditional background (especially the headings and setting), and partly for their contents, the details of which sometimes do not admit of a literal interpretation in accordance with our present historical material (cf. Ezek. xix. 3-9, where the two brothers carried off to Egypt and Babylon respectively would seem to be Jehoahaz and his nephew Jehoiachin).

(b) Some fluctuation is obvious in the number, dates and extent of the deportations. Jer. lii. 28-30 gives a total of 4600 persons, in contrast to 2 Kings xxiv. 14, 16 (the numbers are not inclusive), and reckons three deportations in the 7th (? 17th), 18th and 23rd years of Nebuchadrezzar. Only the second is specifically said to be from Jerusalem (the remaining are of Judeans), and the last has been plausibly connected with the murder of Gedaliah, an interval of five years being assumed. For this twenty third year Josephus (*Ant.* x. 9, 7) gives an invasion of Egypt and an attack upon Ammon, Moab and Palestine (see NEBUCHADREZZAR).

(c) That the exile lasted seventy years (? from 586 B.C. to the completion of the second temple) is the view of the canonical history (2 Chron. xxxvi. 21; Jer. xxv. 11, xxix. 10; Zech. i. 12; cf. Tyre, Isa. xxiii. 15), but it is usually reckoned from the first deportation, which was looked upon as of greater significance than the second (Jer. xxiv. xxix.), and it may be a round number. Another difficulty is the interpretation of the 40 years in Ezek. iv. 6 (cf. Egypt, xxix. 11), and the 390 in v. 5 (Septuagint 150 or 190; 130 in *Jos. x.* 9, 7 end). A period of fifty years is allowed by the chronological scheme (1 Kings vi. 1; cf. *Jos. c. Ap.* i. 21), and the late book of Baruch (vi. 3) even speaks of seven generations. Varying chronological schemes may have been current and some weight must be laid upon the remarkable vagueness of the historical information in later writings (see DANIEL).

(d) The attitude of the neighbouring peoples constitutes another serious problem (cf. 2 Kings xxiv. 2 and 2 Chron. xxxvi. 5, where Lucian's recension and the Septuagint respectively add the Samaritans!), in view of the circumstances of Gedaliah's appointment (Jer. xl. 11, see above) as contrasted with the frequent prophecies against Ammon, Moab and Edom which seem to be contemporary (see EDM.; MOAB).

(e) Finally, the recurrence of similar historical situations in Judaean history must be considered. The period under review, with its relations between Judah and Egypt, can be illustrated by prophecies ascribed to a similar situation in the time of Hezekiah. But the destruction of Jerusalem is not quite unique, and somewhat later we meet with indirect evidence for at least one similar disaster upon which the records are silent. There are a number of apparently related passages which, however, on internal grounds, are unsuitable to the present period, and when they show independent signs of a later date (in their present form), there is a very strong probability that they refer to such subsequent disasters. The scantiness of historical tradition makes a final solution impossible, but the study of these years has an important bearing on the history of the later Judaean state, which has been characteristically treated from the standpoint of exiles who returned from Babylonia and regard them-

selves as the kernel of "Israel." From this point of view, the desire to intensify the denudation of Palestine and the fate of its remnant, and to look to the Babylonian exiles for the future, can probably be recognized in the writings attributed to contemporary prophets.¹

18. *Internal Conditions and the Exile.*—Many of the exiles accepted their lot and settled down in Babylonia (cf. Jer. xxix. 4-7); Jewish colonies, too, were being founded in Egypt. The agriculturists and herdsmen who had been left in Palestine formed, as always, the staple population, and it is impossible to imagine either Judah or Israel as denuded of its inhabitants. The down-trodden peasants were left in peace to divide the land among them, and new conditions arose as they took over the ownerless estates. But the old continuity was not entirely broken; there was a return to earlier conditions, and life moved more freely in its wonted channels. The fall of the monarchy involved a reversion to a pre-monarchical state. It had scarcely been otherwise in Israel. The Israelites who had been carried off by the Assyrians were also removed from the cult of the land (cf. 1 Sam. xxvi. 19; Ruth i. 15 seq.). It is possible that some had escaped by taking timely refuge among their brethren in Judah; indeed, if national tradition availed, there were doubtless times when Judah cast its eye upon the land with which it had been so intimately connected. It would certainly be unwise to draw a sharp boundary line between the two districts; kings of Judah could be tempted to restore the kingdom of their traditional founder, or Assyria might be complaisant towards a faithful Judaean vassal. The character of the Assyrian domination over Israel must not be misunderstood; the regular payment of tribute and the provision of troops were the main requirements, and the position of the masses underwent little change if an Assyrian governor took the place of an unpopular native ruler. The two sections of the Hebrews who had had so much in common were scarcely severed by a border-line only a few miles to the north of Jerusalem. But Israel after the fall of Samaria is artificially excluded from the Judaean horizon, and lies as a foreign land, although Judah itself had suffered from the intrusion of foreigners in the preceding centuries of war and turmoil, and strangers had settled in her midst, had formed part of the royal guard, or had even served as janissaries (§ 15, end).

Samaria had experienced several changes in its original population,² and an instructive story tells how the colonists, in their ignorance of the religion of their new home, incurred the divine wrath. *Cujus regio ejus religio*—settlement upon a new soil involved dependence upon its god, and accordingly priests were sent to instruct the Samaritans in the fear of Yahweh. Thenceforth they continued the worship of the Israelite Yahweh along with their own native cults (2 Kings xvii. 24-28, 33). Their descendants claimed participation in the privileges of the Judeans (cf. Jer. xli. 5), and must have identified themselves with the old stock (Ezra iv. 2). Whatever recollection they preserved of their origin and of the circumstances of their entry would be retold from a new standpoint; the ethnological traditions would gain a new meaning; the assimilation would in time become complete. In view of subsequent events it would be difficult to find a more interesting subject of inquiry than the internal religious and sociological conditions in Samaria at this age.

To the prophets the religious position was lower in Judah than in Samaria, whose iniquities were less grievous (Jer. iii. 11 seq., xxiii. 11 sqq.; Ezek. xvi. 51). The greater prevalence of heathen elements in Jerusalem, as detailed in the reforms of Josiah or in the writings of the prophets (cf. Ezek. viii.), would

¹ So also one can now compare the estimate taken of the Jews in Egypt in Jer. xlv. with the actual religious conditions which are known to have prevailed later at Elephantine, where a small Jewish colony worshipped Yahu (Yahweh) at their own temple (see E. Sachau, "Drei aram. Papyrusurkunde," in the *Abhandlungen* of the Prussian Academy, Berlin, 1907).

² Sargon had removed Babylonians into the land of Hatti (Syria and Palestine), and in 715 B.C. among the colonists were tribes apparently of desert origin (Tamud, Hayapa, &c.); other settlements are ascribed to Esar-haddon and perhaps Assur-bani-pal (Ezra iv. 2, 10). See for the evidence, A. E. Cowley, *Ency. Bib.* col. 4257; J. A. Montgomery, *The Samaritans*, pp. 46-57 (Philadelphia, 1907).

at least suggest that the destruction of the state was not entirely a disaster. To this catastrophe may be due the fragmentary character of old Judæan historical traditions. Moreover, the land was purified when it became divorced from the practices of a luxurious court and lost many of its worst inhabitants. In Israel as in Judah the political disasters not only meant a shifting of population, they also brought into prominence the old popular and non-official religion, the character of which is not to be condemned because of the attitude of lofty prophets in advance of their age. When there were sects like the Rechabites (Jer. xxxv.), when the Judæan fields could produce a Micah or a Zephaniah, and when Israel no doubt had men who inherited the spirit of a Hosea, the nature of the underlying conditions can be more justly appreciated. The writings of the prophets were cherished, not only in the unfavourable atmosphere of courts (see Jer. xxxvi., 21 sqq.), but also in the circles of their followers (Isa. viii. 16). In the quiet smaller sanctuaries the old-time beliefs were maintained, and the priests, often perhaps of the older native stock (cf. 2 Kings xvii. 28 and above), were the recognized guardians of the religious cults. The old stories of earlier days encircle places which, though denounced for their corruption, were not regarded as illegitimate, and in the form in which the dim traditions of the past are now preserved they reveal an attempt to purify popular belief and thought. In the domestic circles of prophetic communities the part played by their great heads in history did not suffer in the telling, and it is probable that some part at least of the extant history of the Israelite kingdom passed through the hands of men whose interest lay in the pre-eminence of their seers and their beneficent deeds on behalf of these small communities. This interest and the popular tone of the history may be combined with the fact that the literature does not take us into the midst of that world of activity in which the events unfolded themselves.

Although the records preserve complete silence upon the period now under review, it is necessary to free oneself from the narrow outlook of the later Judæan compilers. It is a gratuitous assumption that the history of (north) Israel ceased with the fall of Samaria or that Judah then took over Israelite literature and inherited the old Israelite spirit: the question of the preservation of earlier writings is of historical importance. It is true that the situation in Israel or Samaria continues obscure, but a careful study of literary productions, evidently not earlier than the 7th century B.C., reveals a particular loftiness of conception and a tendency which finds its parallels in Hosea and approximates the peculiar characteristics of the Deuteronomist school of thought. But the history which the Judæan writers have handed down is influenced by the later hostility between Judah and Samaria. The traditional bond between the north and south which nothing could efface (cf. Jos. *Ant.* xi. 8, 6) has been carried back to the earliest ages; yet the present period, after the age of rival kingdoms, Judah and Israel, and before the foundation of Judaism, is that in which the historical background for the inclusion of Judah among the "sons" of Israel is equally suitable (§§ 5, 20, end). The circumstances favoured a closer alliance between the people of Palestine, and a greater prominence of the old holy places (Hebron, Bethel, Shechem, &c.), of which the ruined Jerusalem would not be one, and the existing condition of Judah and Israel from internal and non-political points of view—not their condition in the pre-monarchical ages—is the more crucial problem in biblical history.¹

19. *Persian Period.*²—The course of events from the middle of the 6th century B.C. to the close of the Persian period is lamentably obscure, although much indirect evidence indicates that this age holds the key to the growth of written biblical history. It was an age of literary activity which manifested itself, not in contemporary historical records—only a few of which have survived—but rather in the special treatment of previously existing sources. The problems are of unusual

intricacy and additional light is needed from external evidence. It will be convenient to turn to this first. Scarcely 40 years after the destruction of Jerusalem, a new power appeared in the east in the person of Cyrus the Great. Babylon speedily fell (539 B.C.) and a fresh era opened. To the petty states this meant only a change of masters; they now became part of one of the largest empires of antiquity. The prophets who had marked in the past the advent of Assyrians and Chaldeans now fixed their eyes upon the advance of Cyrus, confident that the fall of Babylon would bring the restoration of their fortunes. Cyrus was hailed as the divinely appointed saviour, the anointed one of Yahweh. The poetic imagery in which the prophets clothed the doom of Babylon, like the romantic account of Herodotus (i. 191), falls short of the simple contemporary account of Cyrus himself. He did not fulfil the detailed predictions, and the events did not reach the ideals of Hebrew writers; but these anticipations may have influenced the form which the Jewish traditions subsequently took. Nevertheless, if Cyrus was not originally a Persian and was not a worshipper of Yahweh (Isa. xli. 25), he was at least tolerant towards subject races and their religions, and the persistent traditions unmistakably point to the honour in which his memory was held. Throughout the Persian supremacy Palestine was necessarily influenced by the course of events in Phoenicia and Egypt (with which intercourse was continual), and some light may thus be indirectly thrown on its otherwise obscure political history. Thus, when Cambyses, the son of Cyrus, made his great expedition against Egypt, with the fleets of Phoenicia and Cyprus and with the camels of the Arabians, it is highly probable that Palestine itself was concerned. Also, the revolt which broke out in the Persian provinces at this juncture may have extended to Palestine; although the usurper Darius encountered his most serious opposition in the north and north-east of his empire. An outburst of Jewish religious feeling is dated in the second year of Darius (520), but whether Judah was making a bold bid for independence or had received special favour for abstaining from the above revolts, external evidence alone can decide. Towards the close of the reign of Darius there was a fresh revolt in Egypt; it was quelled by Xerxes (485-465), who did not imitate the religious tolerance of his predecessors. Artaxerxes I. Longimanus (465-425), attracts attention because the famous Jewish reformers Ezra and Nehemiah flourished under a king of this name. Other revolts occurred in Egypt, and for these and also for the rebellion of the Persian satrap Megabyzos (c. 448-447), independent evidence for the position of Judah is needed, since a catastrophe apparently befell the unfortunate state before Nehemiah appears upon the scene. Little is known of the mild and indolent Artaxerxes II. Mnemon (404-359). With the growing weakness of the Persian empire Egypt reasserted its independence for a time. In the reign of Artaxerxes III. Ochus (359-338), Egypt, Phoenicia and Cyprus were in revolt; the rising was quelled without mercy, and the details of the vengeance are valuable for the possible fate of Palestine itself. The Jewish historian Josephus (*Ant.* xi. 7) records the enslavement of the Jews, the pollution of the Temple by a certain Bagoses (see BAGOAS), and a seven years' punishment. Other late sources narrate the destruction of Jericho and a deportation of the Jews to Babylonia and to Hyrcania (on the Caspian Sea). The evidence for the catastrophes under Artaxerxes I. and III. (see ARTAXERXES), exclusively contained in biblical and in external tradition respectively, is of particular importance, since several biblical passages refer to disasters similar to those of 586 but presuppose different conditions and are apparently of later origin.³ The murder of Artaxerxes III. by

¹ The growing recognition that the land was not depopulated after 586 is of fundamental significance for the criticism of "exilic" and "post-exilic" history. G. A. Smith thus sums up a discussion of the extent of the deportations: "... A large majority of the Jewish people remained on the land. This conclusion may startle us with our generally received notions of the whole nation as exiled. But there are facts which support it" (*Jerusalem*, ii. 268).

² On the place of Palestine in Persian history see PERSIA: *History*, *ancient*, especially § 5 ii.; also ARTAXERXES; CAMBYES; CYRUS; DARIUS, &c.

³ The evidence for Artaxerxes III., accepted by Ewald and others (see W. R. Smith, *Old Testament in Jewish Church*, p. 438 seq.; W. Judeich, *Kleinasiat. Stud.*, p. 170; T. K. Cheyne, *Ency. Bib.* col. 2202; F. C. Kent, *Hist.* [1899], pp. 230 sqq.), has however been questioned by Willrich, *Judaica*, 35-39 (see Cheyne, *Ency. Bib.* col. 3941). The account of Josephus (above) raises several difficulties, especially the identity of Bagoses. It has been supposed that he has placed the record too late, and that this Bagoses is the Judæan governor who flourished about 408 B.C. (See p. 286, n. 3.)

be loyal to Babylonia and to resume their former peaceful occupations. The land had not been devastated, and many gladly returned from their hiding-places in Moab, Edom and Ammon. But discontented survivors of the royal family under Ishmael intrigued with Baalis, king of Ammon. The plot resulted in the murder of Gedaliah and an unsuccessful attempt to carry off various princesses and officials who had been left in the governor's care. This new confusion and a natural fear of Babylonia's vengeance led many to feel that their only safety lay in flight to Egypt, and, although warned by Jeremiah that even there the sword would find them, they fled south and took refuge in Tahpanhes (Daphnae, *q.v.*), afterwards forming small settlements in other parts of Egypt. But the thread of the history is broken, and apart from an allusion to the favour shown to the captive Jehoiachin (with which the books of Jeremiah and Kings conclude), there is a gap in the records, and subsequent events are viewed from a new standpoint (§ 20).

The last few years of the Judaean kingdom present several difficult problems.

(a) That there was some fluctuation of tradition is evident in the case of Jehoiakim, with whose quiet end (2 Kings xxiv. 6 [see also LUCIAN]; 2 Chron. xxxvi. 8 [Septuagint]) contrast the fate foreshadowed in Jer. xxii. 18 seq., xxxvi. 30 (cf. *Jos. Ant.* x. 6, 2 seq.). The tradition of his captivity (2 Chron. xxxvi. 6; Dan. i. 2) has apparently confused him with Jehoiachin, and the latter's reign is so brief that some overlapping is conceivable. Moreover, the prophecy in Jer. xxxiv. 5 that Zedekiah would die in peace is not borne out by the history, nor does Josiah's fate agree with the promise in 2 Kings xxii. 20. There is also an evident relation between the pairs: Jehoahaz and Jehoiakim, Jehoiachin and Zedekiah (*e.g.* length of reigns), and the difficulty felt in regard to the second and third is obvious in the attempts of the Jewish historian Josephus to provide a compromise. The contemporary prophecies ascribed to Jeremiah and Ezekiel require careful examination in this connexion, partly as regards their traditional background (especially the headings and setting), and partly for their contents, the details of which sometimes do not admit of a literal interpretation in accordance with our present historical material (cf. Ezek. xix. 3-9, where the two brothers carried off to Egypt and Babylon respectively would seem to be Jehoahaz and his nephew Jehoiachin).

(b) Some fluctuation is obvious in the number, dates and extent of the deportations. Jer. lii. 28-30 gives a total of 4600 persons, in contrast to 2 Kings xxiv. 14, 16 (the numbers are not inclusive), and reckons three deportations in the 7th (? 17th), 18th and 23rd years of Nebuchadrezzar. Only the second is specifically said to be from Jerusalem (the remaining are of Judeans), and the last has been plausibly connected with the murder of Gedaliah, an interval of five years being assumed. For this twenty third year Josephus (*Ant.* x. 9, 7) gives an invasion of Egypt and an attack upon Ammon, Moab and Palestine (see NEBUCHADREZZAR).

(c) That the exile lasted seventy years (? from 586 B.C. to the completion of the second temple) is the view of the canonical history (2 Chron. xxxvi. 21; Jer. xxv. 11, xxix. 10; Zech. i. 12; cf. Tyre, Isa. xxiii. 15), but it is usually reckoned from the first deportation, which was looked upon as of greater significance than the second (Jer. xxiv. xxix.), and it may be a round number. Another difficulty is the interpretation of the 40 years in Ezek. iv. 6 (cf. Egypt, xxix. 11), and the 390 in v. 5 (Septuagint 150 or 190; 130 in *Jos. x.* 9, 7 end). A period of fifty years is allowed by the chronological scheme (1 Kings vi. 1; cf. *Jos. c. Ap.* i. 21), and the late book of Baruch (vi. 3) even speaks of seven generations. Varying chronological schemes may have been current and some weight must be laid upon the remarkable vagueness of the historical information in later writings (see DANIEL).

(d) The attitude of the neighbouring peoples constitutes another serious problem (cf. 2 Kings xxiv. 2 and 2 Chron. xxxvi. 5, where Lucian's recension and the Septuagint respectively add the Samaritans!), in view of the circumstances of Gedaliah's appointment (Jer. xl. 11, see above) as contrasted with the frequent prophecies against Ammon, Moab and Edom which seem to be contemporary (see EDM.; MOAB).

(e) Finally, the recurrence of similar historical situations in Judaean history must be considered. The period under review, with its relations between Judah and Egypt, can be illustrated by prophecies ascribed to a similar situation in the time of Hezekiah. But the destruction of Jerusalem is not quite unique, and somewhat later we meet with indirect evidence for at least one similar disaster upon which the records are silent. There are a number of apparently related passages which, however, on internal grounds, are unsuitable to the present period, and when they show independent signs of a later date (in their present form), there is a very strong probability that they refer to such subsequent disasters. The scantiness of historical tradition makes a final solution impossible, but the study of these years has an important bearing on the history of the later Judaean state, which has been characteristically treated from the standpoint of exiles who returned from Babylonia and regard them-

selves as the kernel of "Israel." From this point of view, the desire to intensify the denudation of Palestine and the fate of its remnant, and to look to the Babylonian exiles for the future, can probably be recognized in the writings attributed to contemporary prophets.¹

18. *Internal Conditions and the Exile.*—Many of the exiles accepted their lot and settled down in Babylonia (cf. Jer. xxix. 4-7); Jewish colonies, too, were being founded in Egypt. The agriculturists and herdsmen who had been left in Palestine formed, as always, the staple population, and it is impossible to imagine either Judah or Israel as denuded of its inhabitants. The down-trodden peasants were left in peace to divide the land among them, and new conditions arose as they took over the ownerless estates. But the old continuity was not entirely broken; there was a return to earlier conditions, and life moved more freely in its wonted channels. The fall of the monarchy involved a reversion to a pre-monarchical state. It had scarcely been otherwise in Israel. The Israelites who had been carried off by the Assyrians were also removed from the cult of the land (cf. 1 Sam. xxvi. 19; Ruth i. 15 seq.). It is possible that some had escaped by taking timely refuge among their brethren in Judah; indeed, if national tradition availed, there were doubtless times when Judah cast its eye upon the land with which it had been so intimately connected. It would certainly be unwise to draw a sharp boundary line between the two districts; kings of Judah could be tempted to restore the kingdom of their traditional founder, or Assyria might be complaisant towards a faithful Judaean vassal. The character of the Assyrian domination over Israel must not be misunderstood; the regular payment of tribute and the provision of troops were the main requirements, and the position of the masses underwent little change if an Assyrian governor took the place of an unpopular native ruler. The two sections of the Hebrews who had had so much in common were scarcely severed by a border-line only a few miles to the north of Jerusalem. But Israel after the fall of Samaria is artificially excluded from the Judaean horizon, and lies as a foreign land, although Judah itself had suffered from the intrusion of foreigners in the preceding centuries of war and turmoil, and strangers had settled in her midst, had formed part of the royal guard, or had even served as janissaries (§ 15, end).

Samaria had experienced several changes in its original population,² and an instructive story tells how the colonists, in their ignorance of the religion of their new home, incurred the divine wrath. *Cujus regio ejus religio*—settlement upon a new soil involved dependence upon its god, and accordingly priests were sent to instruct the Samaritans in the fear of Yahweh. Thenceforth they continued the worship of the Israelite Yahweh along with their own native cults (2 Kings xvii. 24-28, 33). Their descendants claimed participation in the privileges of the Judeans (cf. Jer. xli. 5), and must have identified themselves with the old stock (Ezra iv. 2). Whatever recollection they preserved of their origin and of the circumstances of their entry would be retold from a new standpoint; the ethnological traditions would gain a new meaning; the assimilation would in time become complete. In view of subsequent events it would be difficult to find a more interesting subject of inquiry than the internal religious and sociological conditions in Samaria at this age.

To the prophets the religious position was lower in Judah than in Samaria, whose iniquities were less grievous (Jer. iii. 11 seq., xxiii. 11 sqq.; Ezek. xvi. 51). The greater prevalence of heathen elements in Jerusalem, as detailed in the reforms of Josiah or in the writings of the prophets (cf. Ezek. viii.), would

¹ So also one can now compare the estimate taken of the Jews in Egypt in Jer. xlv. with the actual religious conditions which are known to have prevailed later at Elephantine, where a small Jewish colony worshipped Yahu (Yahweh) at their own temple (see E. Sachau, "Drei aram. Papyrusurkunde," in the *Abhandlungen* of the Prussian Academy, Berlin, 1907).

² Sargon had removed Babylonians into the land of Hatti (Syria and Palestine), and in 715 B.C. among the colonists were tribes apparently of desert origin (Tamud, Hayapa, &c.); other settlements are ascribed to Esar-haddon and perhaps Assur-bani-pal (Ezra iv. 2, 10). See for the evidence, A. E. Cowley, *Encyc. Bib.* col. 4257; J. A. Montgomery, *The Samaritans*, pp. 46-57 (Philadelphia, 1907).

ideal kingdom, the trusted and highly favoured minister who was the signet-ring upon Yahweh's hand (contrast Hag. ii. 24 with Jer. xxii. 23). Zechariah, in his turn, proclaims the overthrow of all difficulties in the path of the new king, who shall rule in glory supported by the priest (Zech. vi.). What political aspirations were revived, what other writers were inspired by these momentous events are questions of inference.

A work which inculcates the dependence of the state upon the purity of its ruler is the unfinished book of Kings with its history of the Davidic dynasty and the Temple. Its ideals culminate in Josiah (§ 16, end), and there is a strong presumption that it is intended to impress upon the new era the lessons drawn from the past. Its treatment of the monarchy is only part of a great and now highly complicated literary undertaking (traceable in the books Joshua to Kings), inspired by the thought and coloured by language characteristic of Deuteronomy (especially the secondary portions), which forms the necessary introduction. Whatever reforms Josiah actually accomplished, the restoration afforded the opportunity of bringing the Deuteronomic teaching into action; though it is more probable that Deuteronomy itself in the main is not much earlier than the second half of the 6th century B.C.¹ It shows a strong nationalist feeling which is not restricted to Judah alone, but comprises a greater Israel from Kadesh in Naphtali in the north to Hebron in the south, and even extends beyond the Jordan. Distinctive non-Judaean features are included, as in the Samaritan liturgical office (Deut. xxvii. 14-26), and the evidence for the conclusion that traditions originally of (north) Israelite interest were taken over and adapted to the later standpoint of Judah and Jerusalem (viz. in the Deuteronomic book of Kings) independently confirms the inferences drawn from Deuteronomy itself. The absence of direct testimony can be partially supplied by later events which presuppose the break-up of no inconsiderable state, and imply relations with Samaria which had been by no means so unfriendly as the historians represent. A common ground for Judaism and Samaritanism is obvious, and it is in this obscure age that it is to be sought. But the curtain is raised for too brief an interval to allow of more than a passing glimpse at the restoration of Judaean fortunes; not until the time of Nehemiah, about 140 years after the fall of Jerusalem, does the historical material become less imperfect.

Upon this blank period before the foundation of Judaism (§§ 21, 23) much light is also thrown by another body of evidence. It has long been recognized that 1 Chron. ii. and iv. represent a Judah composed mainly of groups which had moved up from the south (Hebron) to the vicinity of Jerusalem. It includes Caleb and Jerahmeel, Kenite or Rechabite families, scribes, &c., and these, as "sons" of Hebron, claim some relationship with Gilead. The names point generally to an affinity with south Palestine and north Arabia (Edom, Midian, &c.; see especially the lists in Gen. xxxvi.), and suggest that certain members of a closely related collection of groups had separated from the main body and were ultimately enrolled as Israelites. It is also recognized by many scholars that in the present account of the exodus there are indications of the original prominence of traditions of Kadesh, and also of a journey northwards in which Caleb, Kenites and others took part (§ 5). On these and on other grounds besides, it has long been felt that south Palestine, with its north Arabian connexions, is of real importance in biblical research, and for many years efforts have been made to determine the true significance of the evidence. The usual tendency has been to regard it in the light of the criticism of early Israelite history, which demands some reconstruction (§ 8), and to discern distinct tribal movements previous to the union of Judah and Israel under David. On the other hand, the elaborate theory of T. K. Cheyne involves the view that a history dealing with the south actually underlies our sources and can be recovered by emendation of the text. Against the former is the fact that although certain groups are ultimately found in Judah (Judg. i.), the evidence for the movement—a conquest north of Kadesh, almost at the gate of the promised land—explicitly mentions Israel; and against the latter the evidence again shows that this representation has been deliberately subordinated to the entrance of Israel from beyond the Jordan.²

¹ The view that Deuteronomy is later than the 7th century has been suggested by M. Vernes, *Nouvelle hypothèse sur la comp. et l'origine du Deut.* (1887); Havet, *Christian. et ses origines* (1878); Horst, in *Rev. de l'hist. des relig.*, 1888; and more recently by E. Day, *Journ. Bib. Lit.* (1902), pp. 202 sqq.; and R. H. Kennett, *Journ. Theol. Stud.* (1906), pp. 486 sqq. The strongest counter-arguments (see W. E. Addis, *Doc. of Hexat.* ii. 2-9) rely upon the historical trustworthiness of a Kings xxii. seq. Weighty reasons are brought also by conservative writers against the theory that Deuteronomy dates from or about the age of Josiah, and their objections to the "discovery" of a new law-roll apply equally to the "re-discovery" and promulgation of an old and authentic code.

² See, for Cheyne's view, his *Decline and Fall of Judah: Introduction* (1908). The former tendency has many supporters; see, among recent writers, N. Schmidt, *Hibbert Journal* (1908), pp. 322 sqq.; C. F. Burney, *Journ. Theol. Stud.* (1908), pp. 321 sqq.; O. A. Toffteen,

In either case the history of separate sections of people may have been extended to Israel as a whole, but there is no evidence for any adequate reconstruction. Yet the presence of distinct representations of the history may be recognized, and since the Judaean compilers of the Old Testament have incorporated non-Judaean sources (e.g. the history of the northern monarchy), it is obvious that, apart from indigenous Judaean tradition, the southern groups which were ultimately enrolled in Judah would possess their own stock of oral and written lore. Hence it is noteworthy that the late editor of Judges has given the first place to Othniel, a Kenizite, and therefore of Edomite affinity, though subsequently reckoned as a Judaean (Judg. i. 13, iii. 9; cf. Gen. xxxvi. 11; 1 Chron. iv. 13). Of Kenite interest is the position of Cain, ancestor of heroes of culture and of the worship of Yahweh (Gen. iv. 17 sqq.). One fragmentary source alludes to a journey to the Midianite or Kenite father-in-law of Moses with the Ark (q.v.); another knows of its movements with David and the priest Abiathar (a name closely related to Jethro or Jethro; cf. also 1 Chron. iv. 17). Distinctively Calebite are the stories of the eponym who, fearless of the "giants" of Palestine, gained striking divine promises (Num. xiv. 11-24); Caleb's overthrow of the Hebronite giants finds a parallel in David's conflicts before the capture of Jerusalem, and may be associated with the belief that these primitive giants once filled the land (Josh. xi. 21 seq.; see § 7, and DAVID; SAMUEL, BOOKS OF). Calebite, too, are Hebron and its patron Abraham, and both increase in prominence in the patriarchal narratives, where, moreover, an important body of tradition can have emanated only from outside Israel and Judah (see GENESIS). Although Judah was always closely connected with the south, these "southern" features (once clearly more extensive and complete) are found in the Deuteronomic and priestly compilations, and their presence in the historical records can hardly be severed from the prominence of "southern" families in the vicinity of Jerusalem, some time after the fall of Jerusalem. The background in 1 Chron. ii. presupposes the desolation after that disaster, and some traces of these families are found in Nehemiah's time; and while the traditions know of a separation from Edom (viz. stories of Jacob and his "brother" Esau), elsewhere Edom is frequently denounced for unbrotherly conduct in connexion with some disaster which befell Jerusalem, apparently long after 586 B.C. (see § 22).³ The true inwardness of this movement, its extent and its history, can hardly be recovered at present, but it is noteworthy that the evidence generally involves the Levites, an ecclesiastical body which underwent an extremely intricate development. To a certain extent it would seem that even as Chronicles (q.v.) has passed through the hands of one who was keenly interested in the Temple service, so the other historical books have been shaped not only by the late priestly writers (symbolized in literary criticism by P), but also by rather earlier writers, also of priestly sympathies, but of "southern" or half-Edomite affinity. This is independently suggested by the contents and vicissitudes of the purely ecclesiastical traditions.⁴

Recent criticism goes to show that there is a very considerable body of biblical material, more important for its attitude to the history than for its historical accuracy, the true meaning of which cannot as yet be clearly perceived. It raises many serious problems which concentrate upon that age which is of the greatest importance for the biblical and theological student. The perplexing relation between the admittedly late compilations and the actual course of the early history becomes still more intricate when one observes such a feature as the late interest in the Israelite tribes. No doubt there is much that is purely artificial and untrustworthy in the late (post-exilic) representations of these divisions, but it is almost incredible that the historical foundation for their early career is severed from the written sources by centuries of warfare, immigration and other disturbing factors. On the one hand, conservative scholars insist upon the close material relation between the constituent sources; critical scholars, on the other hand, while recognizing much that is relatively untrustworthy, refrain from departing from the general outlines of the canonical history more than is absolutely necessary. Hence the various reconstructions of the earlier history, with all their inherent weaknesses. But

³ *The Historic Exodus* (1909), pp. 120 sqq.; especially Meyer and Luther, *Die Israeliten*, pp. 442-446, &c. For the early recognition of the evidence in question, see J. Wellhausen, *De gentibus et familiis Judaicis* (Göttingen, 1870); *Prolegomena* (Eng. trans.), pp. 216 sqq., 342 sqq., and 441-443 (from art. "Israel," § 2, *Encyc. Brit.* 9th ed.); also A. Kuenen, *Relig. of Israel* (i. 135 seq., 176-182); W. R. Smith, *Prophets of Israel*, pp. 28 seq., 379.

⁴ For the prominence of the "southern" element in Judah see E. Meyer, *Entstehung d. Judenthums* (1896), pp. 119, 147, 167, 177, 183 n. 1; *Israeliten*, pp. 352 n. 5, 402, 429 seq.

⁵ See § 23 end, and LEVITES. When Edom is renowned for wisdom and a small Judaean family boasts of sages whose names have south Palestinian affinity (1 Chron. ii. 6), and when such names as Korah, Heman, Ethan and Obed-edom, are associated with psalmody, there is no inherent improbability in the conjecture that the "southern" families settled around Jerusalem may have left their mark in other parts of the Old Testament. It is another question whether such literature can be identified (for Cheyne's views, see *Encyc. Bib. "Prophetic Literature," "Psalms,"* and his recent studies).

historical criticism is faced with the established literary conclusions which, it should be noticed, place the Deuteronomic and priestly compilations posterior to the great changes at and after the fall of the northern monarchy, and, to some extent, contemporary with the equally serious changes in Judah. There were catastrophes detrimental to the preservation of older literary records, and vicissitudes which, if they have not left their mark on contemporary history—which is singularly blank—may be traced on the representations of the past. There are external historical circumstances and internal literary features which unite to show that the application of the literary hypotheses of the Old Testament to the course of Israelite history is still incomplete, and they warn us that the intrinsic value of religious and didactic writings should not depend upon the accuracy of their history.¹ Future research may not be able to solve the problems which arise in the study of the period now under discussion; it is the more necessary, therefore, that all efforts should be tested in the light of purely external evidence (see further § 24; and *PALESTINE: History*).

21. *Nehemiah and Ezra*.—There is another remarkable gap in the historical traditions between the time of Zerubbabel and the reign of Artaxerxes I. In obscure circumstances the enthusiastic hopes have melted away, the Davidic scion has disappeared, and Jerusalem has been the victim of another disaster. The country is under Persian officials, the nobles and priests form the local government, and the ground is being prepared for the erection of a hierarchy. It is the work of rebuilding and reorganization, of social and of religious reforms, which we encounter in the last pages of biblical history, and in the records of Ezra and Nehemiah we stand in Jerusalem in the very centre of epoch-making events. Nehemiah, the cup-bearer of Artaxerxes at Susa, plunged in grief at the news of the desolation of Jerusalem, obtained permission from the king to rebuild the ruins. Provided with an escort and with the right to obtain supplies of wood for the buildings, he returned to the city of his fathers' sepulchres (the allusion may suggest his royal ancestry). His zeal is represented in a twofold aspect. Having satisfied himself of the extent of the ruins, he aroused the people to the necessity of fortifying and repopulating the city, and a vivid account is given in his name of the many dangers which beset the rebuilding of the walls. Sanballat of Horon, Tobiah the Ammonite, and Gashmu the Arabian (? Edomite) unceasingly opposed him. Tobiah and his son Johanan were related by marriage to Judaeans secular and priestly families, and active intrigues resulted, in which nobles and prophets took their part. It was insinuated that Nehemiah had his prophets to proclaim that Judah had again its own king; it was even suggested that he was intending to rebel against Persia! Nehemiah naturally gives us only his version, and the attitude of Haggai and Zerariah to Zerubbabel may illustrate the feeling of his partisans. But Tobiah and Johanan themselves were worshippers of Yahweh (as their names also show), and consequently, with prophets taking different sides and with the Samaritan claims summarily repudiated (Neh. ii. 20; cf. Ezra iv. 3), all the facts cannot be gathered from the narratives. Nevertheless the undaunted Judaeans pressed on unmoved by the threatening letters which were sent around, and succeeded in completing the walls within fifty-two days.²

In the next place, Nehemiah appears as governor of the small district of Judah and Benjamin. Famine, the avarice of the rich, and the necessity of providing tribute had brought the humbler classes to the lowest straits. Some had mortgaged their houses, fields and vineyards to buy corn; others had borrowed to pay the taxes, and had sold their children to their richer brethren to repay the debt. Nehemiah was faced with old abuses, and vehemently contrasted the harshness of the nobles with the generosity of the exiles who would redeem their poor countrymen from slavery. He himself had always refrained from exacting the usual provision which other governors had claimed; indeed, he had readily entertained over 150 officials and dependants at his table, apart from casual refugees (Neh. v.). We hear some-

thing of a twelve-years' governorship and of a second visit, but the evidence does not enable us to determine the sequence (xiii. 6). Neh. v. is placed in the middle of the building of the walls in fifty-two days; the other reforms during the second visit are closely connected with the dedication of the walls and with the events which immediately follow his first arrival when he had come to rebuild the city. Nehemiah also turns his attention to religious abuses. The sabbath, once a festival, had become more strictly observed, and when he found the busy agriculturists and traders (some of them from Tyre) pursuing their usual labours on that day, he pointed to the disasters which had resulted in the past from such profanation, and immediately took measures to put down the evil (Neh. xiii. 18; cf. Jer. xvii. 20 sqq.; Ezek. xx. 13-24; Isa. lvi. 2, 6; lviii. 13). Moreover, the maintenance of the Temple servants called for supervision; the customary allowances had not been paid to the Levites who had come to Jerusalem after the smaller shrines had been put down, and they had now forsaken the city. His last acts were the most conspicuous of all. Some of the Jews had married women of Ashdod, Ammon and Moab, and the impetuous governor indignantly adjured them to desist from a practice which was the historic cause of national sin. Even members of the priestly families had intermarried with Tobiah and Sanballat; the former had his own chamber in the precincts of the Temple, the daughter of the latter was the wife of a son of Joiada the son of the high priest Eliashib. Again Nehemiah's wrath was kindled. Tobiah was cast out, the offending priest expelled, and a general purging followed, in which all the foreign element was removed. With this Nehemiah brings the account of his reforms to a conclusion, and the words "Remember me, O my God, for good" (xiii. 31) are not meaningless. The incidents can be supplemented from Josephus. According to this writer (*Ant.* xi. 7, 2), a certain Manasseh, the brother of Jaddua and grandson of Joiada, refused to divorce his wife, the daughter of Sanballat. For this he was driven out, and, taking refuge with the Samaritans, founded a rival temple and priesthood upon Mt Gerizim, to which repaired other priests and Levites who had been guilty of mixed marriages. There is little doubt that Josephus refers to the same events; but there is considerable confusion in his history of the Persian age, and when he places the schism and the foundation of the new Temple in the time of Alexander the Great (after the obscure disasters of the reign of Artaxerxes III.), it is usually supposed that he is a century too late.³ At all events, there is now a complete rupture with Samaria, and thus, in the concluding chapter of the last of the historical books of the Old Testament, Judah maintains its claim to the heritage of Israel and rejects the right of the Samaritans to the title⁴ (see § 5).

In this separation of the Judaeans from religious and social intercourse with their neighbours, the work of Ezra (*q.v.*) requires notice. The story of this scribe (now combined with the memoirs of Nehemiah) crystallizes the new movement inaugurated after a return of exiles from Babylonia. The age can also be illustrated from Isa. lvi.-lxvi. and Malachi (*q.v.*). There was a poor and weak Jerusalem, its Temple stood in need of renovation, its temple-service was mean, its priests unworthy of their office. On the one side was the grinding poverty of the poor; on the other the abuses of the governors. There were two leading religious parties: one of oppressive formalists, exclusive, strict

³ The papyri from Elephantine (p. 384, n. 1, above) mention as contemporaries the Jerusalem priest Johanan (cf. the son of Joiada and father of Jaddua, Neh. xii. 22), Bagohi (Bagoas), governor of Judah, and Delaiah and Shelemiah sons of Sanballat (408-407 B.C.) They ignore any strained relations between Samaria and Judah, and Delaiah and Bagohi unite in granting permission to the Jewish colony to rebuild their place of worship. If this fixes the date of Sanballat and Nehemiah in the time of the first Artaxerxes, the probability of confusion in the later written sources is enhanced by the recurrence of identical names of kings, priests, &c., in the history.

⁴ The Samaritans, for their part, claimed the traditions of their land and called themselves the posterity of Joseph, Ephraim and Manasseh. But they were ready to deny their kinship with the Jews when the latter were in adversity, and could have replied to the tradition that they were foreigners with a *tu quoque* (Josephus, *Ant.* ix. 14, 3; xi. 8, 6; xii. 5, 5) (see SAMARITANS).

¹ One may recall, in this connexion, Caxton's very interesting prologue to Malory's *Morte d'Arthur* and his remarks on the permanent value of the "histories" of this British hero. [Cf. also Horace, *Ep.* i. ii. and R. Browning, "Development."]

² It is noteworthy that Josephus, who has his own representation of the post-exilic age, allows two years and four months for the work (*Ant.* xi. 5, 8).

and ritualistic; the other, more cosmopolitan, extended a freer welcome to strangers, and tolerated the popular elements and the superstitious cults which are vividly depicted (Isa. lxxv. seq.). But the former gained the day, and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influence, its adherents were prepared to take measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to inquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and in due course he read the "book of the Law of Moses" daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.). A special account is given of this reform (Ezra ix. seq.), and the description of Ezra's horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community, sufficiently indicates the attitude of the stricter party. The true seed of Israel separated themselves from all foreigners (not, however, without some opposition) and formed an exclusively religious body or "congregation." Dreams of political freedom gave place to hopes of religious independence, and "Israel" became a church, the foundation of which it sought in the desert of Sinai a thousand years before.

22. *Post-exilic History.*—The biblical history for the period in the books of Ezra and Nehemiah is exceptionally obscure, and it is doubtful how far the traditions can be trusted before we reach the reign of Artaxerxes (Ezra vii. sqq., Neh.). The records belonging to this reign represent four different stages: (a) The Samaritans reported that the Jews who had returned from the king to Jerusalem were rebuilding the city and completing its walls, an act calculated to endanger the integrity of the province. Artaxerxes accordingly instructed them to stop the work until he should give the necessary decree, and this was done by force (Ezra iv. 7-23, undated; 1 Esdras ii. 16 sqq. mentions a building of the Temple). (b) It was in the 7th year (i.e. 458 B.C.) that Ezra returned with a small body of exiles to promulgate the new laws he had brought and to set the Temple service in order.¹ Fortified with remarkable powers, some of which far exceed the known tolerance of Persian kings, he began wide-sweeping marriage reforms; but the record ceases abruptly (vii.-x.). (c) In the 20th year (445 B.C.) Nehemiah returned with permission to rebuild the walls, the citadel and the governor's house (Neh. ii. 5, 8; see § 21 above). But (d), whilst as governor he accomplishes various needed reforms, there is much confusion in the present narratives, due partly to the resumption of Ezra's labours after an interval of twelve years, and partly to the closely related events of Nehemiah's activity in which room must be found for his twelve-years' governorship and a second visit. The internal literary and historical questions are extremely intricate, and the necessity for some reconstruction is very generally felt (for preliminary details, see EZRA AND NEHEMIAH). The disaster which aroused Nehemiah's grief was scarcely the fall of Jerusalem in 586 B.C., but a more recent one, and it has been conjectured that it followed the work of Ezra (in b above). On the other hand, a place can hardly be found for the history of Ezra before the appearance of Nehemiah; he moves in a settled and peaceful community such as Nehemiah had helped to form, his reforms appear to be more mature and schematic than those of Nehemiah; and, whilst Josephus handles the two separately, giving Ezra the priority, many recent scholars incline to place Nehemiah's first visit before the arrival of Ezra.² That later tradition should give the pre-eminence to the priestly reforms of Ezra is in every way natural, but it has been found extremely difficult to combine the two in any reconstruction of the period. Next, since there are three distinct sources, for (a) above, and for the work of Nehemiah and of Ezra, implicit reliance cannot be placed upon the present sequence of narratives. Thus (a), with its allusion to a further decree, forms a plausible prelude to the return of either Ezra (vii. 13) or Nehemiah (i. 3, ii. 3); and if it is surprising that the Samaritans and other opponents, who had previously waited to address Artaxerxes (Ezra iv. 14 sqq., v. 5, 17), should now interfere when Nehemiah was armed with a royal mandate (Neh. ii. 7-9), it is very difficult not to conclude that the royal permits, as now detailed, have been coloured by Jewish patriotism and the history by enmity to Samaria. Finally, the situation in the

independent and undated record (a) points to a return, a rebuilding (apparently after some previous destruction), and some interference. This agrees substantially with the independent records of Nehemiah, and unless we assume two disasters not widely separated in date—viz. those presupposed in (a) and (c)—the record in (a) may refer to that stage in the history where the other source describes the intrigues of the Samaritans and the letters sent by Tobiah (cf. Tabeel in Ezra iv. 7) to frighten Nehemiah (Neh. vi. 19).³ Their insinuations that Nehemiah was seeking to be ruler and their representations to Artaxerxes would be enough to alarm the king (cf. Neh. vi. 5-9, 19, and Ezra iv. 15 seq., 20 seq.), and it may possibly be gathered that Nehemiah at once departed to justify himself (Neh. vii. 2, xiii. 4, 6). Nevertheless, since the narratives are no longer in their original form or sequence, it is impossible to trace the successive steps of the sequel; although if the royal favour was endorsed (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah's position as a reformer would be more secure.

Although there was a stock of tradition for the post-exilic age (cf. Daniel, Esther, 1 Esdras, Josephus), the historical narratives are of the scantiest and vaguest until the time of Artaxerxes, when the account of a return (Ezra iv. 12), which otherwise is quite ignored, appears to have been used for the times of Darius (1 Esdras iv. seq.) and subsequently of Cyrus (Ezra i.-iii.). Moreover, although general opinion identifies our Artaxerxes with the first of that name, certain features suggest that there has been some confusion with the traditions of the time of Artaxerxes II. and III. (§ 19). But the problems are admittedly complicated, and since one is necessarily dependent upon scanty narratives arranged and rearranged by later hands in accordance with their own historical theories, it is difficult to lay stress upon internal evidence which appears to be conclusive for this or that reconstruction.⁴ The main facts, however, are clear. Jerusalem had suffered some serious catastrophe before Nehemiah's return; a body of exiles returned, and in spite of interference the work of rebuilding was completed; through their influence the Judæan community underwent reorganization, and separated itself from its so-called heathen neighbours. How many years elapsed from beginning to end can hardly be said. Tradition concentrated upon Ezra and his age many events and changes of fundamental importance. The canonical history has allowed only one great destruction of Jerusalem, and the disaster of 586 B.C. became the type for similar disasters, but how many there were criticism can scarcely decide.⁵ Allusions to Judah's sufferings at the hands of Edom, Moab and Ammon often imply conditions which are not applicable to 586. A definite series knows of an invasion and occupation by Edom (q.v. end), a people with whom Judah, as the genealogies show, had once been intimately connected. The unfriendliness of the "brother" people, which added so much to the bitterness of Judah, although associated with the events of 586 (so especially 1 Esdras iv. 45), probably belongs to a much later date.⁶ The tradition that Edomites burned the Temple and occupied part of Judah (ib. vv. 45, 50) is partially confirmed by Ezek. xxxv. 5, 10, xxxvi. 5; Ps. cxxxvii. 7; but the assumption that Darius, as in 1 Esdras, helped the Jews against them can with difficulty be maintained. The interesting conjecture that the second Temple suffered another disaster in the obscure gap which follows the time of Zerubbabel has been urged, after Isa. lxiii. 7-lxiv. 12, by Kuenen (afterwards withdrawn) and by Sellin, and can be independently confirmed. In the records of Nehemiah the ruins of the city are extensive (ii. 8, 17, iii.; cf. Eccles. xlix. 13), and the tradition that Nehemiah rebuilt this Temple (Jos. Ant. xi. 5, 6; 2 Macc. i. 18) is supported (a) by the explicit

¹ C. F. Kent, *Israel's Hist. and Biog. Narratives* (1905), p. 358 seq. The objections against this very probable view undervalue Ezra iv. 7-23 and overlook the serious intricacies in the book of Nehemiah.

² There are three inquiries: (a) the critical value of 1 Esdras, (b) the character of the different representations of post-exilic internal and external history, and (c) the recovery of the historical facts. To start with the last before considering (a) and (b) would be futile.

³ For example, to the sufferings under Artaxerxes III. (§ 19) have been ascribed such passages as Isa. lxiii. 7-lxiv. 12; Ps. xlv. 1, lxxiv. 1, lxxix. 1, lxxx. 1, lxxxiii. (see also LAMENTATIONS). In their present form they are not of the beginning of the 6th century and, if the evidence for Artaxerxes III. proves too doubtful, they may belong to the history preceding Nehemiah's return, provided the internal features do not stand in the way (e.g. prior or posterior to the formation of the exclusive Judæan community, &c.). Since the book of Baruch (named after Jeremiah's scribe) is now recognized to be considerably later (probably after the destruction of Jerusalem A.D. 70), it will be seen that the recurrence of similar causes leads to a similarity in the contemporary literary productions (with a reshaping of earlier tradition), the precise date of which depends upon delicate points of detail and not upon the apparently obvious historical elements.

⁴ See H. Winckler, *Keil. u. Alte Test.*, 295, and Kennett, *Journ. Theol. Stud.* (1906), p. 487; *Camb. Bib. Essays*, p. 117. The Chaldeans alone destroyed Jerusalem (2 Kings xxv.); Edom was friendly or at least neutral (Jer. xxvii. 3, xl. 11 seq.). The proposal to read "Edomites" for "Syrians" in the list of bands which troubled Jehoiaikim (2 Kings xxiv. 2) is not supported by the contemporary reference, Jer. xxxv. 11.

¹ The statement that the king desired to avoid the divine wrath may possibly have some deeper meaning (e.g. some recent revolt, Ezra vii. 23).

² It must suffice to refer to the opinions of Bertholet, Buhl, Cheyne, Guthe, Van Hoonacker, Jahn, Kennett, Kent, Kusters, Marquart, Torrey and Wildeboer.

references to the rebuilding of the Temple in the reign of Artaxerxes (1 Esdras ii. 18, not in Ezra iv. 12; but both in a context relating to the history of the Temple), and (b) by the otherwise inaccurate statement that the Temple was finished according to the decree of "Cyrus, Darius and Artaxerxes king of Persia" (Ezra vi. 14).

The untrustworthy account of the return in the time of Cyrus (Ezra i. sqq.) or Darius (1 Esdras iv. sqq.; probably the older form) is curiously indebted to material which seems to have belonged to the history of the work of Nehemiah (cf. Ezra ii. with Neh. vii.), and the important return in the reign of Artaxerxes (Ezra iv. 12) seems to be connected with other references to some new settlement (Neh. xi. 20, 23, 25, especially xii. 29). The independent testimony of the names in Neh. iii. is against any previous large return from Babylon, and clearly illustrates the strength of the groups of "southern" origin whose presence is only to be expected (p. 285). Moreover, the late compiler of 1 Chronicles distinguishes a Judah composed almost wholly of "southern" groups (1 Chron. ii. and iv.) from a subsequent stage when the first inhabitants of Jerusalem correspond in the main to the new population after Nehemiah had repaired the ruins (1 Chron. ix. and Neh. xi.). Consequently, underlying the canonical form of post-exilic history, one may perhaps recognize some fresh disaster, after the completion of Zerubbabel's temple, when Judah suffered grievously at the hands of its Edomite brethren (in Malachi, date uncertain, vengeance has at last been taken); Nehemiah restored the city, and the traditions of the exiles who returned at this period have been thrown back and focussed upon the work of Zerubbabel. The criticism of the history of Nehemiah, which leads to this conjecture, suggests also that if Nehemiah repulsed the Samaritan claims (ii. 20; cf. Ezra iv. 3, where the building of the Temple is concerned) and refused a compromise (vi. 2), it is extremely unlikely that Samaria had hitherto been seriously hostile; see also C. C. Torrey, *Ezra Studies*, pp. 321-333.

Biblical history ends with the triumph of the Judæan community, the true "Israel," the right to which title is found in the distant past. The Judæan view pervades the present sources, and whilst its David and Solomon ruled over a united land, the separation under Jeroboam is viewed as one of calf-worshipping northern tribes from Jerusalem with its one central temple and the legitimate priesthood of the Zadokites. It is from this narrower standpoint of an exclusive and confined Judah (and Benjamin) that the traditions as incorporated in the late recensions gain fresh force, and in Israel's renunciation of the Judæan yoke the later hostility between the two may be read between the lines. The history in Kings was not finally settled until a very late date, as is evident from the important variations in the Septuagint, and it is especially in the description of the time of Solomon and the disruption that there continued to be considerable fluctuations.¹ The book has no finale and the sudden break may not be accidental. It is replaced by Chronicles, which, confining itself to Judæan history from a later standpoint (after the Persian age), includes new characteristic traditions wherein some recollection of more recent events may be recognized. Thus, the south Judæan or south Palestinian element shows itself in Judæan genealogies and lists; there are circumstantial stories of the rehabilitation of the Temple and the reorganization of cultus; there are fuller traditions of inroads upon Judah by southern peoples and their allies. There is also a more definite subordination of the royal authority to the priesthood (so too in the writings of Ezekiel, *q.v.*); and the stories of punishment inflicted upon kings who dared to contend against the priests (Jehoash, Uzziah) point to a conflict of authority, a hint of which is already found in the reconciliation of Zerubbabel and the priest Joshua in a passage ascribed to Zechariah (ch. vi.).

23. *Post-exilic Judaism.*—With Nehemiah and Ezra we enter upon the era in which a new impulse gave to Jewish life and thought that form which became the characteristic orthodox Judaism. It was not a new religion that took root; older tendencies were diverted into new paths, the existing material was shaped to new ends. Judah was now a religious community whose representative was the high priest of Jerusalem. Instead of sacerdotal kings, there were royal priests, anointed with oil, arrayed with kingly insignia, claiming the usual royal dues in addition to the customary rights of the priests. With his priests and Levites, and with the chiefs and nobles of the Jewish families, the high priest directs this small state, and his death marks an epoch as truly as did that of the monarchs in the past. This hierarchical government, which can find no foundation in the Hebrew monarchy, is the forerunner of the Sanhedrin (*q.v.*); it is an institution which, however inaugurated, set its stamp upon the narratives which have survived. Laws were

¹ It is at least a coincidence that the prophet who took the part of Tobiah and Sanballat against Nehemiah (vi. 10 seq.) bears the same name as the one who advised Rehoboam to acquiesce in the disruption (1 Kings xii. 21-24), or announced the divine selection of Jeroboam (ib. v. 24, Septuagint only).

recast in accordance with the requirements of the time, with the result that, by the side of usages evidently of very great antiquity, details now appear which were previously unknown or wholly unsuitable. The age, which the scanty historical traditions themselves represent as one of supreme importance for the history of the Jews, once seemed devoid of interest, and it is entirely through the laborious scholarship of the 19th century that it now begins to reveal its profound significance. The Graf-Wellhausen hypothesis, that the hierarchical law in its complete form in the Pentateuch stands at the close and not at the beginning of biblical history, that this mature Judaism was the fruit of the 5th century B.C. and not a divinely appointed institution at the exodus (nearly ten centuries previously), has won the recognition of almost all Old Testament scholars. It has been substantiated by numerous subsidiary investigations in diverse departments, from different standpoints, and under various aspects, and can be replaced only by one which shall more adequately explain the literary and historical evidence (see further, p. 289).

The post-exilic priestly spirit represents a tendency which is absent from the Judæan Deuteronomic book of Kings but is fully mature in the later, and to some extent parallel, book of Chronicles (*q.v.*). The "priestly" traditions of the creation and of the patriarchs mark a very distinct advance upon the earlier narratives, and appear in a further developed form in the still later book of Jubilees, or "Little Genesis," where they are used to demonstrate the pre-Mosaic antiquity of the priestly or Levitical institutions. There is also an unmistakable development in the laws; and the priestly legislation, though ahead of both Ezekiel and Deuteronomy, not to mention still earlier usage, not only continues to undergo continual internal modification, but finds a further distinct development, in the way of definition and interpretation, outside the Old Testament—in the Talmud (*q.v.*). Upon the characteristics of the post-exilic priestly writings we need not dwell.² Though one may often be repelled by their lifelessness, their lack of spontaneity and the externalization of the ritual, it must be recognized that they placed a strict monotheism upon a legal basis. "It was a necessity that Judaism should incrust itself in this manner; without those hard and ossified forms the preservation of its essential elements would have proved impossible. At a time when all nationalities, and at the same time all bonds of religion and national customs, were beginning to be broken up in the seeming cosmos and real chaos of the Graeco-Roman Empire, the Jews stood out like a rock in the midst of the ocean. When the natural conditions of independent nationality all failed them, they nevertheless artificially maintained it with an energy truly marvellous, and thereby preserved for themselves, and at the same time for the whole world, an eternal good."³

If one is apt to acquire too narrow a view of Jewish legalism, the whole experience of subsequent history, through the heroic age of the Maccabees (*q.v.*) and onwards, only proves that the minuteness of ritual procedure could not cramp the heart. Besides, this was only one of the aspects of Jewish literary activity. The work represented in Nehemiah and Ezra, and put into action by the supporters of an exclusive Judaism, certainly won the day, and their hands have left their impress upon the historical traditions. But Yahwism, like Islam, had its sects and tendencies, and the opponents to the stricter ritualism always had followers. Whatever the predominant party might think of foreign marriages, the tradition of the half-Moabite origin of David serves, in the beautiful idyll of Ruth (*q.v.*), to suggest the debt which Judah and Jerusalem owed to one at least of its neighbours. Again, although some may have desired a self-contained community opposed to the heathen neighbours of Jerusalem, the story of Jonah implicitly contends against the attempt of Judaism to close its doors. The conflicting tendencies were incompatible, but Judaism retained the

³ J. Wellhausen, art. "Israel," *Ency. Brit.* 9th ed., vol. xiii. p. 419; or his *Prolegomena*, pp. 497 seq.

and ritualistic; the other, more cosmopolitan, extended a freer welcome to strangers, and tolerated the popular elements and the superstitious cults which are vividly depicted (Isa. lxxv. seq.). But the former gained the day, and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influence, its adherents were prepared to take measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to inquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and in due course he read the "book of the Law of Moses" daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.). A special account is given of this reform (Ezra ix. seq.), and the description of Ezra's horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community, sufficiently indicates the attitude of the stricter party. The true seed of Israel separated themselves from all foreigners (not, however, without some opposition) and formed an exclusively religious body or "congregation." Dreams of political freedom gave place to hopes of religious independence, and "Israel" became a church, the foundation of which it sought in the desert of Sinai a thousand years before.

22. *Post-exilic History.*—The biblical history for the period in the books of Ezra and Nehemiah is exceptionally obscure, and it is doubtful how far the traditions can be trusted before we reach the reign of Artaxerxes (Ezra vii. sqq., Neh.). The records belonging to this reign represent four different stages: (a) The Samaritans reported that the Jews who had returned from the king to Jerusalem were rebuilding the city and completing its walls, an act calculated to endanger the integrity of the province. Artaxerxes accordingly instructed them to stop the work until he should give the necessary decree, and this was done by force (Ezra iv. 7-23, undated; 1 Esdras ii. 16 sqq. mentions a building of the Temple). (b) It was in the 7th year (i.e. 458 B.C.) that Ezra returned with a small body of exiles to promulgate the new laws he had brought and to set the Temple service in order.¹ Fortified with remarkable powers, some of which far exceed the known tolerance of Persian kings, he began wide-sweeping marriage reforms; but the record ceases abruptly (vii.-x.). (c) In the 20th year (445 B.C.) Nehemiah returned with permission to rebuild the walls, the citadel and the governor's house (Neh. ii. 5, 8; see § 21 above). But (d), whilst as governor he accomplishes various needed reforms, there is much confusion in the present narratives, due partly to the resumption of Ezra's labours after an interval of twelve years, and partly to the closely related events of Nehemiah's activity in which room must be found for his twelve-years' governorship and a second visit. The internal literary and historical questions are extremely intricate, and the necessity for some reconstruction is very generally felt (for preliminary details, see EZRA AND NEHEMIAH). The disaster which aroused Nehemiah's grief was scarcely the fall of Jerusalem in 586 B.C., but a more recent one, and it has been conjectured that it followed the work of Ezra (in b above). On the other hand, a place can hardly be found for the history of Ezra before the appearance of Nehemiah; he moves in a settled and peaceful community such as Nehemiah had helped to form, his reforms appear to be more mature and schematic than those of Nehemiah; and, whilst Josephus handles the two separately, giving Ezra the priority, many recent scholars incline to place Nehemiah's first visit before the arrival of Ezra.² That later tradition should give the pre-eminence to the priestly reforms of Ezra is in every way natural, but it has been found extremely difficult to combine the two in any reconstruction of the period. Next, since there are three distinct sources, for (a) above, and for the work of Nehemiah and of Ezra, implicit reliance cannot be placed upon the present sequence of narratives. Thus (a), with its allusion to a further decree, forms a plausible prelude to the return of either Ezra (vii. 13) or Nehemiah (i. 3, ii. 3); and if it is surprising that the Samaritans and other opponents, who had previously waited to address Artaxerxes (Ezra iv. 14 sqq., v. 5, 17), should now interfere when Nehemiah was armed with a royal mandate (Neh. ii. 7-9), it is very difficult not to conclude that the royal permits, as now detailed, have been coloured by Jewish patriotism and the history by enmity to Samaria. Finally, the situation in the

independent and undated record (a) points to a return, a rebuilding (apparently after some previous destruction), and some interference. This agrees substantially with the independent records of Nehemiah, and unless we assume two disasters not widely separated in date—viz. those presupposed in (a) and (c)—the record in (a) may refer to that stage in the history where the other source describes the intrigues of the Samaritans and the letters sent by Tobiah (cf. Tabeel in Ezra iv. 7) to frighten Nehemiah (Neh. vi. 19).³ Their insinuations that Nehemiah was seeking to be ruler and their representations to Artaxerxes would be enough to alarm the king (cf. Neh. vi. 5-9, 19, and Ezra iv. 15 seq., 20 seq.), and it may possibly be gathered that Nehemiah at once departed to justify himself (Neh. vii. 2, xiii. 4, 6). Nevertheless, since the narratives are no longer in their original form or sequence, it is impossible to trace the successive steps of the sequel; although if the royal favour was endorsed (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah's position as a reformer would be more secure.

Although there was a stock of tradition for the post-exilic age (cf. Daniel, Esther, 1 Esdras, Josephus), the historical narratives are of the scantiest and vaguest until the time of Artaxerxes, when the account of a return (Ezra iv. 12), which otherwise is quite ignored, appears to have been used for the times of Darius (1 Esdras iv. seq.) and subsequently of Cyrus (Ezra i.-iii.). Moreover, although general opinion identifies our Artaxerxes with the first of that name, certain features suggest that there has been some confusion with the traditions of the time of Artaxerxes II. and III. (§ 19). But the problems are admittedly complicated, and since one is necessarily dependent upon scanty narratives arranged and rearranged by later hands in accordance with their own historical theories, it is difficult to lay stress upon internal evidence which appears to be conclusive for this or that reconstruction.⁴ The main facts, however, are clear. Jerusalem had suffered some serious catastrophe before Nehemiah's return; a body of exiles returned, and in spite of interference the work of rebuilding was completed; through their influence the Judæan community underwent reorganization, and separated itself from its so-called heathen neighbours. How many years elapsed from beginning to end can hardly be said. Tradition concentrated upon Ezra and his age many events and changes of fundamental importance. The canonical history has allowed only one great destruction of Jerusalem, and the disaster of 586 B.C. became the type for similar disasters, but how many there were criticism can scarcely decide.⁵ Allusions to Judah's sufferings at the hands of Edom, Moab and Ammon often imply conditions which are not applicable to 586. A definite series knows of an invasion and occupation by Edom (q.v. end), a people with whom Judah, as the genealogies show, had once been intimately connected. The unfriendliness of the "brother" people, which added so much to the bitterness of Judah, although associated with the events of 586 (so especially 1 Esdras iv. 45), probably belongs to a much later date.⁶ The tradition that Edomites burned the Temple and occupied part of Judah (ib. vv. 45, 50) is partially confirmed by Ezek. xxxv. 5, 10, xxxvi. 5; Ps. cxxxvii. 7; but the assumption that Darius, as in 1 Esdras, helped the Jews against them can with difficulty be maintained. The interesting conjecture that the second Temple suffered another disaster in the obscure gap which follows the time of Zerubbabel has been urged, after Isa. lxiii. 7-lxiv. 12, by Kuenen (afterwards withdrawn) and by Sellin, and can be independently confirmed. In the records of Nehemiah the ruins of the city are extensive (ii. 8, 17, iii.; cf. Eccles. xlix. 13), and the tradition that Nehemiah rebuilt this Temple (Jos. Ant. xi. 5, 6; 2 Macc. i. 18) is supported (a) by the explicit

¹ C. F. Kent, *Israel's Hist. and Biog. Narratives* (1905), p. 358 seq. The objections against this very probable view undervalue Ezra iv. 7-23 and overlook the serious intricacies in the book of Nehemiah.

² There are three inquiries: (a) the critical value of 1 Esdras, (b) the character of the different representations of post-exilic internal and external history, and (c) the recovery of the historical facts. To start with the last before considering (a) and (b) would be futile.

³ For example, to the sufferings under Artaxerxes III. (§ 19) have been ascribed such passages as Isa. lxiii. 7-lxiv. 12; Ps. xlv. 1, lxxiv. 1, lxxix. 1, lxxx. 1, lxxxiii. (see also LAMENTATIONS). In their present form they are not of the beginning of the 6th century and, if the evidence for Artaxerxes III. proves too doubtful, they may belong to the history preceding Nehemiah's return, provided the internal features do not stand in the way (e.g. prior or posterior to the formation of the exclusive Judæan community, &c.). Since the book of Baruch (named after Jeremiah's scribe) is now recognized to be considerably later (probably after the destruction of Jerusalem A.D. 70), it will be seen that the recurrence of similar causes leads to a similarity in the contemporary literary productions (with a reshaping of earlier tradition), the precise date of which depends upon delicate points of detail and not upon the apparently obvious historical elements.

⁴ See H. Winckler, *Keil. u. Alte Test.*, 295, and Kennett, *Journ. Theol. Stud.* (1906), p. 487; *Camb. Bib. Essays*, p. 117. The Chaldeans alone destroyed Jerusalem (2 Kings xxv.); Edom was friendly or at least neutral (Jer. xxvii. 3, xl. 11 seq.). The proposal to read "Edomites" for "Syrians" in the list of bands which troubled Jehoiaikim (2 Kings xxiv. 2) is not supported by the contemporary reference, Jer. xxxv. 11.

¹ The statement that the king desired to avoid the divine wrath may possibly have some deeper meaning (e.g. some recent revolt, Ezra vii. 23).

² It must suffice to refer to the opinions of Bertholet, Buhl, Cheyne, Guthe, Van Hoonacker, Jahn, Kennett, Kent, Kusters, Marquart, Torrey and Wildeboer.

Jeroboam), Midian (e.g. Moses, Jethro), &c., like the intimate relationship between Israel and surrounding lands, have a significance in the light of recent research. Israel can no longer be isolated from the politics, culture, folk-lore, thought and religion of western Asia and Egypt. Biblical, or rather Palestinian, thought has been brought into the world of ancient Oriental life, and this life, in spite of the various forms in which it has from time to time been shaped, still rules in the East. This has far-reaching consequences for the traditional attitude to Israelite history and religion. Research is seriously complicated by the growing stores of material, which unfortunately are often utilized without attention to the principles of the various departments of knowledge or aspects of study. The complexity of modern knowledge and the interrelation of its different branches are often insufficiently realized, and that by writers who differ widely in the application of such material as they use to their particular views of the manifold problems of the Old Testament. It has been easy to confuse the study of the Old Testament in its relation to modern religious needs with the technical scientific study of the much edited remains of the literature of a small part of the ancient East. If there was once a tendency to isolate the Old Testament and ignore comparative research, it is now sometimes found possible to exaggerate its general agreement with Oriental history, life and thought. Difficulties have been found in the supernatural or marvellous stories which would be taken as a matter of course by contemporary readers, and efforts are often made to recover historical facts or to adapt the records to modern theology without sufficient attention to the historical data as a whole or to their religious environment. The preliminary preparation for research of any value becomes yearly more exacting.

Many traces of myth, legend and "primitive" thought survive in the Old Testament, and on the most cautious estimate they presuppose a vitality which is not a little astonishing. But they are now softened and often bereft of their earlier significance, and it is this and their divergence from common Oriental thought which make Old Testament thought so profound and unique. The process finds its normal development in later and non-biblical literature; but one can recognize earlier, cruder and less distinctive stages, and, as surely as writings reflect the mentality of an author or of his age, the peculiar characteristics of the extant sources, viewed in the light of a comprehensive survey of Palestinian and surrounding culture, demand a reasonable explanation. The differences between the form of the written history and the conditions which prevailed have impressed themselves variously upon modern writers, and efforts have been made to recover from the Old Testament earlier forms more in accordance with the external evidence. It may be doubted, however, whether the material is sufficient for such restoration or reconstruction. In the Old Testament we have the outcome of specific developments, and the stage at which we see each element of tradition or belief is not always isolated or final (cf. Kings and Chronicles). The early myths, legends and traditions which can be traced differ profoundly from the canonical history, and the gap is wider than that between the latter and the subsequent apocalyptic and pseudographical literature.

Where it is possible to make legitimate and unambiguous comparisons, the ethical and spiritual superiority of Old Testament thought has been convincingly demonstrated, and to the re-shaping and re-writing of the older history and the older traditions the Old Testament owes its permanent value. While the history of the great area between the Nile and the Tigris irresistibly emphasizes the insignificance of Palestine, this land's achievements for humanity grow the more remarkable as research tells more of its environment. Although the light thrown upon ancient conditions of life and thought has destroyed much that sometimes seems vital for the Old Testament, it has brought into relief a more permanent and indisputable appreciation of its significance, and it is gradually dispelling that pseudo-scientific literalism which would fetter the greatest of ancient Oriental writings with an insistence upon the verity of historical facts. Not internal criticism, but the uncontested results of objective observation have shown once and for all that the relationship between the biblical account of the earliest history (Gen. i. xi.) and its value either as an authentic record (which requires unprejudiced examination) or as a religious document (which remains untouched) is typical. If, as seems probable, the continued methodical investigation, which is demanded by the advance of modern knowledge, becomes more drastic in its results, it will recognize ever more clearly that there were certain unique influences in the history of Palestine which cannot be explained by purely historical research. The change from Palestinian polytheism to the pre-eminence of Yahweh and the gradual development of ethical monotheism are facts which external evidence continues to emphasize, which biblical criticism must investigate as completely as possible. And if the work of criticism has brought a fuller appreciation of the value of these facts, the debt which is owed to the Jews is enhanced when one proceeds to realize the immense difficulties against which those who transmitted the Old Testament had to contend in the period of Greek domination. The growth of

the Old Testament into its present form, and its preservation despite hostile forces, are the two remarkable phenomena which most arrest the attention of the historian; it is for the theologian to interpret their bearing upon the history of religious thought. (S. A. C.)

II.—GREEK DOMINATION

25. *Alexander the Great*.—The second great period of the history of the Jews begins with the conquest of Asia by Alexander the Great, disciple of Aristotle, king of Macedon and captain-general of the Greeks. It ends with the destruction of Jerusalem by the armies of the Roman Empire, which was, like Alexander, at once the masterful pupil and the docile patron of Hellenism. The destruction of Jerusalem might be regarded as an event of merely domestic importance; for the Roman cosmopolitan it was only the removal of the titular metropolis of a national and an Oriental religion. But, since a derivative of that religion has come to be a power in the world at large, this event has to be regarded in a different light. The destruction of Jerusalem in A.D. 70 concludes the period of four centuries, during which the Jews as a nation were in contact with the Greeks and exposed to the influence of Hellenism, not wholly of their own will nor yet against it. Whether the master of the provinces, in which there were Jews, be an Alexander, a Ptolemy, a Seleucid or a Roman, the force by which he rules is the force of Greek culture. These four centuries are the Greek period of Jewish history.

The ancient historians, who together cover this period, are strangely indifferent to the importance of the Jews, upon which Josephus is at pains to insist. When Alexander invaded the interior of the Eastern world, which had hitherto remained inviolable, he came as the champion of Hellenism. His death prevented the achievement of his designs; but he had broken down the barrier, he had planted the seed of the Greek's influence in the four quarters of the Persian Empire. His successors, the Diadochi, carried on his work, but Antiochus Epiphanes was the first who deliberately took in hand to deal with the Jews. Daniel (viii. 8) describes the interval between Alexander and Antiochus thus: "The he-goat (the king of Greece) did very greatly: and when he was strong the great horn (Alexander) was broken; and instead of it came up four other ones—four kingdoms shall stand up out of his nation but not with his power. And out of one of them came forth a little horn (Antiochus Epiphanes) which waxed exceeding great towards the south (Egypt) and towards the East (Babylon) and towards the beauteous land (the land of Israel)." The insignificance of the Jewish community in Palestine was their salvation. The reforms of Nehemiah were directed towards the establishment of a religious community at Jerusalem, in which the rigour of the law should be observed. As a part of the Persian Empire the community was obscure and unimportant. But the race whose chief sanctuary it guarded and maintained was the heir of great traditions and ideals. In Egypt, moreover, in Babylon and in Persia individual Jews had responded to the influences of their environment and won the respect of the aliens whom they despised. The law which they cherished as their standard and guide kept them united and conscious of their unity. And the individuals, who acquired power or wisdom among those outside Palestine shed a reflected glory upon the nation and its Temple.

In connexion with Alexander's march through Palestine Josephus gives a tradition of his visit to Jerusalem. In Arrian's narrative of Alexander's exploits, whose fame had already faded before the greater glory of Rome, there is no mention of the visit or the city or the Jews. Only Tyre and Gaza barred the way to Egypt. He took, presumably, the coast-road in order to establish and retain his command of the sea. The rest of Palestine, which is called Coele-Syria, made its submission and furnished supplies. Seven days after the capture of Gaza Alexander was at Pelusium. According to the tradition which Josephus has preserved the high priest refused to transfer his allegiance, and Alexander marched against Jerusalem after the capture of Gaza. The high priest dressed in his robes went out to meet him, and at the sight Alexander remembered a dream, in which such a man had appeared to him as the appointed leader of his expedition. So the danger was averted: Alexander offered sacrifice and was shown the prophecy of Daniel, which spoke of him. It is alleged, further, that at this time certain Jews who could not refrain from intermarriage with

¹ Reference may be made to H. Winckler, *Gesch. Israels*, ii. (1900); W. Erbt, *Die Hebräer* (1906); and T. K. Cheyne, *Traditions and Beliefs of Ancient Israel* (1907).

and ritualistic; the other, more cosmopolitan, extended a freer welcome to strangers, and tolerated the popular elements and the superstitious cults which are vividly depicted (Isa. lxxv. seq.). But the former gained the day, and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influence, its adherents were prepared to take measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to inquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and in due course he read the "book of the Law of Moses" daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.). A special account is given of this reform (Ezra ix. seq.), and the description of Ezra's horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community, sufficiently indicates the attitude of the stricter party. The true seed of Israel separated themselves from all foreigners (not, however, without some opposition) and formed an exclusively religious body or "congregation." Dreams of political freedom gave place to hopes of religious independence, and "Israel" became a church, the foundation of which it sought in the desert of Sinai a thousand years before.

22. *Post-exilic History.*—The biblical history for the period in the books of Ezra and Nehemiah is exceptionally obscure, and it is doubtful how far the traditions can be trusted before we reach the reign of Artaxerxes (Ezra vii. sqq., Neh.). The records belonging to this reign represent four different stages: (a) The Samaritans reported that the Jews who had returned from the king to Jerusalem were rebuilding the city and completing its walls, an act calculated to endanger the integrity of the province. Artaxerxes accordingly instructed them to stop the work until he should give the necessary decree, and this was done by force (Ezra iv. 7-23, undated; 1 Esdras ii. 16 sqq. mentions a building of the Temple). (b) It was in the 7th year (i.e. 458 B.C.) that Ezra returned with a small body of exiles to promulgate the new laws he had brought and to set the Temple service in order.¹ Fortified with remarkable powers, some of which far exceed the known tolerance of Persian kings, he began wide-sweeping marriage reforms; but the record ceases abruptly (vii.-x.). (c) In the 20th year (445 B.C.) Nehemiah returned with permission to rebuild the walls, the citadel and the governor's house (Neh. ii. 5, 8; see § 21 above). But (d), whilst as governor he accomplishes various needed reforms, there is much confusion in the present narratives, due partly to the resumption of Ezra's labours after an interval of twelve years, and partly to the closely related events of Nehemiah's activity in which room must be found for his twelve-years' governorship and a second visit. The internal literary and historical questions are extremely intricate, and the necessity for some reconstruction is very generally felt (for preliminary details, see EZRA AND NEHEMIAH). The disaster which aroused Nehemiah's grief was scarcely the fall of Jerusalem in 586 B.C., but a more recent one, and it has been conjectured that it followed the work of Ezra (in b above). On the other hand, a place can hardly be found for the history of Ezra before the appearance of Nehemiah; he moves in a settled and peaceful community such as Nehemiah had helped to form, his reforms appear to be more mature and schematic than those of Nehemiah; and, whilst Josephus handles the two separately, giving Ezra the priority, many recent scholars incline to place Nehemiah's first visit before the arrival of Ezra.² That later tradition should give the pre-eminence to the priestly reforms of Ezra is in every way natural, but it has been found extremely difficult to combine the two in any reconstruction of the period. Next, since there are three distinct sources, for (a) above, and for the work of Nehemiah and of Ezra, implicit reliance cannot be placed upon the present sequence of narratives. Thus (a), with its allusion to a further decree, forms a plausible prelude to the return of either Ezra (vii. 13) or Nehemiah (i. 3, ii. 3); and if it is surprising that the Samaritans and other opponents, who had previously waited to address Artaxerxes (Ezra iv. 14 sqq., v. 5, 17), should now interfere when Nehemiah was armed with a royal mandate (Neh. ii. 7-9), it is very difficult not to conclude that the royal permits, as now detailed, have been coloured by Jewish patriotism and the history by enmity to Samaria. Finally, the situation in the

independent and undated record (a) points to a return, a rebuilding (apparently after some previous destruction), and some interference. This agrees substantially with the independent records of Nehemiah, and unless we assume two disasters not widely separated in date—viz. those presupposed in (a) and (c)—the record in (a) may refer to that stage in the history where the other source describes the intrigues of the Samaritans and the letters sent by Tobiah (cf. Tabeel in Ezra iv. 7) to frighten Nehemiah (Neh. vi. 19).³ Their insinuations that Nehemiah was seeking to be ruler and their representations to Artaxerxes would be enough to alarm the king (cf. Neh. vi. 5-9, 19, and Ezra iv. 15 seq., 20 seq.), and it may possibly be gathered that Nehemiah at once departed to justify himself (Neh. vii. 2, xiii. 4, 6). Nevertheless, since the narratives are no longer in their original form or sequence, it is impossible to trace the successive steps of the sequel; although if the royal favour was endorsed (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah's position as a reformer would be more secure.

Although there was a stock of tradition for the post-exilic age (cf. Daniel, Esther, 1 Esdras, Josephus), the historical narratives are of the scantiest and vaguest until the time of Artaxerxes, when the account of a return (Ezra iv. 12), which otherwise is quite ignored, appears to have been used for the times of Darius (1 Esdras iv. seq.) and subsequently of Cyrus (Ezra i.-iii.). Moreover, although general opinion identifies our Artaxerxes with the first of that name, certain features suggest that there has been some confusion with the traditions of the time of Artaxerxes II. and III. (§ 19). But the problems are admittedly complicated, and since one is necessarily dependent upon scanty narratives arranged and rearranged by later hands in accordance with their own historical theories, it is difficult to lay stress upon internal evidence which appears to be conclusive for this or that reconstruction.⁴ The main facts, however, are clear. Jerusalem had suffered some serious catastrophe before Nehemiah's return; a body of exiles returned, and in spite of interference the work of rebuilding was completed; through their influence the Judaean community underwent reorganization, and separated itself from its so-called heathen neighbours. How many years elapsed from beginning to end can hardly be said. Tradition concentrated upon Ezra and his age many events and changes of fundamental importance. The canonical history has allowed only one great destruction of Jerusalem, and the disaster of 586 B.C. became the type for similar disasters, but how many there were criticism can scarcely decide.⁵ Allusions to Judah's sufferings at the hands of Edom, Moab and Ammon often imply conditions which are not applicable to 586. A definite series knows of an invasion and occupation by Edom (q.v. end), a people with whom Judah, as the genealogies show, had once been intimately connected. The unfriendliness of the "brother" people, which added so much to the bitterness of Judah, although associated with the events of 586 (so especially 1 Esdras iv. 45), probably belongs to a much later date.⁶ The tradition that Edomites burned the Temple and occupied part of Judah (ib. vv. 45, 50) is partially confirmed by Ezek. xxxv. 5, 10, xxxvi. 5; Ps. cxxxvii. 7; but the assumption that Darius, as in 1 Esdras, helped the Jews against them can with difficulty be maintained. The interesting conjecture that the second Temple suffered another disaster in the obscure gap which follows the time of Zerubbabel has been urged, after Isa. lxiii. 7-lxiv. 12, by Kuenen (afterwards withdrawn) and by Sellin, and can be independently confirmed. In the records of Nehemiah the ruins of the city are extensive (ii. 8, 17, iii.; cf. Eccles. xlix. 13), and the tradition that Nehemiah rebuilt this Temple (Jos. Ant. xi. 5, 6; 2 Macc. i. 18) is supported (a) by the explicit

¹ C. F. Kent, *Israel's Hist. and Biog. Narratives* (1905), p. 358 seq. The objections against this very probable view undervalue Ezra iv. 7-23 and overlook the serious intricacies in the book of Nehemiah.

² There are three inquiries: (a) the critical value of 1 Esdras, (b) the character of the different representations of post-exilic internal and external history, and (c) the recovery of the historical facts. To start with the last before considering (a) and (b) would be futile.

³ For example, to the sufferings under Artaxerxes III. (§ 19) have been ascribed such passages as Isa. lxiii. 7-lxiv. 12; Ps. xlv. 1, lxxiv. 1, lxxix. 1, lxxxiii. (see also LAMENTATIONS). In their present form they are not of the beginning of the 6th century and, if the evidence for Artaxerxes III. proves too doubtful, they may belong to the history preceding Nehemiah's return, provided the internal features do not stand in the way (e.g. prior or posterior to the formation of the exclusive Judaean community, &c.). Since the book of Baruch (named after Jeremiah's scribe) is now recognized to be considerably later (probably after the destruction of Jerusalem A.D. 70), it will be seen that the recurrence of similar causes leads to a similarity in the contemporary literary productions (with a reshaping of earlier tradition), the precise date of which depends upon delicate points of detail and not upon the apparently obvious historical elements.

⁴ See H. Winckler, *Keil. u. Alte Test.*, 295, and Kennett, *Journ. Theol. Stud.* (1906), p. 487; *Camb. Bib. Essays*, p. 117. The Chaldeans alone destroyed Jerusalem (2 Kings xxv.); Edom was friendly or at least neutral (Jer. xxvii. 3, xl. 11 seq.). The proposal to read "Edomites" for "Syrians" in the list of bands which troubled Jehoiaikim (2 Kings xxiv. 2) is not supported by the contemporary reference, Jer. xxxv. 11.

¹ The statement that the king desired to avoid the divine wrath may possibly have some deeper meaning (e.g. some recent revolt, Ezra vii. 23).

² It must suffice to refer to the opinions of Bertholet, Buhl, Cheyne, Guthe, Van Hoonacker, Jahn, Kennett, Kent, Koster, Marquart, Torrey and Wildeboer.

back secretly "to seize the kingdom by guile" (Dan. xi. 21 seq.). On his accession he appointed Jesus, the brother of Onias, to the high-priesthood, and sanctioned his proposals for the conversion of Jerusalem into a Greek city. The high priest changed his name to Jason and made a gymnasium near the citadel. The principle of separation was abandoned. The priests deserted the Temple for the palaestra and the young nobles wore the Greek cap. The Jews of Jerusalem were enrolled as citizens of Antioch. Jason sent money for a sacrifice to Heracles at Tyre; and the only recorded opposition to his policy came from his envoys, who pleaded that the money might be applied to naval expenditure. Thus Jason stripped the high-priesthood of its sacred character and did what he could to stamp out Judaism.

Menelaus supplanted Jason, obtaining his appointment from the king by the promise of a larger contribution. In order to secure his position, he contrived the murder of Onias, who had taken sanctuary at Daphne. This outrage, coupled with his appropriation of temple vessels, which he used as bribes, raised against Menelaus the senate and the people of Jerusalem. His brother and deputy was killed in a serious riot, and an accusation was laid against Menelaus before Antiochus. At the inquiry he bought his acquittal from a courtier and his accusers were executed. Antiochus required peace in Jerusalem and probably regarded Onias as the representative of the pro-Egyptian faction, the allies of his enemy.

During his second Egyptian campaign a rumour came that Antiochus was dead, and Jason made a raid upon Jerusalem. Menelaus held the citadel and Jason was unable to establish himself in the city. The people were presumably out of sympathy with hellenizers, whether they belonged to the house of Onias or that of Tobiah. When Antiochus finally evacuated Egypt in obedience to the decree of Rome, he thought that Judaea was in revolt. Though Jason had fled, it was necessary to storm the city; the drastic measures which Menelaus advised seem to indicate that the poorer classes had been roused to defend the Temple from further sacrilege. A massacre took place, and Antiochus braved the anger of Yahweh by entering and pillaging the Temple with impunity. The author of 2 Maccabees infers from his success that the nation had forfeited all right to divine protection for the time (2 Macc. v. 18-20).

The policy which Antiochus thus inaugurated he carried on rigorously and systematically. His whole kingdom was to be unified; Judaism was an eccentricity and as such doomed to extinction. The Temple of Jerusalem was made over to Zeus Olympius: the temple of Gerizim to Zeus Xenius. All the religious rites of Judaism were proscribed and the neighbouring Greek cities were requested to enforce the prohibition upon their Jewish citizens. Jerusalem was occupied by an army which took advantage of the Sabbath and proceeded to suppress its observance. An Athenian came to be the missionary of Hellenism and to direct its ceremonies, which were established by force up and down the country.

28. *The Maccabees.*—Jerusalem and Gerizim were purged and converted to the state religion with some ease. Elsewhere, as there, some conformed and some became martyrs for the faith. And the passive resistance of those who refused to conform at length gave rise to active opposition. "The king's officers who were enforcing the apostasy came into the city of Modein to sacrifice, and many of Israel went over to them, but Mattathias . . . slew a Jew who came to sacrifice and the king's officer and pulled down the altar" (1 Macc. ii. 15 sqq.). Whether led by this Mattathias or not, certain Jews fled into the wilderness and found a leader in Judas Maccabaeus his reputed son, the first of the five Asmonean (Hasmonean) brethren. The warfare which followed was like that which Saul and David waged against the Philistines. Antiochus was occupied with his Parthian campaign and trusted that the hellenized Jews would maintain their ascendancy with the aid of the provincial troops. In his last illness he wrote to express his confidence in their loyalty. But the rebels collected adherents from the villages; and, when they resolved to violate the sabbath to the extent of resisting attack, they were joined by the company of

the Assideans (Hasidim). Such a breach of the sabbath was necessary if the whole Law was to survive at all in Palestine. But the transgression is enough to explain the disfavour into which the Maccabees seem to fall in the judgment of later Judaism, as, in that judgment, it is enough to account for the instability of their dynasty. Unstable as it was, their dynasty was soon established. In the country-side of Judaea, Judaism—and no longer Hellenism—was propagated by force. Apollonius, the commander of the Syrian garrison in Jerusalem, and Seron the commander of the army in Syria, came in turn against Judas and his bands and were defeated. The revolt thus became important enough to engage the attention of the governor of Coele-Syria and Phoenicia, if not of Lysias the regent himself. Nicanor was despatched with a large army to put down the rebels and to pay the tribute due to Rome by selling them as slaves. Judas was at Emmaus; "the men of the citadel" guided a detachment of the Syrian troops to his encampment by night. The rebels escaped in time, but not into the hills, as their enemies surmised. At dawn they made an unexpected attack upon the main body and routed it. Next year (165 B.C.) Lysias himself entered the Idumaeen country and laid siege to the fortress of Bethsura. Judas gathered what men he could and joined battle. The siege was raised, more probably in consequence of the death of Antiochus Epiphanes than because Judas had gained any real victory. The proscription of the Jewish religion was withdrawn and the Temple restored to them. But it was Menelaus who was sent by the king "to encourage" (2 Macc. xi. 32) the Jews, and in the official letters no reference is made to Judas. Such hints as these indicate the impossibility of recovering a complete picture of the Jews during the sovereignty of the Greeks, which the Talmudists regard as the dark age, best left in oblivion.

Judas entered Jerusalem, the citadel of which was still occupied by a Syrian garrison, and the Temple was re-dedicated on the 25th of Kislev (164 B.C.). So "the Pious" achieved the object for which presumably they took up arms. The re-establishment of Judaism, which alone of current religions was intolerant of a rival, seems to have excited the jealousy of their neighbours who had embraced the Greek way of life. The hellenizers had not lost all hope of converting the nation and were indisposed to acquiesce in the concordat. Judas and his zealots were thus able to maintain their prominence and gradually to increase their power. At Joppa, for example, the Jewish settlers—two hundred in all—"were invited to go into boats provided in accordance with the common decree of the city." They accepted the invitation and were drowned. Judas avenged them by burning the harbour and the shipping, and set to work to bring into Judaea all such communities of Jews who had kept themselves separate from their heathen neighbours. In this way he became strong enough to deal with the apostates of Judaea.

In 163 Lysias led another expedition against these disturbers of the king's peace and defeated Judas at Bethzachariah. But while the forces were besieging Bethzur and the fortress on Mount Zion, a pretender arose in Antioch, and Lysias was compelled to come to terms—and now with Judas. The Jewish refugees had turned the balance, and so Judas became strategus of Judaea, whilst Menelaus was put to death.

In 162 Demetrius escaped from Rome and got possession of the kingdom of Syria. Jakim, whose name outside religion was Alcimus, waited upon the new king on behalf of the loyal Jews who had hellenized. He himself was qualified to be the legitimate head of a united state, for he was of the tribe of Aaron. Judas and the Asmoneans were usurpers, who owed their title to Lysias. So Alcimus-Jakim was made high priest and Bacchides brought an army to install him in his office. The Assideans made their submission at once. Judas had won for them religious freedom: but the Temple required a descendant of Aaron for priest and he was come. But his first act was to seize and slay sixty of them: so it was clear to Judas at any rate, if not also to the Assideans who survived, that political independence was necessary if the religion was to be secure. In face of his active opposition Alcimus could not maintain himself

and ritualistic; the other, more cosmopolitan, extended a freer welcome to strangers, and tolerated the popular elements and the superstitious cults which are vividly depicted (Isa. lxxv. seq.). But the former gained the day, and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influence, its adherents were prepared to take measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to inquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and in due course he read the "book of the Law of Moses" daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.). A special account is given of this reform (Ezra ix. seq.), and the description of Ezra's horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community, sufficiently indicates the attitude of the stricter party. The true seed of Israel separated themselves from all foreigners (not, however, without some opposition) and formed an exclusively religious body or "congregation." Dreams of political freedom gave place to hopes of religious independence, and "Israel" became a church, the foundation of which it sought in the desert of Sinai a thousand years before.

22. *Post-exilic History.*—The biblical history for the period in the books of Ezra and Nehemiah is exceptionally obscure, and it is doubtful how far the traditions can be trusted before we reach the reign of Artaxerxes (Ezra vii. sqq., Neh.). The records belonging to this reign represent four different stages: (a) The Samaritans reported that the Jews who had returned from the king to Jerusalem were rebuilding the city and completing its walls, an act calculated to endanger the integrity of the province. Artaxerxes accordingly instructed them to stop the work until he should give the necessary decree, and this was done by force (Ezra iv. 7-23, undated; 1 Esdras ii. 16 sqq. mentions a building of the Temple). (b) It was in the 7th year (i.e. 458 B.C.) that Ezra returned with a small body of exiles to promulgate the new laws he had brought and to set the Temple service in order.¹ Fortified with remarkable powers, some of which far exceed the known tolerance of Persian kings, he began wide-sweeping marriage reforms; but the record ceases abruptly (vii.-x.). (c) In the 20th year (445 B.C.) Nehemiah returned with permission to rebuild the walls, the citadel and the governor's house (Neh. ii. 5, 8; see § 21 above). But (d), whilst as governor he accomplishes various needed reforms, there is much confusion in the present narratives, due partly to the resumption of Ezra's labours after an interval of twelve years, and partly to the closely related events of Nehemiah's activity in which room must be found for his twelve-years' governorship and a second visit. The internal literary and historical questions are extremely intricate, and the necessity for some reconstruction is very generally felt (for preliminary details, see EZRA AND NEHEMIAH). The disaster which aroused Nehemiah's grief was scarcely the fall of Jerusalem in 586 B.C., but a more recent one, and it has been conjectured that it followed the work of Ezra (in b above). On the other hand, a place can hardly be found for the history of Ezra before the appearance of Nehemiah; he moves in a settled and peaceful community such as Nehemiah had helped to form, his reforms appear to be more mature and schematic than those of Nehemiah; and, whilst Josephus handles the two separately, giving Ezra the priority, many recent scholars incline to place Nehemiah's first visit before the arrival of Ezra.² That later tradition should give the pre-eminence to the priestly reforms of Ezra is in every way natural, but it has been found extremely difficult to combine the two in any reconstruction of the period. Next, since there are three distinct sources, for (a) above, and for the work of Nehemiah and of Ezra, implicit reliance cannot be placed upon the present sequence of narratives. Thus (a), with its allusion to a further decree, forms a plausible prelude to the return of either Ezra (vii. 13) or Nehemiah (i. 3, ii. 3); and if it is surprising that the Samaritans and other opponents, who had previously waited to address Artaxerxes (Ezra iv. 14 sqq., v. 5, 17), should now interfere when Nehemiah was armed with a royal mandate (Neh. ii. 7-9), it is very difficult not to conclude that the royal permits, as now detailed, have been coloured by Jewish patriotism and the history by enmity to Samaria. Finally, the situation in the

independent and undated record (a) points to a return, a rebuilding (apparently after some previous destruction), and some interference. This agrees substantially with the independent records of Nehemiah, and unless we assume two disasters not widely separated in date—viz. those presupposed in (a) and (c)—the record in (a) may refer to that stage in the history where the other source describes the intrigues of the Samaritans and the letters sent by Tobiah (cf. Tabeel in Ezra iv. 7) to frighten Nehemiah (Neh. vi. 19).³ Their insinuations that Nehemiah was seeking to be ruler and their representations to Artaxerxes would be enough to alarm the king (cf. Neh. vi. 5-9, 19, and Ezra iv. 15 seq., 20 seq.), and it may possibly be gathered that Nehemiah at once departed to justify himself (Neh. vii. 2, xiii. 4, 6). Nevertheless, since the narratives are no longer in their original form or sequence, it is impossible to trace the successive steps of the sequel; although if the royal favour was endorsed (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah's position as a reformer would be more secure.

Although there was a stock of tradition for the post-exilic age (cf. Daniel, Esther, 1 Esdras, Josephus), the historical narratives are of the scantiest and vaguest until the time of Artaxerxes, when the account of a return (Ezra iv. 12), which otherwise is quite ignored, appears to have been used for the times of Darius (1 Esdras iv. seq.) and subsequently of Cyrus (Ezra i.-iii.). Moreover, although general opinion identifies our Artaxerxes with the first of that name, certain features suggest that there has been some confusion with the traditions of the time of Artaxerxes II. and III. (§ 19). But the problems are admittedly complicated, and since one is necessarily dependent upon scanty narratives arranged and rearranged by later hands in accordance with their own historical theories, it is difficult to lay stress upon internal evidence which appears to be conclusive for this or that reconstruction.⁴ The main facts, however, are clear. Jerusalem had suffered some serious catastrophe before Nehemiah's return; a body of exiles returned, and in spite of interference the work of rebuilding was completed; through their influence the Judaean community underwent reorganization, and separated itself from its so-called heathen neighbours. How many years elapsed from beginning to end can hardly be said. Tradition concentrated upon Ezra and his age many events and changes of fundamental importance. The canonical history has allowed only one great destruction of Jerusalem, and the disaster of 586 B.C. became the type for similar disasters, but how many there were criticism can scarcely decide.⁵ Allusions to Judah's sufferings at the hands of Edom, Moab and Ammon often imply conditions which are not applicable to 586. A definite series knows of an invasion and occupation by Edom (q.v. end), a people with whom Judah, as the genealogies show, had once been intimately connected. The unfriendliness of the "brother" people, which added so much to the bitterness of Judah, although associated with the events of 586 (so especially 1 Esdras iv. 45), probably belongs to a much later date.⁶ The tradition that Edomites burned the Temple and occupied part of Judah (ib. vv. 45, 50) is partially confirmed by Ezek. xxxv. 5, 10, xxxvi. 5; Ps. cxxxvii. 7; but the assumption that Darius, as in 1 Esdras, helped the Jews against them can with difficulty be maintained. The interesting conjecture that the second Temple suffered another disaster in the obscure gap which follows the time of Zerubbabel has been urged, after Isa. lxiii. 7-lxiv. 12, by Kuenen (afterwards withdrawn) and by Sellin, and can be independently confirmed. In the records of Nehemiah the ruins of the city are extensive (ii. 8, 17, iii.; cf. Eccles. xlix. 13), and the tradition that Nehemiah rebuilt this Temple (Jos. Ant. xi. 5, 6; 2 Macc. i. 18) is supported (a) by the explicit

¹ C. F. Kent, *Israel's Hist. and Biog. Narratives* (1905), p. 358 seq. The objections against this very probable view undervalue Ezra iv. 7-23 and overlook the serious intricacies in the book of Nehemiah.

² There are three inquiries: (a) the critical value of 1 Esdras, (b) the character of the different representations of post-exilic internal and external history, and (c) the recovery of the historical facts. To start with the last before considering (a) and (b) would be futile.

³ For example, to the sufferings under Artaxerxes III. (§ 19) have been ascribed such passages as Isa. lxiii. 7-lxiv. 12; Ps. xlv. 1, lxxiv. 1, lxxix. 1, lxxx. 1, lxxxiii. (see also LAMENTATIONS). In their present form they are not of the beginning of the 6th century and, if the evidence for Artaxerxes III. proves too doubtful, they may belong to the history preceding Nehemiah's return, provided the internal features do not stand in the way (e.g. prior or posterior to the formation of the exclusive Judaean community, &c.). Since the book of Baruch (named after Jeremiah's scribe) is now recognized to be considerably later (probably after the destruction of Jerusalem A.D. 70), it will be seen that the recurrence of similar causes leads to a similarity in the contemporary literary productions (with a reshaping of earlier tradition), the precise date of which depends upon delicate points of detail and not upon the apparently obvious historical elements.

⁴ See H. Winckler, *Keil. u. Alte Test.*, 295, and Kennett, *Journ. Theol. Stud.* (1906), p. 487; *Camb. Bib. Essays*, p. 117. The Chaldeans alone destroyed Jerusalem (2 Kings xxv.); Edom was friendly or at least neutral (Jer. xxvii. 3, xl. 11 seq.). The proposal to read "Edomites" for "Syrians" in the list of bands which troubled Jehoiaikim (2 Kings xxiv. 2) is not supported by the contemporary reference, Jer. xxxv. 11.

¹ The statement that the king desired to avoid the divine wrath may possibly have some deeper meaning (e.g. some recent revolt, Ezra vii. 23).

² It must suffice to refer to the opinions of Bertholet, Buhl, Cheyne, Guthe, Van Hoonacker, Jahn, Kennett, Kent, Kusters, Marquart, Torrey and Wildeboer.

for help against her son. The result of this double-dealing was that his army was destroyed by Ptolemy, who advanced into Egypt leaving Palestine at the mercy of Cleopatra. But Cleopatra's generals were Jews and by their protests prevented her from annexing it. Being thus freed from fear on the side of Ptolemy, Alexander continued his desultory campaigns across the Jordan and on the coast without any apparent policy and with indifferent success. Finally, when he officiated as high priest at the feast of tabernacles he roused the fury of the people by a derisive breach of the Pharisaic ritual. They cried out that he was unworthy of his office, and pelted him with the citrons which they were carrying as the Law prescribed. Alexander summoned his mercenaries, and 6000 Jews were killed before he set out on his disastrous campaign against an Arabian king. He returned a fugitive to find the nation in armed rebellion. After six years of civil war he appealed to them to state the conditions under which they would lay aside their hostility. They replied by demanding his death and called in the Syrians. But when the Syrians chased him into the mountains, 6000 Jews went over to him and, with their aid, he put down the rebellion. Eight hundred Jews who had held a fortress against him were crucified; 8000 Pharisees fled to Egypt and remained there. Offering an ineffectual resistance to the passage of the Syrian troops, Alexander was driven back by Aretas, king of Arabia, against whom they had marched. His later years brought him small victories over isolated cities.

On his death-bed it is said that Alexander advised his wife to reverse this policy and rely upon the Pharisees. According to the Talmud, he warned her "to fear neither the Pharisees nor their opponents but the hypocrites who do the deed of Zimri, and claim the reward of Phinehas;" the warning indicates his justification of his policy in the matter of the crucifixions. In any case the Pharisees were predominant under Alexandra, who became queen (78-69) under her husband's will. Hyrcanus her elder son was only high priest, as the stricter Pharisees required. All the Pharisaic ordinances which Hyrcanus had abolished were reaffirmed as binding. Simon ben Shatach stood beside the queen: the exiles were restored and among them his great colleague Jehudah ben Tabai. The great saying of each of these rabbis is concerned with the duties of a judge; the selection does justice to the importance of the Sanhedrin, which was filled with Pharisees. The legal reforms which they introduced tended for the most part to mercy, but the Talmud refers to one case which is an exception: false witnesses were condemned to suffer the penalty due to their victim, even if he escaped. This ruling may be interpreted as part of a campaign directed against the counsellors of Alexander or as an instance of their general principle that intention is equivalent to commission in the eye of the Law. The queen interposed to prevent the execution of those who had counselled the crucifixion of the rebels and permitted them to withdraw with her younger son Aristobulus to the fortresses outside Jerusalem. Against their natural desire for revenge may be set the fact that the Pharisees did much to improve the status of women among the Jews.

On the death of Alexandra (69 B.C.) Aristobulus disputed the succession of Hyrcanus. When their forces met at Jericho, Hyrcanus, finding that the bulk of his following deserted to Aristobulus, fled with those who remained to the tower Antonia and seized Aristobulus's wife and children as hostages for his own safety. Having this advantage, he was able to abdicate in favour of Aristobulus and to retire into private life. But he was not able to save his friends, who were also the enemies of the reigning king. In fear of reprisals Antipater (or Antipater), the Idumaeen, his counsellor, played on the fears of Hyrcanus and persuaded him to buy the aid of the Nabataean Arabs with promises. Aristobulus could not withstand the army of Aretas: he was driven back upon Jerusalem and there besieged. The Jews deserted to the victorious Hyrcanus: only the priests remained loyal to their accepted king; many fled to Egypt.

30. *The Romans and the Idumaeans.*—At this point the power of Rome appeared upon the scene in the person of M. Aemilius Scaurus (stepson of Sulla) who had been sent into Syria by

Pompey (65 B.C.). Both brothers appealed to this new tribunal and Aristobulus bought a verdict in his favour. The siege was raised. Aretas retired from Judaea; and Aristobulus pursued the retreating army. But, when Pompey himself arrived at Damascus, Antipater, who pulled the strings and exploited the claims of Hyrcanus, realized that Rome and not the Arabs, who were cowed by the threats of Scaurus, was the ruler of the East. To Rome, therefore, he must pay his court. Others shared this conviction: Strabo speaks of embassies from Egypt and Judaea bearing presents—one deposited in the temple of Jupiter Capitolinus bore the inscription of Alexander, the king of the Jews. From Judaea there were three embassies pleading, for Aristobulus, for Hyrcanus, and for the nation, who would have no king at all but their God.

Pompey deferred his decision until he should have inquired into the state of the Nabataeans, who had shown themselves to be capable of dominating the Jews in the absence of the Roman army. In the interval Aristobulus provoked him by his display of a certain impatience. The people had no responsible head, of whom Rome could take cognisance: so Pompey decided in favour of Hyrcanus and humoured the people by recognizing him, not as king, but as high priest. Antipater remained secure, in power if not in place. The Roman supremacy was established: the Jews were once more one of the subject states of Syria, now a Roman province. Their national aspirations had received a contemptuous acknowledgment, when their Temple had been desecrated by the entry of a foreign conqueror.

Aristobulus himself had less resolution than his partisans. When he repented of his attempted resistance and treated with Pompey for peace, his followers threw themselves into Jerusalem, and, when the faction of Hyrcanus resolved to open the gates, into the Temple. There they held out for three months, succumbing finally because in obedience to the Law (as interpreted since the time of Antiochus Epiphanes) they would only defend themselves from actual assault upon the sabbath day. The Romans profited by this inaction to push on the siegeworks, without provoking resistance by actual assaults until the very end. Pompey finally took the stronghold by choosing the day of the fast, when the Jews abstain from all work, that is the sabbath (Strabo). Dio Cassius calls it the day of Cronos. On this bloody sabbath the priests showed a devotion to their worship which matched the inaction of the fighting men. Though they saw the enemy advancing upon them sword in hand they remained at worship untroubled and were slaughtered as they poured libation and burned incense, for they put their own safety second to the service of God. And there were Jews among the murderers of the 12,000 Jews who fell.

The Jews of Palestine thus became once more a subject state, stripped of their conquests and confined to their own borders. Aristobulus and his children were conveyed to Rome to grace their conqueror's triumphal procession. But his son Alexander escaped during the journey, gathered some force, and overran Judaea. The Pharisees decided that they could not take action on either side, since the elder son of Alexandra was directed by the Idumaeen Antipater; and the people had an affection for such Asmonean princes as dared to challenge the Roman domination of their ancestral kingdom. The civil war was renewed; but Aulus Gabinius, the proconsul, soon crushed the pretender and set up an aristocracy in Judaea with Hyrcanus as guardian of the Temple. The country was divided into five districts with five synods; and Josephus asserts that the people welcomed the change from the monarchy. In spite of this, Aristobulus (56 B.C.) and Alexander (55 B.C.) found loyalists to follow them in their successive raids. But Antipater found supplies for the army of Gabinius, who, despite Egyptian and Parthian distractions, restored order according to the will of Antipater. M. Crassus, who succeeded him, plundered the Temple of its gold and the treasure (54 B.C.) which the Jews of the dispersion had contributed for its maintenance. It is said that Eleazar, the priest who guarded the treasure, offered Crassus the golden beam as ransom for the whole, knowing, what no one else knew, that it was mainly composed of wood. So Crassus departed to

Parthia and died. When the Parthians, elated by their victory over Crassus (53 B.C.) advanced upon Syria, Cassius opposed them. Some of the Jews, presumably the partisans of Aristobulus, were ready to co-operate with the Parthians. At any rate Antipater was ready to aid Cassius with advice; Taricheae was taken and 30,000 Jews were sold into slavery (51 B.C.). In spite of this vigorous coercion Cassius came to terms with Alexander, before he returned to the Euphrates to hold it against the Parthians.

Two years later Julius Caesar made himself master of Rome and despatched the captive Aristobulus with two legions to win Judaea (49 B.C.). But Pompey's partisans were beforehand with him: he was taken off by poison and got not so much as a burial in his fatherland. At the same time his son Alexander was beheaded at Antioch by Pompey's order as an enemy of Rome. After the defeat and death of Pompey (48 B.C.) Antipater transferred his allegiance to Caesar and demonstrated its value during Caesar's Egyptian campaign. He carried with him the Arabs and the princes of Syria, and through Hyrcanus he was able to transform the hostility of the Egyptian Jews into active friendliness. These services, which incidentally illustrate the solidarity and unity of the Jewish nation and the respect of the communities of the dispersion for the metropolis, were recognized and rewarded. Before his assassination in 44 B.C. Julius Caesar had confirmed Hyrcanus in the high-priesthood and added the title of ethnarch. Antipater had been made a Roman citizen and procurator of the reunited Judaea. Further, as confederates of the senate and people of Rome, the Jews had received accession of territory, including the port of Joppa and, with other material privileges, the right of observing their religious customs not only in Palestine but also in Alexandria and elsewhere. Idumaean or Philistine of Ascalon, Antipater had displayed the capacity of his adoptive or adopted nation for his own profit and theirs. And when Caesar died Suetonius notes that he was mourned by foreign nations, especially by the Jews (*Caes.* 84).

In the midst of all this civil strife the Pharisees and all who were preoccupied with religion found it almost impossible to discern what they should do to please God. The people whom they directed were called out to fight, at the bidding of an alien, for this and that foreigner who seemed most powerful and most likely to succeed. In Palestine few could command leisure for meditation; as for opportunities of effective intervention in affairs, they had none, it would seem, once Alexander was dead.

There is a story of a priest named Onias preserved both by Josephus and in the Talmud, which throws some light upon the indecision of the religious in the period just reviewed. When Aretas intervened in the interest of Hyrcanus and defeated Aristobulus, the usurper of his brother's inheritance, the people accepted the verdict of battle, sided with the victor's client, and joined in the siege of Jerusalem. The most reputable of the Jews fled to Egypt; but Onias, a righteous man and dear to God, who had hidden himself, was discovered by the besiegers. He had a name for power in prayer; for once in a drought he prayed for rain and God had heard his prayer. His captors now required of him that he should put a curse upon Aristobulus and his faction. On compulsion he stood in their midst and said: "O God, king of the universe, since these who stand with me are thy people and the besieged are thy priests, I pray thee that thou hearken not to those against these, nor accomplish what these entreat against those." So he prayed—and the wicked Jews stoned him.

Unrighteous Jews were in the ascendant. There were only Asmonean princes, degenerate and barely titular sons of Levi, to serve as judges of Israel—and they were at feud and both relied upon foreign aid. The righteous could only flee or hide, and so wait dreaming of the mercy of God past and to come. As yet our authorities do not permit us to follow them to Egypt with any certainty, but the *Psalms of Solomon* express the mind of one who survived to see Pompey the Great brought low. Although Pompey had spared the temple treasure, he was the embodiment of the power of Rome, which was not always so considerably exercised. And so the psalmist exults in his death and dishonour (*Ps.* ii.): he prayed that the pride of the dragon might be humbled and God showed him the dead body lying upon the waves—and there was none to bury it. As one of those who fear the Lord in truth and in patience, he looks forward to the punishment of all sinners who oppress the righteous and profane the sanctuary. For the sins of the rulers God had

rejected his people; but the remnant could not but inherit the promises, which belong to the chosen people. For the Lord is faithful unto those who walk in the righteousness of his commandments (*xiv.* 1): in the exercise of their freewill and with God's help they will attain salvation. As God's servant, Pompey destroyed their rulers and every wise councillor: soon the righteous and sinless king of David's house shall reign over them and over all the nations (*xvii.*).

31. *Herod the Great.*—After the departure of Caesar, Antipater warned the adherents of Hyrcanus against taking part in any revolutionary attempts, and his son Herod, who, in spite of his youth, had been appointed governor of Galilee, dealt summarily with Hezekiah, the robber captain who was overrunning the adjacent part of Syria. The gratitude of the Syrians brought him to the knowledge of Sextus Caesar the governor of Syria; but his action inspired the chief men of the Jews with apprehension. Complaint was made to Hyrcanus that Herod had violated the law which prohibited the execution of even an evil man, unless he had been first condemned to death by the Sanhedrin. At the same time the mothers of the murdered men came to the Temple to demand vengeance. So Herod was summoned to stand his trial. He came in answer to the summons—but attended by a bodyguard and protected by the word of Sextus. Of all the Sanhedrin only Sameas "a righteous man and therefore superior to fear" dared to speak. Being a Pharisee he faced the facts of Herod's power and warned the tribunal of the event, just as later he counselled the people to receive him, saying that for their sins they could not escape him. Herod put his own profit above the Law, acting after his kind, and he also was God's instrument. The effect of the speech was to goad the Sanhedrin into condemning Herod: Hyrcanus postponed their decision and persuaded him to flee. Sextus Caesar made him lieutenant-governor of Coele Syria, and only his father restrained him from returning to wreak his revenge upon Hyrcanus.

It is to be remembered that, in this and all narratives of the life of Herod, Josephus was dependent upon the history of Herod's client, Nicolaus of Damascus, and was himself a supporter of law and order. The action of the Sanhedrin and the presence of the women suppliants in the Temple suggest, if they do not prove, that this Hezekiah who harassed the Syrians was a Jewish patriot, who could not acquiesce and wait with Sameas.

Malichus also, the murderer or reputed murderer of Antipater, appears to have been a partisan of Hyrcanus, who had a zeal for Judaism. When Cassius demanded a tribute of 700 talents from Palestine, Antipater set Herod, Phasaël and this Malichus, his enemy, to collect it. Herod thought it imprudent to secure the favour of Rome by the sufferings of others. But some cities defaulted, and they were apparently among those assigned to Malichus. If he had been lenient for their sakes or in the hope of damaging Antipater, he was disappointed; for Cassius sold four cities into slavery and Hyrcanus made up the deficit. Soon after this (43 B.C.) Malichus succeeded, it is said, in poisoning Antipater as he dined with Hyrcanus, and was assassinated by Herod's bravoes.

After the departure of Cassius, Antipater being dead, there was confusion in Judaea. Antigonus, the son of Aristobulus, made a raid and was with difficulty repulsed by Herod. The prince of Tyre occupied part of Galilee. When Antony assumed the dominion of the East after the defeat of Cassius at Philippi, an embassy of the Jews, amongst other embassies, approached him in Bithynia and accused the sons of Antipater as usurpers of the power which rightly belonged to Hyrcanus. Another approached him at Antioch. But Hyrcanus was well content to forgo the title to political power, which he could not exercise in practice, and Antony had been a friend of Antipater. So Herod and Phasaël continued to be virtually kings of the Jews: Antony's court required large remittances and Palestine was not exempt.

In 40 B.C. Antony was absent in Egypt or Italy; and the Parthians swept down upon Syria with Antigonus in their train. Hyrcanus and Phasaël were trapped: Herod fled by way of Egypt to Rome. Hyrcanus, who was Antigonus' only rival, was mutilated and carried to Parthia. So he could no more be

high priest, and his life was spared only at the intercession of the Parthian Jews, who had a regard for the Asmonean prince. Thus Antigonus succeeded his uncle as "King Antigonus" in the Greek and "Mattathiah the high priest" in the Hebrew by grace of the Parthians.

The senate of Rome under the influence of Antony and Octavian ratified the claims of Herod, and after some delay lent him the armed force necessary to make them good. In the hope of healing the breach, which his success could only aggravate, and for love, he took to wife Mariamne, grandniece of Hyrcanus. Galilee was pacified, Jerusalem taken and Antigonus beheaded by the Romans. From this point to the end of the period the Jews were dependants of Rome, free to attend to their own affairs, so long as they paid taxes to the subordinate rulers, Herodian or Roman, whom they detested equally. If some from time to time dared to hope for political independence their futility was demonstrated. One by one the descendants of the Asmoneans were removed. The national hope was relegated to an indefinite future and to another sphere. At any rate the Jews were free to worship their God and to study his law: their religion was recognized by the state and indeed established.

This development of Judaism was eminently to the mind of the rulers; and Herod did much to encourage it. More and more it became identified with the synagogue, in which the Law was expounded: more and more it became a matter for the individual and his private life. This was so even in Palestine—the land which the Jews hoped to possess—and in Jerusalem itself, the holy city, in which the Temple stood. Herod had put down Jewish rebels and Herod appointed the high priests. In his appointments he was careful to avoid or to suppress any person who, being popular, might legitimize a rebellion by heading it. The Pharisees, who regarded his rule as an inevitable penalty for the sins of the people, he encouraged. Pollio the Pharisee and Sameas his disciple were in special honour with him, Josephus says, when he re-entered Jerusalem and put to death the leaders of the faction of Antigonus. How well their teaching served his purpose is shown by the sayings of two rabbis who, if not identical with these Pharisees, belong to their period and their party. Shemaiah said, "Love work and hate lordship and make not thyself known to the government." Abtalion said, "Ye wise, be guarded in your words: perchance ye may incur the debt of exile." Precepts such as these could hardly fail to effect some modification of the reckless zeal of the Galileans in the pupils of the synagogue. Many if not all of the professed rabbis had travelled outside Palestine: some were even members of the dispersion, like Hillel the Babylonian, who with Shammai forms the second of the pairs. Through them the experience of the dispersion was brought to bear upon the Palestinian Jews. Herod's nominees were not the men to extend the prestige of the high-priesthood at the expense of these rabbis: even in Jerusalem the synagogue became of more importance than the Temple. Hillel also inculcated the duty of making converts to Judaism. He said, "Be of the disciples of Aaron, loving peace, and pursuing peace, loving mankind and bringing them nigh to the Law." But even he reckoned the books of Daniel and Esther as canonical, and these were dangerous food for men who did not realize the full power of Rome.

So long as Herod lived there was no insurrection. Formally he was an orthodox Jew and set his face against intermarriage with the uncircumcised. He was also ready and able to protect the Jews of the dispersion. But that ability was largely due to his whole-hearted Hellenism, which was shown by the Greek cities which he founded in Palestine and the buildings he erected in Jerusalem. In its material embodiments Greek civilization became as much a part of Jewish life in Palestine as it was in Alexandria or Antioch; and herein the rabbis could not follow him.

When all the Jewish people swore to be loyal to Caesar and the king's policy, the Pharisees—above 6000—refused to swear. The king imposed a fine upon them, and the wife of Pheroras—Herod's brother—paid it on their behalf. In return for her

kindness, being entrusted with foreknowledge by the visitation of God, they prophesied that God had decreed an end of rule for Herod and his line and that the sovereignty devolved upon her and Pheroras and their children.

From the sequel it appears that the prophecy was uttered by one Pharisee only, and that it was in no way endorsed by the party. When it came to the ears of the king he slew the most responsible of the Pharisees and every member of his household who accepted what the Pharisee said. An explanation of this unwarrantable generalization may be found in the fact that the incident is derived from a source which was unfavourable to the Pharisees: they are described as a Jewish section of men who pretend to set great store by the exactitude of the ancestral tradition and the laws in which the deity delights—as dominant over women-folk—and as sudden and quick in quarrel.

Towards the end of Herod's life two rabbis attempted to uphold by physical force the cardinal dogma of Judaism, which prohibited the use of images. Their action is intelligible enough. Herod was stricken with an incurable disease. He had sinned against the Law; and at last God had punished him. At last the law-abiding Jews might and must assert the majesty of the outraged Law. The most conspicuous of the many symbols and signs of his transgression was the golden eagle which he had placed over the great gate of the Temple; its destruction was the obvious means to adopt for the quickening and assertion of Jewish principles.

By their labours in the education of the youth of the nation, these rabbis, Judas and Matthias, had endeared themselves to the populace and had gained influence over their disciples. A report that Herod was dead co-operated with their exhortations to send the iconoclasts to their appointed work. And so they went to earn the rewards of their practical piety from the Law. If they died, death was inevitable, the rabbis said, and no better death would they ever find. Moreover, their children and kindred would benefit by the good name and fame belonging to those who died for the Law. Such is the account which Josephus gives in the *Antiquities*; in the *Jewish War* he represents the rabbis and their disciples as looking forward to greater happiness for themselves after such a death. But Herod was not dead yet, and the instigators and the agents of this sacrilege were burned alive.

32. *The Settlement of Augustus.*—On the death of Herod in 4 B.C. Archelaus kept open house for mourners as the Jewish custom, which reduced many Jews to beggary, prescribed. The people petitioned for the punishment of those who were responsible for the execution of Matthias and his associates and for the removal of the high priest. Archelaus temporized; the loyalty of the people no longer constituted a valid title to the throne; his succession must first be sanctioned by Augustus. Before he departed to Rome on this errand, which was itself an insult to the nation, there were riots in Jerusalem at the Passover which he needed all his soldiery to put down. When he presented himself before the emperor—apart from rival claimants of his own family—there was an embassy from the Jewish people who prayed to be rid of a monarchy and rulers such as Herod. As part of the Roman province of Syria and under its governors they would prove that they were not really disaffected and rebellious. During the absence of Archelaus, who would—the Jews feared—prove his legitimacy by emulating his father's ferocity, and to whom their ambassadors preferred Antipas, the Jews of Palestine gave the lie to their protestations of loyalty and peaceableness. At the Passover the pilgrims attacked the Roman troops. After hard fighting the procurator, whose cruelty provoked the attack, captured the Temple and robbed the treasury. On this the insurgents were joined by some of Herod's army and besieged the Romans in Herod's palace. Elsewhere the occasion tempted many to play at being king—Judas, son of Hezekiah, in Galilee; Simon, one of the king's slaves, in Peraea. Most notable of all perhaps was the shepherd Athronges, who assumed the pomp of royalty and employed his four brothers as captains and satraps in the war which he waged upon Romans and king's men alike—not even Jews escaped him unless they brought him contributions.

Order was restored by Varus the governor of Syria in a campaign which Josephus describes as the most important war between that of Pompey and that of Vespasian.

At length Augustus summoned the representatives of the nation and Nicolaus of Damascus, who spoke for Archelaus, to plead before him in the temple of Apollo. Augustus apportioned Herod's dominions among his sons in accordance with the provisions of his latest will. Archelaus received the lion's share: for ten years he was ethnarch of Idumaea, Judaea and Samaria, with a yearly revenue of 600 talents. Antipas became tetrarch of Galilee and Peraea, with a revenue of 200 talents. Philip, who had been left in charge of Palestine pending the decision and had won the respect of Varus, became tetrarch of Batanaea, Trachonitis and Auranitis, with 100 talents. His subjects included only a sprinkling of Jews. Up to his death (A.D. 34) he did nothing to forfeit the favour of Rome. His coins bore the heads of Augustus and Tiberius, and his government was worthy of the best Roman traditions—he succeeded where proconsuls had failed. His capital was Caesarea Philippi, where Pan had been worshipped from ancient times, and where Augustus had a temple built by Herod the Great.

33. *Archelaus*.—Augustus had counselled Archelaus to deal gently with his subjects. But there was an outstanding feud between him and them; and his first act as ethnarch was to remove the high priest on the ground of his sympathy with the rebels. In violation of the Law he married a brother's widow, who had already borne children, and in general he showed himself so fierce and tyrannical that the Jews joined with the Samaritans to accuse him before the emperor. Archelaus was summoned to Rome and banished to Gaul; his territory was entrusted to a series of procurators (A.D. 6-41), among whom was an apostate Jew, but none with any pretension even to a semi-legitimate authority. Each procurator represented not David but Caesar. The Sanhedrin had its police and powers to safeguard the Jewish religion; but the procurator had the appointment of the high priests, and no capital sentence could be executed without his sanction.

34. *The Procurators*.—So the Jews of Judaea obtained the settlement for which they had pleaded at the death of Herod; and some of them began to regret it at once. The first procurator Coponius was accompanied by P. Sulpicius Quirinius, legate of Syria, who came to organize the new Roman province. As a necessary preliminary a census (A.D. 6-7) was taken after the Roman method, which did not conform to the Jewish Law. The people were affronted, but for the most part acquiesced, under the influence of Joazar the high priest. But Judas the Galilean, with a Pharisee named Sadduc (Sadduk), endeavoured to incite them to rebellion in the name of religion. The result of this alliance between a revolutionary and a Pharisee was the formation of the party of Zealots, whose influence—according to Josephus—brought about the great revolt and so led to the destruction of Jerusalem in 70. So far as this influence extended, the Jewish community was threatened with the danger of suicide, and the distinction drawn by Josephus between the Pharisees and the Zealots is a valid one. Not all Pharisees were prepared to take such action, in order that Israel might "tread on the neck of the eagle" (as is said in *The Assumption of Moses*). So long as the Law was not deliberately outraged and so long as the worship was established, most of the religious leaders of the Jews were content to wait.

It seems that the Zealots made more headway in Galilee than in Judaea—so much so that the terms Galilean and Zealot are practically interchangeable. In Galilee the Jews predominated over the heathen and their ruler Herod Antipas had some sort of claim upon their allegiance. His marriage with the daughter of the Arabian king Aretas (which was at any rate in accordance with the general policy of Augustus) seems to have preserved his territory from the incursions of her people, so long as he remained faithful to her. He conciliated his subjects by his deference to the observances of Judaism, and—the case is probably typical of his policy—he joined in protesting, when Pilate set up a votive shield in the palace of Herod within the sacred city.

He seems to have served Tiberius as an official scrutineer of the imperial officials and he commemorated his devotion by the foundation of the city of Tiberias. But he repudiated the daughter of Aretas in order to marry Herodias and so set the Arabians against him. Disaster overtook his forces (A.D. 36) and Tiberius, his patron, died before the Roman power was brought in full strength to his aid. Caligula was not predisposed to favour the favourites of Tiberius; and Antipas, having petitioned him for the title of king at the instigation of Herodias, was banished from his tetrarchy and (apparently) was put to death in 39.

Antipas is chiefly known to history in connexion with John the Baptist, who reproached him publicly for his marriage with Herodias. According to the earliest authority, he seems to have imprisoned John to save him from the vengeance of Herodias. But—whatever his motive—Antipas certainly consented to John's death. If the Fourth Gospel is to be trusted, John had already recognized and acclaimed Jesus of Nazareth as the Messiah for whom the Jews were looking. By common consent of Christendom, John was the forerunner of the founder of the Christian Church. It was, therefore, during the reign of Antipas, and partly if not wholly within his territory, that the Gospel was first preached by the rabbi or prophet whom Christendom came to regard as the one true Christ, the Messiah of the Jews. Josephus' history of the Jews contains accounts of John the Baptist and Jesus, the authenticity of which has been called in question for plausible but not entirely convincing reasons. However this may be, the Jews who believed Jesus to be the Christ play no great part in the history of the Jews before 70, as we know it. Many religious teachers and many revolutionaries were crucified within this period; and the early Christians were outwardly distinguished from other Jews only by their scrupulous observance of religious duties.

The crucifixion of Jesus was sanctioned by Pontius Pilate, who was procurator of Judaea A.D. 26-36. Of the Jews under his predecessors little enough is known. Speaking generally, they seem to have avoided giving offence to their subjects. But Pilate so conducted affairs as to attract the attention not only of Josephus but also of Philo, who represents for us the Jewish community of Alexandria. Pilate inaugurated his term of office by ordering his troops to enter Jerusalem at night and to take their standards with them. There were standards and standards in the Roman armies: those which bore the image of the emperor, and therefore constituted a breach of the Jewish Law, had hitherto been kept aloof from the holy city. On learning of this, the Jews repaired to Caesarea and besought Pilate to remove these offensive images. Pilate refused; and, when they persisted in their petition for six days, he surrounded them with soldiers and threatened them with instant death. They protested that they would rather die than dare to transgress the wisdom of the laws; and Pilate yielded. But he proceeded to expend the temple treasure upon an aqueduct for Jerusalem; and some of the Jews regarded the devotion of sacred money to the service of man as a desecration. Pilate came up to Jerusalem and dispersed the petitioners by means of disguised soldiers armed with clubs. So the revolt was put down, but the excessive zeal of the soldiers and Pilate's obstinate adherence to his policy widened the breach between Rome and the stricter Jews. But the death of Sejanus in 31 set Tiberius free from prejudice against the Jews; and, when Pilate put up the votive shields in Herod's palace at Jerusalem, the four sons of Herod came forward in defence of Jewish principles and he was ordered to remove them. In 35 he dispersed a number of Samaritans, who had assembled near Mt Gerizim at the bidding of an impostor, in order to see the temple vessels buried there by Moses. Complaint was made to Vitellius, then legate of Syria, and Pilate was sent to Rome to answer for his shedding of innocent blood. At the passover of 36 Vitellius came to Jerusalem and pacified the Jews by two concessions: he remitted the taxes on fruit sold in the city, and he restored to their custody the high priest's vestments, which Herod Archelaus and the Romans had kept in the tower Antonia. The vestments had been stored there since the time

of the first high priest named Hyrcanus, and Herod had taken them over along with the tower, thinking that his possession of them would deter the Jews from rebellion against his rule. At the same time Vitellius vindicated the Roman supremacy by degrading Caiaphas from the high-priesthood, and appointing a son of Annas in his place. The motive for this change does not appear, and we are equally ignorant of the cause which prompted his transference of the priesthood from his nominee to another son of Annas in 37. But it is quite clear that Vitellius was concerned to reconcile the Jews to the authority of Rome. When he marched against Aretas, his army with their standards did not enter Judaea at all; but he himself went up to Jerusalem for the feast and, on receipt of the news that Tiberius was dead, administered to the Jews the oath of allegiance to Caligula.

35. *Caligula and Agrippa I.*—The accession of Caligula (A.D. 37-41) was hailed by his subjects generally as the beginning of the Golden Age. The Jews in particular had a friend at court. Agrippa, the grandson of Herod the Great, was an avowed partisan of the new emperor and had paid penalty for a premature avowal of his preference. But Caligula's favour, though lavished upon Agrippa, was not available for pious Jews. His foible was omnipotence, and heaped the gods of Greece in turn. In the provinces and even in Italy his subjects were ready to acknowledge his divinity—with the sole exception of the Jews. So we learn something of the Palestinian Jews and more of the Jewish community in Alexandria. The great world (as we know it) took small note of Judaism even when Jews converted its women to their faith; but now the Jews as a nation refused to bow before the present god of the civilized world. The new Catholicism was promulgated by authority and accepted with deference. Only the Jews protested: they had a notion of the deity which Caligula at all events did not fulfil.

The people of Alexandria seized the opportunity for an attack upon the Jews. Images of Caligula were set up in the synagogues, an edict deprived the Jews of their rights as citizens, and finally the governor authorized the mob to sack the Jewish quarter, as if it had been a conquered city (38). Jewesses were forced to eat pork and the elders were scourged in the theatre. But Agrippa had influence with the emperor and secured the degradation of the governor. The people and the Jews remained in a state of civil war, until each side sent an embassy (40) to wait upon the emperor. The Jewish embassy was headed by Philo, who has described its fortunes in a tract dealing with the divine punishment of the persecutors. Their opponents also had secured a friend at court and seem to have prevented any effective measure of redress. While the matter was still pending, news arrived that the emperor had commanded Publius Petronius, the governor of Syria, to set up his statue in the temple of Jerusalem. On the intervention of Agrippa the order was countermanded, and the assassination of the emperor (41) effectually stopped the desecration.

36. *Claudius and the Procurators.*—Claudius, the new emperor, restored the civic rights of the Alexandrian Jews and made Agrippa I. king over all the territories of Herod the Great. So there was once more a king of Judaea, and a king who observed the tradition of the Pharisees and protected the Jewish religion. There is a tradition in the Talmud which illustrates his popularity. As he was reading the Law at the feast of tabernacles he burst into tears at the words "Thou mayest not set a stranger over thee which is not thy brother"; and the people cried out, "Fear not, Agrippa; thou art our brother." The fact that he began to build a wall round Jerusalem may be taken as further proof of his patriotism. But the fact that he summoned five vassal-kings of the empire to a conference at Tiberias suggests rather a policy of self-aggrandisement. Both projects were prohibited by the emperor on the intervention of the legate. In 44 he died. The Christian records treat his death as an act of divine vengeance upon the persecutor of the Christian Church. The Jews prayed for his recovery and lamented him. The Gentile soldiers exulted in the downfall of his dynasty, which they signaled after their own fashion. Claudius intended that Agrippa's young son should succeed to the kingdom; but he was

overruled by his advisers, and Judaea was taken over once more by Roman procurators. The success of Agrippa's brief reign had revived the hopes of the Jewish nationalists, and concessions only retarded the inevitable insurrection.

Cuspius Fadus, the first of these procurators, purged the land of bandits. He also attempted to regain for the Romans the custody of the high priest's vestments; but the Jews appealed to the emperor against the revival of this advertisement of their servitude. The emperor granted the petition, which indeed the procurator had permitted them to make, and further transferred the nomination of the high priest and the supervision of the temple from the procurator to Agrippa's brother, Herod of Chalcis. But these concessions did not satisfy the hopes of the people. During the government of Fadus, Theudas, who claimed to be a prophet and whom Josephus describes as a wizard, persuaded a large number to take up their possessions and follow him to the Jordan, saying that he would cleave the river asunder with a word of command and so provide them with an easy crossing. A squadron of cavalry despatched by Fadus took them alive, cut off the head of Theudas and brought it to Jerusalem.

Under the second procurator Tiberius Alexander, an apostate Jew of Alexandria, nephew of Philo, the Jews suffered from a great famine and were relieved by the queen of Adiabene, a proselyte to Judaism, who purchased corn from Egypt. The famine was perhaps interpreted by the Zealots as a punishment for their acquiescence in the rule of an apostate. At any rate Alexander crucified two sons of Simon the Galilean, who had headed a revolt in the time of the census. They had presumably followed the example of their father.

Under Ventidius Cumanus (48-52) the mutual hatred of Jews and Romans, Samaritans and Jews, found vent in insults and bloodshed. At the passover, on the fourth day of the feast, a soldier mounting guard at the porches of the Temple provoked an uproar, which ended in a massacre, by indecent exposure of his person. Some of the rebels intercepted a slave of the emperor on the high-road near the city and robbed him of his possessions. Troops were sent to pacify the country, and in one village a soldier found a copy of Moses' laws and tore it up in public with jeers and blasphemies. At this the Jews flocked to Caesarea, and were only restrained from a second outbreak by the execution of the soldier. Finally, the Samaritans attacked certain Galileans who were (as the custom was) travelling through Samaria to Jerusalem for the passover. Cumanus was bribed and refused to avenge the death of the Jews who were killed. So the Galileans with some of the lower classes of "the Jews" allied themselves with a "robber" and burned some of the Samaritan villages. Cumanus armed the Samaritans, and, with them and his own troops, defeated these Jewish marauders. The leading men of Jerusalem prevailed upon the rebels who survived the defeat to disperse. But the quarrel was referred first to the legate of Syria and then to the emperor. The emperor was still disposed to conciliate the Jews; and, at the instance of Agrippa, son of Agrippa I., Cumanus was banished.

37. *Felix and the Revolutionaries.*—Under Antonius Felix (52-60) the revolutionary movement grew and spread. The country, Josephus says, was full of "robbers" and "wizards." The high priest was murdered in the Temple by pilgrims who carried daggers under their cloaks. Wizards and impostors persuaded the multitude to follow them into the desert, and an Egyptian, claiming to be a prophet, led his followers to the Mount of Olives to see the walls of Jerusalem fall at his command. Such deceivers, according to Josephus, did no less than the murderers to destroy the happiness of the city. Their hands were cleaner but their thoughts were more impious, for they pretended to divine inspiration.

Felix the procurator—a king, as Tacitus says, in power and in mind a slave—tried in vain to put down the revolutionaries. The "chief-robber" Eleazar, who had plundered the country for twenty years, was caught and sent to Rome; countless robbers of less note were crucified. But this severity cemented the alliance of religious fanatics with the physical-force party and induced the ordinary citizens to join them, in spite of the punishments

which they received when captured. Agrippa II. received a kingdom—first Chalcis, and then the tetrarchies of Philip and Lysanias—but, though he had the oversight of the Temple and the nomination of the high priest, and enjoyed a reputation for knowledge of Jewish customs and questions, he was unable to check the growing power of the Zealots. His sister Drusilla had broken the Law by her marriage with Felix; and his own notorious relations with his sister Berenice, and his coins which bore the images of the emperors, were an open affront to the conscience of Judaism. When Felix was recalled by Nero in 60 the nation was divided against itself, the Gentiles within its gates were watching for their opportunity, and the chief priests robbed the lower priests with a high hand.

In Caesarea there had been for some time trouble between the Jewish and the Syrian inhabitants. The Jews claimed that the city was theirs, because King Herod had founded it. The Syrians admitted the fact, but insisted that it was a city for Greeks, as its temples and statues proved. Their rivalry led to street-fighting: the Jews had the advantage in respect of wealth and bodily strength, but the Greek party had the assistance of the soldiers who were stationed there. On one occasion Felix sent troops against the victorious Jews; but neither this nor the scourge and the prison, to which the leaders of both factions had been consigned, deterred them. The quarrel was therefore referred to the emperor Nero, who finally gave his decision in favour of the Syrians or Greeks. The result of this decision was that the synagogue at Caesarea was insulted on a Sabbath and the Jews left the city taking their books of the Law with them. So—Josephus says—the war began in the twelfth year of the reign of Nero (A.D. 66).

38. *Festus, Albinus and Florus.*—Meanwhile the procurators who succeeded Felix—Porcius Festus (60-62), Albinus (62-64) and Gessius Florus (64-66)—had in their several ways brought the bulk of the nation into line with the more violent of the Jews of Caesarea. Festus found Judaea infested with robbers and the sicarii, who mingled with the crowds at the feasts and stabbed their enemies with the daggers (*sicae*) from which their name was derived. He also had to deal with a wizard, who deceived many by promising them salvation and release from evils, if they would follow him into the desert. His attempts to crush all such disturbers of the peace were cut short by his death in his second year of office.

In the interval which elapsed before the arrival of Albinus, Ananus son of Annas was made high priest by Agrippa. With the apparent intention of restoring order in Jerusalem, he assembled the Sanhedrin, and being, as a Sadducee, cruel in the matter of penalties, secured the condemnation of certain law-breakers to death by stoning. For this he was deposed by Agrippa. Albinus fostered and turned to his profit the struggles of priests with priests and of Zealots with their enemies. The general release of prisoners, with which he celebrated his impending recall, is typical of his policy. Meanwhile Agrippa gave the Levites the right to wear the linen robe of the priests and sanctioned the use of the temple treasure to provide work—the paving of the city with white stones—for the workmen who had finished the Temple (64) and now stood idle. But everything pointed to the destruction of the city, which one Jesus had prophesied at the feast of tabernacles in 62. The Zealots' zeal for the Law and the Temple was flouted by their pro-Roman king.

By comparison with Florus, Albinus was, in the opinion of Josephus, a benefactor. When the news of the troubles at Caesarea reached Jerusalem, it became known also that Florus had seized seventeen talents of the temple treasure (66). At this the patience of the Jews was exhausted. The sacrilege, as they considered it, may have been an attempt to recover arrears of tribute; but they were convinced that Florus was providing for himself and not for Caesar. The revolutionaries went about among the excited people with baskets, begging coppers for their destitute and miserable governor. Stung by this insult, he neglected the fire of war which had been lighted at Caesarea, and hastened to Jerusalem. His soldiers sacked the upper city and killed 630 persons—men, women and children. Berenice, who

was fulfilling a Nazarite vow, interposed in vain. Florus actually dared to scourge and crucify Jews who belonged to the Roman order of knights. For the moment the Jews were cowed, and next day they went submissively to greet the troops coming from Caesarea. Their greetings were unanswered, and they cried out against Florus. On this the soldiers drew their swords and drove the people into the city; but, once inside the city, the people stood at bay and succeeded in establishing themselves upon the temple-hill. Florus withdrew with all his troops, except one cohort, to Caesarea. The Jews laid complaint against him, and he complained against the Jews before the governor of Syria, Cestius Gallus, who sent an officer to inquire into the matter. Agrippa, who had hurried from Alexandria, entered Jerusalem with the governor's emissary. So long as he counselled submission to the overwhelming power of Rome the people complied, but when he spoke of obedience to Florus he was compelled to fly. The rulers, who desired peace, and upon whom Florus had laid the duty of restoring peace, asked him for troops; but the civil war ended in their complete discomfiture. The rebels abode by their decision to stop the daily sacrifice for the emperor; Agrippa's troops capitulated and marched out unhurt; and the Romans, who surrendered on the same condition and laid down their arms, were massacred. As if to emphasize the spirit and purpose of the rebellion, one and only one of the Roman soldiers was spared, because he promised to become a Jew even to the extent of circumcision.

39. *Josephus and the Zealots.*—Simultaneously with this massacre the citizens of Caesarea slaughtered the Jews who still remained there; and throughout Syria Jews effected—and suffered—reprisals. At length the governor of Syria approached the centre of the disturbance in Jerusalem, but retreated after burning down a suburb. In the course of his retreat he was attacked by the Jews and fled to Antioch, leaving them his engines of war. Some prominent Jews fled from Jerusalem—as from a sinking ship—to join him and carried the news to the emperor. The rest of the pro-Roman party were forced or persuaded to join the rebels and prepared for war on a grander scale. Generals were selected by the Sanhedrin from the aristocracy, who had tried to keep the peace and still hoped to make terms with Rome. Ananus the high priest, their leader, remained in command at Jerusalem; Galilee, where the first attack was to be expected, was entrusted to Josephus, the historian of the war. The revolutionary leaders, who had already taken the field, were superseded.

Josephus set himself to make an army of the inhabitants of Galilee, many of whom had no wish to fight, and to strengthen the strongholds. His organization of local government and his efforts to maintain law and order brought him into collision with the Zealots and especially with John of Giscala, one of their leaders. The people, whom he had tried to conciliate, were roused against him; John sent assassins and finally procured an order from Jerusalem for his recall. In spite of all this Josephus held his ground and by force or craft put down those who resisted his authority.

In the spring of 67 Vespasian, who had been appointed by Nero to crush the rebellion, advanced from his winter quarters at Antioch. The inhabitants of Sepphoris—whom Josephus had judged to be so eager for the war that he left them to build their wall for themselves—received a Roman garrison at their own request. Joined by Titus, Vespasian advanced into Galilee with three legions and the auxiliary troops supplied by Agrippa and other petty kings. Before his advance the army of Josephus fled. Josephus with a few stalwarts took refuge in Tiberias, and sent a letter to Jerusalem asking that he should be relieved of his command or supplied with an adequate force to continue the war. Hearing that Vespasian was preparing to besiege Jotapata, a strong fortress in the hills, which was held by other fugitives, Josephus entered it just before the road approaching it was made passable for the Roman horse and foot. A deserter announced his arrival to Vespasian, who rejoiced (Josephus says) that the cleverest of his enemies had thus voluntarily imprisoned himself. After some six weeks' siege the place was stormed, and its

exhausted garrison were killed or enslaved. Josephus, whose pretences had postponed the final assault, hid in a cave with forty men. His companions refused to permit him to surrender and were resolved to die. At his suggestion they cast lots, and the first man was killed by the second and so on, until all were dead except Josephus and (perhaps) one other. So Josephus saved them from the sin of suicide and gave himself up to the Romans. He had prophesied that the place would be taken—as it was—on the forty-seventh day, and now he prophesied that both Vespasian and his son Titus would reign over all mankind. The prophecy saved his life, though many desired his death, and the rumour of it produced general mourning in Jerusalem. By the end of the year (67) Galilee was in the hands of Vespasian, and John of Giscala had fled. Agrippa celebrated the conquest at Caesarea Philippi with festivities which lasted twenty days.

In accordance with ancient custom Jerusalem welcomed the fugitive Zealots. The result was civil war and famine. Ananus incited the people against these robbers, who arrested, imprisoned and murdered prominent friends of Rome, and arrogated to themselves the right of selecting the high priest by lot. The Zealots took refuge in the Temple and summoned the Idumaeans to their aid. Under cover of a storm, they opened the city-gates to their allies and proceeded to murder Ananus the high priest, and, against the verdict of a formal tribunal, Zacharias the son of Baruch in the midst of the Temple. The Idumaeans left, but John of Giscala remained master of Jerusalem.

40. *The Fall of Jerusalem.*—Vespasian left the rivals to consume one another and occupied his army with the subjugation of the country. When he had isolated the capital and was preparing to besiege it, the news of Nero's death reached him at Caesarea. For a year (June 68–June 69) he held his hand and watched events, until the robber-bands of Simon Bar-Giora (son of the proselyte) required his attention. But, before Vespasian took action to stop his raids, Simon had been invited to Jerusalem in the hope that he would act as a counterpoise to the tyrant John. And so, when Vespasian was proclaimed emperor in fulfilment of Josephus' prophecy, and deputed the command to Titus, there were three rivals at war in Jerusalem—Eleazar, Simon and John. The temple sacrifices were still offered and worshippers were admitted; but John's catapults were busy, and priest and worshippers at the altar were killed, because Eleazar's party occupied the inner courts of the Temple. A few days before the passover of 70 Titus advanced upon Jerusalem, but the civil war went on. When Eleazar opened the temple-gates to admit those who wished to worship God, John of Giscala introduced some of his own men, fully armed under their garments, and so got possession of the Temple. Titus pressed the attack, and the two factions joined hands at last to repel it. In spite of their desperate sallies, Jerusalem was surrounded by a wall, and its people, whose numbers were increased by those who had come up for the passover, were hemmed in to starve. The famine affected all alike—the populace, who desired peace, and the Zealots, who were determined to fight to the end. At last John of Giscala portioned out the sacred wine and oil, saying that they who fought for the Temple might fearlessly use its stores for their sustenance. Steadily the Romans forced their way through wall after wall, until the Jews were driven back to the Temple and the daily sacrifices came to an end on the 17th of July for lack of men. Once more Josephus appealed in vain to John and his followers to cease from desecrating and endangering the Temple. The siege proceeded and the temple-gates were burned. According to Josephus, Titus decided to spare the Temple, but—whether this was so or not—on the 10th of August it was fired by a soldier after a sortie of the Jews had been repelled. The legions set up their standards in the temple-court and hailed Titus as imperator.

Some of the Zealots escaped with John and Simon to the upper city and held it for another month. But Titus had already earned the triumph which he celebrated at Rome in 71. The Jews, wherever they might be, continued to pay the temple-tax; but now it was devoted to Jupiter Capitolinus. The Romans had taken their holy place, and the Law was all that was left to them.

41. *From A.D. 70 to A.D. 135.*—The destruction of the Temple carried with it the destruction of the priesthood and all its power. The priests existed to offer sacrifices, and by the Law no sacrifice could be offered except at the Temple of Jerusalem. Thenceforward the remnant of the Jews who survived the fiery ordeal formed a church rather than a nation or a state, and the Pharisees exercised an unchallenged supremacy. With the Temple and its Sadducean high priests perished the Sanhedrin in which the Sadducees had competed with the Pharisees for predominance. The Sicarii or Zealots who had appealed to the arm of flesh were exterminated. Only the teachers of the Law survived to direct the nation and to teach those who remained loyal Jews, how they should render to Caesar what belonged to Caesar, and to God what belonged to God. Here and there hot-headed Zealots rose up to repeat the errors and the disasters of their predecessors. But their fate only served to deepen the impression already stamped upon the general mind of the nation. The Temple was gone, but they had the Law. Already the Jews of the Dispersion had learned to supplement the Temple by the synagogue, and even the Jews of Jerusalem had not been free to spend their lives in the worship of the Temple. There were still, as always, rites which were independent of the place and of the priest; there had been a time when the Temple did not exist. So Judaism survived once more the destruction of its central sanctuary.

When Jerusalem was taken, the Sicarii still continued to hold three strongholds: one—Masada—for three years. But the commander of Masada realized at length that there was no hope of escaping captivity except by death, and urged his comrades to anticipate their fate. Each man slew his wife and children; ten men were selected by lot to slay the rest; one man slew the nine executioners, fired the palace and fell upon his sword. When the place was stormed the garrison consisted of two old women and five children who had concealed themselves in caves. So Vespasian obtained possession of Palestine—the country which Nero had given him—and for a time it was purged of revolutionaries. Early Christian writers assert that he proceeded to search out and to execute all descendants of David who might conceivably come forward as claimants of the vacant throne.

In Egypt and in Cyrene fugitive Zealots endeavoured to continue their rebellion against the emperor, but there also with disastrous results. The doors of the Temple in Egypt were closed, and its sacrifices which had been offered for 243 years were prohibited. Soon afterwards this temple also was destroyed. Apart from these local outbreaks, the Jews throughout the empire remained loyal citizens and were not molested. The general hope of the nation was not necessarily bound up with the house of David, and its realization was not incompatible with the yoke of Rome. They still looked for a true prophet, and meanwhile they had their rabbis.

Under Johanan ben Zaccai (*q.v.*) the Pharisees established themselves at Jamnia. A new Sanhedrin was formed there under the presidency of a ruler, who received yearly dues from all Jewish communities. The scribes through the synagogues preserved the national spirit and directed it towards the religious life which was prescribed by Scripture. The traditions of the elders were tested and gradually harmonized in their essentials. The canon of Scripture was decided in accordance with the touchstone of the Pentateuch. Israel had retired to their tents to study their Bible.

Under Vespasian and Titus the Jews enjoyed freedom of conscience and equal political rights with non-Jewish subjects of Rome. But Domitian, according to pagan historians, bore hardly on them. The temple-tax was strictly exacted; Jews who lived the Jewish life without openly confessing their religion and Jews who concealed their nationality were brought before the magistrates. Proselytes to Judaism were condemned either to death or to forfeiture of their property. Indeed it would seem that Domitian instituted a persecution of the Jews, to which Nerva his successor put an end. Towards the end of Trajan's reign (114–117) the Jews of Egypt and Cyrene rose against their Greek neighbours and set up a king. The rebellion spread to Cyprus; and when Trajan advanced from Mesopotamia into Parthia the Jews of Mesopotamia revolted. The massacres they perpetrated were avenged in kind and all the insurrections were quelled when Hadrian succeeded Trajan.

In 132 the Jews of Palestine rebelled again. Hadrian had forbidden circumcision as illegal mutilation: he had also replaced Jerusalem by a city of his own, Aelia Capitolina, and the temple of Yahweh by a temple of Jupiter. Apart from these bitter provocations—the prohibition of the sign of the covenant and the desecration of the sacred place—the Jews had a leader who was recognized as Messiah by the rabbi Akiba. Though the majority of the rabbis looked for no such deliverer and refused to admit his claims, Barcochebas (*q.v.*) drew the people after him to struggle for their national independence. For three years and a half he held his own and issued coins in the name of Simon, which commemorate the liberation of Jerusalem. Some attempt was apparently made to rebuild the Temple; and the Jews of the Dispersion, who had perhaps been won over by Akiba, supported the rebellion. Indeed even Gentiles helped them, so that the whole world (Dio Cassius says) was stirred. Hadrian sent his best generals against the rebels, and at length they were driven from Jerusalem to Bethar (135). The Jews were forbidden to enter the new city of Jerusalem on pain of death.

BIBLIOGRAPHY.—The most comprehensive of modern books dealing with the period is Emil Schürer, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (3 vols., Leipzig, 1901 foll.). Exception has been taken to a certain lack of sympathy with the Jews, especially the rabbis, which has been detected in the author. But at least the book remains an indispensable storehouse of references to ancient and modern authorities. An earlier edition was translated into English under the title *History of the Jewish People* (Edinburgh, 1890, 1891). Of shorter histories, D. A. Schlatter's *Geschichte Israels von Alexander dem Grossen bis Hadrian* (2nd ed., 1906) is perhaps the least dependent upon Schürer and attempts more than others to interpret the fragmentary evidence available. Dr R. H. Charles has done much by his editions to restore to their proper prominence in connexion with Jewish history the *Testaments of the Twelve Patriarchs*, *The Book of Jubilees*, *Enoch*, etc. But Schürer gives a complete bibliography to which it must suffice to refer. For the Sanhedrin see SYNEDRIUM. (J. H. A. H.)

III.—FROM THE DISPERSION TO MODERN TIMES

42. *The Later Empire.*—With the failure in 135 of the attempt led by Barcochebas to free Judaea from Roman domination a new era begins in the history of the Jews. The direct consequence of the failure was the annihilation of political nationality. Large numbers fell in the actual fighting. Dio Cassius puts the total at the incredible figure of 580,000, besides the incalculable number who succumbed to famine, disease and fire (Dio-Xiphilin lxi. 11-15). Jerusalem was rebuilt by Hadrian, orders to this effect being given during the emperor's first journey through Syria in 130, the date of his foundations at Gaza, Tiberias and Petra (Reinach, *Textes relatifs au Judaïsme*, p. 198). The new city was named Aelia Capitolina, and on the site of the temple of Jehovah there arose another temple dedicated to Jupiter. To Eusebius the erection of a temple of Venus over the sepulchre of Christ was an act of mockery against the Christian religion. Rome had been roused to unwonted fury, and the truculence of the rebels was matched by the cruelty of their masters. The holy city was barred against the Jews; they were excluded, under pain of death, from approaching within view of the walls. Hadrian's policy in this respect was matched later on by the edict of the caliph Omar (c. 638), who, like his Roman prototype, prevented the Jews from settling in the capital of their ancient country. The death of Hadrian and the accession of Antoninus Pius (138), however, gave the dispersed people of Palestine a breathing-space. Roman law was by no means intolerant to the Jews. Under the constitution of Caracalla (198-217) all inhabitants of the Roman empire enjoyed the civil rights of the *Cives Romani* (Scherer, *Die Rechtsverhältnisse der Juden*, p. 10).

Moreover, a spiritual revival mitigated the crushing effects of material ruin. The synagogue had become a firmly established institution, and the personal and social life of the masses had come under the control of communal law. The dialectic of the school proved stronger to preserve than the edge of the sword to destroy. Pharisaic Judaism, put to the severest test to which a religious system has ever been subject, showed itself able to control and idealize life in all its phases. Whatever question may be possible as to the force or character of Pharisaism in the time of Christ, there can be no doubt that it became both all-pervading and ennobling among the successors of Aqiba (q.v.), himself one of the martyrs to Hadrian's severity. Little more than half a century after the overthrow of the Jewish nationality, the Mishnah was practically completed, and by this code of rabbinic law—and law is here a term which includes the social, moral and religious as well as the ritual and legal phases of human activity—the Jewish people were organized into a community, living more or less autonomously under the Sanhedrin or Synedrium (q.v.) and its officials.

Judah the prince, the patriarch or *nāsi* who edited the Mishnah, died early in the 3rd century. With him the importance of the Palestinian patriarchate attained its zenith. Gamaliel II. of Jamnia (Jabne Yebneh) had been raised to this dignity a century before, and, as members of the house of Hillel and thus descendants of David, the patriarchs enjoyed almost royal authority. Their functions were political rather than religious, though their influence was by no means purely secular.

They were often on terms of intimate friendship with the emperors, who scarcely interfered with their jurisdiction. As late as Theodosius I. (379-395) the internal affairs of the Jews were formally committed to the patriarchs, and Honorius (404) authorized the collection of the patriarch's tax (*aurum coronarium*), by which a revenue was raised from the Jews of the diaspora. Under Theodosius II. (408-450) the patriarchate was finally abolished after a régime of three centuries and a half (Graetz, *History of the Jews*, Eng. trans. vol. ii. ch. xxii.), though ironically enough the last holder of the office had been for a time elevated by the emperor to the rank of prefect. The real turning-point had been reached earlier, when Christianity became the state religion under Constantine I. in 312.

Religion under the Christian emperors became a significant source of discrimination in legal status, and non-conformity might reach so far as to produce complete loss of rights. The laws concerning the Jews had a repressive and preventive object: the repression of Judaism and the prevention of inroads of Jewish influences into the state religion. The Jews were thrust into a position of isolation, and the Code of Theodosius and other authorities characterize the Jews as a lower order of depraved beings (*inferiores and perversi*), their community as a godless, dangerous sect (*sæcta nefaria, feralis*), their religion a superstition, their assemblies for religious worship a blasphemy (*sacrilegi coetus*) and a contagion (Scherer, *op. cit.* pp. 11-12). Yet Judaism under Roman Christian law was a lawful religion (*religio licita*), Valentinian I. (364-375) forbade the quartering of soldiers in the synagogues, Theodosius I. prohibited interference with the synagogue worship ("Judæorum sectam nulla lege prohibitam satis constat"), and in 412 a special edict of protection was issued. But the admission of Christians into the Jewish fold was punished by confiscation of goods (357), the erection of new synagogues was arrested by Theodosius II. (439) under penalty of a heavy fine, Jews were forbidden to hold Christian slaves under pain of death (423). A similar penalty attached to intermarriage between Jews and Christians, and an attempt was made to nullify all Jewish marriages which were not celebrated in accordance with Roman law. But Justinian (527-565) was the first to interfere directly in the religious institutions of the Jewish people. In 553 he interdicted the use of the Talmud (which had then not long been completed), and the Byzantine emperors of the 8th and 9th centuries passed even more intolerant regulations. As regards civil law, Jews were at first allowed to settle disputes between Jew and Jew before their own courts, but Justinian denied to them and to heretics the right to appear as witnesses in the public courts against orthodox Christians. To Constantine V. (911-959) goes back the Jewish form of oath which in its later development required the Jew to gird himself with thorns; stand in water; and, holding the scroll of the Torah in his hand, invoke upon his person the leprosy of Naaman, the curse of Eli and the fate of Korah's sons should he perjure himself. This was the original of all the medieval forms of oath *more judaico*, which still prevailed in many European lands till the 19th century, and are even now maintained by some of the Rumanian courts. Jews were by the law of Honorius excluded from the army, from public offices and dignities (418), from acting as advocates (425); only the curial offices were open to them. Justinian gave the finishing touch by proclaiming in 537 the Jews absolutely ineligible for any honour whatsoever ("honore fruantur nullo").

43. *Judaism in Babylonia.*—The Jews themselves were during this period engaged in building up a system of isolation on their own side, but they treated Roman law with greater hospitality than it meted out to them. The Talmud shows the influence of that law in many points, and may justly be compared to it as a monument of codification based on great principles. The Palestinian Talmud was completed in the 4th century, but the better known and more influential version was compiled in Babylonia about 500. The land which, a millennium before, had been a prison for the Jewish exiles was now their asylum of refuge. For a long time it formed their second fatherland. Here, far more than on Palestinian soil, was built the enduring edifice of rabbinism. The population of the southern part of Mesopotamia—the strip of land enclosed between the Tigris and the Euphrates—was, according to Graetz, mainly Jewish; while the district extending for about 70 m. on the east of the Euphrates, from Nehardea in the north to Sura in the south, became a new Palestine with Nehardea for its Jerusalem. The Babylonian Jews were practically independent, and the exilarch (*resh-gabultha*) or prince of the captivity was an official who ruled the community as a vassal of the Persian throne. The exilarch claimed, like the Palestinian patriarch, descent from the royal house of David, and exercised most of the functions of

exhausted garrison were killed or enslaved. Josephus, whose pretences had postponed the final assault, hid in a cave with forty men. His companions refused to permit him to surrender and were resolved to die. At his suggestion they cast lots, and the first man was killed by the second and so on, until all were dead except Josephus and (perhaps) one other. So Josephus saved them from the sin of suicide and gave himself up to the Romans. He had prophesied that the place would be taken—as it was—on the forty-seventh day, and now he prophesied that both Vespasian and his son Titus would reign over all mankind. The prophecy saved his life, though many desired his death, and the rumour of it produced general mourning in Jerusalem. By the end of the year (67) Galilee was in the hands of Vespasian, and John of Giscala had fled. Agrippa celebrated the conquest at Caesarea Philippi with festivities which lasted twenty days.

In accordance with ancient custom Jerusalem welcomed the fugitive Zealots. The result was civil war and famine. Ananus incited the people against these robbers, who arrested, imprisoned and murdered prominent friends of Rome, and arrogated to themselves the right of selecting the high priest by lot. The Zealots took refuge in the Temple and summoned the Idumaeans to their aid. Under cover of a storm, they opened the city-gates to their allies and proceeded to murder Ananus the high priest, and, against the verdict of a formal tribunal, Zacharias the son of Baruch in the midst of the Temple. The Idumaeans left, but John of Giscala remained master of Jerusalem.

40. *The Fall of Jerusalem.*—Vespasian left the rivals to consume one another and occupied his army with the subjugation of the country. When he had isolated the capital and was preparing to besiege it, the news of Nero's death reached him at Caesarea. For a year (June 68–June 69) he held his hand and watched events, until the robber-bands of Simon Bar-Giora (son of the proselyte) required his attention. But, before Vespasian took action to stop his raids, Simon had been invited to Jerusalem in the hope that he would act as a counterpoise to the tyrant John. And so, when Vespasian was proclaimed emperor in fulfilment of Josephus' prophecy, and deputed the command to Titus, there were three rivals at war in Jerusalem—Eleazar, Simon and John. The temple sacrifices were still offered and worshippers were admitted; but John's catapults were busy, and priest and worshippers at the altar were killed, because Eleazar's party occupied the inner courts of the Temple. A few days before the passover of 70 Titus advanced upon Jerusalem, but the civil war went on. When Eleazar opened the temple-gates to admit those who wished to worship God, John of Giscala introduced some of his own men, fully armed under their garments, and so got possession of the Temple. Titus pressed the attack, and the two factions joined hands at last to repel it. In spite of their desperate sallies, Jerusalem was surrounded by a wall, and its people, whose numbers were increased by those who had come up for the passover, were hemmed in to starve. The famine affected all alike—the populace, who desired peace, and the Zealots, who were determined to fight to the end. At last John of Giscala portioned out the sacred wine and oil, saying that they who fought for the Temple might fearlessly use its stores for their sustenance. Steadily the Romans forced their way through wall after wall, until the Jews were driven back to the Temple and the daily sacrifices came to an end on the 17th of July for lack of men. Once more Josephus appealed in vain to John and his followers to cease from desecrating and endangering the Temple. The siege proceeded and the temple-gates were burned. According to Josephus, Titus decided to spare the Temple, but—whether this was so or not—on the 10th of August it was fired by a soldier after a sortie of the Jews had been repelled. The legions set up their standards in the temple-court and hailed Titus as imperator.

Some of the Zealots escaped with John and Simon to the upper city and held it for another month. But Titus had already earned the triumph which he celebrated at Rome in 71. The Jews, wherever they might be, continued to pay the temple-tax; but now it was devoted to Jupiter Capitolinus. The Romans had taken their holy place, and the Law was all that was left to them.

41. *From A.D. 70 to A.D. 135.*—The destruction of the Temple carried with it the destruction of the priesthood and all its power. The priests existed to offer sacrifices, and by the Law no sacrifice could be offered except at the Temple of Jerusalem. Thenceforward the remnant of the Jews who survived the fiery ordeal formed a church rather than a nation or a state, and the Pharisees exercised an unchallenged supremacy. With the Temple and its Sadducean high priests perished the Sanhedrin in which the Sadducees had competed with the Pharisees for predominance. The Sicarii or Zealots who had appealed to the arm of flesh were exterminated. Only the teachers of the Law survived to direct the nation and to teach those who remained loyal Jews, how they should render to Caesar what belonged to Caesar, and to God what belonged to God. Here and there hot-headed Zealots rose up to repeat the errors and the disasters of their predecessors. But their fate only served to deepen the impression already stamped upon the general mind of the nation. The Temple was gone, but they had the Law. Already the Jews of the Dispersion had learned to supplement the Temple by the synagogue, and even the Jews of Jerusalem had not been free to spend their lives in the worship of the Temple. There were still, as always, rites which were independent of the place and of the priest; there had been a time when the Temple did not exist. So Judaism survived once more the destruction of its central sanctuary.

When Jerusalem was taken, the Sicarii still continued to hold three strongholds: one—Masada—for three years. But the commander of Masada realized at length that there was no hope of escaping captivity except by death, and urged his comrades to anticipate their fate. Each man slew his wife and children; ten men were selected by lot to slay the rest; one man slew the nine executioners, fired the palace and fell upon his sword. When the place was stormed the garrison consisted of two old women and five children who had concealed themselves in caves. So Vespasian obtained possession of Palestine—the country which Nero had given him—and for a time it was purged of revolutionaries. Early Christian writers assert that he proceeded to search out and to execute all descendants of David who might conceivably come forward as claimants of the vacant throne.

In Egypt and in Cyrene fugitive Zealots endeavoured to continue their rebellion against the emperor, but there also with disastrous results. The doors of the Temple in Egypt were closed, and its sacrifices which had been offered for 243 years were prohibited. Soon afterwards this temple also was destroyed. Apart from these local outbreaks, the Jews throughout the empire remained loyal citizens and were not molested. The general hope of the nation was not necessarily bound up with the house of David, and its realization was not incompatible with the yoke of Rome. They still looked for a true prophet, and meanwhile they had their rabbis.

Under Johanan ben Zaccai (*q.v.*) the Pharisees established themselves at Jamnia. A new Sanhedrin was formed there under the presidency of a ruler, who received yearly dues from all Jewish communities. The scribes through the synagogues preserved the national spirit and directed it towards the religious life which was prescribed by Scripture. The traditions of the elders were tested and gradually harmonized in their essentials. The canon of Scripture was decided in accordance with the touchstone of the Pentateuch. Israel had retired to their tents to study their Bible.

Under Vespasian and Titus the Jews enjoyed freedom of conscience and equal political rights with non-Jewish subjects of Rome. But Domitian, according to pagan historians, bore hardly on them. The temple-tax was strictly exacted; Jews who lived the Jewish life without openly confessing their religion and Jews who concealed their nationality were brought before the magistrates. Proselytes to Judaism were condemned either to death or to forfeiture of their property. Indeed it would seem that Domitian instituted a persecution of the Jews, to which Nerva his successor put an end. Towards the end of Trajan's reign (114–117) the Jews of Egypt and Cyrene rose against their Greek neighbours and set up a king. The rebellion spread to Cyprus; and when Trajan advanced from Mesopotamia into Parthia the Jews of Mesopotamia revolted. The massacres they perpetrated were avenged in kind and all the insurrections were quelled when Hadrian succeeded Trajan.

In 132 the Jews of Palestine rebelled again. Hadrian had forbidden circumcision as illegal mutilation; he had also replaced Jerusalem by a city of his own, Aelia Capitolina, and the temple of Yahweh by a temple of Jupiter. Apart from these bitter provocations—the prohibition of the sign of the covenant and the desecration of the sacred place—the Jews had a leader who was recognized as Messiah by the rabbi Akiba. Though the majority of the rabbis looked for no such deliverer and refused to admit his claims, Barcochebas (*q.v.*) drew the people after him to struggle for their national independence. For three years and a half he held his own and issued coins in the name of Simon, which commemorate the liberation of Jerusalem. Some attempt was apparently made to rebuild the Temple; and the Jews of the Dispersion, who had perhaps been won over by Akiba, supported the rebellion. Indeed even Gentiles helped them, so that the whole world (Dio Cassius says) was stirred. Hadrian sent his best generals against the rebels, and at length they were driven from Jerusalem to Bethar (135). The Jews were forbidden to enter the new city of Jerusalem on pain of death.

BIBLIOGRAPHY.—The most comprehensive of modern books dealing with the period is Emil Schürer, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (3 vols., Leipzig, 1901 foll.). According to Josephus, Titus decided to spare the Temple, but—whether this was so or not—on the 10th of August it was fired by a soldier after a sortie of the Jews had been repelled. The legions set up their standards in the temple-court and hailed Titus as imperator.

Some of the Zealots escaped with John and Simon to the upper city and held it for another month. But Titus had already earned the triumph which he celebrated at Rome in 71. The Jews, wherever they might be, continued to pay the temple-tax; but now it was devoted to Jupiter Capitolinus. The Romans had taken their holy place, and the Law was all that was left to them.

41. *From A.D. 70 to A.D. 135.*—The destruction of the Temple carried with it the destruction of the priesthood and all its power. The priests existed to offer sacrifices, and by the Law no sacrifice could be offered except at the Temple of Jerusalem. Thenceforward the remnant of the Jews who survived the fiery ordeal formed a church rather than a nation or a state, and the Pharisees exercised an unchallenged supremacy. With the Temple and its Sadducean high priests perished the Sanhedrin in which the Sadducees had competed with the Pharisees for predominance. The Sicarii or Zealots who had appealed to the arm of flesh were exterminated. Only the teachers of the Law survived to direct the nation and to teach those who remained loyal Jews, how they should render to Caesar what belonged to Caesar, and to God what belonged to God. Here and there hot-headed Zealots rose up to repeat the errors and the disasters of their predecessors. But their fate only served to deepen the impression already stamped upon the general mind of the nation. The Temple was gone, but they had the Law. Already the Jews of the Dispersion had learned to supplement the Temple by the synagogue, and even the Jews of Jerusalem had not been free to spend their lives in the worship of the Temple. There were still, as always, rites which were independent of the place and of the priest; there had been a time when the Temple did not exist. So Judaism survived once more the destruction of its central sanctuary.

When Jerusalem was taken, the Sicarii still continued to hold three strongholds: one—Masada—for three years. But the commander of Masada realized at length that there was no hope of escaping captivity except by death, and urged his comrades to anticipate their fate. Each man slew his wife and children; ten men were selected by lot to slay the rest; one man slew the nine executioners, fired the palace and fell upon his sword. When the place was stormed the garrison consisted of two old women and five children who had concealed themselves in caves. So Vespasian obtained possession of Palestine—the country which Nero had given him—and for a time it was purged of revolutionaries. Early Christian writers assert that he proceeded to search out and to execute all descendants of David who might conceivably come forward as claimants of the vacant throne.

In Egypt and in Cyrene fugitive Zealots endeavoured to continue their rebellion against the emperor, but there also with disastrous results. The doors of the Temple in Egypt were closed, and its sacrifices which had been offered for 243 years were prohibited. Soon afterwards this temple also was destroyed. Apart from these local outbreaks, the Jews throughout the empire remained loyal citizens and were not molested. The general hope of the nation was not necessarily bound up with the house of David, and its realization was not incompatible with the yoke of Rome. They still looked for a true prophet, and meanwhile they had their rabbis.

Under Johanan ben Zaccai (*q.v.*) the Pharisees established themselves at Jamnia. A new Sanhedrin was formed there under the presidency of a ruler, who received yearly dues from all Jewish communities. The scribes through the synagogues preserved the national spirit and directed it towards the religious life which was prescribed by Scripture. The traditions of the elders were tested and gradually harmonized in their essentials. The canon of Scripture was decided in accordance with the touchstone of the Pentateuch. Israel had retired to their tents to study their Bible.

Under Vespasian and Titus the Jews enjoyed freedom of conscience and equal political rights with non-Jewish subjects of Rome. But Domitian, according to pagan historians, bore hardly on them. The temple-tax was strictly exacted; Jews who lived the Jewish life without openly confessing their religion and Jews who concealed their nationality were brought before the magistrates. Proselytes to Judaism were condemned either to death or to forfeiture of their property. Indeed it would seem that Domitian instituted a persecution of the Jews, to which Nerva his successor put an end. Towards the end of Trajan's reign (114–117) the Jews of Egypt and Cyrene rose against their Greek neighbours and set up a king. The rebellion spread to Cyprus; and when Trajan advanced from Mesopotamia into Parthia the Jews of Mesopotamia revolted. The massacres they perpetrated were avenged in kind and all the insurrections were quelled when Hadrian succeeded Trajan.

In 132 the Jews of Palestine rebelled again. Hadrian had forbidden circumcision as illegal mutilation; he had also replaced Jerusalem by a city of his own, Aelia Capitolina, and the temple of Yahweh by a temple of Jupiter. Apart from these bitter provocations—the prohibition of the sign of the covenant and the desecration of the sacred place—the Jews had a leader who was recognized as Messiah by the rabbi Akiba. Though the majority of the rabbis looked for no such deliverer and refused to admit his claims, Barcochebas (*q.v.*) drew the people after him to struggle for their national independence. For three years and a half he held his own and issued coins in the name of Simon, which commemorate the liberation of Jerusalem. Some attempt was apparently made to rebuild the Temple; and the Jews of the Dispersion, who had perhaps been won over by Akiba, supported the rebellion. Indeed even Gentiles helped them, so that the whole world (Dio Cassius says) was stirred. Hadrian sent his best generals against the rebels, and at length they were driven from Jerusalem to Bethar (135). The Jews were forbidden to enter the new city of Jerusalem on pain of death.

to be avoided. The Leibzoll (body-tax) was also abolished, in addition to the special law-taxes, the passport-duty, the night-duty and all similar imposts which had stamped the Jews as outcast, for they were now (Dec. 19) to have equal rights with the Christian inhabitants." The Jews were not, indeed, granted complete citizenship, and their residence and public worship in Vienna and other Austrian cities were circumscribed and even penalized. "But Joseph II. annulled a number of vexatious, restrictive regulations, such as the compulsory wearing of beards, the prohibition against going out in the forenoon on Sundays or holidays, or frequenting public pleasure resorts. The emperor even permitted Jewish wholesale merchants, notables and their sons, to wear swords (January 2, 1782), and especially insisted that Christians should behave in a friendly manner towards Jews."

48. *The Mendelssohn Movement*.—This notable beginning to the removal of "the ignominy of a thousand years" was causally connected with the career of Moses Mendelssohn (1729-1786; *q.v.*). He found on both sides an unreadiness for approximation: the Jews had sunk into apathy and degeneration, the Christians were still moved by hereditary antipathy. The failure of the hopes entertained of Sabbatai Zebi (*q.v.*) had plunged the Jewries of the world into despair. This Smyrnan pretender not only proclaimed himself Messiah (*c.* 1650) but he was accepted in that rôle by vast numbers of his brethren. At the moment when Spinoza was publishing a system which is still a dominating note of modern philosophy, this other son of Israel was capturing the very heart of Jewry. His miracles were reported and eagerly believed everywhere; "from Poland, Hamburg and Amsterdam treasures poured into his court; in the Levant young men and maidens prophesied before him; the Persian Jews refused to till the fields. 'We shall pay no more taxes,' they said, 'our Messiah is come.'" The expectation that he would lead Israel in triumph to the Holy Land was doomed to end in disappointment. Sabbatai lacked one quality without which enthusiasm is ineffective: he failed to believe in himself. At the critical moment he embraced Islam to escape death, and though he was still believed in by many—it was not Sabbatai himself but a phantom resemblance that had assumed the turban!—his meteoric career did but colour the sky of the Jews with deeper blackness. Despite all this, one must not fall into the easy error of exaggerating the degeneration into which the Jewries of the world fell from the middle of the 17th till the middle of the 18th century. For Judaism had organized itself; the *Shulhan aruch* of Joseph Qaro (*q.v.*), printed in 1564 within a decade of its completion, though not accepted without demur, was nevertheless widely admitted as the code of Jewish life. If in more recent times progress in Judaism has implied more or less of revolt against the rigors and fetters of Qaro's code, yet for 250 years it was a powerful safeguard against demoralization and stagnation. No community living in full accordance with that code could fail to reach a high moral and intellectual level.

It is truer to say that on the whole the Jews began at this period to abandon as hopeless the attempt to find a place for themselves in the general life of their country. Perhaps they even ceased to desire it. Their children were taught without any regard to outside conditions, they spoke and wrote a jargon, and their whole training, both by what it included and by what it excluded, tended to produce isolation from their neighbours. Moses Mendelssohn, both by his career and by his propaganda, for ever put an end to these conditions; he more than any other man. Born in the ghetto of Dessau, he was not of the ghetto. At the age of fourteen he found his way to Berlin, where Frederick the Great, inspired by the spirit of Voltaire, held the maxim that "to oppress the Jews never brought prosperity to any government." Mendelssohn became a warm friend of Lessing, the hero of whose drama *Nathan the Wise* was drawn from the Dessau Jew. Mendelssohn's *Phædo*, on the immortality of the soul, brought the author into immediate fame, and the simple home of the "Jewish Plato" was sought by many of the leaders of the Gentile society in Berlin. Mendelssohn's translation of the Pentateuch into German with a new commentary by himself

and others introduced the Jews to more modern ways of thinking. Two results emanated from Mendelssohn's work. A new school of scientific study of Judaism emerged, to be dignified by the names of Leopold Zunz (*q.v.*), H. Graetz (*q.v.*) and many others. On the other hand Mendelssohn by his pragmatic conception of religion (specially in his *Jerusalem*) weakened the belief of certain minds in the absolute truth of Judaism, and thus his own grandchildren (including the famous musician Felix Mendelssohn-Bartholdy), as well as later Heine, Börne, Gans and Neander, embraced Christianity. Within Judaism itself two parties were formed, the Liberals and the Conservatives, and as time went on these tendencies definitely organized themselves. Holdheim (*q.v.*) and Geiger (*q.v.*) led the reform movement in Germany and at the present day the effects of the movement are widely felt in America on the Liberal side and on the opposite side in the work of the neo-orthodox school founded by S. R. Hirsch (*q.v.*). Modern seminaries were established first in Breslau by Zacharias Fränkel (*q.v.*) and later in other cities. Brilliant results accrued from all this participation in the general life of Germany. Jews, engaged in all the professions and pursuits of the age, came to the front in many branches of public life, claiming such names as Riesser (d. 1863) and Lasker in politics, Auerbach in literature, Rubenstein and Joachim in music, Traube in medicine, and Lazarus in psychology. Especially famous have been the Jewish linguists, pre-eminent among them Theodor Benfey (1809-1881), the pioneer of modern comparative philology; and the Greek scholar and critic Jakob Bernays (1824-1881).

49. *Effect of the French Revolution*.—In close relation to the German progress in Mendelssohn's age, events had been progressing in France, where the Revolution did much to improve the Jewish condition, thanks largely to the influence of Mirabeau. In 1807 Napoleon convoked a Jewish assembly in Paris. Though the decisions of this body had no binding force on the Jews generally, yet in some important particulars its decrees represent principles widely adopted by the Jewish community. They proclaim the acceptance of the spirit of Mendelssohn's reconciliation of the Jews to modern life. They assert the citizenship and patriotism of Jews, their determination to accommodate themselves to the present as far as they could while retaining loyalty to the past. They declare their readiness to adapt the law of the synagogue to the law of the land, as for instance in the question of marriage and divorce. No Jew, they decided, may perform the ceremony of marriage unless civil formalities have been fulfilled; and divorce is allowed to the Jews only if and so far as it is confirmatory of a legal divorce pronounced by the civil law of the land. The French assembly did not succeed in obtaining formal assent to these decisions (except from Frankfurt and Holland), but they gained the practical adhesion of the majority of Western and American Jews. Napoleon, after the report of the assembly, established the consistorial system which remained in force, with its central consistory in the capital, until the recent separation of church and state. Many French Jews acquired fame, among them the ministers Crémieux (1796-1879), Fould, Gondchaux and Raynal; the archaeologists and philologists Oppert, Halévy, Munk, the Derenbours, Darmesteters and Reimachs; the musicians Halévy, Waldteufel and Meyerbeer; the authors and dramatists Catulle Mendès and A. d'Ennery, and many others, among them several distinguished occupants of civil and military offices.

50. *Modern Italy*.—Similar developments occurred in other countries, though it becomes impossible to treat the history of the Jews, from this time onwards, in general outline. We must direct our attention to the most important countries in such detail as space permits. And first as to Italy, where the Jews in a special degree have identified themselves with the national life. The revolutions of 1848, which greatly affected the position of the Jews in several parts of Europe, brought considerable gain to the Jews of Italy. During the war against Austria in the year named, Isaac Pesaro Marogonato was finance minister in Venice. Previously to this date the Jews were still confined to the ghetto, but in 1859, in the Italy united under Victor

Emmanuel II., the Jews obtained complete rights, a privilege which was extended also to Rome itself in 1870. The Italian Jews devoted themselves with ardour to the service of the state. Isaac Artom was Cavour's secretary, L' Olper a counsellor of Mazzini. "The names of the Jewish soldiers who died in the cause of Italian liberty were placed along with those of their Christian fellow soldiers on the monuments erected in their honour" (*Jewish Encyclopedia*, vii. 10). More recently men like Wollemberg, Ottolenghi and Luzzatti rose to high positions as ministers of state. Most noted of recent Jewish scholars in Italy was S. D. Luzzatto (*q.v.*)

51. *Austria*.—From Italy we may turn to the country which so much influenced Italian politics, Austria, which had founded the system of "Court Jews" in 1518, had expelled the Jews from Vienna as late as 1670, when the synagogue of that city was converted into a church. But economic laws are often too strong for civil vagaries or sectarian fanaticism, and as the commerce of Austria suffered by the absence of the Jews, it was impossible to exclude the latter from the fairs in the provinces or from the markets of the capital. As has been pointed out above, certain protected Jews were permitted to reside in places where the expulsion of the Jews had been decreed. But Maria Theresa (1740-1780) was distinguished for her enmity to the Jews, and in 1744 made a futile attempt to secure their expulsion from Bohemia. "In 1760 she issued an order that all unbearded Jews should wear a yellow badge on their left arm" (*Jewish Encyclopedia*, ii. 330). The most petty limitations of Jewish commercial activity continued; thus at about this period the community of Prague, in a petition, "complain that they are not permitted to buy victuals in the market before a certain hour, vegetables not before 9 and cattle not before 11 o'clock; to buy fish is sometimes altogether prohibited; Jewish druggists are not permitted to buy victuals at the same time with Christians" (*op. cit.*). So, too, with taxation. It was exorbitant and vexatious. To pay for rendering inoperative the banishment edict of 1744, the Jews were taxed 3,000,000 florins annually for ten years. In the same year it was decreed that the Jews should pay "a special tax of 40,000 florins for the right to import their citrons for the feast of booths." Nevertheless, Joseph II. (1780-1790) inaugurated a new era for the Jews of his empire. Soon after his accession he abolished the distinctive Jewish dress, abrogated the poll-tax, admitted the Jews to military service and their children to the public schools, and in general opened the era of emancipation by the *Toleranzpatent* of 1782. This enlightened policy was not continued by the successors of Joseph II. Under Francis II. (1792-1835) economic and social restrictions were numerous. Agriculture was again barred; indeed the Vienna congress of 1815 practically restored the old discriminations against the Jews. As time went on, a more progressive policy intervened, the special form of Jewish oath was abolished in 1846, and in 1848, as a result of the revolutionary movement in which Jews played an active part, legislation took a more liberal turn. Francis Joseph I. ascended the throne in that year, and though the constitution of 1849 recognized the principle of religious liberty, an era of reaction supervened, especially when "the concordat of 1855 delivered Austria altogether into the hands of the clericals." But the day of medieval intolerance had passed, and in 1867 the new constitution "abolished all disabilities on the ground of religious differences," though anti-Semitic manipulation of the law by administrative authority has led to many instances of intolerance. Many Jews have been members of the Reichsrath, some have risen to the rank of general in the army, and Austrian Jews have contributed their quota to learning, the arts and literature. Löw, Jellinek, Kaufmann, as scholars in the Jewish field; as poets and novelists, Kompert, Franzos, L. A. Frankl; the pianist Moscheles, the dramatist Mosenthal and the actor Sonnenthal, the mathematician Spitzer, and the chess-player Steinitz are some of the most prominent names. The law of 1890 makes it "compulsory for every Jew to be a member of the congregation of the district in which he resides, and so gives to every congregation the right to tax the individual members"

(*op. cit.*). A similar obligation prevails in parts of Germany. A Jew can avoid the communal tax only by formally declaring himself as outside the Jewish community. The Jews of Hungary shared with their brethren in Austria the same alternations of expulsion and recall. By the law "De Judaeis" passed by the Diet in 1791 the Jews were accorded protection, but half a century passed before their tolerated condition was regularized. The "toleration-tax" was abolished in 1846. During the revolutionary outbreak of 1848, the Jews suffered severely in Hungary, but as many as 20,000 Jews are said to have joined the army. Kossuth succeeded in granting them temporary emancipation, but the suppression of the War of Independence led to an era of royal autocracy which, while it advanced Jewish culture by enforcing the establishment of modern schools, retarded the obtaining of civic and political rights. As in Austria, so in Hungary, these rights were granted by the constitution of 1867. But one step remained. The Hungarian Jews did not consider themselves fully emancipated until the Synagogue was "duly recognized as one of the legally acknowledged religions of the country." This recognition was granted by the law of 1895-1896. In the words of Büchler (*Jewish Encyclopedia*, vi. 503): "Since their emancipation the Jews have taken an active part in the political, industrial, scientific and artistic life of Hungary. In all these fields they have achieved prominence. They have also founded great religious institutions. Their progress has not been arrested even by anti-Semitism, which first developed in 1883 at the time of the Tisza-Esler accusation of ritual murder."

52. *Other European Countries*.—According to M. Caimi the present Jewish communities of Greece are divisible into five groups: (1) Arta (Epirus); (2) Chalcis (Euboea); (3) Athens (Attica); (4) Volo, Larissa and Trikala (Thessaly); and (5) Corfu and Zante (Ionian Islands). The Greek constitution admits no religious disabilities, but anti-Semitic riots in Corfu and Zante in 1891 caused much distress and emigration. In Spain there has been of late a more liberal attitude towards the Jews, and there is a small congregation (without a public synagogue) in Madrid. In 1858 the edict of expulsion was repealed. Portugal, on the other hand, having abolished the Inquisition in 1821, has since 1826 allowed Jews freedom of religion, and there are synagogues in Lisbon and Faro. In Holland the Jews were admitted to political liberty in 1796. At present more than half of the Dutch Jews are concentrated in Amsterdam, being largely engaged in the diamond and tobacco trades. Among famous names of recent times foremost stands that of the artist Josef Israels. In 1675 was consecrated in Amsterdam the synagogue which is still the most noted Jewish edifice in Europe. Belgium granted full freedom to the Jews in 1815, and the community has since 1808 been organized on the state consistorial system, which till recently also prevailed in France. It was not till 1874 that full religious equality was granted to the Jews of Switzerland. But there has been considerable interference (ostensibly on humanitarian grounds) with the Jewish method of slaughtering animals for food (*Shehitah*) and the method was prohibited by a referendum in 1893. In the same year a similar enactment was passed in Saxony, and the subject is a favourite one with anti-Semites, who have enlisted on their side some scientific authorities, though the bulk of expert opinion is in favour of *Shehitah* (see Dembo, *Das Schlachten*, 1894). In Sweden the Jews have all the rights which are open to non-Lutherans; they cannot become members of the council of state. In Norway there is a small Jewish settlement (especially in Christiania) who are engaged in industrial pursuits and enjoy complete liberty. Denmark has for long been distinguished for its liberal policy towards the Jews. Since 1814 the latter have been eligible as magistrates, and in 1849 full equality was formally ratified. Many Copenhagen Jews achieved distinction as manufacturers, merchants and bankers, and among famous Jewish men of letters may be specially named Georg Brandes.

The story of the Jews in Russia and Rumania remains a black spot on the European record. In Russia the Jews are more numerous and more harshly treated than in any other part of the world. In the remotest past Jews were settled in much of

the territory now included in Russia, but they are still treated as aliens. They are restricted to the pale of settlement which was first established in 1791. The pale now includes fifteen governments, and under the May laws of 1892 the congestion of the Jewish population, the denial of free movement, and the exclusion from the general rights of citizens were rendered more oppressive than ever before. The right to leave the pale is indeed granted to merchants of the first gild, to those possessed of certain educational diplomas, to veteran soldiers and to certain classes of skilled artisans. But these concessions are unfavourably interpreted and much extortion results. Despite a huge emigration of Jews from Russia, the congestion within the pale is the cause of terrible destitution and misery. Fierce massacres occurred in Nizhny-Novgorod in 1882, and in Kishinev in 1903. Many other pogroms have occurred, and the condition of the Jews has been reduced to one of abject poverty and despair. Much was hoped from the *duma*, but this body has proved bitterly opposed to the Jewish claim for liberty. Yet in spite of these disabilities there are amongst the Russian Jews many enterprising contractors, skilful doctors, and successful lawyers and scientists. In Rumania, despite the Berlin Treaty, the Jews are treated as aliens, and but a small number have been naturalized. They are excluded from most of the professions and are hampered in every direction.

53. *Oriental Countries.*—In the Orient the condition of the Jews has been much improved by the activity of Western organizations, of which something is said in a later paragraph. Modern schools have been set up in many places, and Palestine has been the scene of a notable educational and agricultural revival, while technical schools—such as the agricultural college near Jaffa and the schools of the alliance and the more recent Bezalel in Jerusalem—have been established. Turkey has always on the whole tolerated the Jews, and much is hoped from the new régime. In Morocco the Jews, who until late in the 19th century were often persecuted, are still confined to a *mellah* (separate quarter), but at the coast-towns there are prosperous Jewish communities mostly engaged in commerce. In other parts of the same continent, in Egypt and in South Africa, many Jews have settled, participating in all industrial and financial pursuits. Recently a mission has been sent to the Falashas of Abyssinia, and much interest has been felt in such outlying branches of the Jewish people as the Black Jews of Cochín and the Bene Israel community of Bombay. In Persia Jews are often the victims of popular outbursts as well as of official extortion, but there are fairly prosperous communities at Bushire, Isfahan, Teheran and Kashan (in Shiraz they are in low estate). The recent advent of constitutional government may improve the condition of the Jews.

54. *The United Kingdom.*—The general course of Jewish history in England has been indicated above. The Jews came to England at least as early as the Norman Conquest; they were expelled from Bury St Edmunds in 1190, after the massacres at the coronation of Richard I.; they were required to wear badges in 1218. At the end of the 12th century was established the "exchequer of the Jews," which chiefly dealt with suits concerning money-lending, and arranged a "continual flow of money from the Jews to the royal treasury," and a so-called "parliament of the Jews" was summoned in 1241; in 1275 was enacted the statute *de Judaismo* which, among other things, permitted the Jews to hold land. But this concession was illusory, and as the statute prevented Jews from engaging in finance—the only occupation which had been open to them—it was a prelude to their expulsion in 1290. There were few Jews in England from that date till the Commonwealth, but Jews settled in the American colonies earlier in the 17th century, and rendered considerable services in the advancement of English commerce. The Whitehall conference of 1655 marks a change in the status of the Jews in England itself, for though no definite results emerged it was clearly defined by the judges that there was no legal obstacle to the return of the Jews. Charles II. in 1664 continued Cromwell's tolerant policy. No serious attempt towards the emancipation of the Jews was made till the Naturalization Act of 1753, which

was, however, immediately repealed. Jews no longer attached to the Synagogue, such as the Herschels and Disraelis, attained to fame. In 1830 the first Jewish emancipation bill was brought in by Robert Grant, but it was not till the legislation of 1858–1860 that Jews obtained full parliamentary rights. In other directions progress was more rapid. The office of sheriff was thrown open to Jews in 1835 (Moses Montefiore, sheriff of London was knighted in 1837); Sir I. L. Goldsmid was made a baronet in 1841, Baron Lionel de Rothschild was elected to Parliament in 1847 (though he was unable to take his seat), Alderman (Sir David) Salomons became lord mayor of London in 1855, and Francis Goldsmid was made a Q.C. in 1858. In 1873 Sir George Jessel was made a judge, and Lord Rothschild took his seat in the House of Lords as the first Jewish peer in 1886. A fair proportion of Jews have been elected to the House of Commons, and Mr Herbert Samuel rose to cabinet rank in 1909. Sir Matthew Nathan has been governor of Hong-Kong and Natal, and among Jewish statesmen in the colonies Sir Julius Vogel and V. L. Solomon have been prime ministers (HYAMSON: *A History of the Jews in England*, p. 342). It is unnecessary to remark that in the British colonies the Jews everywhere enjoy full citizenship. In fact, the colonies emancipated the Jews earlier than did the mother country. Jews were settled in Canada from the time of Wolfe, and a congregation was founded at Montreal in 1768, and since 1832 Jews have been entitled to sit in the Canadian parliament. There are some thriving Jewish agricultural colonies in the same dominion. In Australia the Jews from the first were welcomed on perfectly equal terms. The oldest congregation is that of Sydney (1817); the Melbourne community dates from 1844. Reverting to incidents in England itself, in 1870 the abolition of university tests removed all restrictions on Jews at Oxford and Cambridge, and both universities have since elected Jews to professorships and other posts of honour. The communal organization of English Jewry is somewhat inchoate. In 1841 an independent reform congregation was founded, and the Spanish and Portuguese Jews have always maintained their separate existence with a *Haham* as the ecclesiastical head. In 1870 was founded the United Synagogue, which is a metropolitan organization, and the same remark applies to the more recent Federation of Synagogues. The chief rabbi, who is the ecclesiastical head of the United Synagogue, has also a certain amount of authority over the provincial and colonial Jewries, but this is nominal rather than real. The provincial Jewries, however, participate in the election of the chief rabbi. At the end of 1909 was held the first conference of Jewish ministers in London, and from this is expected some more systematic organization of scattered communities. Anglo-Jewry is rich, however, in charitable, educational and literary institutions; chief among these respectively may be named the Jewish board of guardians (1859), the Jews' college (1855), and the Jewish historical society (1893). Besides the distinctions already noted, English Jews have risen to note in theology (C. G. Montefiore), in literature (Israel Zangwill and Alfred Sutro), in art (S. Hart, R.A., and S. J. Solomon, R.A.), in music (Julius Benedict and Frederick Hymen Cowen). More than 1000 English and colonial Jews participated as active combatants in the South African War. The immigration of Jews from Russia was mainly responsible for the ineffective yet oppressive Aliens Act of 1905. (Full accounts of Anglo-Jewish institutions are given in the *Jewish Year-Book* published annually since 1895.)

55. *The American Continent.*—Closely parallel with the progress of the Jews in England has been their steady advancement in America. Jews made their way to America early in the 16th century, settling in Brazil prior to the Dutch occupation. Under Dutch rule they enjoyed full civil rights. In Mexico and Peru they fell under the ban of the Inquisition. In Surinam the Jews were treated as British subjects; in Barbadoes, Jamaica and New York they are found as early as the first half of the 17th century. During the War of Independence the Jews of America took a prominent part on both sides, for under the British rule many had risen to wealth and high social position. After the Declaration of Independence, Jews are found all over America, where they

have long enjoyed complete emancipation, and have enormously increased in numbers, owing particularly to immigration from Russia. The American Jews bore their share in the Civil War (7038 Jews were in the two armies), and have always identified themselves closely with national movements such as the emancipation of Cuba. They have attained to high rank in all branches of the public service, and have shown most splendid instances of far-sighted and generous philanthropy. Within the Synagogue the reform movement began in 1825, and soon won many successes, the central conference of American rabbis and Union College (1875) at Cincinnati being the instruments of this progress. At the present time orthodox Judaism is also again acquiring its due position and the Jewish theological seminary of America was founded for this purpose. In 1908 an organization, inclusive of various religious sections, was founded under the description "the Jewish community of New York." There have been four Jewish members of the United States senate, and about 30 of the national house of representatives. Besides filling many diplomatic offices, a Jew (O. S. Straus) has been a member of the cabinet. Many Jews have filled professorial chairs at the universities, others have been judges, and in art, literature (there is a notable Jewish publication society), industry and commerce have rendered considerable services to national culture and prosperity. American universities have owed much to Jewish generosity, a foremost benefactor of these (as of many other American institutions) being Jacob Schiff. Such institutions as the Gratz and Dropsie colleges are further indications of the splendid activity of American Jews in the educational field. The Jews of America have also taken a foremost place in the succour of their oppressed brethren in Russia and other parts of the world. (Full accounts of American Jewish institutions are given in the *American Jewish Year-Book*, published annually since 1899.)

56. *Anti-Semitism*.—It is saddening to be compelled to close this record with the statement that the progress of the European Jews received a serious check by the rise of modern anti-Semitism in the last quarter of the 19th century. While in Russia this took the form of actual massacre, in Germany and Austria it assumed the shape of social and civic ostracism. In Germany Jews are still rarely admitted to the rank of officers in the army, university posts are very difficult of access, Judaism and its doctrines are denounced in medieval language, and a tone of hostility prevails in many public utterances. In Austria, as in Germany, anti-Semitism is a factor in the parliamentary elections. The legend of ritual murder (*q.v.*) has been revived, and every obstacle is placed in the way of the free intercourse of Jews with their Christian fellow-citizens. In France Edouard Adolphe Drumont led the way to a similar animosity, and the popular fury was fanned by the Dreyfus case. It is generally felt, however, that this recrudescence of anti-Semitism is a passing phase in the history of culture (see ANTI-SEMITISM).

57. *The Zionist Movement*.—The Zionist movement (see ZIONISM), founded in 1895 by Theodor Herzl (*q.v.*), was in a sense the outcome of anti-Semitism. Its object was the foundation of a Jewish state in Palestine, but though it aroused much interest it failed to attract the majority of the emancipated Jews, and the movement has of late been transforming itself into a mere effort at colonization. Most Jews not only confidently believe that their own future lies in progressive development within the various nationalities of the world, but they also hope that a similar consummation is in store for the as yet unemancipated branches of Israel. Hence the Jews are in no sense internationally organized. The influence of the happier communities has been exercised on behalf of those in a worse position by individuals such as Sir Moses Montefiore (*q.v.*) rather than by societies or leagues. From time to time incidents arise which appeal to the Jewish sympathies everywhere and joint action ensues. Such incidents were the Damascus charge of ritual murder (1840), the forcible baptism of the Italian child Mortara (1858), and the Russian pogroms at various dates. But all attempts at an international union of Jews, even in view of such emergencies as these, have failed. Each country has its own local organiza-

tion for dealing with Jewish questions. In France the Alliance Israélite (founded in 1860), in England the Anglo-Jewish Association (founded in 1871), in Germany the Hilfsverein der deutschen Juden, and in Austria the Israelitische Allianz zu Wien (founded 1872), in America the American Jewish Committee (founded 1906), and similar organizations in other countries deal only incidentally with political affairs. They are concerned mainly with the education of Jews in the Orient, and the establishment of colonies and technical institutions. Baron Hirsch (*q.v.*) founded the Jewish colonial association, which has undertaken vast colonizing and educational enterprises, especially in Argentina, and more recently the Jewish territorial organization has been started to found a home for the oppressed Jews of Russia. All these institutions are performing a great regenerative work, and the tribulations and disappointments of the last decades of the 19th century were not all loss. The gain consisted in the rousing of the Jewish consciousness to more virile efforts towards a double end, to succour the persecuted and ennoble the ideals of the emancipated.

58. *Statistics*.—Owing to the absence of a religious census in several important countries, the Jewish population of the world can only be given by inferential estimate. The following approximate figures are taken from the *American Jewish Year-Book* for 1909-1910 and are based on similar estimates in the English *Jewish Year-Book*, the *Jewish Encyclopedia*, Nossig's *Jüdische Statistik* and the *Reports of the Alliance Israélite Universelle*. According to these estimates the total Jewish population of the world in the year named was approximately 11,500,000. Of this total there were in the British Empire about 380,000 Jews (British Isles 240,000, London accounts for 150,000 of these; Canada and British Columbia 60,000; India 18,000; South Africa 40,000). The largest Jewish populations were those of Russia (5,215,000), Austria-Hungary (2,084,000), United States of America (1,777,000), Germany (607,000, of whom 400,000 were in Prussia), Turkey (463,000, of whom some 78,000 resided in Palestine), Rumania (250,000), Morocco (109,000) and Holland (106,000). Others of the more important totals are: France 95,000 (besides Algeria 63,000 and Tunis 62,000); Italy 52,000; Persia 49,000; Egypt 39,000; Bulgaria 36,000; Argentine Republic 30,000; Tripoli 19,000; Turkestan and Afghanistan 14,000; Switzerland and Belgium each 12,000; Mexico 9000; Greece 8000; Servia 6000; Sweden and Cuba each 4000; Denmark 3500; Brazil and Abyssinia (Falashas) each 3000; Spain and Portugal 2500; China and Japan 2000. There are also Jews in Curaçao, Surinam, Luxemburg, Norway, Peru, Crete and Venezuela; but in none of these does the Jewish population much exceed 1000.

JEWSBURY, GERALDINE ENDOR (1812-1880), English writer, daughter of Thomas Jewsbury, a Manchester merchant, was born in 1812 at Measham, Derbyshire. Her first novel, *Zoe: the History of Two Lives*, was published in 1845, and was followed by *The Half Sisters* (1848), *Marian Withers* (1851), *Constance Herbert* (1855), *The Sorrows of Gentility* (1856), *Right or Wrong* (1859). In 1850 she was invited by Charles Dickens to write for *Household Words*; for many years she was a frequent contributor to the *Athenaeum* and other journals and magazines. It is, however, mainly on account of her friendship with Thomas Carlyle and his wife that her name is remembered. Carlyle described her, after their first meeting in 1841, as "one of the most interesting young women I have seen for years; clear delicate sense and courage looking out of her small sylph-like figure." From this time till Mrs Carlyle's death in 1866, Geraldine Jewsbury was the most intimate of her friends. The selections from Geraldine Jewsbury's letters to Jane Welsh Carlyle (1892, ed. Mrs Alexander Ireland) prove how confidential were the relations

between the two women for a quarter of a century. In 1854 Miss Jewsbury removed from Manchester to London to be near her friend. To her Carlyle turned for sympathy when his wife died; and at his request she wrote down some "biographical anecdotes" of Mrs Carlyle's childhood and early married life. Carlyle's comment was that "few or none of these narratives are correct in details, but there is a certain mythical truth in all or most of them;" and he added, "the Geraldine accounts of her (Mrs Carlyle's) childhood are substantially correct." He accepted them as the groundwork for his own essay on "Jane Welsh Carlyle," with which they were therefore incorporated by Froude when editing Carlyle's *Reminiscences*. Miss Jewsbury was consulted by Froude when he was preparing Carlyle's biography, and her recollection of her friend's confidences confirmed the suspicion that Carlyle had on one occasion used physical violence towards his wife. Miss Jewsbury further informed Froude that the secret of the domestic troubles of the Carlyles lay in the fact that Carlyle had been "one of those persons who ought never to have married," and that Mrs Carlyle had at one time contemplated having her marriage legally annulled (see *My Relations with Carlyle*, by James Anthony Froude, 1903). The endeavour has been made to discredit Miss Jewsbury in relation to this matter, but there seems to be no sufficient ground for doubting that she accurately repeated what she had learnt from Mrs Carlyle's own lips. Miss Jewsbury died in London on the 23rd of September 1880.

JEW'S EARS, the popular name of a fungus, known botanically as *Hirneola auricula-judae*, so called from its shape, which somewhat resembles a human ear. It is very thin, flexible, flesh-coloured to dark brown, and one to three inches broad. It is common on branches of elder, which it often kills, and is also found on elm, willow, oak and other trees. It was formerly prescribed as a remedy for dropsy.

JEW'S HARP, or **JEW'S TRUMP** (Fr. *guimbarde*, O. Fr. *trompe-gronde*; Ger. *Mundharmonica*, *Maultrommel*, *Brummeisen*; Ital. *scaccia-pensieri* or *spassa-pensiero*), a small musical instrument of percussion, known for centuries all over Europe. "Jew's trump" is the older name, and "trump" is still used in parts of Great Britain. Attempts have been made to derive "Jew's" from "jaws" or Fr. *jeu*, but, though there is no apparent reason for associating the instrument with the Jews, it is certain that "Jew's" is the original form (see the *New English Dictionary* and C. B. Mount in *Notes and Queries* (Oct. 23, 1897, p. 322). The instrument consists of a slender tongue of steel riveted at one end to the base of a pear-shaped steel loop; the other end of the tongue, left free and passing out between the two branches of the frame, terminates in a sharp bend at right angles, to enable the player to depress it by an elastic blow and thus set it vibrating while firmly pressing the branches of the frame against his teeth. The vibrations of the steel tongue produce a compound sound composed of a fundamental and its harmonics. By using the cavity of the mouth as a resonator, each harmonic in succession can be isolated and reinforced, giving the instrument the compass shown. The lower harmonics of the series cannot be

obtained, owing to the limited capacity of the resonating cavity. The black notes on the staff show the scale which may be produced by using two harps, one tuned a fourth above the other. The player on the Jew's harp, in order to isolate the harmonics, frames his mouth as though intending to pronounce the various vowels. At the beginning of the 19th century, when much energy and ingenuity were being expended in all countries upon the invention of new musical instruments, the *Maultrommel*, re-christened *Mundharmonica* (the most rational of all its names), attracted attention in Germany. Heinrich Scheibler devised an ingenious holder with a handle, to contain

five Jew's harps, all tuned to different notes; by holding one in each hand, a large compass, with duplicate notes, became available; he called this complex Jew's harp *Aura*¹ and with it played themes with variations, marches, Scotch reels, &c. Other virtuosi, such as Eulenstein, a native of Württemberg, achieved the same result by placing the variously tuned Jew's harps upon the table in front of him, taking them up and setting them down as required. Eulenstein created a sensation in London in 1827 by playing on no fewer than sixteen Jew's harps. In 1828 Sir Charles Wheatstone published an essay on the technique of the instrument in the *Quarterly Journal of Science*. (K. S.)

JEZEBEL (Heb. *i-sebel*, perhaps an artificial form to suggest "un-exalted," a divine name or its equivalent would naturally be expected instead of the first syllable), wife of Ahab, king of Israel (1 Kings xvi. 31), and mother of Athaliah, in the Bible. Her father Eth-baal (Ithobal, Jos., *contra* Ap. i. 18) was king of Tyre and priest of the goddess Astarte. He had usurped the throne and was the first important Phoenician king after Hiram (see PHOENICIA). Jezebel, a true daughter of a priest of Astarte, showed herself hostile to the worship of Yahweh, and to his prophets, whom she relentlessly pursued (1 Kings xviii. 4-13; see ELIJAH). She is represented as a woman of virile character, and became notorious for the part she took in the matter of Naboth's vineyard. When the Jezreelite² sheikh refused to sell the family inheritance to the king, Jezebel treacherously caused him to be arrested on a charge of treason, and with the help of false witnesses he was found guilty and condemned to death. For this the prophet Elijah pronounced a solemn curse upon Ahab and Jezebel, which was fulfilled when Jehu, who was anointed king at Elisha's instigation, killed the son Jehoram, massacred all the family, and had Jezebel destroyed (1 Kings xxi.; 2 Kings ix. 11-28). What is told of her comes from sources written under the influence of strong religious bias; among the exaggerations must be reckoned 1 Kings xviii. 13, which is inconsistent with xix. 18 and xxii. 6. A literal interpretation of the reference to Jezebel's idolatry (2 Kings ix. 22) has made her name a by-word for a false prophetess in Rev. ii. 20. Her name is often used in modern English as a synonym for an abandoned woman or one who paints her face. (S. A. C.)

JEZREEL (Heb. "God sows"), the capital of the Israelite monarchy under Ahab, and the scene of stirring Biblical events (1 Sam. xxix. 1; 1 Kings xxi.; 2 Kings ix. 21-37). The name was also applied to the great plain (Esdraelon) dominated by the city ("the valley of Jezreel," Josh. xvii. 16, &c.). The site has never been lost, and the present village *Zercin* retains the name radically unchanged. In Greek (e.g. Judith) the name appears under the form *Ἰορδανία*; it is *Stradela* in the *Bordeaux Pilgrim*, and to the Crusaders the place was known as *Parvum Gerinum*. The modern stone village stands on a bare rocky knoll, 500 ft. above the broad northern valley, at the north extremity of a long ledge, terminating in steep cliffs, forming part of the chain of Mt Gilboa. The buildings are modern, but some scanty remains of rock-hewn wine presses and a few scattered sarcophagi mark the antiquity of the site. The view over the plains is fine and extensive. It is vain now to look for Ahab's palace or Naboth's vineyard. The fountain mentioned in 1 Sam. xxix. 1 is perhaps the fine spring *Ain el Meiyiyita*, north of the village, a shallow pool of good water full of small fish, rising between black basalt boulders: or more probably the copious *Ain Jalud*.

A second city named Jezreel lay in the hill country of Judah, somewhere near Hebron (Josh. xv. 56). This was the native place of David's wife Abinoam (1 Sam. xxv. 43).

See, for an excellent description of the scenery and history of the Israelite Jezreel, G. A. Smith, *Hist. Geog.* xix.

JHABUA, a native state of Central India, in the Bhopawar agency. Area, with the dependency of Rutanmal, 1336 sq. m.

¹ See *Allg. musik. Ztg.* (Leipzig, 1816), p. 506, and *Beilage* 5, where the construction of the instruments is described and illustrated and the system of notation shown in various pieces of music.

² According to another tradition Naboth lived at Samaria (xxi. 1 [LXX], 18 seq.; cf. xxii. 38). A similar confusion regarding the king's home appears in 2 Kings x. 11 compared with vv. 1, 17.

JHALAWAR—JHANSI

Pop. (1901), 80,889. More than half the inhabitants belong to the aboriginal Bhils. Estimated revenue, £7000; tribute, £1000. Manganese and opium are exported. The chief, whose title is raja, is a Rajput of the Rathor clan, descended from a branch of the Jodhpur family. Raja Udai Singh was invested in 1898 with the powers of administration.

The town of JHABUA (pop. 3,354) stands on the bank of a lake, and is surrounded by a mud wall. A dispensary and a guest-house were constructed to commemorate Queen Victoria's Diamond Jubilee in 1897.

JHALAWAR, a native state of India, in the Rajputana agency, pop. (1901), 90,175; estimated revenue, £26,000; tribute, £2000. Area, 810 sq. m. The ruling family of Jhalawar belongs to the Jhala clan of Rajputs, and their ancestors were petty chiefs of Halwad in the district of Jhalawar, in Kathiawar. About 1709 one of the younger sons of the head of the clan left his country with his son to try his fortunes at Delhi. At Kotah he left his son Madhu Singh, who soon became a favourite with the maharaja, and received from him an important post, which became hereditary. On the death of one of the Kotah rajas (1771), the country was left to the charge of Zalim Singh, a descendant of Madhu Singh. From that time Zalim Singh was the real ruler of Kotah. He brought it to a wonderful state of prosperity, and under his administration, which lasted over forty-five years, the Kotah territory was respected by all parties. In 1838 it was resolved, with the consent of the chief of Kotah, to dismember the state, and to create the new principality of Jhalawar as a separate provision for the descendants of Zalim Singh. The districts then severed from Kotah were considered to represent one-third (£120,000) of the income of Kotah; by treaty they acknowledged the supremacy of the British, and agreed to pay an annual tribute of £8000. Madan Singh received the title of maharaja rana, and was placed on the same footing as the other chiefs in Rajputana. He died in 1845. An adopted son of his successor took the name of Zalim Singh in 1875 on becoming chief of Jhalawar. He was a minor and was not invested with governing powers till 1884. Owing to his maladministration, his relations with the British government became strained, and he was finally deposed in 1896, "on account of persistent misgovernment and proved unfitness for the powers of a ruling chief." He went to live at Benares, on a pension of £2000; and the administration was placed in the hands of the British resident. After much consideration, the government resolved in 1897 to break up the state, restoring the greater part to Kotah, but forming the two districts of Shahabad and the Chaumahla into a new state, which came into existence in 1899, and of which Kunwar Bhawani Singh, a descendant of the original Zalim Singh, was appointed chief.

The chief town is PATAN, or JHALRAPATAN (pop. 7955), founded close to an old site by Zalim Singh in 1796, by the side of an artificial lake. It is the centre of trade, the chief exports of the state being opium, oil-seeds and cotton. The palace is at the cantonment or chhaoni, 4 m. north. The ancient site near the town was occupied by the city of Chandrawati, said to have been destroyed in the time of Aurangzeb. The finest feature of its remains is the temple of Sitalleswar Mahadeva (c. 600).

JHANG, a town and district of British India, in the Multan division of the Punjab. The town, which forms one municipality with the newer and now more important quarter of Maghiana, is about 3 m. from the right bank of the river Chenab. Founded by Mal Khan, a Sial chieftain, in 1462, it long formed the capital of a Mahomedan state. Pop. (1901), 24,382. Maghiana has manufactures of leather, soap and metal ware.

The DISTRICT OF JHANG extends along both sides of the Chenab, including its confluences with the Jhelum and the Ravi. Area, 3726 sq. m. Pop. (1901), 378,695, showing an apparent decrease of 13 % in the decade, due to the creation of the district of Lyallpur in 1904. But actually the population increased by 132 % on the old area, owing to the opening of the Chenab canal and the colonization of the tract irrigated by it. Within Jhang many thousands of acres of government waste

have been allotted to colonists, who are reported to be flourishing. A branch of the North-Western railway enters the district in this quarter, extending throughout its entire length. The Southern Jech Doab railway serves the south. The principal industries are the ginning, pressing and weaving of cotton.

Jhang contains the ruins of Shorkot, identified with one of the towns taken by Alexander. In modern times the history of Jhang centres in the famous clan of Sials, who exercised an extensive sway over a large tract between Shahpur and Multan, with little dependence on the imperial court at Delhi, until they finally fell before the all-absorbing power of Ranjit Singh. The Sials of Jhang are Mahomedans of Rajput descent, whose ancestor, Rai Shankar of Daranagar, emigrated early in the 13th century from the Gangetic Doab. In the beginning of the 19th century Maharaja Ranjit Singh invaded Jhang, and captured the Sial chieftain's territory. The latter recovered a small portion afterwards, which he was allowed to retain on payment of a yearly tribute. In 1847, after the establishment of the British agency at Lahore, the district came under the charge of the British government; and in 1848 Ismail Khan, the Sial leader, rendered important services against the rebel chiefs, for which he received a pension. During the Mutiny of 1857 the Sial leader again proved his loyalty by serving in person on the British side. His pension was afterwards increased, and he obtained the title of khan bahadur, with a small *jagir* for life.

JHANSI, a city and district of British India, in the Allahabad division of the United Provinces. The city is the centre of the Indian Midland railway system, whence four lines diverge to Agra, Cawnpore, Allahabad and Bhopal. Pop. (1901), 55,724. A stone fort crowns a neighbouring rock. Formerly the capital of a Mahratta principality, which lapsed to the British in 1853, it was during the Mutiny the scene of disaffection and massacre. It was then made over to Gwalior, but has been taken back in exchange for other territory. Even when the city was within Gwalior, the civil headquarters and the cantonment were at Jhansi Naoabad, under its walls. Jhansi is the principal centre for the agricultural trade of the district, but its manufactures are small.

The DISTRICT OF JHANSI was enlarged in 1891 by the incorporation of the former district of Lalitpur, which extends further into the hill country, almost entirely surrounded by native states. Combined area, 3628 sq. m. Pop. (1901), 616,759 showing a decrease of 10 % in the decade, due to the results of famine. The main line and branches of the Indian Midland railway serve the district, which forms a portion of the hill country of Bundelkhand, sloping down from the outliers of the Vindhyan range on the south to the tributaries of the Jumna on the north. The extreme south is composed of parallel rows of long and narrow-ridged hills. Through the intervening valleys the rivers flow down impetuously over ledges of granite or quartz. North of the hilly region, the rocky granite chains gradually lose themselves in clusters of smaller hills. The northern portion consists of the level plain of Bundelkhand, distinguished for its deep black soil, known as *mar*, and admirably adapted for the cultivation of cotton. The district is intersected or bounded by three principal rivers—the Pahuji, Betwa and Dhasan. The district is much cut up, and portions of it are insulated by the surrounding native states. The principal crops are millets, cotton, oil-seeds, pulses, wheat, gram and barley. The destructive *hans* grass has proved as great a pest here as elsewhere in Bundelkhand. Jhansi is especially exposed to blights, droughts, floods, hailstorms, epidemics, and their natural consequence—famine.

Nothing is known with certainty as to the history of this district before the period of Chandel rule, about the 11th century of our era. To this epoch must be referred the artificial reservoirs and architectural remains of the hilly region. The Chandels were succeeded by their servants the Khangars, who built the fort of Karar, lying just outside the British border. About the 14th century the Bundelas poured down upon the plains, and gradually spread themselves over the whole region which now bears their name. The Mahomedan governors were constantly making irruptions into the Bundela country; and in

1732 Chhatar Sal, the Bundela chieftain, called in the aid of the Mahrattas. They came to his assistance with their accustomed promptitude, and were rewarded on the raja's death in 1734, by the bequest of one-third of his dominions. Their general founded the city of Jhansi, and peopled it with inhabitants from Orchha state. In 1806 British protection was promised to the Mahratta chief, and in 1817 the peshwa ceded to the East India Company all his rights over Bundelkhand. In 1853 the raja died childless, and his territories lapsed to the British. The Jhansi state and the Jalaun and Chanderi districts were then formed into a superintendency. The widow of the raja considered herself aggrieved because she was not allowed to adopt an heir, and because the slaughter of cattle was permitted in the Jhansi territory. Reports were spread which excited the religious prejudices of the Hindus. The events of 1857 accordingly found Jhansi ripe for mutiny. In June a few men of the 12th native infantry seized the fort containing the treasure and magazine, and massacred the European officers of the garrison. Everywhere the usual anarchic quarrels rose among the rebels, and the country was plundered mercilessly. The rani put herself at the head of the rebels, and died bravely in battle. It was not till November 1858, after a series of sharp contests with various guerrilla leaders, that the work of reorganization was fairly set on foot.

JHELMUM, or **JEHLAM** (*Hydaspes* of the Greeks), a river of northern India. It is the most westerly of the "five rivers" of the Punjab. It rises in the north-east of the Kashmir state, flows through the city of Srinagar and the Wular lake, issues through the Pir Panjal range by the narrow pass of Baramula, and enters British territory in the Jhelum district. Thence it flows through the plains of the Punjab, forming the boundary between the Jech Doab and the Sind Sagar Doab, and finally joins the Chenab at Timmu after a course of 450 miles. The Jhelum colony, in the Shahpur district of the Punjab, formed on the example of the Chenab colony in 1901, is designed to contain a total irrigable area of 1,130,000 acres. The Jhelum canal is a smaller work than the Chenab canal, but its silt is noted for its fertilizing qualities. Both projects have brought great prosperity to the cultivators.

JHELMUM, or **JEHLAM**, a town and district of British India, in the Rawalpindi division of the Punjab. The town is situated on the right bank of the river Jhelum, here crossed by a bridge of the North-Western railway, 103 m. N. of Lahore. Pop. (1901). 14,951. It is a modern town with river and railway trade (principally in timber from Kashmir), boat-building and cantonments for a cavalry and four infantry regiments.

The DISTRICT OF JHELMUM stretches from the river Jhelum almost to the Indus. Area, 2813 sq. m. Pop. (1901), 501,424, showing a decrease of 2 % in the decade. Salt is quarried at the Mayo mine in the Salt Range. There are two coal-mines, the only ones worked in the province, from which the North-Western railway obtains part of its supply of coal. The chief centre of the salt trade is Pind Dadan Khan (pop. 13,770). The district is crossed by the main line of the North-Western railway, and also traversed along the south by a branch line. The river Jhelum is navigable throughout the district, which forms the south-eastern portion of a rugged Himalayan spur, extending between the Indus and Jhelum to the borders of the Sind Sagar Doab. Its scenery is very picturesque, although not of so wild a character as the mountain region of Rawalpindi to the north, and is lighted up in places by smiling patches of cultivated valley. The backbone of the district is formed by the Salt Range, a treble line of parallel hills running in three long forks from east to west throughout its whole breadth. The range rises in bold precipices, broken by gorges, clothed with brushwood and traversed by streams which are at first pure, but soon become impregnated with the saline matter over which they pass. Between the line of hills lies a picturesque table-land, in which the beautiful little lake of Kallar Kahar nestles amongst the minor ridges. North of the Salt Range, the country extends upwards in an elevated plateau, diversified by countless ravines and fissures, until it loses itself in tangled masses of Rawalpindi

mountains. In this rugged tract cultivation is rare and difficult, the soil being choked with saline matter. At the foot of the Salt Range, however, a small strip of level soil lies along the banks of the Jhelum, and is thickly dotted with prosperous villages. The drainage of the district is determined by a low central watershed running north and south at right angles to the Salt Range. The waters of the western portion find their way into the Sohan, and finally into the Indus; those of the opposite slope collect themselves into small torrents, and empty themselves into the Jhelum.

The history of the district dates back to the semi-mythical period of the *Mahābhārata*. Hindu tradition represents the Salt Range as the refuge of the five Pandava brethren during the period of their exile, and every salient point in its scenery is connected with some legend of the national heroes. Modern research has fixed the site of the conflict between Alexander and Porus as within Jhelum district, although the exact point at which Alexander effected the passage of the Jhelum (or Hydaspes) is disputed. After this event, we have little information with regard to the condition of the district until the Mahomedan conquest brought back literature and history to Upper India. The Janjuahs and Jats, who now hold the Salt Range and its northern plateau respectively, appear to have been the earliest inhabitants. The Ghakkars seem to represent an early wave of conquest from the east, and they still inhabit the whole eastern slope of the district; while the Awans, who now cluster in the western plain, are apparently later invaders from the opposite quarter. The Ghakkars were the dominant race at the period of the first Mahomedan incursions, and long continued to retain their independence. During the flourishing period of the Mogul dynasty, the Ghakkar chieftains were prosperous and loyal vassals of the house of Baber; but after the collapse of the Delhi Empire Jhelum fell, like its neighbours, under the sway of the Sikhs. In 1765 Gujar Singh defeated the last independent Ghakkar prince, and reduced the wild mountaineers to subjection. His son succeeded to his dominions, until 1810, when he fell before the irresistible power of Ranjit Singh. In 1849 the district passed, with the rest of the Sikh territories, into the hands of the British.

JHERING, **RUDOLF VON** (1818–1892), German jurist, was born on the 22nd of August 1818 at Aurich in East Friesland, where his father practised as a lawyer. Young Jhering entered the university of Heidelberg in 1836 and, after the fashion of German students, visited successively Göttingen and Berlin. G. F. Puchta, the author of *Geschichte des Rechts bei dem römischen Volke*, alone of all his teachers appears to have gained his admiration and influenced the bent of his mind. After graduating *doctor juris*, Jhering established himself in 1844 at Berlin as *privatdozent* for Roman law, and delivered public lectures on the *Geist des römischen Rechts*, the theme which may be said to have constituted his life's work. In 1845 he became an ordinary professor at Basel, in 1846 at Rostock, in 1849 at Kiel, and in 1851 at Giessen. Upon all these seats of learning he left his mark; beyond any other of his contemporaries he animated the dry bones of Roman law. The German juristic world was still under the dominating influence of the Savigny cult, and the older school looked askance at the daring of the young professor, who essayed to adapt the old to new exigencies and to build up a system of natural jurisprudence. This is the key-note of his famous work, *Geist des römischen Rechts auf den verschiedenen Stufen seiner Entwicklung* (1852–1865), which for originality of conception and lucidity of scientific reasoning placed its author in the forefront of modern Roman jurists. It is no exaggeration to say that in the second half of the 19th century the reputation of Jhering was as high as that of Savigny in the first. Their methods were almost diametrically opposed. Savigny and his school represented the conservative, historical tendency. In Jhering the philosophical conception of jurisprudence, as a science to be utilized for the further advancement of the moral and social interests of mankind, was predominant. In 1868 Jhering accepted the chair of Roman Law at Vienna, where his lecture-room was crowded, not only with regular students but

with men of all professions and even of the highest ranks in the official world. He became one of the lions of society, the Austrian emperor conferring upon him in 1872 a title of hereditary nobility. But to a mind constituted like his, the social functions of the Austrian metropolis became wearisome, and he gladly exchanged its brilliant circles for the repose of Göttingen, where he became professor in 1872. In this year he had read at Vienna before an admiring audience a lecture, published under the title of *Der Kampf um's Recht* (1872; Eng. trans., *Battle for Right*, 1884). Its success was extraordinary. Within two years it attained twelve editions, and it has been translated into twenty-six languages. This was followed a few years later by *Der Zweck im Recht* (2 vols., 1877-1883). In these two works is clearly seen Jhering's individuality. The *Kampf um's Recht* shows the firmness of his character, the strength of his sense of justice, and his juristic method and logic: "to assert his rights is the duty that every responsible person owes to himself." In the *Zweck im Recht* is perceived the bent of the author's intellect. But perhaps the happiest combination of all his distinctive characteristics is to be found in his *Jurisprudenz des täglichen Lebens* (1870; Eng. trans., 1904). A great feature of his lectures was his so-called *Praktika*, problems in Roman law, and a collection of these with hints for solution was published as early as 1847 under the title *Civilrechtsfälle ohne Entscheidungen*. In Göttingen he continued to work until his death on the 17th of September 1892. A short time previously he had been the centre of a devoted crowd of friends and former pupils, assembled at Wilhelmshöhe near Cassel to celebrate the jubilee of his doctorate. Almost all countries were worthily represented, and this pilgrimage affords an excellent illustration of the extraordinary fascination and enduring influence that Jhering commanded. In appearance he was of middle stature, his face clean-shaven and of classical mould, lit up with vivacity and beaming with good nature. He was perhaps seen at his best when dispensing hospitality in his own house. With him died the best beloved and the most talented of Roman-law professors of modern times. It was said of him by Professor Adolf Merkel in a memorial address, *R. v. Jhering* (1893), that he belonged to the happy class of persons to whom Goethe's lines are applicable: "Was ich in der Jugend gewünscht, das habe ich im Alter die Fülle," and this may justly be said of him, though he did not live to complete his *Geist des römischen Rechts* and his *Rechtsgeschichte*. For this work the span of a single life would have been insufficient, but what he has left to the world is a monument of vigorous intellectual power and stamps Jhering as an original thinker and unrivalled exponent (in his peculiar interpretation) of the spirit of Roman law.

Among others of his works, all of them characteristic of the author and sparkling with wit, may be mentioned the following: *Beiträge zur Lehre von Besitz*, first published in the *Jahrbücher für die Dogmatik des heutigen römischen und deutschen Privat-rechts*, and then separately; *Der Besitzwille*, and an article entitled "Besitz" in the *Handwörterbuch der Staatswissenschaften* (1891), which aroused at the time much controversy, particularly on account of the opposition manifested to Savigny's conception of the subject. See also *Scherz und Ernst in der Jurisprudenz* (1885); *Das Schuldmoment im römischen Privat-recht* (1867); *Das Trinkgeld* (1882); and among the papers he left behind him his *Vorgeschichte der Indoeuropäer*, a fragment, has been published by v. Ehrenberg (1894). See for an account of his life also M. de Jonge, *Rudolf v. Jhering* (1888); and A. Merkel, *Rudolf von Jhering* (1893). (P. A. A.)

JIBITOS, a tribe of South American Indians, first met with by the Franciscans in 1676 in the forest near the Huallaga river, in the Peruvian province of Loreto. After their conversion they settled in villages on the western bank of the river.

JIBUTI (DJIBOUTI), the chief port and capital of French Somaliland, in 11° 35' N., 43° 10' E. Jibuti is situated at the entrance to and on the southern shore of the Gulf of Tadjura about 150 m. S.W. of Aden. The town is built on a horseshoe-shaped peninsula partly consisting of mud flats, which are spanned by causeways. The chief buildings are the governor's palace, customs-house, post office, and the terminal station of the railway to Abyssinia. The houses in the European

quarter are built of stone, are flat-roofed and provided with verandas. There is a good water supply, drawn from a reservoir about 2½ m. distant. The harbour is land-locked and capacious. Ocean steamers are able to enter it at all states of wind and tide. Adjoining the mainland is the native town, consisting mostly of roughly made wooden houses with well thatched roofs. In it is held a large market, chiefly for the disposal of livestock, camels, cattle, &c. The port is a regular calling-place and also a coaling station for the steamers of the Messageries Maritimes, and there is a local service to Aden. Trade is confined to coaling passing ships and to importing goods for and exporting goods from southern Abyssinia via Harrar, there being no local industries. (For statistics see SOMALILAND, FRENCH.) The inhabitants are of many races—Somali, Danakil, Gallas, Armenians, Jews, Arabs, Indians, besides Greeks, Italians, French and other Europeans. The population, which in 1900 when the railway was building was about 15,000, had fallen in 1907 to some 5000 or 6000, including 300 Europeans.

Jibuti was founded by the French in 1888 in consequence of its superiority to Obok both in respect to harbour accommodation and in nearness to Harrar. It has been the seat of the governor of the colony since May 1896. Order is maintained by a purely native police force. The port is not fortified.

JICARILLA, a tribe of North American Indians of Athapaskan stock. Their former range was in New Mexico, about the headwaters of the Rio Grande and the Pecos, and they are now settled in a reservation on the northern border of New Mexico. Originally a scourge of the district, they are now subdued, but remain uncivilized. They number some 800 and are steadily decreasing. The name is said to be from the Spanish *jacara*, a basket tray, in reference to their excellent basket-work.

JIDDA (also written JEDDAH, DJIDDAH, DJEDDEH), a town in Arabia on the Red Sea coast in 21° 28' N. and 39° 10' E. It is of importance mainly as the principal landing-place of pilgrims to Mecca, from which it is about 46 m. distant. It is situated in a low sandy plain backed by a range of hills 10 m. to the east, with higher mountains behind. The town extends along the beach for about a mile, and is enclosed by a wall with towers at intervals, the seaward angles being commanded by two forts, in the northern of which are the prison and other public buildings. There are three gates, the Medina gate on the north, the Mecca gate on the east, and the Yemen gate (rarely opened) on the south; there are also three small posterns on the west side, the centre one leading to the quay. In front of the Mecca gate is a rambling suburb with shops, coffee houses, and an open market-place; before the Medina gate are the Turkish barracks, and beyond them the holy place of Jidda, the tomb of "our mother Eve," surrounded by the principal cemetery.

The tomb is a walled enclosure said to represent the dimensions of the body, about 200 paces long and 15 ft. broad. At the head is a small erection where gifts are deposited, and rather more than half-way down a whitewashed dome encloses a small dark chapel within which is the black stone known as *El Surrah*, the navel. The grave of Eve is mentioned by Edrisi, but except the black stone nothing bears any aspect of antiquity (see Burton's *Pilgrimage*, vol. ii.).

The sea face is the best part of the town; the houses there are lofty and well built of the rough coral that crops out all along the shore. The streets are narrow and winding. There are two mosques of considerable size and a number of smaller ones. The outer suburbs are merely collections of brushwood huts. The bazaars are well supplied with food-stuffs imported by sea, and fruit and vegetables from Taif and Wadi Fatima. The water supply is limited and brackish; there are, however, two sweet wells and a spring 7½ m. from the town, and most of the houses have cisterns for storing rain-water. The climate is hot and damp, but fever is not so prevalent as at Mecca. The harbour though inconvenient of access is well protected by coral reefs; there are, however, no wharves or other dock facilities and cargo is landed in small Arab boats, *sambuks*.

The governor is a Turkish kaimakam under the vali of Hejaz, and there is a large Turkish garrison; the sharif of Mecca, however, through his agent at Jidda exercises an authority

practically superior to that of the sultan's officials. Consulates are maintained by Great Britain, France, Austria, Russia, Holland, Belgium and Persia. The permanent population is estimated at 20,000, of which less than half are Arabs, and of these a large number are foreigners from Yemen and Hadramut, the remainder are negroes and Somali with a few Indian and Greek traders.

Jidda is said to have been founded by Persian merchants in the caliphate of Othman, but its great commercial prosperity dates from the beginning of the 15th century when it became the centre of trade between Egypt and India. Down to the time of Burckhardt (1815) the Suez ships went no farther than Jidda, where they were met by Indian vessels. The introduction of steamers deprived Jidda of its place as an emporium, not only for Indian goods but for the products of the Red Sea, which formerly were collected here, but are now largely exported direct by steamer from Hodeda, Suakin, Jibuti and Aden. At the same time it gave a great impulse to the pilgrim traffic which is now regarded as the annual harvest of Jidda. The average number of pilgrims arriving by sea exceeds 50,000, and in 1903-1904 the total came to 74,600. The changed status of the port is shown in its trade returns, for while its exports decreased from £250,000 in 1880 to £25,000 in 1904, its imports in the latter year amounted to over £1,400,000. The adverse balance of trade is paid by a very large export of specie, collected from the pilgrims during their stay in the country.

JIG, a brisk lively dance, the quick and irregular steps of which have varied at different times and in the various countries in which it has been danced (see **DANCE**). The music of the "jig," or such as is written in its rhythm, is in various times and has been used frequently to finish a suite, e.g. by Bach and Handel. The word has usually been derived from or connected with Fr. *gigue*, Ital. *giga*, Ger. *Geige*, a fiddle. The French and Italian words are now chiefly used of the dance or dance-rhythm, and in this sense have been taken by etymologists as adapted from the English "jig," which may have been originally an onomatopoeic word. The idea of jumping, jerking movement has given rise to many applications of "jig" and its derivative "jigger" to mechanical and other devices, such as the machine used for separating the heavier metal-bearing portions from the lighter parts in ore-dressing, or a tackle consisting of a double and single block and fall, &c. The word "jigger," a corruption of the West Indian *chigoe*, is also used as the name of a species of flea, the *Sarcophylla penetrans*, which burrows and lays its eggs in the human foot, generally under the toe nails, and causes great swelling and irritation (see **FLEA**).

JIHAD (also written **JEHAD**, **JAHAD**, **DJEHAD**), an Arabic word of which the literal meaning is an effort or a contest. It is used to designate the religious duty inculcated in the Koran on the followers of Mahomet to wage war upon those who do not accept the doctrines of Islam. This duty is laid down in five suras—all of these suras belonging to the period after Mahomet had established his power. Conquered peoples who will neither embrace Islam nor pay a poll-tax (*jizya*) are to be put to the sword. (See further **MAHOMMEDAN INSTITUTIONS**.) By Mahommedan commentators the commands in the Koran are not interpreted as a general injunction on all Moslems constantly to make war on the infidels. It is generally supposed that the order for a general war can only be given by the caliph (an office now claimed by the sultans of Turkey). Mahommedans who do not acknowledge the spiritual authority of the Ottoman sultan, such as the Persians and Moors, look to their own rulers for the proclamation of a jihad; there has been in fact no universal warfare by Moslems on unbelievers since the early days of Mahommedanism. Jihads are generally proclaimed by all persons who claim to be mahdis, e.g. Mahommed Ahmad (the Sudanese mahdi) proclaimed a jihad in 1882. In the belief of Moslems every one of their number slain in a jihad is taken straight to paradise.

JIMENES (or **XIMENES**) **DE CISNEROS, FRANCISCO** (1436-1517), Spanish cardinal and statesman, was born in 1436 at Torrelaguna in Castile, of good but poor family. He studied at

Alcalá de Henares and afterwards at Salamanca; and in 1459, having entered holy orders, he went to Rome. Returning to Spain in 1465, he brought with him an "expective" letter from the pope, in virtue of which he took possession of the archpriestship of Uzeda in the diocese of Toledo in 1473. Carillo, archbishop of Toledo, opposed him, and on his obstinate refusal to give way threw him into prison. For six years Jimenes held out, and at length in 1480 Carillo restored him to his benefice. This Jimenes exchanged almost at once for a chaplaincy at Sigüenza, under Cardinal Mendoza, bishop of Sigüenza, who shortly appointed him vicar-general of his diocese. In that position Jimenes won golden opinions from ecclesiastic and layman; and he seemed to be on the sure road to distinction among the secular clergy, when he abruptly resolved to become a monk. Throwing up all his benefices, and changing his baptismal name Gonzales for that of Francisco, he entered the Franciscan monastery of San Juan de los Reyes, recently founded by Ferdinand and Isabella at Toledo. Not content with the ordinary severities of the noviciate, he added voluntary austerities. He slept on the bare ground, wore a hair-shirt, doubled his fasts, and scourged himself with much fervour; indeed throughout his whole life, even when at the acme of his greatness, his private life was most rigorously ascetic. The report of his sanctity brought crowds to confess to him; but from them he retired to the lonely monastery of Our Lady of Castañar; and he even built with his own hands a rude hut in the neighbouring woods, in which he lived at times as an anchorite. He was afterwards guardian of a monastery at Salzedá. Meanwhile Mendoza (now archbishop of Toledo) had not forgotten him; and in 1492 he recommended him to Isabella as her confessor. The queen sent for Jimenes, was pleased with him, and to his great reluctance forced the office upon him. The post was politically important, for Isabella submitted to the judgment of her father-confessor not only her private affairs but also matters of state. Jimenes's severe sanctity soon won him considerable influence over Isabella; and thus it was that he first emerged into political life. In 1494 the queen's confessor was appointed provincial of the order of St Francis, and at once set about reducing the laxity of the conventual to the strictness of the observantine Franciscans. Intense opposition was continued even after Jimenes became archbishop of Toledo. The general of the order himself came from Rome to interfere with the archbishop's measures of reform, but the stern inflexibility of Jimenes, backed by the influence of the queen, subdued every obstacle. Cardinal Mendoza had died in 1495, and Isabella had secretly procured a papal bull nominating her confessor to his diocese of Toledo, the richest and most powerful in Spain, second perhaps to no other dignity of the Roman Church save the papacy. Long and sincerely Jimenes strove to evade the honour; but his *nolo episcopari* was after six months overcome by a second bull ordering him to accept consecration. With the primacy of Spain was associated the lofty dignity of high chancellor of Castile; but Jimenes still maintained his lowly life; and, although a message from Rome required him to live in a style befitting his rank, the outward pomp only concealed his private asceticism. In 1499 Jimenes accompanied the court to Granada, and there eagerly joined the mild and pious Archbishop Talavera in his efforts to convert the Moors. Talavera had begun with gentle measures, but Jimenes preferred to proceed by haranguing the *fakhs*, or doctors of religion, and loading them with gifts. Outwardly the latter method was successful; in two months the converts were so numerous that they had to be baptized by aspersion. The indignation of the unconverted Moors swelled into open revolt. Jimenes was besieged in his house, and the utmost difficulty was found in quieting the city. Baptism or exile was offered to the Moors as a punishment for rebellion. The majority accepted baptism; and Isabella, who had been momentarily annoyed at her archbishop's imprudence, was satisfied that he had done good service to Christianity.

On the 24th of November 1504 Isabella died. Ferdinand at once resigned the title of king of Castile in favour of his daughter Joan and her husband the archduke Philip, assuming instead

with men of all professions and even of the highest ranks in the official world. He became one of the lions of society, the Austrian emperor conferring upon him in 1872 a title of hereditary nobility. But to a mind constituted like his, the social functions of the Austrian metropolis became wearisome, and he gladly exchanged its brilliant circles for the repose of Göttingen, where he became professor in 1872. In this year he had read at Vienna before an admiring audience a lecture, published under the title of *Der Kampf um's Recht* (1872; Eng. trans., *Battle for Right*, 1884). Its success was extraordinary. Within two years it attained twelve editions, and it has been translated into twenty-six languages. This was followed a few years later by *Der Zweck im Recht* (2 vols., 1877-1883). In these two works is clearly seen Jhering's individuality. The *Kampf um's Recht* shows the firmness of his character, the strength of his sense of justice, and his juristic method and logic: "to assert his rights is the duty that every responsible person owes to himself." In the *Zweck im Recht* is perceived the bent of the author's intellect. But perhaps the happiest combination of all his distinctive characteristics is to be found in his *Jurisprudenz des täglichen Lebens* (1870; Eng. trans., 1904). A great feature of his lectures was his so-called *Praktika*, problems in Roman law, and a collection of these with hints for solution was published as early as 1847 under the title *Civilrechtsfälle ohne Entscheidungen*. In Göttingen he continued to work until his death on the 17th of September 1892. A short time previously he had been the centre of a devoted crowd of friends and former pupils, assembled at Wilhelmshöhe near Cassel to celebrate the jubilee of his doctorate. Almost all countries were worthily represented, and this pilgrimage affords an excellent illustration of the extraordinary fascination and enduring influence that Jhering commanded. In appearance he was of middle stature, his face clean-shaven and of classical mould, lit up with vivacity and beaming with good nature. He was perhaps seen at his best when dispensing hospitality in his own house. With him died the best beloved and the most talented of Roman-law professors of modern times. It was said of him by Professor Adolf Merkel in a memorial address, *R. v. Jhering* (1893), that he belonged to the happy class of persons to whom Goethe's lines are applicable: "Was ich in der Jugend gewünscht, das habe ich im Alter die Fülle," and this may justly be said of him, though he did not live to complete his *Geist des römischen Rechts* and his *Rechtsgeschichte*. For this work the span of a single life would have been insufficient, but what he has left to the world is a monument of vigorous intellectual power and stamps Jhering as an original thinker and unrivalled exponent (in his peculiar interpretation) of the spirit of Roman law.

Among others of his works, all of them characteristic of the author and sparkling with wit, may be mentioned the following: *Beiträge zur Lehre von Besitz*, first published in the *Jahrbücher für die Dogmatik des heutigen römischen und deutschen Privat-rechts*, and then separately; *Der Besitzwille*, and an article entitled "Besitz" in the *Handwörterbuch der Staatswissenschaften* (1891), which aroused at the time much controversy, particularly on account of the opposition manifested to Savigny's conception of the subject. See also *Scherz und Ernst in der Jurisprudenz* (1885); *Das Schuldmoment im römischen Privat-recht* (1867); *Das Trinkgeld* (1882); and among the papers he left behind him his *Vorgeschichte der Indoeuropäer*, a fragment, has been published by v. Ehrenberg (1894). See for an account of his life also M. de Jonge, *Rudolf v. Jhering* (1888); and A. Merkel, *Rudolf von Jhering* (1893). (P. A. A.)

The grave of Eve is mentioned by Edrisi, but except the black stone nothing bears any aspect of antiquity (see Burton's *Pilgrimage*, vol. ii.).

The sea face is the best part of the town; the houses there are lofty and well built of the rough coral that crops out all along the shore. The streets are narrow and winding. There are two mosques of considerable size and a number of smaller ones. The outer suburbs are merely collections of brushwood huts. The bazaars are well supplied with food-stuffs imported by sea, and fruit and vegetables from Taif and Wadi Fatima. The water supply is limited and brackish; there are, however, two sweet wells and a spring 7½ m. from the town, and most of the houses have cisterns for storing rain-water. The climate is hot and damp, but fever is not so prevalent as at Mecca. The harbour though inconvenient of access is well protected by coral reefs; there are, however, no wharves or other dock facilities and cargo is landed in small Arab boats, *sambuks*.

The governor is a Turkish kaimakam under the vali of Hejaz, and there is a large Turkish garrison; the sharif of Mecca, however, through his agent at Jidda exercises an authority

practically superior to that of the sultan's officials. Consulates are maintained by Great Britain, France, Austria, Russia, Holland, Belgium and Persia. The permanent population is estimated at 20,000, of which less than half are Arabs, and of these a large number are foreigners from Yemen and Hadramut, the remainder are negroes and Somali with a few Indian and Greek traders.

Jidda is said to have been founded by Persian merchants in the caliphate of Othman, but its great commercial prosperity dates from the beginning of the 15th century when it became the centre of trade between Egypt and India. Down to the time of Burckhardt (1815) the Suez ships went no farther than Jidda, where they were met by Indian vessels. The introduction of steamers deprived Jidda of its place as an emporium, not only for Indian goods but for the products of the Red Sea, which formerly were collected here, but are now largely exported direct by steamer from Hodeda, Suakin, Jibuti and Aden. At the same time it gave a great impulse to the pilgrim traffic which is now regarded as the annual harvest of Jidda. The average number of pilgrims arriving by sea exceeds 50,000, and in 1903-1904 the total came to 74,600. The changed status of the port is shown in its trade returns, for while its exports decreased from £250,000 in 1880 to £25,000 in 1904, its imports in the latter year amounted to over £1,400,000. The adverse balance of trade is paid by a very large export of specie, collected from the pilgrims during their stay in the country.

JIG, a brisk lively dance, the quick and irregular steps of which have varied at different times and in the various countries in which it has been danced (see **DANCE**). The music of the "jig," or such as is written in its rhythm, is in various times and has been used frequently to finish a suite, e.g. by Bach and Handel. The word has usually been derived from or connected with Fr. *gigue*, Ital. *giga*, Ger. *Geige*, a fiddle. The French and Italian words are now chiefly used of the dance or dance-rhythm, and in this sense have been taken by etymologists as adapted from the English "jig," which may have been originally an onomatopoeic word. The idea of jumping, jerking movement has given rise to many applications of "jig" and its derivative "jigger" to mechanical and other devices, such as the machine used for separating the heavier metal-bearing portions from the lighter parts in ore-dressing, or a tackle consisting of a double and single block and fall, &c. The word "jigger," a corruption of the West Indian *chigoe*, is also used as the name of a species of flea, the *Sarcophylla penetrans*, which burrows and lays its eggs in the human foot, generally under the toe nails, and causes great swelling and irritation (see **FLEA**).

JIHAD (also written **JEHAD**, **JAHAD**, **DJEHAD**), an Arabic word of which the literal meaning is an effort or a contest. It is used to designate the religious duty inculcated in the Koran on the followers of Mahomet to wage war upon those who do not accept the doctrines of Islam. This duty is laid down in five suras—all of these suras belonging to the period after Mahomet had established his power. Conquered peoples who will neither embrace Islam nor pay a poll-tax (*jizya*) are to be put to the sword. (See further **MAHOMMEDAN INSTITUTIONS**.) By Mahommedan commentators the commands in the Koran are not interpreted as a general injunction on all Moslems constantly to make war on the infidels. It is generally supposed that the order for a general war can only be given by the caliph (an office now claimed by the sultans of Turkey). Mahommedans who do not acknowledge the spiritual authority of the Ottoman sultan, such as the Persians and Moors, look to their own rulers for the proclamation of a jihad; there has been in fact no universal warfare by Moslems on unbelievers since the early days of Mahommedanism. Jihads are generally proclaimed by all persons who claim to be mahdis, e.g. Mahommed Ahmad (the Sudanese mahdi) proclaimed a jihad in 1882. In the belief of Moslems every one of their number slain in a jihad is taken straight to paradise.

JIMENES (or **XIMENES**) **DE CISNEROS, FRANCISCO** (1436-1517), Spanish cardinal and statesman, was born in 1436 at Torrelaguna in Castile, of good but poor family. He studied at

Alcalá de Henares and afterwards at Salamanca; and in 1459, having entered holy orders, he went to Rome. Returning to Spain in 1465, he brought with him an "expective" letter from the pope, in virtue of which he took possession of the archpriestship of Uzeda in the diocese of Toledo in 1473. Carillo, archbishop of Toledo, opposed him, and on his obstinate refusal to give way threw him into prison. For six years Jimenes held out, and at length in 1480 Carillo restored him to his benefice. This Jimenes exchanged almost at once for a chaplaincy at Sigüenza, under Cardinal Mendoza, bishop of Sigüenza, who shortly appointed him vicar-general of his diocese. In that position Jimenes won golden opinions from ecclesiastic and layman; and he seemed to be on the sure road to distinction among the secular clergy, when he abruptly resolved to become a monk. Throwing up all his benefices, and changing his baptismal name Gonzales for that of Francisco, he entered the Franciscan monastery of San Juan de los Reyes, recently founded by Ferdinand and Isabella at Toledo. Not content with the ordinary severities of the noviciate, he added voluntary austerities. He slept on the bare ground, wore a hair-shirt, doubled his fasts, and scourged himself with much fervour; indeed throughout his whole life, even when at the acme of his greatness, his private life was most rigorously ascetic. The report of his sanctity brought crowds to confess to him; but from them he retired to the lonely monastery of Our Lady of Castañar; and he even built with his own hands a rude hut in the neighbouring woods, in which he lived at times as an anchorite. He was afterwards guardian of a monastery at Salzedá. Meanwhile Mendoza (now archbishop of Toledo) had not forgotten him; and in 1492 he recommended him to Isabella as her confessor. The queen sent for Jimenes, was pleased with him, and to his great reluctance forced the office upon him. The post was politically important, for Isabella submitted to the judgment of her father-confessor not only her private affairs but also matters of state. Jimenes's severe sanctity soon won him considerable influence over Isabella; and thus it was that he first emerged into political life. In 1494 the queen's confessor was appointed provincial of the order of St Francis, and at once set about reducing the laxity of the conventual to the strictness of the observantine Franciscans. Intense opposition was continued even after Jimenes became archbishop of Toledo. The general of the order himself came from Rome to interfere with the archbishop's measures of reform, but the stern inflexibility of Jimenes, backed by the influence of the queen, subdued every obstacle. Cardinal Mendoza had died in 1495, and Isabella had secretly procured a papal bull nominating her confessor to his diocese of Toledo, the richest and most powerful in Spain, second perhaps to no other dignity of the Roman Church save the papacy. Long and sincerely Jimenes strove to evade the honour; but his *nolo episcopari* was after six months overcome by a second bull ordering him to accept consecration. With the primacy of Spain was associated the lofty dignity of high chancellor of Castile; but Jimenes still maintained his lowly life; and, although a message from Rome required him to live in a style befitting his rank, the outward pomp only concealed his private asceticism. In 1499 Jimenes accompanied the court to Granada, and there eagerly joined the mild and pious Archbishop Talavera in his efforts to convert the Moors. Talavera had begun with gentle measures, but Jimenes preferred to proceed by haranguing the *fakhs*, or doctors of religion, and loading them with gifts. Outwardly the latter method was successful; in two months the converts were so numerous that they had to be baptized by aspersion. The indignation of the unconverted Moors swelled into open revolt. Jimenes was besieged in his house, and the utmost difficulty was found in quieting the city. Baptism or exile was offered to the Moors as a punishment for rebellion. The majority accepted baptism; and Isabella, who had been momentarily annoyed at her archbishop's imprudence, was satisfied that he had done good service to Christianity.

On the 24th of November 1504 Isabella died. Ferdinand at once resigned the title of king of Castile in favour of his daughter Joan and her husband the archduke Philip, assuming instead

criticism of the Trinitarian theory of Peter Lombard. This council, though condemning the book, refrained from condemning the author, and approved the order of Floris. Nevertheless, the monks continued to be subjected to insults as followers of a heretic, until they obtained from Honorius III. in 1220 a bull formally recognizing Joachim as orthodox and forbidding any one to injure his disciples.

It is impossible to enumerate here all the works attributed to Joachim. Some served their avowed object with great success, being powerful instruments in the anti-papal polemic and sustaining the revolted Franciscans in their hope of an approaching triumph. Among the most widely circulated were the commentaries on Jeremiah, Isaiah and Ezekiel, the *Valencia pontificum* and the *De operibus ecclesiarum*. Of his authentic works the doctrinal essential is very simple. Joachim divides the history of humanity, past, present and future, into three periods, which, in his *Expositio in Apocalypsim* (bk. i. ch. 3), he defines as the age of the Law, or of the Father; the age of the Gospel, or of the Son; and the age of the Spirit, which will bring the ages to an end. Before each of these ages there is a period of incubation, or initiation: the first age begins with Abraham, but the period of initiation with the first man Adam. The initiation period of the third age begins with St Benedict, while the actual age of the Spirit is not to begin until 1260, the Church—*mulier amicta sole* (Rev. xii. 1)—remaining hidden in the wilderness 1260 days. We cannot here enter into the infinite details of the other subdivisions imagined by Joachim, or into his system of perpetual concordances between the New and the Old Testaments, which, according to him, furnish the prefiguration of the third age. Far more interesting as explaining the diffusion and the religious and social importance of his doctrine is his conception of the second and third ages. The first age was the age of the Letter, the second was intermediary between the Letter and the Spirit, and the third was to be the age of the Spirit. The age of the Son is the period of study and wisdom, the period of striving towards mystic knowledge. In the age of the Father all that was necessary was obedience; in the age of the Son reading is enjoined; but the age of the Spirit was to be devoted to prayer and song. The third is the age of the *plena spiritus libertas*, the age of contemplation, the monastic age *par excellence*, the age of a monachism wholly directed towards ecstasy, more Oriental than Benedictine. Joachim does not conceal his sympathies with the ideal of Basilian monachism. In his opinion—which is, in form at least, perfectly orthodox—the church of Peter will be, not abolished, but purified; actually, the hierarchy effaces itself in the third age before the order of the monks, the *viri spirituales*. The entire world will become a vast monastery in that day, which will be the resting-season, the sabbath of humanity. In various passages in Joachim's writings the clerical hierarchy is represented by Rachel and the contemplative order by her son Joseph, and Rachel is destined to efface herself before her son. Similarly, the teaching of Christ and the Apostles on the sacraments is considered, implicitly and explicitly, as transitory, as representing that passage from the *significantia* to the *significata* which Joachim signalizes at every stage of his demonstration. Joachim was not disturbed during his lifetime. In 1200 he submitted all his writings to the judgment of the Holy See, and unreservedly affirmed his orthodoxy; the Lateran council, which condemned his criticism of Peter Lombard, made no allusion to his eschatological temerities; and the bull of 1220 was a formal certificate of his orthodoxy.

The joachimite ideas soon spread into Italy and France, and especially after a division had been produced in the Franciscan order. The rigorists, who soon became known as "Spirituals," represented St Francis as the initiator of Joachim's third age. Certain convents became centres of joachimism. Around the hermit of Hyères, Hugh of Digne, was formed a group of Franciscans who expected from the advent of the third age the triumph of their ascetic ideas. The joachimites even obtained a majority in the general chapter of 1247, and elected John of Parma, one of their number, general of the order. Pope Alexander IV., however, compelled John of Parma to renounce his dignity, and the joachimite opposition became more and more vehement. Pseudo-joachimite treatises sprang up on every hand, and, finally, in 1254, there appeared in Paris the *Liber introductorius ad evangelium aeternum*, the work of a Spiritual Franciscan, Gherardo da Borgo San Donnino. This book was published with, and as an introduction to, the three principal works of Joachim, in which the Spirituals had made some interpolations.¹ Gherardo, however, did not say, as has been supposed, that Joachim's books were the new gospel, but merely that the Calabrian abbot had supplied the key to Holy Writ, and that with the help of that *intelligentia mystica* it would be possible to extract from the Old and New Testaments the eternal meaning, the gospel according to the Spirit, a gospel which would never be written; as for this eternal sense, it had been entrusted to an order set apart, to the Franciscan order announced by Joachim, and in this order the ideal of the third age was realized. These affirmations provoked very keen protests in the ecclesiastical world. The secular masters of the university of Paris denounced the work to Pope Innocent IV., and the bishop of Paris sent it to the pope. It

was Innocent's successor, Alexander IV., who appointed a commission to examine it; and as a result of this commission, which sat at Anagni, the destruction of the *Liber introductorius* was ordered by a papal breve dated the 23rd of October 1255. In 1260 a council held at Ardes condemned Joachim's writings and his supporters, who were very numerous in that region. The joachimite ideas were equally persistent among the Spirituals, and acquired new strength with the publication of the commentary on the Apocalypse. This book, probably published after the death of its author and probably interpolated by his disciples, contains, besides joachimite principles, an affirmation even clearer than that of Gherardo da Borgo of the elect character of the Franciscan order, as well as extremely violent attacks on the papacy. The joachimite literature is extremely vast. From the 14th century to the middle of the 16th, Ubertin of Casale (in his *Arbor vitæ cruciferae*), Bartholomew of Pisa (author of the *Liber conformitatum*), the Calabrian hermit Telesphorus, John of La Rochetaillade, Seraphin of Fermo, Johannes Anninus of Viterbo, Coelius Pannonius, and a host of other writers, repeated or complicated *ad infinitum* the exegesis of Abbot Joachim. A treatise entitled *De ultima aetate ecclesiarum*, which appeared in 1356, has been attributed to Wycliffe, but is undoubtedly from the pen of an anonymous joachimite Franciscan. The heterodox movements in Italy in the 13th and 14th centuries, such as those of the Segarellists, Dolcinists, and Fraticelli of every description, were penetrated with joachimism; while such independent spirits as Roger Bacon, Arnaldus de Villa Nova and Bernard de Cîteaux often comforted themselves with the thought of the era of justice and peace promised by Joachim. Dante held Joachim in great reverence, and has placed him in Paradise (*Par.* xii. 140-141).

(1885). (P. A.)

JOACHIM I. (1484-1535), surnamed Nestor, elector of Brandenburg, elder son of John Cicero, elector of Brandenburg, was born on the 21st of February 1484. He received an excellent education, became elector of Brandenburg on his father's death in January 1499, and soon afterwards married Elizabeth, daughter of John, king of Denmark. He took some part in the political complications of the Scandinavian kingdoms, but the early years of his reign were mainly spent in the administration of his electorate, where by stern and cruel measures he succeeded in restoring some degree of order (see BRANDENBURG). He also improved the administration of justice, aided the development of commerce, and was a friend to the towns. On the approach of the imperial election of 1519, Joachim's vote was eagerly solicited by the partisans of Francis I., king of France, and by those of Charles, afterwards the emperor Charles V. Having treated with, and received lavish promises from, both parties, he appears to have hoped for the dignity for himself; but when the election came he turned to the winning side and voted for Charles. In spite of this step, however, the relations between the emperor and the elector were not friendly, and during the next few years Joachim was frequently in communication with the enemies of Charles. Joachim is best known as a pugnacious adherent of Catholic orthodoxy. He was one of the princes who urged upon the emperor the necessity of enforcing the Edict of Worms, and at several diets was prominent among the enemies of the Reformers. He was among those who met at Dessau in July 1525, and was a member of the league established at Halle in November 1533. But his wife adopted the reformed faith, and in 1528 fled for safety to Saxony; and he had the mortification of seeing these doctrines also favoured by other members of his family. Joachim, who was a patron of learning, established the university of Frankfort-on-the-Oder in 1506. He died at Stendal on the 11th of July 1535.

See T. von Buttlar, *Der Kampf Joachims I. von Brandenburg gegen den Adel* (1889); J. G. Droysen, *Geschichte der preussischen Politik* (1855-1886).

¹ Preger is the only writer who has maintained that the three books in their primitive form date from 1251.

JOACHIM II. (1505-1571), surnamed Hector, elector of Brandenburg, the elder son of Joachim I., elector of Brandenburg, was born on the 13th of January 1505. Having passed some time at the court of the emperor Maximilian I., he married in 1524 a daughter of George, duke of Saxony. In 1532 he led a contingent of the imperial army on a campaign against the Turks; and soon afterwards, having lost his first wife, married Hedwig, daughter of Sigismund I., king of Poland. He became elector of Brandenburg on his father's death in July 1535, and undertook the government of the old and middle marks, while the new mark passed to his brother John. Joachim took a prominent part in imperial politics as an advocate of peace, though with a due regard for the interests of the house of Habsburg. He attempted to make peace between the Protestants and the emperor Charles V. at Frankfurt in 1539, and subsequently at other places; but in 1542 he led the German forces on an unsuccessful campaign against the Turks. When the war broke out between Charles and the league of Schmalkalde in 1546 the elector at first remained neutral; but he afterwards sent some troops to serve under the emperor. With Maurice, elector of Saxony, he persuaded Philip, landgrave of Hesse, to surrender to Charles after the imperial victory at Mühlberg in April 1547, and pledged his word that the landgrave would be pardoned. But, although he felt aggrieved when the emperor declined to be bound by this promise, he refused to join Maurice in his attack on Charles. He supported the *Interim*, which was issued from Augsburg in May 1548, and took part in the negotiations that resulted in the treaty of Passau (1552), and the religious peace of Augsburg (1555). In domestic politics he sought to consolidate and strengthen the power of his house by treaties with neighbouring princes, and succeeded in secularizing the bishoprics of Brandenburg, Havelberg and Lebus. Although brought up as a strict adherent of the older religion, he showed signs of wavering soon after his accession, and in 1539 allowed free entrance to the reformed teaching in the electorate. He took the communion himself in both kinds, and established a new ecclesiastical organization in Brandenburg, but retained much of the ceremonial of the Church of Rome. His position was not unlike that of Henry VIII. in England, and may be partly explained by a desire to replenish his impoverished exchequer with the wealth of the Church (see BRANDENBURG). After the peace of Augsburg the elector mainly confined his attention to Brandenburg, where he showed a keener desire to further the principles of the Reformation. By his luxurious habits and his lavish expenditure on public buildings he piled up a great accumulation of debt, which was partly discharged by the estates of the land in return for important concessions. He cast covetous eyes upon the archbishopric of Magdeburg and the bishopric of Halberstadt, both of which he secured for his son Frederick in 1551. When Frederick died in the following year, the elector's son Sigismund obtained the two sees; and on Sigismund's death in 1566 Magdeburg was secured by his nephew, Joachim Frederick, afterwards elector of Brandenburg. Joachim, who was a prince of generous and cultured tastes, died at Köpenick on the 3rd of January 1571, and was succeeded by his son, John George. In 1880 a statue was erected to his memory at Spandau.

See Steinmüller, *Einführung der Reformation in die Kurmark Brandenburg durch Joachim II.* (1903); S. Isaacsohn, "Die Finanzen Joachims II.," in the *Zeitschrift für Preussische Geschichte und Landeskunde* (1864-1883); J. G. Droysen, *Geschichte der Preussischen Politik* (1855-1886).

JOACHIM, JOSEPH (1831-1907), German violinist and composer, was born at Kittsee, near Pressburg, on the 28th of June 1831, the son of Jewish parents. His family moved to Budapest when he was two years old, and he studied there under Serwaczynski, who brought him out at a concert when he was only eight years old. Afterwards he learnt from the elder Hellmesberger and Joseph Böhm in Vienna, the latter instructing him in the management of the bow. In 1843 he went to Leipzig to enter the newly founded conservatorium. Mendelssohn, after testing his musical powers, pronounced that the regular training of a music school was not needed, but recommended that he should

receive a thorough general education in music from Ferdinand David and Moritz Hauptmann. In 1844 he visited England, and made his first appearance at Drury Lane Theatre, where his playing of Ernst's fantasia on *Otello* made a great sensation; he also played Beethoven's concerto at a Philharmonic concert conducted by Mendelssohn. In 1847-1849 and 1852 he revisited England, and after the foundation of the popular concerts in 1859, up to 1899, he played there regularly in the latter part of the season. On Liszt's invitation he accepted the post of *Konsertmeister* at Weimar, and was there from 1850 to 1853. This brought Joachim into close contact with the advanced school of German musicians, headed by Liszt; and he was strongly tempted to give his allegiance to what was beginning to be called the "music of the future"; but his artistic convictions forced him to separate himself from the movement, and the tact and good taste he displayed in the difficult moment of explaining his position to Liszt afford one of the finest illustrations of his character.

His acceptance of a similar post at Hanover brought him into a different atmosphere, and his playing at the Düsseldorf festival of 1853 procured him the intimate friendship of Robert Schumann. His introduction of the young Brahms to Schumann is a famous incident of this time. Schumann and Brahms collaborated with Albert Dietrich in a joint sonata for violin and piano, as a welcome on his arrival in Düsseldorf. At Hanover he was *königlicher Konzertdirektor* from 1853 to 1868, when he made Berlin his home. He married in 1863 the mezzo-soprano singer, Amalie Weiss, who died in 1899. In 1869 Joachim was appointed head of the newly founded *königliche Hochschule für Musik* in Berlin. The famous "Joachim quartet" was started in the *Sing-Akademie* in the following year. Of his later life, continually occupied with public performances, there is little to say except that he remained, even in a period which saw the rise of numerous violinists of the finest technique, the acknowledged master of all. He died on the 15th of August 1907.

Besides the consummate manual skill which helped to make him famous in his youth, Joachim was gifted with the power of interpreting the greatest music in absolute perfection: while Bach, Mozart, Beethoven and Brahms were masters, whose works he played with a degree of insight that has never been approached, he was no less supreme in the music of Mendelssohn and Schumann; in short, the whole of the classical repertory has become identified with his playing. No survey of Joachim's artistic career would be complete which omitted mention of his absolute freedom from tricks or mannerism, his dignified bearing, and his unselfish character. His devotion to the highest ideals, combined with a certain austerity and massivity of style, brought against him an accusation of coldness from admirers of a more effusive temperament. But the answer to this is given by the depth and variety of expression which his mastery of the resources of his instrument put at his command. His biographer (1898), Andreas Moser, expressed his essential characteristic in the words, "He plays the violin, not for its own sake, but in the service of an ideal."

As a composer Joachim did but little in his later years, and the works of his earlier life never attained the public success which, in the opinion of many, they deserve (see MUSIC). They undoubtedly have a certain austerity of character which does not appeal to every hearer, but they are full of beauty of a grave and dignified kind; and in such things as his "Hungarian concerto" for his own instrument the utmost degree of difficulty is combined with great charm of melodic treatment. The "romance" in B flat for violin and the variations for violin and orchestra are among his finest things, and the noble overture in memory of Kleist, as well as the scena for mezzo-soprano from Schiller's *Demetrius*, show a wonderful degree of skill in orchestration as well as originality of thought. Joachim's place in musical history as a composer can only be properly appreciated in the light of his intimate relations with Brahms, with whom he studiously refrained from putting himself into independent rivalry, and to whose work as a composer he gave the co-operation of one who might himself have ranked as a master.

There are admirable portraits of Joachim by G. F. Watts (1866) and by J. S. Sargent (1904), the latter presented to him on the 16th of May 1904, at the celebration of the sixtieth anniversary of his first appearance in England.

JOAN, a mythical female pope, who is usually placed between Leo IV. (847-855) and Benedict III. (855-858). One account has it that she was born in England, another in Germany of English parents. After an education at Cologne, she fell in love with a Benedictine monk and fled with him to Athens disguised as a man. On his death she went to Rome under the alias of Joannes Anglicus (John of England), and entered the priesthood, eventually receiving a cardinal's hat. She was elected pope under the title of John VIII., and died in childbirth during a papal procession.

A French Dominican, Steven of Bourbon (d. c. 1261) gives the legend in his *Seven Gifts of the Holy Spirit*. He is believed to have derived it from an earlier writer. More than a hundred authors between the 13th and 17th centuries gave circulation to the myth. Its explosion was first seriously undertaken by David Blondel, a French Calvinist, in his *Éclaircissement de la question si une femme a été assise au siège papal de Rome* (1647); and *De Joanna Papissa* (1657). The refutation was completed by Johann Dollinger in his *Papstfabeln des Mittelalters* (1863; Eng. trans. 1872).

JOAN OF ARC, more properly JEANNE D'ARC (1411-1431), the "Maid of Orleans," was born between 1410 and 1412, the daughter of Jacques Darc, peasant proprietor, of Domremy, a small village in the Vosges, partly in Champagne and partly in Lorraine, and of his wife Isabeau, of the village of Vouthon, who from having made a pilgrimage to Rome had received the usual surname of Romée. Although her parents were in easy circumstances, Joan never learned to read or write, and received her sole religious instruction from her mother, who taught her to recite the Pater Noster, Ave Maria, and Credo. She sometimes guarded her father's flocks, but at her trial in 1431 she strongly resented being referred to as a shepherd girl. In all household work she was specially proficient, her skill in the use of the needle not being excelled (she said) by that of any matron even of Rouen. In her childhood she was noted for her abounding physical energy; but her vivacity, so far from being tainted by any coarse or unfeminine trait, was the direct outcome of an abnormally sensitive nervous temperament. Towards her parents her conduct was uniformly exemplary, and the charm of her unselfish kindness made her a favourite in the village. As she grew to womanhood she became inclined to silence, and spent much of her time in solitude and prayer. She repelled all attempts of the young men of her acquaintance to win her favour; and while active in the performance of her duties, and apparently finding her life quite congenial, inwardly she was engrossed with thoughts reaching far beyond the circle of her daily concerns.

At this time, through the alliance and support of Philip of Burgundy, the English had extended their conquest over the whole of France north of the Loire in addition to their possession of Guienne; and while the infant Henry VI. of England had in 1422 been proclaimed king of France at his father's grave at St Denis, Charles the dauphin (still uncrowned) was forced to watch the slow dismemberment of his kingdom. Isabella, the dauphin's mother, had favoured Henry V. of England, the husband of her daughter Catherine; and under Charles VI. a visionary named Marie d'Avignon declared that France was being ruined by a woman and would be restored by an armed virgin from the marches of Lorraine. To what extent this idea worked in Joan's mind is doubtful. In Geoffrey of Monmouth's tract, *De prophetiis Merlini*, there is a reference to an ancient prophecy of the enchanter Merlin concerning a virgin *ex nemore canuto*, and it appears that this *nemus canutum* had been identified in folk-lore with the oak wood of Domremy. Joan's knowledge of the prophecy does not, however, appear till 1429; and already before that, from 1424, according to her account at her trial, she

¹ In the act of ennoblement the name is spelt Day, due probably to the peculiar pronunciation. It has been disputed whether the name was written originally d'Arc or Darc. It is beyond doubt that the father of Joan was not of noble origin, but Bouteiller suggests that at that period the apostrophe did not indicate nobility. Her mother, it may be noted, is called "de Vouthon."

had become imbued with a sense of having a mission to free France from the English. She heard the voices of St Michael, St Catherine and St Margaret urging her on. In May 1428 she tried to obtain from Robert de Baudricourt, governor of Vaucouleurs, an introduction to the dauphin, saying that God would send him aid, but she was rebuffed. When, however, in September the English (under the earl of Salisbury) invested Orleans, the key to the south of France, she renewed her efforts with Baudricourt, her mission being to relieve Orleans and crown the dauphin at Reims. By persistent importunity, the effect of which was increased by the simplicity of her demeanour and her calm assurance of success, she at last prevailed on the governor to grant her request; and in February 1429, accompanied by six men-at-arms, she set out on her perilous journey to the court of the dauphin at Chinon. At first Charles refused to see her, but popular feeling in her favour induced his advisers to persuade him after three days to grant her an interview. She is said to have persuaded him of the divine character of her commission by discovering him though disguised in the crowd of his courtiers, and by reassuring him regarding his secret doubts as to his legitimacy. And Charles was impressed by her knowledge of a secret prayer, which (he told Dunois) could only be known to God and himself. Accordingly, after a commission of doctors had reported that they had found in her nothing of evil or contrary to the Catholic faith, and a council of matrons had reported on her chastity, she was permitted to set forth with an army of 4000 or 5000 men designed for the relief of Orleans. At the head of the army she rode clothed in a coat of mail, armed with an ancient sword, said to be that with which Charles Martel had vanquished the Saracens, the hiding-place of which, under the altar of the parish church of the village of Ste Catherine de Fierbois, the "voices" had revealed to her; she carried a white standard of her own design embroidered with lilies, and having on the one side the image of God seated on the clouds and holding the world in His hand, and on the other a representation of the Annunciation. Joan succeeded in entering Orleans on the 29th of April 1429, and through the vigorous and unremitting sallies of the French the English gradually became so discouraged that on the 8th of May they raised the siege. It is admitted that her extraordinary pluck and sense of leadership were responsible for this result. In a single week (June 12 to 19), by the capture of Jargeau and Beaugency, followed by the great victory of Patay, where Talbot was taken prisoner, the English were driven beyond the Loire. With some difficulty the dauphin was then persuaded to set out towards Reims, which he entered with an army of 12,000 men on the 16th of July, Troyes having yielded on the way. On the following day, holding the sacred banner, Joan stood beside Charles at his coronation in the cathedral.

The king then entered into negotiations with a view to detaching Burgundy from the English cause. Joan, at his importunity, remained with the army, but the king played her false when she attempted the capture of Paris; and after a failure on the 8th of September, when Joan was wounded,² his troops were disbanded. Joan went into Normandy to assist the duke of Alençon, but in December returned to the court, and on the 29th she and her family were ennobled with the surname of du Lis. Unconsoled by such honours, she rode away from the court in March, to assist in the defence of Compiègne against the duke of Burgundy; and on the 24th of May she led an unsuccessful sortie against the besiegers, when she was surrounded and taken prisoner. Charles, partly perhaps on account of his natural indolence, partly on account of the intrigues at the court, made no effort to effect her ransom, and never showed any sign of interest in her fate. By means of negotiations instigated and prosecuted with great perseverance by the university of Paris and the Inquisition, and through the persistent scheming of Pierre Cauchon, the bishop of Beauvais—a Burgundian partisan, who, chased from his own see, hoped to obtain the archbishopric of Rouen—she was sold in November by John of Luxemburg and Burgundy to the English, who on the 3rd of January 1431, at the instance of the

² The Porte St Honoré where Joan was wounded stood where the Comédie Française now stands.

university of Paris, delivered her over to the Inquisition for trial. After a public examination, begun on the 9th of January and lasting six days, and another conducted in the prison, she was, on the 20th of March, publicly accused as a heretic and witch, and, being in the end found guilty, she made her submission at the scaffold on the 24th of May, and received pardon. She was still, however, the prisoner of the English, and, having been induced by those who had her in charge to resume her male clothes, she was on this account judged to have relapsed, was sentenced to death, and burned at the stake on the streets of Rouen on the 30th of May 1431. In 1436 an impostor appeared, professing to be Joan of Arc escaped from the flames, who succeeded in inducing many people to believe in her statement, but afterwards confessed her imposture. The sentence passed on Joan of Arc was revoked by the pope on the 7th of July 1456, and since then it has been the custom of Catholic writers to uphold the reality of her divine inspiration.

During the latter part of the 19th century a popular cult of the Maid of Orleans sprang up in France, being greatly stimulated by the clerical party, which desired to advertise, in the person of this national heroine, the intimate union between patriotism and the Catholic faith, and for this purpose ardently desired her enrolment among the Saints. On the 27th of January 1894 solemn approval was given by Pope Leo XIII., and in February 1903 a formal proposal was entered for her canonization. The Feast of the Epiphany (Jan. 6) 1904 was made the occasion for a public declaration by Pope Pius X. that she was entitled to the designation Venerable. On the 13th of December 1908 the decree of beatification was published in the Consistory Hall of the Vatican.

As an historical figure, it is impossible to dogmatize concerning the personality of Joan of Arc. The modern clerical view has to some extent provoked what appears, in Anatole France's learned account, ably presented as it is, to be a retaliation, in regarding her as a clerical tool in her own day. But her character was in any case exceptional. She undoubtedly nerved the French at a critical time, and inspired an army of laggards and pillagers with a fanatical enthusiasm, comparable with that of Cromwell's Puritans. Moreover, as regards her genuine military qualities we have the testimony of Dunois and d'Alençon; and Captain Marin, in his *Jeanne d'Arc, tacticien et stratège* (1891), takes a high view of her achievements. The nobility of her purpose and the genuineness of her belief in her mission, combined with her purity of character and simple patriotism, stand clear. As to her "supranormal" faculties, a matter concerning which belief largely depends on the point of view, it is to be remarked that Quicherat, a freethinker wholly devoid of clerical influences, admits them (*Aperçus nouveaux*, 1850), saying that the evidence is as good as for any facts in her history. See also A. Lang on "the voices" in *Proc. Soc. Psychical Research*, vol. xi.

AUTHORITIES.—For bibliography see *Le Livre d'or de Jeanne d'Arc* (1894), and A. Molinier, *Sources de l'histoire de France* (1904). Until the 19th century the history of Joan of Arc was almost entirely neglected; Voltaire's scurrilous satire *La Pucelle*, while indicative of the attitude of his time, may be compared with the very fair praises in the *Encyclopédie*. The first attempt at a study of the sources was that of L'Averdy in 1790, published in the third volume of *Mémoires* of the Academy of Inscriptions, which served as the base for all lives until J. Quicherat's great work, *Le Procès de Jeanne d'Arc* (1841-1849), a collection of the texts so full and so vivid that they reveal the character and life of the heroine with great distinctness. Michelet's sketch of her work in his *Histoire de France*, one of the best sections of the history, is hardly more vivid than these sources, upon which all the later biographies (notably that of H. A. Wallon, 1860) are based. See also A. Marty, *L'Histoire de Jeanne d'Arc d'après des documents originaux*, with introduction by M. Sepet (1907); P. H. Dunand, *Jeanne d'Arc et l'église* (1908); and especially Andrew Lang, *The Maid of France* (1908). The *Vie de Jeanne d'Arc*, by Anatole France (2 vols., 1908), is brilliant and erudite, but in some respects open to charges of inaccuracy and prejudice in its handling of the sources (see the criticism by Andrew Lang in *The Times*, Lit. Suppl., May 28, 1908). The attempt to establish the reality of the "revelations" and consequently to obtain the canonization of Joan of Arc led the Catholic party in France to publish lives (such as Sepet's, 1869) in support of their claims. Excellent works worth special mention are: Siméon Luce, *Jeanne d'Arc à Domremy*; L. Jarry, *L'Armée anglaise au siège d'Orléans* (1892);

J. J. Bourassé, *Miracles de Madame Sainte Katherine de Fierbois* (1858, trans. by A. Lang); Boucher de Molandon and A. de Beau-corps, *L'Armée anglaise vaincue par Jeanne d'Arc* (1892); R. P. Agroles, S. J., *La vraie Jeanne d'Arc*. For the "false Pucelle" see A. Lang's article in his *Valet's Tragedy* (1903). Of the numerous dramas and poems of which Joan of Arc has been the subject, mention can only be made of *Die Jungfrau von Orléans* of Schiller, and of the *Joan of Arc* of Southey. A drama in verse by Jules Barbier was set to music by C. Gounod (1873). (J. T. S.*; H. Ch.)

JOANES (or **JUANES**), **VICENTE** (1506-1579), head of the Valencian school of painters, and often called "the Spanish Raphael," was born at Fuente de la Higuera in the province of Valencia in 1506. He is said to have studied his art for some time in Rome, with which school his affinities are closest, but the greater part of his professional life was spent in the city of Valencia, where most of the extant examples of his work are now to be found. All relate to religious subjects, and are characterized by dignity of conception, accuracy of drawing, truth and beauty of colour, and minuteness of finish. He died at Bocaliente (near Jativa) while engaged upon an altarpiece in the church there, on the 21st of December 1579.

JOANNA (1479-1555), called the Mad (*la Loca*), queen of Castile and mother of the emperor Charles V., was the second daughter of Ferdinand and Isabella, king and queen of Spain, and was born at Toledo on the 6th of November 1479. Her youngest sister was Catherine of Aragon, the first wife of Henry VIII. In 1496 at Lille she was married to the archduke Philip the Handsome, son of the German King Maximilian I., and at Ghent, in February 1500, she gave birth to the future emperor. The death of her only brother John, of her eldest sister Isabella, queen of Portugal, and then of the latter's infant son Miguel, made Joanna heiress of the Spanish kingdoms, and in 1502 the cortes of Castile and of Aragon recognized her and her husband as their future sovereigns. Soon after this Joanna's reason began to give way. She mourned in an extravagant fashion for her absent husband, whom at length she joined in Flanders; in this country her passionate jealousy, although justified by Philip's conduct, led to deplorable scenes. In November 1504 her mother's death left Joanna queen of Castile, but as she was obviously incapable of ruling, the duties of government were undertaken by her father, and then for a short time by her husband. The queen was with Philip when he was wrecked on the English coast and became the guest of Henry VII. at Windsor; soon after this event, in September 1506, he died and Joanna's mind became completely deranged, it being almost impossible to get her away from the dead body of her husband. The remaining years of her miserable existence were spent at Tordesillas, where she died on the 11th of April 1555. In spite of her afflictions the queen was sought in marriage by Henry VII. just before his death. Nominally Joanna remained queen of Castile until her death, her name being joined with that of Charles in all public documents, but of necessity she took no part in the business of state. In addition to Charles she had a son Ferdinand, afterwards the emperor Ferdinand I., and four daughters, among them being Maria (1505-1558), wife of Louis II., king of Hungary, afterwards governor-general of the Netherlands.

See R. Villa, *La Reina doña Juana la Loca* (Madrid, 1892); Röslér, *Johanna die Wahnsinnige* (Vienna, 1890); W. H. Prescott, *Hist. of Ferdinand and Isabella* (1854); and H. Tighe, *A Queen of Unrest* (1907).

JOANNA I. (c. 1327-1382), queen of Naples, was the daughter of Charles duke of Calabria (d. 1328), and became sovereign of Naples in succession to her grandfather King Robert in 1343. Her first husband was Andrew, son of Charles Robert, king of Hungary, who like the queen herself was a member of the house of Anjou. In 1345 Andrew was assassinated at Aversa, possibly with his wife's connivance, and at once Joanna married Louis, son of Philip prince of Taranto. King Louis of Hungary then came to Naples to avenge his brother's death, and the queen took refuge in Provence—which came under her rule at the same time as Naples—purchasing pardon from Pope Clement VI. by selling to him the town of Avignon, then part of her dominions. Having returned to Naples in 1352 after the departure of Louis, Joanna lost her second husband in 1362, and married James, king of

Majorca (d. 1375), and later Otto of Brunswick, prince of Taranto. The queen had no sons, and as both her daughters were dead she made Louis I. duke of Anjou, brother of Charles V. of France, her heir. This proceeding so angered Charles, duke of Durazzo, who regarded himself as the future king of Naples, that he seized the city. Joanna was captured and was put to death at Aversa on the 22nd of May 1382. The queen was a woman of intellectual tastes, and was acquainted with some of the poets and scholars of her time, including Petrarch and Boccaccio.

See Crivelli, *Della prima e della seconda Giovanna, regine di Napoli* (1832); G. Battaglia, *Giovanna I., regina di Napoli* (1835); W. St. C. Baddeley, *Queen Joanna I. of Naples* (1893); Scarpetta, *Giovanna I. di Napoli* (1903); and Francesca M. Steele, *The Beautiful Queen Joanna I. of Naples* (1910).

JOANNA II. (1371-1435), queen of Naples, was descended from Charles II. of Anjou through his son John of Durazzo. She had been married to William, son of Leopold III. of Austria, and at the death of her brother King Ladislaus in 1414 she succeeded to the Neapolitan crown. Her life had always been very dissolute, and although now a widow of forty-five, she chose as her lover Pandolfo Alogo, a youth of twenty-six, whom she made seneschal of the kingdom. He and the constable Muzio Attendolo Sforza completely dominated her, and the turbulent barons wished to provide her with a husband who would be strong enough to break her favourites yet not make himself king. The choice fell on James of Bourbon, a relative of the king of France, and the marriage took place in 1415. But James at once declared himself king, had Alogo killed and Sforza imprisoned, and kept his wife in a state of semi-confinement; this led to a counter-agitation on the part of the barons, who forced James to liberate Sforza, renounce his kingship, and eventually to quit the country. The queen now sent Sforza to re-establish her authority in Rome, whence the Neapolitans had been expelled after the death of Ladislaus; Sforza entered the city and obliged the *condottiere* Braccio da Montone, who was defending it in the pope's name, to depart (1416). But when Oddo Colonna was elected pope as Martin V., he allied himself with Joanna, who promised to give up Rome, while Sforza returned to Naples. The latter found, however, that he had lost all influence with the queen, who was completely dominated by her new lover Giovanni (Sergianni) Caracciolo. Hoping to re-establish his position and crush Caracciolo, Sforza favoured the pretensions of Louis III. of Anjou, who wished to obtain the succession of Naples at Joanna's death, a course which met with the approval of the pope. Joanna refused to adopt Louis owing to the influence of Caracciolo, who hated Sforza; she appealed for help instead to Alphonso of Aragon, promising to make him her heir. War broke out between Joanna and the Aragonese on one side and Louis and Sforza, supported by the pope, on the other. After much fighting by land and sea, Alphonso entered Naples, and in 1422 peace was made. But dissensions broke out between the Aragonese and Catalans and the Neapolitans, and Alphonso had Caracciolo arrested; whereupon Joanna, fearing for her own safety, invoked the aid of Sforza, who with difficulty carried her off to Aversa. There she was joined by Louis whom she adopted as her successor instead of the ungrateful Alphonso. Sforza was accidentally drowned, but when Alphonso returned to Spain, leaving only a small force in Naples, the Angevins with the help of a Genoese fleet recaptured the city. For a few years there was peace in the kingdom, but in 1432 Caracciolo, having quarrelled with the queen, was seized and murdered by his enemies. Internal disorders broke out, and Gian Antonio Orsini, prince of Taranto, led a revolt against Joanna in Apulia; Louis of Anjou died while conducting a campaign against the rebels (1434), and Joanna herself died on the 11th of February 1435, after having appointed his son René her successor. Weak, foolish and dissolute, she made her reign one long scandal, which reduced the kingdom to the lowest depths of degradation. Her perpetual intrigues and her political incapacity made Naples a prey to anarchy and foreign invasions, destroying all sense of patriotism and loyalty both in the barons and the people.

JOASH, or **JEHOASH** (Heb. "Yahweh is strong, or hath given"), the name of two kings of Palestine in the Bible.

1. Son of Ahaziah (see **JEHORAM**, 2) and king of Judah. He obtained the throne by means of a revolt in which Athaliah (*q.v.*) perished, and his accession was marked by a solemn covenant, and by the overthrow of the temple of Baal and of its priest Mattan(-Baal). In this the priest Jehoiada (who must have continued to act as regent) took the leading part. The account of Joash's reign is not from a contemporary source (2 Kings xi. 4-xii. 16), and 2 Chronicles adds several new details, including a tradition of a conflict between the king and priests after the death of Jehoiada (xxii. 11; xxiv. 3, 15 *sqq.*).¹ At an unstated period, the Aramaeans under Hazael captured Gath, and Jerusalem only escaped by buying off the enemy (2 Kings xii. 17 *sqq.*). This may perhaps be associated with the Aramaean attacks upon Israel (2 below), but the tradition recorded in 2 Chron. xxiv. 23 *seq.* differs widely and cannot be wholly rejected. The king perished in a conspiracy, the origin of which is not clear; it may have been for his attack upon the priests, it was scarcely for the course he took to save Jerusalem. He was succeeded by his son Amaziah, whose moderation in avenging his father's death receives special mention. After defeating the Edomites, Amaziah turned his attention to Israel.

2. Son of Jehoahaz and king of Israel. Like his grandfather Jelu, he enjoyed the favour of the prophet Elisha, who promised him a triple defeat of the Aramaeans at Aphek (2 Kings xiii. 14 *sqq.* 22-25). The cities which had been taken from his father by Hazael the father of Ben-hadad were recovered (*cf.* 1 Kings xx. 34, time of Ahab) and the relief gained by Israel from the previous blows of Syria prepared the way for its speedy extension of power. When challenged by Amaziah of Judah, Joash uttered the famous fable of the thistle and cedar (for another example see Judg. ix. 8-15; see also **ABIMELECH**), and a battle was fought at Beth-shemesh, in which Israel was completely successful. An obscure statement in 2 Chron. xxv. 13 would show that this was not the only conflict; at all events, Amaziah was captured, the fortifications of Jerusalem were partially destroyed, the treasures of the Temple and palace were looted, and hostages were carried away to Samaria. According to one statement, Amaziah survived the disaster fifteen years, and lost his life in a conspiracy; but there is a gap in the history of Judah which the narratives do not enable us to fill (1 Kings xv. 1; see xiv. 17, 23). See further **UZZIAH**; **JEROBOAM** (2); and **JEWS**. (S. A. C.)

JOB. The book of Job (Heb. **יִיב** 'Iyyob, Gr. **Ἰώβ**), in the Bible, the most splendid creation of Hebrew poetry, is so called from the name of the man whose history and afflictions and sayings form the theme of it.

Contents.—As it now lies before us it consists of five parts. 1. The prologue, in prose, chs. i.-iii., describes in rapid and dramatic steps the history of this man, his prosperity and greatness corresponding to his godliness; then how his life is drawn in under the operation of the sifting providence of God, through the suspicion suggested by the Satan, the minister of this aspect of God's providence, that his godliness is selfish and only the natural return for unexampled prosperity, and the insinuation that if stripped of his prosperity he will curse God to His face. These suspicions bring down two severe calamities on Job, one depriving him of children and possessions alike, and the other throwing the man himself under a painful malady. In spite of these afflictions Job retains his integrity and ascribes no wrong to God. Then is described the advent of Job's three friends—Eliphaz the Temanite, Bildad the Shuhite, and Zophar the Naamathite—who, having heard of Job's calamities, come to condole with him. 2. The body of the book, in poetry, chs. iii.-xxxi., contains a series of speeches in which the problem of Job's afflictions and the relation of external evil to the righteousness of God and the conduct of men are brilliantly discussed. This part, after Job's passionate outburst in ch. iii., is divided into three cycles, each containing six speeches, one by each of the friends, and three by Job, one in reply to each of theirs (chs. iv.-xiv.; xv.-xxi.; xxii.-xxxi.), although in the last cycle the

¹ That the murder of Zechariah the son of Jehoiada (2 Chron. i. c.) is referred to in Matt. xxiii. 35, Luke xi. 51 is commonly held; but see Cheyne, *Ency. Bib.* col. 5373.

third speaker Zophar fails to answer (unless his answer is to be found in ch. xxvii.). Job, having driven his opponents from the field, carries his reply through a series of discourses in which he dwells in pathetic words upon his early prosperity, contrasting with it his present humiliation, and ends with a solemn repudiation of all the offences that might be suggested against him, and a challenge to God to appear and put His hand to the charge which He had against him and for which He afflicted him. 3. Elihu, the representative of a younger generation, who has been a silent observer of the debate, intervenes to express his dissatisfaction with the manner in which both Job and his friends conducted the cause, and offers what is in some respects a new solution of the question (xxxii.-xxxvii.). 4. In answer to Job's repeated demands that God would appear and solve the riddle of his life, the Lord answers Job out of the whirlwind. The divine speaker does not condescend to refer to Job's individual problem, but in a series of ironical interrogations asks him, as he thinks himself capable of fathoming all things, to expound the mysteries of the origin and subsistence of the world, the phenomena of the atmosphere, the instincts of the creatures that inhabit the desert, and, as he judges God's conduct of the world amiss, invites him to seize the reins, gird himself with the thunder and quell the rebellious forces of evil in the universe (xxxviii.-xlii. 6). Job is humbled and abashed, lays his hand upon his mouth, and repents his hasty words in dust and ashes. No solution of his problem is vouchsafed; but God Himself effects that which neither the man's own thoughts of God nor the representations of the friends could accomplish: he had heard of him with the hearing of the ear without effect, but now his eye sees Him. This is the profoundest religious deep in the book. 5. The epilogue, in prose, xlii. 7-17, describes Job's restoration to a prosperity double that of his former estate, his family felicity and long life.

Design.—With the exception of the episode of Elihu, the connexion of which with the original form of the poem may be doubtful, all five parts of the book are essential elements of the work as it came from the hand of the first author, although some parts of the second and fourth divisions may have been expanded by later writers. The idea of the composition is to be derived not from any single element of the book, but from the teaching and movement of the whole piece. Job is unquestionably the hero of the work, and in his ideas and his history combined we may assume that we find the author himself speaking and teaching. The discussion between Job and his friends of the problem of suffering occupies two-thirds of the book, or, if the space occupied by Elihu be not considered, nearly three-fourths, and in the direction which the author causes this discussion to take we may see revealed the main didactic purpose of the book. When the three friends, the representatives of former theories of providence, are reduced to silence, we may be certain that it was the author's purpose to discredit the ideas which they represent. Job himself offers no positive contribution to the doctrine of evil; his position is negative, merely antagonistic to that of the friends. But this negative position victoriously maintained by him has the effect of clearing the ground, and the author himself supplies in the prologue the positive truth, when he communicates the real explanation of his hero's calamities, and teaches that they were a trial of his righteousness. It was therefore the author's main purpose in his work to widen men's views of the providence of God and set before them a new view of suffering. This purpose, however, was in all probability subordinate to some wider practical design. No Hebrew writer is merely a poet or a thinker. He is always a teacher. He has men before him in their relations to God,¹ and usually not men in their individual relations, but members of the family of Israel, the people of God. It is consequently scarcely to be doubted that the book has a national scope. The author considered his new truth regarding the meaning of affliction as of national interest, and as the truth then needful for the heart of his people. But the teaching of the book is only half its contents. It contains also a history—deep and inexplicable affliction, a great moral struggle, and a victory. The author meant his new truth to inspire new conduct, new faith, and new hopes. In Job's sufferings, undeserved and inexplicable to him, yet capable of an explanation most consistent with the goodness and faithfulness of God, and casting honour upon his faithful servants; in his despair bordering on unbelief, at last overcome; and in the happy

issue of his afflictions—in all this Israel may see itself, and from the sight take courage, and forecast its own history. Job, however, is not to be considered Israel, the righteous servant of the Lord, under a feigned name; he is no mere parable (though such a view is found as early as the Talmud); he and his history have both elements of reality in them. It is these elements of reality common to him with Israel in affliction, common even to him with humanity as a whole, confined within the straitened limits set by its own ignorance, wounded to death by the mysterious sorrows of life, tortured by the uncertainty whether its cry finds an entrance into God's ear, alarmed and paralysed by the irreconcilable discrepancies which it seems to discover between its necessary thoughts of Him and its experience of Him in His providence, and faint with longing that it might come into His place, and behold him, not girt with His majesty, but in human form, as one looketh upon his fellow—it is these elements of truth that make the history of Job instructive to Israel in the times of affliction when it was set before them, and to men of all races in all ages. It would probably be a mistake, however, to imagine that the author consciously stepped outside the limits of his nation and assumed a human position antagonistic to it. The chords he touches vibrate through all humanity—but this is because Israel is the religious kernel of humanity, and because from Israel's heart the deepest religious music of mankind is heard, whether of pathos or of joy.

Two threads requiring to be followed, therefore, run through the book—one the discussion of the problem of evil between Job and his friends, and the other the varying attitude of Job's mind towards God, the first being subordinate to the second. Both Job and his friends advance to the discussion of his sufferings and of the problem of evil, ignorant of the true cause of his calamities—Job strong in his sense of innocence, and the friends armed with their theory of the righteousness of God, who giveth to every man according to his works. With fine psychological instinct the poet lets Job altogether lose his self-control first when his three friends came to visit him. His bereavements and his malady he bore with a steady courage, and his wife's direct instigations to godlessness he repelled with severity and resignation. But when his equals and the old associates of his happiness came to see him, and when he read in their looks and in their seven days' silence the depth of his own misery, his self-command deserted him, and he broke out into a cry of despair, cursing his day and crying for death (iii.). Job had somewhat misinterpreted the demeanour of his friends. It was not all pity that it expressed. Along with their pity they had also brought their theology, and they trusted to heal Job's malady with this. Till a few days before, Job would have agreed with them on the sovereign virtues of this remedy. But he had learned through a higher teaching, the events of God's providence, that it was no longer a specific in his case. His violent impatience, however, under his afflictions and his covert attacks upon the divine rectitude only served to confirm the view of his sufferings which their theory of evil had already suggested to his friends. And thus commences the high debate which continues through twenty-nine chapters.

The three friends of Job came to the consideration of his history with the principle that calamity is the result of evil-doing, as prosperity is the reward of righteousness. Suffering is not an accident or a spontaneous growth of the soil; man is born unto trouble as the sparks fly upwards; there is in human life a tendency to do evil which draws down upon men the chastisement of God (v. 6). The principle is thus enunciated by Eliphaz, from whom the other speakers take their cue: where there is suffering there has been sin in the sufferer. Not suffering in itself, but the effect of it on the sufferer is what gives insight into his true character. Suffering is not always punitive; it is sometimes disciplinary, designed to wean the good man from his sin. If he sees in his suffering the monition of God and turns from his evil, his future shall be rich in peace and happiness, and his latter estate more prosperous than his first. If he murmurs or resists, he can only perish under the multiplying chastisements which his impenitence will provoke. Now this principle is far from being a peculiar crotchet of the friends; its truth is undeniable, though they erred in supposing that it would cover the wide providence of God. The principle is the fundamental idea of moral government, the expression of the natural conscience, a principle common more or less to all peoples, though perhaps more prominent in the Semitic mind, because all religious ideas are more prominent and simple there—not suggested to Israel first by the law, but found and adopted by the law, though it may be sharpened by it. It is the fundamental principle of prophecy no less than of the law, and, if possible, of the wisdom or philosophy of the Hebrews more than of either. Speculation among the Hebrews had a simpler task before it than it had in the West or in the farther East. The Greek philosopher began his operations upon the sum of things; he threw the universe into his crucible at once. His object was to effect some analysis of it, so

¹ Exceptions must be made in the cases of Esther and the Song of Songs, which do not mention God, and the original writer in Ecclesiastes who is a philosopher.

that he could call one element cause and another effect. Or, to vary the figure, his endeavour was to pursue the streams of tendency which he could observe till he reached at last the central spring which sent them all forth. God, a single cause and explanation, was the object of his search. But to the Hebrew of the later time this was already found. The analysis resulting in the distinction of God and the world had been effected for him so long ago that the history and circumstances of the process had been forgotten, and only the unchallengeable result remained. His philosophy was not a quest of God whom he did not know, but a recognition on all hands of God whom he knew. The great primary idea to his mind was that of God, a Being wholly just, doing all. And the world was little more than the phenomena that revealed the mind and the presence and the operations of God. Consequently the nature of God as known to him and the course of events formed a perfect equation. The idea of what God was in Himself was in complete harmony with His manifestation of Himself in providence, in the events of individual human lives, and in the history of nations. The philosophy of the wise did not go behind the origin of sin, or referred it to the freedom of man; but, sin existing, and God being in immediate personal contact with the world, every event was a direct expression of His moral will and energy; calamity fell on wickedness, and success attended right-doing. This view of the moral harmony between the nature of God and the events of providence in the fortunes of men and nations is the view of the Hebrew wisdom in its oldest form, during what might be called the period of principles, to which belong Prov. x. seq.; and this is the position maintained by Job's three friends. And the significance of the book of Job in the history of Hebrew thought arises in that it marks the point when such a view was definitely overcome, closing the long period when this principle was merely subjected to questionings, and makes a new positive addition to the doctrine of evil.

Job agreed that afflictions came directly from the hand of God, and also that God afflicted those whom He held guilty of sins. But his conscience denied the imputation of guilt, whether insinuated by his friends or implied in God's chastisement of him. Hence he was driven to conclude that God was unjust. The position of Job appeared to his friends nothing else but impiety; while theirs was to him mere falsehood and the special pleading of sycophants on behalf of God because He was the stronger. Within these two iron walls the debate moves, making little progress, but with much brilliancy, if not of argument, of illustration. A certain advance indeed is perceptible. In the first series of speeches (iv.-xiv.), the key-note of which is struck by Eliphaz, the oldest and most considerate of the three, the position is that affliction is caused by sin, and is chastisement designed for the sinner's good; and the moral is that Job should recognize it and use it for the purpose for which it was sent. In the second (xv.-xxi.) the terrible fate of the sinner is emphasized, and those brilliant pictures of a restored future, thrown in by all the speakers in the first series, are absent. Job's demeanour under the consolations offered him afforded little hope of his repentance. In the third series (xxii. seq.) the friends cast off all disguise, and openly charge Job with a course of evil life. That their armoury was now exhausted is shown by the brevity of the second speaker, and the failure of the third (at least in the present text) to answer in any form. In reply Job disdains for a time to touch what he well knew lay under all their exhortations; he laments with touching pathos the defection of his friends, who were like the winter torrents looked for in vain by the perishing caravan in the summer heat; he meets with bitter scorn their constant cry that God will not cast off the righteous man, by asking: How can one be righteous with God? what can human weakness, however innocent, do against infinite might and subtlety? they are righteous whom an omnipotent and perverse will thinks fit to consider so; he falls into a hopeless wail over the universal misery of man, who has a weary campaign of life appointed him; then, rising up in the strength of his conscience, he upbraids the Almighty with His misuse of His power and His indiscriminate tyranny—righteous and innocent He destroys alike—and challenges Him to lay aside His majesty and meet His creature as a man, and then he would not fear Him. Even in the second series Job can hardly bring himself to face the personal issue raised by the friends. His relations to God absorb him almost wholly—his pitiable isolation, the indignities showered on his once honoured head, the loathsome spectacle of his body; abandoned by all, he turns for pity from God to men and from men to God. Only in the third series of debates does he put out his hand and grasp firmly the theory of his friends, and their "defences of mud" fall to dust in his hands. Instead of that roseate moral order on which they are never weary of insisting, he finds only disorder and moral confusion. When he thinks of it, trembling takes hold of him. It is not the righteous but the wicked that live, grow old, yea, wax mighty in strength, that send forth their children like a flock and establish them in their sight. Before the logic of facts the theory of the friends goes down; and with this negative result, which the author skilfully reaches through the debate, has to be combined his own positive doctrine of the uses of adversity advanced in the prologue.

To a modern reader it appears strange that both parties were so entangled in the meshes of their preconceptions regarding God as to be unable to break through to broader views. The friends, while

maintaining that injustice on the part of God is inconceivable, might have given due weight to the persistent testimony of Job's conscience as that behind which it is impossible to go, and found refuge in the reflection that there might be something inexplicable in the ways of God, and that affliction might have some other meaning than to punish the sinner or even to wean him from his sin. And Job, while maintaining his innocence from overt sins, might have confessed that there was such sinfulness in every human life as was sufficient to account for the severest chastisement from heaven, or at least he might have stopped short of charging God foolishly. Such a position would certainly be taken up by an afflicted saint now, and such an explanation of his sufferings would suggest itself to the sufferer, even though it might be in truth a false explanation. Perhaps here, where an artistic fault might seem to be committed, the art of the writer, or his truth to nature, and the extraordinary freedom with which he moves among his materials, as well as the power and individuality of his dramatic creations, are most remarkable. The rôle which the author reserved for himself was to teach the truth on the question in dispute, and he accomplishes this by allowing his performers to push their false principles to their proper extreme. There is nothing about which men are usually so sure as the character of God. They are ever ready to take Him in their own hand, to interpret His providence in their own sense, to say what things are consistent or not with His character and word, and beat down the opposing consciences of other men by His so-called authority, which is nothing but their own. The friends of Job were religious Orientals, men to whom God was a being in immediate contact with the world and life, to whom the idea of second causes was unknown, on whom science had not yet begun to dawn, nor the conception of a divine scheme pursuing a distant end by complicated means, in which the individual's interest may suffer for the larger good. The broad sympathies of the author and his sense of the truth lying in the theory of the friends are seen in the scope which he allows them, in the richness of the thought and the splendid luxuriance of the imagery—drawn from the immemorial moral consent of mankind, the testimony of the living conscience, and the observation of life—with which he makes them clothe their views. He remembered the elements of truth in the theory from which he was departing, that it was a national heritage, which he himself perhaps had been constrained not without a struggle to abandon; and, while showing its insufficiency, he sets it forth in its most brilliant form.

The extravagance of Job's assertions was occasioned greatly by the extreme position of his friends, which left no room for his conscious innocence along with the rectitude of God. Again, the poet's purpose, as the prologue shows, was to teach that afflictions may fall on a man out of all connexion with any offence of his own, and merely as the trial of his righteousness; and hence he allows Job, as by a true instinct of the nature of his sufferings, to repudiate all connexion between them and sin in himself. And further, the terrible conflict into which the suspicions of the Satan brought Job could not be exhibited without pushing him to the verge of ungodliness. These are all elements of the poet's art; but art and nature are one. In ancient Hebrew life the sense of sin was less deep than it is now. In the desert, too, men speak boldly of God. Nothing is more false than to judge the poet's creation from our later point of view, and construct a theory of the book according to a more developed sense of sin and a deeper reverence for God than belonged to antiquity. In complete contradiction to the testimony of the book itself, some critics, as Hengstenberg and Budde, have assumed that Job's spiritual pride was the cause of his afflictions, that this was the root of bitterness in him which must be killed down ere he could become a true saint. The fundamental position of the book is that Job was already a true saint; this is testified by God Himself, is the radical idea of the author in the prologue, and the very hypothesis of the drama. We might be ready to think that Job's afflictions did not befall him out of all connexion with his own condition of mind, and we might be disposed to find a vindication of God's ways in this. There is no evidence that such an idea was shared by the author of the book. It is remarkable that the attitude which we imagine it would have been so easy for Job to assume, namely, while holding fast his integrity, to fall back upon the inexplicableness of providence, of which there are such imposing descriptions in his speeches, is just the attitude which is taken up in ch. xxviii. It is far from certain, however, that this chapter is an integral part of the original book.

The other line running through the book, the varying attitude of Job's mind towards God, exhibits dramatic action and tragic interest of the highest kind, though the movement is internal. That the exhibition of this struggle in Job's mind was a main point in the author's purpose is seen from the fact that at the end of each of his great trials he notes that Job sinned not, nor ascribed wrong to God (i. 22; ii. 10), and from the effect which the divine voice from the whirlwind is made to produce upon him (xl. 3). In the first cycle of debate (iv.-xiv.) Job's mind reaches the deepest limit of estrangement. There he not merely charges God with injustice, but, unable to reconcile His former goodness with His present enmity, he regards the latter as the true expression of God's attitude towards His creatures, and the former, comprising all his infinite creative skill in weaving the delicate organism of

human nature and the rich endowments of His providence, only as the means of exercising His mad and immoral cruelty in the time to come. When the Semitic skin of Job is scratched, we find a modern pessimist beneath. Others in later days have brought the keen sensibility of the human frame and the torture which it endures together, and asked with Job to whom at last all this has to be referred. Towards the end of the cycle a star of heavenly light seems to rise on the horizon; the thought seizes the sufferer's mind that man might have another life, that God's anger pursuing him to the grave might be sated, and that He might call him out of it to Himself again (xiv. 13). This idea of a resurrection, unfamiliar to Job at first, is one which he is allowed to reach out of the necessities of the moral complications around him, but from the author's manner of using the idea we may judge that it was familiar to himself. In the second cycle the thought of a future reconciliation with God is more firmly grasped. That satisfaction or at least composure which, when we observe calamities that we cannot morally account for, we reach by considering that providence is a great scheme moving according to general laws, and that it does not always truly reflect the relation of God to the individual, Job reached in the only way possible to a Semitic mind. He drew a distinction between an outer God whom events obey, pursuing him in His anger, and an inner God whose heart was with him, who was aware of his innocence; and he appeals from God to God, and beseeches God to pledge Himself that he shall receive justice from God (xvi. 19; xvii. 3). And so high at last does this consciousness that God is at one with him rise that he avows his assurance that He will yet appear to do him justice before men, and that he shall see Him with his own eyes, no more estranged but on his side, and for this moment he faints with longing (xix. 25 seq.).

After this expression of faith Job's mind remains calm, though he ends by firmly charging God with perverting his right, and demanding to know the cause of his afflictions (xxvii. 2 seq.; xxxi. 35, where render: "Oh, that I had the indictment which mine adversary has written!"). In answer to this demand the Divine voice answers Job out of the tempest: "Who is this that darkeneth counsel by words without knowledge?" The word "counsel" intimates to Job that God does not act without a design, large and beyond the comprehension of man; and to impress this is the purpose of the Divine speeches. The speaker does not enter into Job's particular cause; there is not a word tending to unravel his riddle; his mind is drawn away to the wisdom and majesty of God Himself. His own words and those of his friends are but re-echoed, but it is God Himself who now utters them. Job is in immediate nearness to the majesty of heaven, wise, unfathomable, ironical over the littleness of man, and he is abased; God Himself effects what neither the man's

¹ This remarkable passage reads thus: "But I know that my redeemer liveth, and afterwards he shall arise upon the dust, and after my skin, even this body, is destroyed, without my flesh shall I see God: whom I shall see for myself, and mine eyes shall behold, and not as a stranger; my reins within me are consumed with longing." The redeemer who liveth and shall arise or stand upon the earth is God whom he shall see with his own eyes, on his side. The course of exegesis was greatly influenced by the translation of Jerome, who, departing from the Itala, rendered: "In novissimo die de terra surrecturus sum . . . et rursum circumdabor pelle mea et in carne mea videbo deum meum." The only point now in question is whether: (a) Job looks for this manifestation of God to him while he is still alive, or (b) after death, and therefore in the sense of a spiritual vision and union with God in another life; that is, whether the words "destroyed" and "without my flesh" are to be taken relatively only, of the extremest effects of his disease upon him, or literally, of the separation of the body in death. A third view which assumes that the words rendered "without my flesh," which run literally, "out of my flesh," mean *looking out from my flesh*, that is, clothed with a new body, and finds the idea of resurrection repeated, perhaps imports more into the language than it will fairly bear. In favour of (b) may be adduced the persistent refusal of Job throughout to entertain the idea of a restoration in this life; the word "afterwards"; and perhaps the analogy of other passages where the same situation appears, as Ps. xlix. and lxxiii., although the actual dénouement of the tragedy supports (a). The difference between the two senses is not important, when the Old Testament view of immortality is considered. To the Hebrew the life beyond was not what it is to us, a freedom from sin and sorrow and admission to an immediate divine fellowship not attainable here. To him the life beyond was at best a prolongation of the life here; all he desired was that his fellowship with God here should not be interrupted in death, and that Sheol, the place into which deceased persons descended and where they remained, cut off from all life with God, might be overleapt. On this account the theory of Ewald, which throws the centre of gravity of the book into this passage in ch. xix., considering its purpose to be to teach that the riddles of this life shall be solved and its inequalities corrected in a future life, appears one-sided. The point of the passage does not lie in any distinction which it draws between this life and a future life; it lies in the assurance which Job expresses that God, who even now knows his innocence, will vindicate it in the future, and that, though estranged now, He will at last take him to His heart.

own thoughts of God nor the representations of his friends could accomplish, though by the same means. The religious insight of the writer sounds here the profoundest depths of truth.

Integrity.—Doubts whether particular portions of the present book belonged to the original form of it have been raised by many. M. L. De Wette expressed himself as follows: "It appears to us that the present book of Job has not all flowed from one pen. As many books of the Old Testament have been several times written over, so has this also" (Ersch and Gruber, *Ency.*, sect. ii. vol. viii.). The judgment formed by De Wette has been adhered to more or less by most of those who have studied the book. Questions regarding the unity of such books as this are difficult to settle; there is not unanimity among scholars regarding the idea of the book, and consequently they differ as to what parts are in harmony or conflict with unity; and it is dangerous to apply modern ideas of literary composition and artistic unity to the works of antiquity and of the East. The problem raised in the book of Job has certainly received frequent treatment in the Old Testament; and there is no likelihood that all efforts in this direction have been preserved to us. It is probable that the book of Job was but a great effort amidst or after many smaller. It is scarcely to be supposed that one with such poetic and literary power as the author of chap. iii.—xxxii., xxxviii.—xli. would embody the work of any other writer in his own. If there be elements in the book which must be pronounced foreign, they have been inserted in the work of the author by a later hand. It is not unlikely that our present book may, in addition to the great work of the original author, contain some fragments of the thoughts of other religious minds upon the same question, and that these, instead of being loosely appended, have been fitted into the mechanism of the first work. Some of these fragments may have originated at first quite independently of our book, while others may be expansions and insertions that never existed separately. At the same time it is scarcely safe to throw out any portion of the book merely because it seems to us out of harmony with the unity of the main part of the poem, or unless several distinct lines of consideration conspire to point it out as an extraneous element.

The arguments against the originality of the prologue—as, that it is written in prose, that the name Yahweh appears in it, that sacrifice is referred to, and that there are inconsistencies between it and the body of the book—are of little weight. There must have been some introduction to the poem explaining the circumstances of Job, otherwise the poetical dispute would have been unintelligible, for it is improbable that the story of Job was so familiar that a poem in which he and his friends figured as they do here would have been understood. And there is no trace of any other prologue or introduction having ever existed. The prologue, too, is an essential element of the work, containing the author's positive contribution to the doctrine of suffering, for which the discussion in the poem prepares the way. The intermixture of prose and poetry is common in Oriental works containing similar discussions; the reference to sacrifice is to primitive not to Mosaic sacrifice; and the author, while using the name Yahweh freely himself, puts the patriarchal Divine names into the mouth of Job and his friends because he regards them as belonging to the patriarchal age and to a country outside of Israel. That the observance of this rule had a certain awkwardness for the writer appears perhaps from his allowing the name Yahweh to slip in once or twice (xii. 9, cf. xxviii. 28) in familiar phrases in the body of the poem. The discrepancies, such as Job's references to his children as still alive (xix. 17, the interpretation is doubtful), and to his servants, are trivial, and even if real imply nothing in a book admittedly poetical and not historical. The objections to the epilogue are equally unimportant—as that the Satan is not mentioned in it, and that Job's restoration is in conflict with the main idea of the poem—that earthly felicity does not follow righteousness. The epilogue confirms the teaching of the poem when it gives the divine sanction to Job's doctrine regarding God in opposition to that of the friends (xlii. 7). And it is certainly not the intention of the poem to teach that earthly felicity does not follow righteousness; its purpose is to correct the exclusiveness with which the friends of Job maintained that principle. The Satan is introduced in the prologue, exercising his function as minister of God in heaven; but it is to misinterpret wholly the doctrine of evil in the Old Testament to assign to the Satan any such personal importance or independence of power as that he should be called before the curtain to receive the hisses that accompany his own discomfiture. The Satan, though he here appears with the beginnings of a malevolent will of his own, is but the instrument of the sifting providence of God. His work was to try; that done he

that he could call one element cause and another effect. Or, to vary the figure, his endeavour was to pursue the streams of tendency which he could observe till he reached at last the central spring which sent them all forth. God, a single cause and explanation, was the object of his search. But to the Hebrew of the later time this was already found. The analysis resulting in the distinction of God and the world had been effected for him so long ago that the history and circumstances of the process had been forgotten, and only the unchallengeable result remained. His philosophy was not a quest of God whom he did not know, but a recognition on all hands of God whom he knew. The great primary idea to his mind was that of God, a Being wholly just, doing all. And the world was little more than the phenomena that revealed the mind and the presence and the operations of God. Consequently the nature of God as known to him and the course of events formed a perfect equation. The idea of what God was in Himself was in complete harmony with His manifestation of Himself in providence, in the events of individual human lives, and in the history of nations. The philosophy of the wise did not go behind the origin of sin, or referred it to the freedom of man; but, sin existing, and God being in immediate personal contact with the world, every event was a direct expression of His moral will and energy; calamity fell on wickedness, and success attended right-doing. This view of the moral harmony between the nature of God and the events of providence in the fortunes of men and nations is the view of the Hebrew wisdom in its oldest form, during what might be called the period of principles, to which belong Prov. x. seq.; and this is the position maintained by Job's three friends. And the significance of the book of Job in the history of Hebrew thought arises in that it marks the point when such a view was definitely overcome, closing the long period when this principle was merely subjected to questionings, and makes a new positive addition to the doctrine of evil.

Job agreed that afflictions came directly from the hand of God, and also that God afflicted those whom He held guilty of sins. But his conscience denied the imputation of guilt, whether insinuated by his friends or implied in God's chastisement of him. Hence he was driven to conclude that God was unjust. The position of Job appeared to his friends nothing else but impiety; while theirs was to him mere falsehood and the special pleading of sycophants on behalf of God because He was the stronger. Within these two iron walls the debate moves, making little progress, but with much brilliancy, if not of argument, of illustration. A certain advance indeed is perceptible. In the first series of speeches (iv.-xiv.), the key-note of which is struck by Eliphaz, the oldest and most considerate of the three, the position is that affliction is caused by sin, and is chastisement designed for the sinner's good; and the moral is that Job should recognize it and use it for the purpose for which it was sent. In the second (xv.-xxi.) the terrible fate of the sinner is emphasized, and those brilliant pictures of a restored future, thrown in by all the speakers in the first series, are absent. Job's demeanour under the consolations offered him afforded little hope of his repentance. In the third series (xxii. seq.) the friends cast off all disguise, and openly charge Job with a course of evil life. That their armoury was now exhausted is shown by the brevity of the second speaker, and the failure of the third (at least in the present text) to answer in any form. In reply Job disdains for a time to touch what he well knew lay under all their exhortations; he laments with touching pathos the defection of his friends, who were like the winter torrents looked for in vain by the perishing caravan in the summer heat; he meets with bitter scorn their constant cry that God will not cast off the righteous man, by asking: How can one be righteous with God? what can human weakness, however innocent, do against infinite might and subtlety? they are righteous whom an omnipotent and perverse will thinks fit to consider so; he falls into a hopeless wail over the universal misery of man, who has a weary campaign of life appointed him; then, rising up in the strength of his conscience, he upbraids the Almighty with His misuse of His power and His indiscriminate tyranny—righteous and innocent He destroys alike—and challenges Him to lay aside His majesty and meet His creature as a man, and then he would not fear Him. Even in the second series Job can hardly bring himself to face the personal issue raised by the friends. His relations to God absorb him almost wholly—his pitiable isolation, the indignities showered on his once honoured head, the loathsome spectacle of his body; abandoned by all, he turns for pity from God to men and from men to God. Only in the third series of debates does he put out his hand and grasp firmly the theory of his friends, and their "defences of mud" fall to dust in his hands. Instead of that roseate moral order on which they are never weary of insisting, he finds only disorder and moral confusion. When he thinks of it, trembling takes hold of him. It is not the righteous but the wicked that live, grow old, yea, wax mighty in strength, that send forth their children like a flock and establish them in their sight. Before the logic of facts the theory of the friends goes down; and with this negative result, which the author skilfully reaches through the debate, has to be combined his own positive doctrine of the uses of adversity advanced in the prologue.

To a modern reader it appears strange that both parties were so entangled in the meshes of their preconceptions regarding God as to be unable to break through to broader views. The friends, while

maintaining that injustice on the part of God is inconceivable, might have given due weight to the persistent testimony of Job's conscience as that behind which it is impossible to go, and found refuge in the reflection that there might be something inexplicable in the ways of God, and that affliction might have some other meaning than to punish the sinner or even to wean him from his sin. And Job, while maintaining his innocence from overt sins, might have confessed that there was such sinfulness in every human life as was sufficient to account for the severest chastisement from heaven, or at least he might have stopped short of charging God foolishly. Such a position would certainly be taken up by an afflicted saint now, and such an explanation of his sufferings would suggest itself to the sufferer, even though it might be in truth a false explanation. Perhaps here, where an artistic fault might seem to be committed, the art of the writer, or his truth to nature, and the extraordinary freedom with which he moves among his materials, as well as the power and individuality of his dramatic creations, are most remarkable. The rôle which the author reserved for himself was to teach the truth on the question in dispute, and he accomplishes this by allowing his performers to push their false principles to their proper extreme. There is nothing about which men are usually so sure as the character of God. They are ever ready to take Him in their own hand, to interpret His providence in their own sense, to say what things are consistent or not with His character and word, and beat down the opposing consciences of other men by His so-called authority, which is nothing but their own. The friends of Job were religious Orientals, men to whom God was a being in immediate contact with the world and life, to whom the idea of second causes was unknown, on whom science had not yet begun to dawn, nor the conception of a divine scheme pursuing a distant end by complicated means, in which the individual's interest may suffer for the larger good. The broad sympathies of the author and his sense of the truth lying in the theory of the friends are seen in the scope which he allows them, in the richness of the thought and the splendid luxuriance of the imagery—drawn from the immemorial moral consent of mankind, the testimony of the living conscience, and the observation of life—with which he makes them clothe their views. He remembered the elements of truth in the theory from which he was departing, that it was a national heritage, which he himself perhaps had been constrained not without a struggle to abandon; and, while showing its insufficiency, he sets it forth in its most brilliant form.

The extravagance of Job's assertions was occasioned greatly by the extreme position of his friends, which left no room for his conscious innocence along with the rectitude of God. Again, the poet's purpose, as the prologue shows, was to teach that afflictions may fall on a man out of all connexion with any offence of his own, and merely as the trial of his righteousness; and hence he allows Job, as by a true instinct of the nature of his sufferings, to repudiate all connexion between them and sin in himself. And further, the terrible conflict into which the suspicions of the Satan brought Job could not be exhibited without pushing him to the verge of ungodliness. These are all elements of the poet's art; but art and nature are one. In ancient Hebrew life the sense of sin was less deep than it is now. In the desert, too, men speak boldly of God. Nothing is more false than to judge the poet's creation from our later point of view, and construct a theory of the book according to a more developed sense of sin and a deeper reverence for God than belonged to antiquity. In complete contradiction to the testimony of the book itself, some critics, as Hengstenberg and Budde, have assumed that Job's spiritual pride was the cause of his afflictions, that this was the root of bitterness in him which must be killed down ere he could become a true saint. The fundamental position of the book is that Job was already a true saint; this is testified by God Himself, is the radical idea of the author in the prologue, and the very hypothesis of the drama. We might be ready to think that Job's afflictions did not befall him out of all connexion with his own condition of mind, and we might be disposed to find a vindication of God's ways in this. There is no evidence that such an idea was shared by the author of the book. It is remarkable that the attitude which we imagine it would have been so easy for Job to assume, namely, while holding fast his integrity, to fall back upon the inexplicableness of providence, of which there are such imposing descriptions in his speeches, is just the attitude which is taken up in ch. xxviii. It is far from certain, however, that this chapter is an integral part of the original book.

The other line running through the book, the varying attitude of Job's mind towards God, exhibits dramatic action and tragic interest of the highest kind, though the movement is internal. That the exhibition of this struggle in Job's mind was a main point in the author's purpose is seen from the fact that at the end of each of his great trials he notes that Job sinned not, nor ascribed wrong to God (i. 22; ii. 10), and from the effect which the divine voice from the whirlwind is made to produce upon him (xl. 3). In the first cycle of debate (iv.-xiv.) Job's mind reaches the deepest limit of estrangement. There he not merely charges God with injustice, but, unable to reconcile His former goodness with His present enmity, he regards the latter as the true expression of God's attitude towards His creatures, and the former, comprising all his infinite creative skill in weaving the delicate organism of

for his intimate acquaintance with the desert. Ewald considers that he belonged to the exile in Egypt, on account of his minute acquaintance with that country. But all these conjectures localize an author whose knowledge was not confined to any locality, who was a true child of the East and familiar with life and nature in every country there, who was at the same time a true Israelite and felt that the earth was the Lord's and the fullness thereof, and whose sympathies and thought took in all God's works.

JOBST, or **JODOCUS** (c. 1350–1411), margrave of Moravia, was a son of John Henry of Luxemburg, margrave of Moravia, and grandson of John, the blind king of Bohemia. He became margrave of Moravia on his father's death in 1375, and his clever and unscrupulous character enabled him to amass a considerable amount of wealth, while his ambition led him into constant quarrels with his brother Procop, his cousins, the German king Wenceslaus and Sigismund, margrave of Brandenburg, and others. By taking advantage of their difficulties he won considerable power, and the record of his life is one of warfare and treachery, followed by broken promises and transitory reconciliations. In 1385 and 1388 he purchased Brandenburg from Sigismund, and the duchy of Luxemburg from Wenceslaus; and in 1397 he also became possessed of upper and lower Lusatia. For some time he had entertained hopes of the German throne and had negotiated with Wenceslaus and others to this end. When, however, King Rupert died in 1410 he maintained at first that there was no vacancy, as Wenceslaus, who had been deposed in 1400, was still king; but changing his attitude, he was chosen German king at Frankfurt on the 1st of October 1410 in opposition to Sigismund, who had been elected a few days previously. Jobst however was never crowned, and his death on the 17th of January 1411 prevented hostilities between the rival kings.

Aschbach, *Geschichte Kaiser Sigismunds* (1838–1845); F. Palacky, *Geschichte von Böhmen*, iii. (1804–1874); and T. Lindner, *Geschichte des Deutschen Reiches vom Ende des 14. Jahrhunderts bis zur Reformation*, i. (1875–1880).

JOB'S TEARS, in botany, the popular name for *Coix Lacryma-Jobi*, a species of grass, of the tribe *maydeae*, which also includes the maize (see *GRASSES*). The seeds, or properly fruits, are contained singly in a stony involucre or bract, which does not open until the enclosed seed germinates. The young involucre surrounds the female flower and the stalk supporting the spike of male flowers, and when ripe has the appearance of bluish-white porcelain. Being shaped somewhat like a large drop of fluid, the form has suggested the name. The fruits are esculent, but the involucres are the part chiefly used, for making necklaces and other ornaments. The plant is a native of India, but is now widely spread throughout the tropical zone. It grows in marshy places; and is cultivated in China, the fruit having a supposed value as a diuretic and anti-phthisic. It was cultivated by John Gerard, author of the famous *Herball*, at the end of the 16th century as a tender annual.

JOCASTA, or **IOCASTA** (Ἰοκάστη; in Homer, Ἐρινύστη), in Greek legend, wife of Laius, mother (afterwards wife) of Oedipus (q.v.), daughter of Menoeceus, sister (or daughter) of Creon. According to Homer (*Od.* xi. 271) and Sophocles (*Oed. Tyr.* 1241), on learning that Oedipus was her son she immediately hanged herself; but in Euripides (*Phoenissae*, 1455) she stabs herself over the bodies of her sons Eteocles and Polynices, who had slain each other in single combat before the walls of Thebes.

JOCKEY, a professional rider of race-horses, now the current usage (see *HORSE-RACING*). The word is by origin a diminutive of "jock," the Northern or Scots colloquial equivalent of the name "John" (cf. JACK). A familiar instance of the use of the word as a name is in "Jockey of Norfolk" in Shakespeare's *Richard III.* v. 3, 304. In the 16th and 17th centuries the word was applied to horse-dealers, postilions, itinerant minstrels and vagabonds, and thus frequently bore the meaning of a cunning trickster, a "sharp," whence "to jockey," to outwit, or "do" a person out of something. The current usage is found in John Evelyn's *Diary*, 1670, when it was clearly well known. George Borrow's attempt to derive the word from the gipsy *chukki*, a heavy whip used by horse-dealing gipsies, has no foundation.

JODELLE, **ÉTIENNE**, seigneur de Limodin (1532–1573), French dramatist and poet, was born in Paris of a noble family. He attached himself to the poetic circle of the Pléiade (see DAURAT) and proceeded to apply the principles of the reformers to dramatic composition. Jodelle aimed at creating a classical drama that should be in every respect different from the moralities and *soities* that then occupied the French stage. His first play, *Cléopâtre captive*, was represented before the court at Reims in 1552. Jodelle himself took the title rôle, and the cast included his friends Remy Belleau and Jean de la Péruse. In honour of the play's success the friends organised a little fête at Arcueil when a goat garlanded with flowers was led in procession and presented to the author—a ceremony exaggerated by the enemies of the Ronsardists into a renewal of the pagan rites of the worship of Bacchus. Jodelle wrote two other plays. *Eugène*, a comedy satirizing the superior clergy, had less success than it deserved. Its preface poured scorn on Jodelle's predecessors in comedy, but in reality his own methods are not so very different from theirs. *Didon se sacrifiant*, a tragedy which follows Virgil's narrative, appears never to have been represented. Jodelle died in poverty in July 1573. His works were collected the year after his death by Charles de la Mothe. They include a quantity of miscellaneous verse dating chiefly from Jodelle's youth. The intrinsic value of his tragedies is small. *Cléopâtre* is lyric rather than dramatic. Throughout the five acts of the piece nothing actually happens. The death of Antony is announced by his ghost in the first act; the story of Cleopatra's suicide is related, but not represented, in the fifth. Each act is terminated by a chorus which moralizes on such subjects as the inconstancy of fortune and the judgments of heaven on human pride. But the play was the starting-point of French classical tragedy, and was soon followed by the *Médée* (1553) of Jean de la Péruse and the *Aman* (1561) of André de Rivaudeau. Jodelle was a rapid worker, but idle and fond of dissipation. His friend Ronsard said that his published poems gave no adequate idea of his powers.

Jodelle's works are collected (1868) in the *Pléiade française* of Charles Marty-Laveaux. The prefatory notice gives full information of the sources of Jodelle's biography, and La Mothe's criticism is reprinted in its entirety.

JODHPUR, or **MARWAR**, a native state of India, in the Rajputana agency. Area, 34,963 sq. m. Pop. (1901), 1,935,565, showing a decrease of 23 % in the decade, due to the results of famine. Estimated revenue, £373,600; tribute, £14,000. The general aspect of the country is that of a sandy plain, divided into two unequal parts by the river Luni, and dotted with picturesque conical hills, attaining in places an elevation of 3000 ft. The river Luni is the principal feature in the physical aspects of Jodhpur. One of its headstreams rises in the sacred lake of Pushkar in Ajmere, and the main river flows through Jodhpur in a south-westerly direction till it is finally lost in the marshy ground at the head of the Runn of Cutch. It is fed by numerous tributaries and occasionally overflows its banks, fine crops of wheat and barley being grown on the saturated soil. Its water is, as a rule, saline or brackish, but comparatively sweet water is obtained from wells sunk at a distance of 20 or 30 yds. from the river bank. The famous salt-lake of Sambhar is situated on the borders of Jodhpur and Jaipur, and two smaller lakes of the same description lie within the limits of the state,

from which large quantities of salt are extracted. Marble is mined in the north of the state and along the south-east border.

The population consists of Rathor Rājputs (who form the ruling class), Brāhmins, Charans, Bhāts, Mahajans or traders, and Jāts. The Charans, a sacred race, hold large religious grants of land, and enjoy peculiar immunities as traders in local produce. The Bhāts are by profession genealogists, but also engage in trade. Mārwarī traders are an enterprising class to be found throughout the length and breadth of India.

The principal crops are millets and pulses, but wheat and barley are largely produced in the fertile tract watered by the Lūni river. The manufactures comprise leather boxes and brass utensils; and turbans and scarfs and a description of embroidered silk knotted thread are specialties of the country.

The Mahārājā belongs to the Rathor clan of Rājputs. The family chronicles relate that after the downfall of the Rathor dynasty of Kanauj in 1194, Sivaji, the grandson of Jai Chānd, the last king of Kanauj, entered Mārwar on a pilgrimage to Dwarka, and on halting at the town of Pāli he and his followers settled there to protect the Brāhman community from the constant raids of marauding bands. The Rathor chief thus laid the foundation of the state, but it was not till the time of Rāo Chānda, the tenth in succession from Sivaji, that Mārwar was actually conquered. His grandson Jodha founded the city of Jodhpur, which he made his capital. In 1561 the country was invaded by Akbar, and the chief was forced to submit, and to send his son as a mark of homage to take service under the Mogul emperor. When this son Udāi Singh succeeded to the chiefship, he gave his sister Jodhbāi in marriage to Akbar, and was rewarded by the restoration of most of his former possessions. Udāi Singh's son, Gaj Singh, held high service under Akbar, and conducted successful expeditions in Gujarat and the Deccan. The bigoted and intolerant Aurangzeb invaded Mārwar in 1679, plundered Jodhpur, sacked all the large towns, and commanded the conversion of the Rathors to Mahommedanism. This cemented all the Rājput clans into a bond of union, and a triple alliance was formed by the three states of Jodhpur, Udāipur and Jaipur, to throw off the Mahommedan yoke. One of the conditions of this alliance was that the chiefs of Jodhpur and Jaipur should regain the privilege of marriage with the Udāipur family, which they had forfeited by contracting alliances with the Mogul emperors, on the understanding that the offspring of Udāipur princesses should succeed to the state in preference to all other children. The quarrels arising from this stipulation lasted through many generations, and led to the invitation of Mahratta help from the rival aspirants to power, and finally to the subjection of all the Rājput states to the Mahrattās. Jodhpur was conquered by Sindhia, who levied a tribute of £60,000, and took from it the fort and town of Ajmere. Internecine disputes and succession wars disturbed the peace of the early years of the century, until in January 1818 Jodhpur was taken under British protection. In 1839 the misgovernment of the rājā led to an insurrection which compelled the interference of the British. In 1843, the chief having died without a son, and without having adopted an heir, the nobles and state officials were left to select a successor from the nearest of kin. Their choice fell upon Rājā Takht Sinh, chief of Ahmednagar. This chief, who did good service during the Mutiny, died in 1873. Mahārājā Jaswant Singh, who died in 1896, was a very enlightened ruler. His brother, Sir Pertab Singh (q.v.), conducted the administration until his nephew, Sardar Singh, came of age in 1898. The imperial service cavalry formed part of the reserve brigade during the Tirah campaign.

The state maintains a railway running to Bikanir, and there is also a branch railway into Sind. Gold, silver and copper money is coined. The state emblems are a *jhar* or sprig of seven branches and a *khanda* or sword. Jodhpur practically escaped the plague, but it suffered more severely than any other part of Rajputana from the famine of 1899-1900. In February 1900 more than 110,000 persons were in receipt of famine relief.

The city of JODHPUR is 64 m. by rail N.W. of Mārwar junction,

on the Rajputana railway. Pop. (1901), 60,437. It was built by Rāo Jodha in 1459, and from that time has been the seat of government. It is surrounded by a strong wall nearly 6 m. in extent, with seventy gates. The fort, which stands on an isolated rock, contains the mahārājā's palace, a large and handsome building, completely covering the crest of the hill on which it stands, and overlooking the city, which lies several hundred feet below. The city contains palaces of the mahārājā, and town residences of the *thākurs* or nobles, besides numerous fine temples and tanks. Building stone is plentiful and close at hand, and the architecture is solid and handsome. Three miles north of Jodhpur are the ruins of Mandor, the site of the ancient capital of the Parihar princes of Mārwar, before its conquest by the Rathors. Mills for grinding flour and crushing grain have been constructed for the imperial service troops. The Jaswant college is affiliated to the B.A. standard of the Allahabad university. To the Hewson hospital a wing for eye diseases was added in 1898, and the Jaswant hospital for women is under an English lady doctor.

JOEL. The second book among the minor prophets in the Bible is entitled *The word of Yahweh that came to Joel the son of Pethuel*, or, as the Septuagint, Latin, Syriac and other versions read, *Bethuel*. Nothing is recorded as to the date or occasion of the prophecy. Most Hebrew prophecies contain pointed references to the foreign politics and social relations of the nation at the time. In the book of Joel there are only scanty allusions to Phoenicians, Philistines, Egypt and Edom, couched in terms applicable to very different ages, while the prophet's own people are exhorted to repentance without specific reference to any of those national sins of which other prophets speak. The occasion of the prophecy, described with great force of rhetoric, is no known historical event, but a plague of locusts, perhaps repeated in successive seasons; and even here there are features in the description which have led many expositors to seek an allegorical interpretation. The most remarkable part of the book is the eschatological picture with which it closes; and the way in which the plague of locusts appears to be taken as foreshadowing the final judgment—the great day or assize of Yahweh, in which Israel's enemies are destroyed—is so unique as greatly to complicate the exegetical problem. It is not therefore surprising that the most various views are still held as to the date and meaning of the book. Allegorists and literalists still contend over the first and still more over the second chapter, and, while the largest number of recent interpreters accept Credner's view that the prophecy was written in the reign of Joash of Judah (835-796 B.C.?), a powerful school of critics (including A. B. Davidson) follow the view suggested by Vatke (*Bib. Theol.* p. 462 seq.), and reckon Joel among the post-exile prophets. Other scholars give yet other dates: see the particulars in the elaborate work of Merx. The followers of Credner are literalists; the opposite school of moderns includes some literalists (as Duhm), while others (like Hilgenfeld, and in a modified sense Merx) adopt the old allegorical interpretation which treats the locusts as a figure for the enemies of Jerusalem.

There are cogent reasons for placing Joel either earlier or later than the great series of prophets extending from the time when Amos first proclaimed the approach of the Assyrian down to the Babylonian exile. In Joel the enemies of Israel are the nations collectively, and among those specified by name neither Assyria nor Chaldaea finds a place. This circumstance might, if it stood alone, be explained by placing Joel with Zephaniah in the brief interval between the decline of the empire of Nineveh and the advance of the Babylonians. But it is further obvious that Joel has no part in the internal struggle between spiritual Yahweh-worship and idolatry which occupied all the prophets from Amos to the captivity. He presupposes a nation of Yahweh-worshippers, whose religion has its centre in the temple and priesthood of Zion, which is indeed conscious of sin, and needs forgiveness and an outpouring of the Spirit, but is not visibly divided, as the kingdom of Judah was, between the adherents of spiritual prophecy and a party whose national worship of Yahweh involved for them no fundamental separation from the surrounding nations. The book, therefore, must have been written before the ethico-spiritual and the popular conceptions of Yahweh came into conscious antagonism, or else after the fall of the state and the restoration of the community of Jerusalem to religious rather than political existence had decided

the contest in favour of the prophets, and of the Law in which their teaching was ultimately crystallized.

The considerations which have given currency to an early date for Joel are of various kinds. The absence of all mention of one great oppressing world-power seems most natural before the westward march of Assyria involved Israel in the general politics of Asia. The purity of the style is also urged, and a comparison of Amos i. 2, Joel iii. 16 (Heb. iv. 16), and Amos ix. 13, Joel iii. 18 (iv. 18), has been taken as proving that Amos knew our book. The last argument might be inverted with much greater probability, and numerous points of contact between Joel and other parts of the Old Testament (e.g. Joel ii. 2, Exod. x. 14; Joel ii. 3, Ezek. xxxvi. 35; Joel iii. 10, Mic. iv. 3) make it not incredible that the purity of his style—which is rather elegant than original and strongly marked—is in large measure the fruit of literary culture. The absence of allusion to a hostile or oppressing empire may be fairly taken in connexion with the fact that the prophecy gives no indication of political life at Jerusalem. When the whole people is mustered in ch. i., the elders or sheikhs of the municipality and the priests of the temple are the most prominent figures. The king is not mentioned—which on Credner's view is explained by assuming that the plague fell in the minority of Joash, when the priest Jehoiada held the reins of power—and the princes, councillors and warriors necessary to an independent state, and so often referred to by the prophets before the exile, are altogether lacking. The nation has only a municipal organization with a priestly aristocracy, precisely the state of things that prevailed under the Persian empire. That the Persians do not appear as enemies of Yahweh and his people is perfectly natural. They were hard masters but not invaders, and under them the enemies of the Jews were their neighbours, just as appears in Joel.¹ Those, however, who place our prophet in the minority of King Joash draw a special argument from the mention of Phoenicians, Philistines and Edomites (iii. 4 seq., 19), pointing to the revolt of Edom under Joram (2 Kings viii. 20) and the incursion of the Philistines in the same reign (2 Chron. xxi. 16, xxii. 1). These were recent events in the time of Joash, and in like manner the Phoenician slave trade in Jewish children is carried back to an early date by the reference in Amos i. 9. This argument is rather specious than sound. Edom's hostility to Judah was incessant, but the feud reached its full intensity only after the time of Deuteronomy (xxiii. 7), when the Edomites joined the Chaldeans, drew profit from the overthrow of the Jews, whose land they partly occupied, and exercised barbarous cruelty towards the fugitives of Jerusalem (Obad. *passim*; Mal. i. 2 seq.; Isa. lxiii.). The offence of shedding innocent blood charged on them by Joel is natural after these events, but hardly so in connexion with the revolt against Joram.

As regards the Philistines, it is impossible to lay much weight on the statement of Chronicles, unsupported as it is by the older history, and in Joel the Philistines plainly stand in one category with the Phoenicians, as slave dealers, not as armed foes. Gaza in fact was a slave emporium as early as the time of Amos (i. 6), and continued so till Roman times.

Thus, if any inference as to date can be drawn from ch. iii., it must rest on special features of the trade in slaves, which was always an important part of the commerce of the Levant. In the time of Amos the slaves collected by Philistines and Tyrians were sold *en masse* to Edom, and presumably went to Egypt or Arabia. Joel complains that they were sold to the Grecians (Javan, Ionians).² It is probable that some Hebrew and Syrian slaves were exported to the Mediterranean coasts from a very early date, and Isa. xi. 11 already speaks of Israelites captive in these districts as well as in Egypt, Ethiopia and the East. But the traffic in this direction hardly became extensive till a later date. In Deut. xxviii. 68, Egypt is still the chief goal of the maritime slave trade, and in Ezek. xxvii. 13 Javan exports slaves to Tyre, not conversely. Thus the allusion to Javan in Joel better suits a later date, when Syrian slaves were in special request in Greece.³ And the name of Javan is not found in any part of the Old Testament certainly older than Ezekiel. In Joel it seems to stand as a general representative of the distant countries reached by the Mediterranean (in contrast with the southern Arabians, *Sabaeans*, ch. iii. 8), the farthest nation reached by the fleets of the Red Sea. This is precisely the geographical standpoint of the post-exile author of Gen. x. 4, where (assuming that Elishah = Carthage and Tarshish = Tartessus) Javan includes Carthage and Tartessus.

Finally, the allusion to Egypt in Joel iii. 19 must on Credner's theory be explained of the invasion of Shishak a century before

¹ In the A.V. of ii. 17 it appears that subjection to a foreign power is not a present fact but a thing feared. But the parallelism and v. 19 justify the rendering in margin of R.V. "use a byword against them."

² The hypothesis of an Arabian Javan, applied to Joel iii. 6 by Credner, Hitzig, and others, may be viewed as exploded (see Stade, "Das Volk Javan," 1880, reprinted in his *Ahad. Reden u. Abhandlungen*, 1899, pp. 123-142). The question, however, has to be re-examined; later interpreters, e.g. the LXX translators, may have misunderstood. The text of the passages has to be critically treated anew. See Cheyne, *Traditions and Beliefs of Ancient Israel* (on Gen. x. 2).

³ Compare Movers, *Phönizisches Alterthum*, iii. i. 70 seq.

Joash. From this time down to the last period of the Hebrew monarchy Egypt was not the enemy of Judah.

If the arguments chiefly relied on for an early date are so precarious or can even be turned against their inventors, there are others of an unambiguous kind which make for a date in the Persian period. It appears from ch. iii. 1, 2, that Joel wrote after the exile. The phrase "to bring again the captivity" would not alone suffice to prove this, for it is used in a wide sense, and perhaps means rather to "reverse the calamity,"⁴ but the dispersion of Israel among the nations, and the allotment of the Holy Land to new occupants, cannot fairly be referred to any calamity less than that of the captivity. With this the whole standpoint of the prophecy agrees. To Joel Judah and the people of Yahweh are synonyms; northern Israel has disappeared. Now it is true that those who take their view of the history from Chronicles, where the kingdom of Ephraim is always treated as a sect outside the true religion, can reconcile this fact with an early date. But in ancient times it was not so; and under Joash, the contemporary of Elisha, such a limitation of the people of Yahweh is wholly inconceivable. The earliest prophetic books have a quite different standpoint; otherwise indeed the books of northern prophets and historians could never have been admitted into the Jewish canon. Again, the significant fact that there is no mention of a king and princes, but only of sheikhs and priests, has a force not to be invalidated by the ingenious reference of the book to the time of Joash's minority and the supposed regency of Jehoiada.⁵ And the assumption that there was a period before the prophetic conflicts of the 8th century B.C. when spiritual prophecy had unchallenged sway, when there was no gross idolatry or superstition, when the priests of Jerusalem, acting in accord with prophets like Joel, held the same place as heads of a pure worship which they occupied after the exile (cf. Ewald, *Propheten*, i. 89), is not consistent with history. It rests on the old theory of the antiquity of the Levitical legislation, so that in fact all who place that legislation later than Ezekiel are agreed that the book of Joel is also late. In this connexion one point deserves special notice. The religious significance of the plague of drought and locusts is expressed in ch. i. 9 in the observation that the daily meat and drink offering are cut off, and the token of new blessing is the restoration of this service, ch. ii. 14. In other words, the daily offering is the continual symbol of gracious intercourse between Yahweh and his people and the main office of religion. This conception, which finds its parallel in Dan. viii. 11, xi. 31, xii. 11, is quite in accordance with the later law. But under the monarchy the daily oblation was the king's private offering, and not till Ezra's reformation did it become the affair of the community and the central act of national worship (Neh. x. 33 seq.).⁶ That Joel wrote not only after the exile, but after the work of Ezra and Nehemiah may be viewed as confirmed by the allusions to the walls of Jerusalem in ch. ii. 7, 9. Such is the historical basis which we seem to be able to lay for the study of the exegetical problems of the book.

The style of Joel is clear (which hardly favours an early date), and his language presents peculiarities which are evidences of a late origin. But the structure of the book, the symbolism and the connexion of the prophet's thoughts have given rise to much controversy. It seems safest to start from the fact that the prophecy is divided into two well-marked sections by ch. ii. 18, 19a. According to the Massoretic vocalization, which is in harmony with the most ancient exegetical tradition as contained in the LXX, these words are historical: "Then the Lord was jealous, . . . and answered and said unto his people, Behold," &c. Such is the natural meaning of the words as pointed.

Thus the book falls into two parts. In the first the prophet speaks in his own name, addressing himself to the people in a lively description of a present calamity caused by a terrible plague of locusts which threatens the entire destruction of the country, and appears to be the vehicle of a final consuming judgment (the day of Yahweh). There is no hope save in repentance and prayer; and in ch. ii. 12 the prophet, speaking now for the first time in Yahweh's name, calls the people to a solemn fast at the sanctuary, and invites the intercession of the priests. The calamity is described in the strongest colours of Hebrew hyperbole, and it seems arbitrary to seek too literal an interpretation of details, e.g. to lay weight on the four names of locusts, or to take ch. i. 20 of a conflagration produced by drought, when it appears from ii. 3 that the ravages of the locusts themselves are compared to those of fire. But when due allowance is made for

⁴ See Ewald on Jer. xlviii. 47, Kuenen, *Theol. Tijdschrift* (1873), p. 519; Schwally, *Z.A.T.W.*, viii. 200, and Briggs on Ps. xiv. 7.

⁵ Stade not unreasonably questions whether 2 Kings xii. 1-3 implies the paramount political influence of Jehoiada.

⁶ See Wellhausen, *Geschichte Israels*, p. 78 seq.; *Prolegomena zur Gesch. Israels* (1883), p. 82 seq.

Eastern rhetoric, there is no occasion to seek in this section anything else than literal locusts. Nay, the allegorical interpretation, which takes the locusts to be hostile invaders, breaks through the laws of all reasonable writing; for the poetical hyperbole which compares the invading swarms to an army (ii. 4 seq.) would be inconceivably lame if a literal army was already concealed under the figure of the locusts. Nor could the prophet so far forget himself in his allegory as to speak of a victorious host as entering the conquered city like a thief (ii. 9). The second part of the book is Yahweh's answer to the people's prayer. The answer begins with a promise of deliverance from famine, and of fruitful seasons compensating for the ravages of the locusts. In the new prosperity of the land the union of Yahweh and his people shall be sealed anew, and so the Lord will proceed to pour down further and higher blessings. The aspiration of Moses (Num. xi. 20) and the hope of earlier prophets (Isa. xxxii. 15, lix. 21; Jer. xxxi. 33) shall be fully realized in the outpouring of the Spirit on all the Jews and even upon their servants (Isa. lxi. 5 with lvi. 6, 7); and then the great day of judgment, which had seemed to overshadow Jerusalem in the now averted plague, shall draw near with awful tokens of blood and fire and darkness. But the terrors of that day are not for the Jews but for their enemies. The worshippers of Yahweh on Zion shall be delivered (cf. Obad. v. 17, whose words Joel expressly quotes in ch. ii. 32), and it is their heathen enemies, assembled before Jerusalem to war against Yahweh, who shall be mowed down in the valley of Jehoshaphat ("Yahweh judgeth") by no human arm, but by heavenly warriors. Thus definitively freed from the profane foot of the stranger (Isa. lii. 1), Jerusalem shall abide a holy city for ever. The fertility of the land shall be such as was long ago predicted in Amos ix. 13, and streams issuing from the Temple, as Ezekiel had described in his picture of the restored Jerusalem (Ezek. xlviii.), shall fertilize the barren Wādi of Acacias. Egypt and Edom, on the other hand, shall be desolate, because they have shed the blood of Yahweh's innocents. Compare the similar predictions against Edom, Isa. xxxiv. 9 seq. (Mal. i. 3), and against Egypt, Isa. xix. 5 seq., Ezek. xxix. Joel's eschatological picture appears indeed to be largely a combination of elements from older unfulfilled prophecies. Its central feature, the assembling of the nations to judgment, is already found in Zeph. iii. 8, and in Ezekiel's prophecy concerning Gog and Magog, where the wonders of fire and blood named in Joel ii. 30 are also mentioned (Ezek. xxxviii. 22). The other physical features of the great day, the darkening of the lights of heaven, are a standing figure of the prophets from Amos v. 6, viii. 9, downwards. It is characteristic of the prophetic eschatology that images suggested by one prophet are adopted by his successors, and gradually become part of the permanent scenery of the last times; and it is a proof of the late date of Joel that almost his whole picture is made up of such features. In this respect there is a close parallelism, extending to minor details, between Joel and the last chapters of Zechariah.

That Joel's delineation of the final deliverance and glory attaches itself directly to the deliverance of the nation from a present calamity is quite in the manner of the so-called prophetic perspective. But the fact that the calamity which bulks so largely is natural and not political is characteristic of the post-exile period. Other prophets of the same age speak much of dearth and failure of crops, which in Palestine then as now were aggravated by bad government, and were far more serious to a small and isolated community than they could ever have been to the old kingdom. It was indeed by no means impossible that Jerusalem might have been altogether undone by the famine caused by the locusts; and so the conception of these visitants as the destroying army, executing Yahweh's final judgment, is really much more natural than appears to us at first sight, and does not need to be explained away by allegory. The chief argument relied upon by those who still find allegory at least in ch. ii. is the expression *hassephōnī*, "the northerner"¹ [if this rendering is correct], in ii. 20. In view of the other points of

¹ It has been suggested that *Saphon*, which is often rather troublesome if rendered "the north," may be a weakened form of *šib'ōn*, a

affinity between Joel and Ezekiel, this word inevitably suggests Gog and Magog, and it is difficult to see how a swarm of locusts could receive such a name, or if they came from the north could perish, as the verse puts it, in the desert between the Mediterranean and the Dead Sea. The verse remains a *crux interpretum*, and no exegesis hitherto given can be deemed thoroughly satisfactory; but the interpretation of the whole book must not be made to hinge on a single word in a verse which might be altogether removed without affecting the general course of the prophet's argument.

The whole verse is perhaps the addition of an allegorizing glossator. The prediction in v. 19, that the seasons shall henceforth be fruitful, is given after Yahweh has shown his zeal and pity for Israel, not of course by mere words, but by acts, as appears in verses 20, 21, where the verbs are properly perfects recording that Yahweh hath already done great things, and that vegetation has already revived. In other words, the mercy already experienced in the removal of the plague is taken as a pledge of future grace not to stop short till all God's old promises are fulfilled. In this context v. 20 is out of place. Observe also that in v. 25 the locusts are spoken of in the plain language of chap. i.

See the separate commentaries on Joel by Credner (1831), Wünsche (1872), Merx (1879). The last-named gives an elaborate history of interpretation from the Septuagint down to Calvin, and appends the Ethiopic text edited by Dillmann. Nowack and Marti should also be consulted (see their respective series of commentaries); also G. A. Smith, in *The Book of the Twelve Prophets*, vol. i. (1896), and S. R. Driver, *Joel and Amos* (1897). On the language of Joel, see Holzinger, *Z. A. T. W.* (1889), pp. 89-131. Of older commentaries the most valuable is Pocock's (Oxford, 1691). Bochart's *Hierozoicon* may also be consulted. (W. R. S.; T. K. C.)

JOEL, MANUEL (1826-1890), Jewish philosopher and preacher. After teaching for several years at the Breslau rabbinical seminary, founded by Z. Frankel, he became the successor of Abraham Geiger in the rabbinate of Breslau. He made important contributions to the history of the school of Akiba (*q.v.*) as well as to the history of Jewish philosophy, his essays on Ibn Gabirol and Maimonides being of permanent worth. But his most influential work was connected with the relations between Jewish philosophy and the medieval scholasticism. He showed how Albertus Magnus derived some of his ideas from Maimonides and how Spinoza was indebted to the same writer, as well as to Hasdai Crescas. These essays were collected in two volumes of *Beiträge zur Geschichte der Philosophie* (1876), while another two volumes of *Blicke in die Religionsgeschichte* (1880-1883) threw much light on the development of religious thought in the early centuries of the Christian era. Equally renowned were Joel's pulpit addresses. Though he was no orator, his appeal to the reason was effective, and in their published form his three volumes of *Predigten* (issued posthumously) have found many readers. (I. A.)

JOFFRIN, JULES FRANÇOIS ALEXANDRE (1846-1890), French politician, was born at Troyes on the 16th of March 1846. He served in the Franco-German War, was involved in the Commune, and spent eleven years in England as a political exile. He attached himself to the "possibilist" group of the socialist party, the section opposed to the root-and-branch measures of Jules Guesde. He became a member of the municipal council of Paris in 1882, and vice-president in 1888-1889. Violently attacked by the Boulangist organs, *L'Intransigeant* and *La France*, he won a suit against them for libel, and in 1889 he contested the 18th arrondissement of Paris with General Boulanger, who obtained a majority of over 2000 votes, but was declared ineligible. Joffrin was only admitted to the Chamber after a heated discussion, and continued to be attacked by the nationalists. He died in Paris on the 17th of September 1890.

current popular corruption of *šim'on* = Ishmael. In Ezek. xxxviii. 15 it is distinctly said that Gog is to come from the recesses of Saphōn. "Mashech" and "Tubal" are no hindrance to this view, if the names of the so-called "sons of Japheth" are critically examined. For they, too, as well as Saphōn, can be plausibly shown to represent regions of North Arabia. See Cheyne, *Traditions and Beliefs of Anc. Israel*, on Gen. x. 2-4.

JOGUES, ISAAC (1607–1646), French missionary in North America, was born at Orleans on the 10th of January 1607. He entered the Society of Jesus at Rouen in 1624, and in 1636 was ordained and sent, by his own wish, to the Huron mission. In 1639 he went among the Tobacco Nation, and in 1641 journeyed to Sault Sainte Marie, where he preached to the Algonquins. Returning from an expedition to Three Rivers he was captured by Mohawks, who tortured him and kept him as a slave until the summer of 1643, when, aided by some Dutchmen, he escaped to the manor of Rensselaerwyck and thence to New Amsterdam. After a brief visit to France, where he was treated with high honour, he returned to the Mohawk country in May 1646 and ratified a treaty between that tribe and the Canadian government. Working among them as the founder of the Mission of the Martyrs, he incurred their enmity, was tortured as a sorcerer, and finally killed at Ossernenon, near Auriesville, N.Y.

See Parkman, *The Jesuits in North America* (1898).

JOHANAN BEN ZACCAI, Palestinian rabbi, contemporary of the Apostles. He was a disciple of Hillel (q.v.), and after the destruction of the Temple of Jerusalem by Titus was the main instrument in the preservation of the Jewish religion. During the last decades of the Temple Johanan was a member of the Sanhedrin and a skilled controversialist against the Sadducees. He is also reported to have been head of a great school in the capital. In the war with Rome he belonged to the peace party, and finding that the Zealots were resolved on carrying their revolt to its inevitable sequel, Johanan had himself conveyed out of Jerusalem in a coffin. In the Roman camp the rabbi was courteously received, and Vespasian (whose future elevation to the imperial dignity Johanan, like Josephus, is said to have foretold) agreed to grant him any boon he desired. Johanan obtained permission to found a college at Jamnia (Jabneh), which became the centre of Jewish culture. It practically exercised the judicial functions of the Sanhedrin (see *Jews*, § 40 *ad fin.*). That chief literary expression of Pharisaism, the Mishnah, was the outcome of the work begun at Jamnia. Johanan solaced his disciples on the fall of the Temple by the double thought that charity could replace sacrifice, and that a life devoted to the religious law could form a fitting continuation of the old theocratic state. "Johanan felt the fall of his people more deeply than any one else, but—and in this lies his historical importance—he did more than any one else to prepare the way for Israel to rise again" (Bacher).

See Graetz, *History of the Jews* (Eng. trans.), vol. ii. ch. xiii.; Weiss, *Dor dor ve-dorshav*, ii. 36; Bacher, *Die Agada der Tannaiten*, vol. i. ch. iii. (I. A.)

JOHANNESBURG, a city of the Transvaal and the centre of the Rand gold-mining industry. It is the most populous city and the commercial capital of South Africa. It is built on the southern slopes of the Witwatersrand in 26° 11' S., 28° 2' E., at an elevation of 5764 ft. above the sea. The distances by rail from Johannesburg to the following seaports are: Lourenço Marques, 364 m.; Durban, 483 m.; East London, 659 m.; Port Elizabeth, 714 m.; Cape Town, 957 m. Pretoria is, by rail, 46 m. N. by E.

The town lies immediately north of the central part of the main gold reef. The streets run in straight lines east and west or north and south. The chief open spaces are Market Square in the west and Government Square in the south of the town. Park railway station lies north of the business quarter, and farther north are the Wanderers' athletic sports ground and Joubert's Park. The chief business streets, such as Commissioner Street, Market Street, President Street and Pritchard Street, run east and west. In these thoroughfares and in several of the streets which intersect them are the offices of the mining companies, the banks, clubs, newspaper offices, hotels and shops, the majority being handsome stone or brick buildings, while the survival of some wooden shanties and corrugated iron buildings recalls the early character of the town.

Chief Buildings, &c.—In the centre of Market Square are the market buildings, and at its east end the post and telegraph
